Title: Regarding supply of non-urea and setting up of Nano Urea Plant.

SHRI C.N. ANNADURAI (TIRUVANNAMALAI): Hon. Chairman, Sir, nano urea is a source of nutrient that provides nitrogen plants an alternative to the conventional urea. The nano urea is in liquid form and it can curtail the requirement of urea, at least, 50 per cent. The Government should formulate sustainable policy for the production, price control, reduction of cost and adequate supply of nano urea. The nano urea is enhancing yield and reducing global warming. It also improves the quality of groundwater and increases the farmer's income.

Therefore, I strongly suggest the Government to give importance to assured supply of nano urea in the country. I urge the Government to set up a nano urea plant in my constituency to bridge the demand-supply gap in Tamil Nadu.

Thank you.
