WITNESSES EXAMINED

P.C.S. (Judicial Branch) Association, Punjab and Delhi, New Delhi.

Spokesmen:

1. Shri K. S. Sidhu, Additional District and Sessions Judge, Rohtak, Secretary of the Association.
2. Shri G. C. Jain, Subordinate Judge I Class, Delhi, Joint Secretary of the Association.
3. Shri O. N. Vohra, Settlement Commissioner, Ministry of Labour, Employment and Rehabilitation, New Delhi, Member, Executive Committee of the Association.

P.C.S. (Judicial Branch) Association, Punjab and Delhi, New Delhi.

Spokesmen:

1. Shri K. S. Sidhu.
2. Shri G. C. Jain.
3. Shri O. N. Vohra.

(The witnesses were called in and they took their seats).

Mr. Chairman: I suppose you are from Judicial Branch.

Shri G. C. Jain: I represent P.C.S. (Judicial Branch), Punjab.

Mr. Chairman: Gentlemen, whatever evidence you give before this Committee is to be treated as public and it will be distributed amongst the Members. Even if you want any part to be treated as confidential, it will be printed and distributed to our Members and it will be laid on the Table of the House also. We have received your representation. Whatever you want to add to this, you may do so. The Bill is for constitution of a High Court for Delhi.

Shri K. S. Sidhu: Should I start giving you further facts?

Mr. Chairman: Whatever you have given us has been distributed to all the Members. If you want to add anything to that, you may do so.

Shri K. S. Sidhu: We have brought with us ten copies of the memorandum to-day. I thought that the hon. Members might have got the copy of it.

Mr. Chairman: Have you sent that?

Shri K. S. Sidhu: Yes, Sir. We have sent that. We had a general meeting day before yesterday and there was a small amendment suggested.

Mr. Chairman: Do you want to add anything to what you have already submitted?

Shri K. S. Sidhu: Number 1 is about the suggestions that we have made. There, we have suggested strongly that as defenders of the Bill, all the judicial officers posted in Delhi should be treated as having been appointed to their respective posts and offices in accordance with the provisions of Articles 233 and 234 of the Constitution or any other law for the time being in force and then we had also suggested a period of six months within which the two Governments concerned *viz.*, the Punjab Government in consultation with the Punjab High Court and the Delhi Administration in consultation with the proposed Delhi High Court, can send back any judicial officers from here to Punjab and get their replacement from there within a period of six months.

In our general meeting, it was felt that we had not placed the emphasis in order of priority. Now they have suggested that we might suggest to the hon. Members that the initial judicial service of Delhi to the extent of the present number, should be constituted by calling for options from all the officers, whether they are posted in Delhi or in Punjab—of course the scrutiny etc. will be left to the authorities concerned in Delhi whether a particular officer stands to the test of screening or not. The idea behind the present amendment is this that all the judicial officers in Punjab, even if they are not posted in Delhi, should be invited to submit their options to the authorities concerned.

Shri Jai Sukh Lal Hathi: How many officers will be in the Punjab judiciary?

Shri K. S. Sidhu: We have on the present strength 153 judges of whom 20 are district judges.

Shri Jai Sukh Lal Hathi: If all of them opt to come to Delhi?

Shri K. S. Sidhu: It may be left to the Screening Committee constituted by the authorities in Delhi. They may reject a person due to his record.

Shri Jai Sukh Lal Hathi: Have they represented to the authority concerned about their difficulty?

Shri K. S. Sidhu: What we have submitted in our memorandum is the point that we try to make out. At the moment, we have in our judicial service in Punjab and Delhi a total of 153 subordinate judges. Of this, 28 are working here in Delhi of which 21 are district judges. We have four permanent district judges and five officiating district and sessions judges working in Delhi. Our submission in the memorandum was that if we are not given the statutory protection, then the executive authority concerned may say that they are free to make their recruitment from any source they like. The consequence of that would be that quite a number of people who are recruited to the judicial service on the assumption that this is going to feed the two States *viz.*, Punjab and Delhi, will have either to be retrenched or reverted.

So, our submission is that this is a matter concerning the judicial service, concerning the judicial officers. They should not be left at the mercy of the Executive. It is suggested that protection should be sought from authorities other than the Parliament. We submit that it is not considered proper for the judicial officers to approach any executive authority at least to make any sort of a suggestion to them. Our submission is that the hon. Members may kindly consider affording us the statutory protection in the Bill itself.

Shri Jai Sukh Lal Hathi: You mean that should be for all the servants of the Punjab Judicial Services?

Shri K. S. Sidhu: This, if I may say so, should be applied to all the members of the Punjab and Delhi Judicial Services.

Shri Jai Sukh Lal Hathi: In the Punjab Judicial Service, there are 110 judges or so

Shri K. S. Sidhu: Out of 153, Delhi Administration will not provide jobs to more than 28.

Shri Jai Sukh Lal Hathi: I understand it. But, these 20 may be absorbed and rules can be framed absorbing these people. To make a statutory provision for all the 150, is it your idea that all these 150 have to be screened or only those who are screened should be provided for?

