

Need to take comprehensive steps for irrigation in Nandurbar Parliamentary Constituency, Maharashtra.-laid

ADV. GOWAAL KAGADA PADAVI (NANDURBAR): A large number of irrigation projects have been undertaken in Dhule and Nandurbar districts and huge amount of water have been stored in Prakasha Sarangkhedda in Nandurbar district, Akkalpada in Dhule district and in many other small and medium projects. The Government has spent crores of rupees for the construction of these dams. But, due to lack of funds for irrigation facilities, water is being wasted. If irrigation facilities are made available at Akkalpada dam, the drought situation in Sakri Tehsil can be countered. Also, if the irrigation facilities on the dams in Nandurbar district increase, thousands of hectares of land will get irrigated and the problem of migration will be reduced. I would like to have information from Government regarding implementation of any irrigation project in my Nandurbar Parliamentary Constituency. As the ground water level in Nandurbar district has gone down, initiatives must be taken by Government to raise ground water level in Nandurbar and Dhule districts. The Narmada and Tapti rivers are flowing through my Nandurbar Lok Sabha constituency and their interlinking may be initiated by the Government to address the scarcity of water in the region.
