Title: Regarding waste management solutions for Hyderabad.

SHRI ANUMULA REVANTH REDDY (MALKAJGIRI): Almost all Indian States are facing the problem of waste management, air and water pollution. It is high time that waste management and pollution control measures are taken on priority basis by the Centre and all the State Governments.

I want to raise my concern over long-term waste management solutions for Hyderabad, which is one of the leading IT cities of the country. Professionals from India and all over the world come and settle in the city. It is important that we have clean water to drink and fresh air to breath.