Shri K. S. Sidhu: May I, with your permission, read the amended suggestions:—

> "Sub-section (1): There shall be a judicial service for the Union Territory of Delhi.
>
> Sub-section (2): Such service shall, to begin with, be constituted by allocating to the P.C.S. (Judicial Branch) and the superior Judicial service of Punjab at least the existing number of posts, both permanent and temporary, held by them in the Union Territory of Delhi on the appointed day."

Dr. M. S. Aney: Is this the amendment you want to suggest in the Bill?

Shri K. S. Sidhu: This is an amended suggestion.

Shri Ram Sewak Yadav: In order to safeguard their interest.

Shri K. S. Sidhu: This is our amended suggestion. What we want is this that the existing number of posts that should be given to the joint judicial service of Punjab and Delhi courts including the judges of the Delhi Administration and all that should be restricted to the persons posted here. But, the Delhi Administration would like to make their own screening from out of the whole lot. So, our submission is that after providing for this statutory protection in the Bill itself, it will be left to the executive authorities and in consultation with the High Court to call for the option and to screen them. There are 20 people out

of that and this will prevent the possibility of reversion, retrenchment and consequent frustrations in the judicial service where promotions etc. are very rare.

Mr. Chairman: Anything else?

Shri K. S. Sidhu: That is all. This is an amended suggestion. Can we leave this to the Committee?

Mr. Chairman: Yes, please.

Shri Gajraj Singh Rao: Have you suggested here that any particular section that you want to be amended so as to give statutory protection?

Shri K. S. Sidhu: An additional section is to be added anywhere as the Draftsman considers it proper.

Shri Gajraj Singh Rao: Have you ever recommended that it should have the security of service for those who are in judiciary or in executive? Have you come across any other Act in this regard? Can you say as to where it has been laid down?

Shri K. S. Sidhu: The exact parallel case would not be available because, this is for the first time that in our country we are bifurcating a High Court. If there are parallel cases, there may be provisions. Now may I refer to the section?

Shri Gajraj Singh Rao: Can you give any instance of a legislation or enactment wherein it has been provided that such and such person shall be retained in services. There may be Rules for that.

Mr. Chairman: It is the High Court of Punjab that controls your service conditions?

Shri K. S. Sidhu: Yes, Sir.

Mr. Chairman: Then we must leave it to the High Court. How can we put it in a Bill?

Shri K. S. Sidhu: In all humility I would say that when the High Court acts other than in judicial matters, it acts in a purely executive manner. The hon'ble Judges do not sit in the Court. They sit on the executive side. The High Court, sitting on the executive side, make appointments, promotions, etc. As the hon'ble Member has just put this question, I would cite Sec. 115 and 116 of the States Reorganisation Act, Section 63 of the Andhra State Act of 1953 and Sec. 81 of the Bombay Reorganisation Act, 1960 which have made provision for all the three services—the executive, the judicial and the miscellaneous services.

Shri Jai Sukh Lal Hathi: Can you read that section?

Shri K. S. Sidhu: For the sake of brevity, I have not reproduced that.

Shri Gajraj Singh Rao: Rules may provide for that, but not in a statute.

In the states reorganisation all matters whether judicial or executive services can be dealt with that it should be like this and so on, but what we are considering is a High Court Bill. The question is: whether in a High Court Bill such a provision can be made. It is always left to the High Court Rules and orders. There are 13 different sets of Rules in the High Courts relating to services, relating to the working of the subordinate judiciary, etc. They are provided in the Rules, not in the High Court Act.

Shri K. S. Sidhu: With all respect, so far as appointment of subordinate Judges and District Judges are concerned, Art. 233 of our Constitution deals with appointments of District Judges and Art. 234 deals with Subordinate Judges. The appointments are made by Governor in consultation with the High Court.

Mr. Chairman: Initiative is taken by the High Court.

Shri K. S. Sidhu: All over India there are Rules framed under Art. 309. The Governor frames Rules in consultation with the High Court. Then it is a matter of routine. Recruitments are made according to those Rules.

But here is a situation—if I may submit with all respect—a novel situation. There has never been in India a bifurcation of only a High Court.

Mr. Chairman: It is not bifurcation. It is creation.

Shri Gajraj Singh Rao: There have been Gujarat and Maharashtra High Courts.

Shri K. S. Sidhu: Again that was done by Bombay Reorganisation Act as a whole. It was not the Gujarat High Court Bill or Bombay High Court Bill. It was the Bombay Reorganisation Act providing for that.

Mr. Chairman: Here is a Bill creating a new High Court.

Shri K. S. Sidhu: That is why we submit that it is a case for Parliament who are dealing with the creation of a High Court or constitution of a High Court for Delhi which directly is so far under the jurisdiction of the Punjab High Court.

Dr. M. S. Aney: There was one High Court at Nagpur and at the time of States Reorganisation, a Bench of the Bombay High Court was set up at Nagpur. There was nothing in the Act itself. All these things have been provided in the Rules themselves.

Mr. Chairman: We will look into it.

Shri Gajraj Singh Rao: It is in the Rules of Service that the High Court may provide that such and such preference may be given—those who have served judicially in such and such capacity, preference may be given to them. But provision can never be made in an Act because every Indian has a right to apply.

Shri Jai Sukh Lal Hathi: Under Art. 309 relating to recruitment and conditions of service of persons serving the Union or a State, the President or such person as he may direct in the case of services and posts in connection with the affairs of the Union, and for the Governor of a State or such person as he may direct in the case of services and posts in connection with the affairs of the State, to make rules regulating the recruitment and conditions of service etc.

Shri K. S. Sidhu: It is really a matter which requires a little more effort on our part to make our point clear. These Rules as I submitted earlier which are to be made under Art. 309 will deal with future appointments to the Judicial Service of Delhi. I am submitting before the Hon'ble Members a situation which will be created on the constitution of this separate High Court for Delhi. Here in Delhi on the appointed day will be sitting 28 subordinate Judges, 9 Addl. District Judges working according to the present dispensation of things done by this Parliament and the position for them would be a sort of uncertainty.

Shri Jai Sukh Lal Hathi: There will be no uncertainty. They belong to Punjab. They will be there in Punjab and if they have to be absorbed; Rules will be made.

Mr. Chairman: But if you want to go back to the parent service, you can go. We will give you option.

Shri K. S. Sidhu: There is no question of our going back to that service or coming to this Service. What we submit is that if statutory protection is not provided in the Bill, there is nothing to prevent the authority to debar us.

Mr. Chairman: The authorities will be the High Court.

Shri K. S. Sidhu: No, Sir; as I submitted, these Judicial Officers are not appointed by the High Court; they are appointed by Governor in consultation with the High Court.

Shri Jai Sukh Lal Hathi: In this Bill we can't make any provision for officers of Punjab Government. It can't be done.

Shri K. S. Sidhu: I have not really made my point clear....

Shri Ram Sewak Yadav: I think what they want is that the interests of those who are working in Delhi should be safeguarded.

Shri Jai Sukh Lal Hathi: No, that is not so. What they want is that all the 150 officers of Punjab should be screened; then you select whatever number you want; and then for them, make a provision in the statute.

Shri K. S. Sidhu: Yes.

Shri Ram Sewak Yadav: All the 150 officers are at present working either in Punjab or Delhi?

Shri K. S. Sidhu: Yes.

Shri Ram Sewak Yadav: With the coming into existence of this Delhi High Court, those who are working in Delhi, according to your statement as far as I could understand, would be out of employment?

Shri K. S. Sidhu: Yes.

Shri Ram Sewak Yadav: So you should ask for protection for those people. Why do you include all those who are working in Punjab?

Shri K. S. Sidhu: I will explain the position. Now we have 28 persons working here. So far as appointments are concerned, they are done by the Government in consultation with the High Court. So far as transfers are concerned, the Punjab High Court has got the power to transfer one judicial officer from one station in Punjab to Delhi and *vice* versa. So the present position is that all these 28 persons have been transferred to Delhi by the Punjab High Court from the judicial service under its control. They are still under Punjab High Court. The position that would be created if we are to ask the hon. Members to provide for protection for the present officers . . .

Shri Gajraj Singh Rao: How can the provision that you suggest be made in law? These are procedures for the High Court, to be formed when it comes into existence. The rules of service are there and there you can press your claim and say that they have an advantage over the others, they have worked in Delhi, they have special knowledge of this area and the special type of cases which come here. Delhi is a commercial city. So it would require commercial type of judicial officers specially. Agricultural and customs cases are there and so they are specially adapted to them. But how can you suggest a statutory provision for the persons serving now in Delhi? Does such a procedure exist in any enactment, not to say of a High Court Bill? Can you say that such and such persons should be statutorily protected?

Shri K. S. Sidhu: From the various views expressed by the hon. Members I find that I have failed to put across my point of view.

Mr. Chairman: We will examine the representation you have made. We will see what best can be done. There is a Constitutional objection. You are all members of the Punjab State Service. The Parliament cannot make a law for Punjab State Service.

Shri Ram Sewak Yadav: Will it not be possible to provide in the Act that those who are working at present in Delhi can be brought into the framework of the Act?

Mr. Chairman: We will see what best can be done. We have got your views.

Shri K. S. Sidhu: Our difficulties are, for example, we say that all the persons working in Delhi should be protected . . .

Mr. Chairman: How can we protect all the Punjab officers? There may be some seniors and some juniors. The new High Court will have to screen them.

Shri K. S. Sidhu: I may submit that at present the judicial service for Punjab and Delhi is common. Now, out of the present common judicial service, some percentage of officers are serving in Delhi . . . .

Mr. Chairman: All of them may not like to remain here. They may like to go back to their parent State.

Shri K. S. Sidhu: That is the point . . .

Mr. Chairman: Some people may like to come here and naturally the new High Court will have to screen them. Out of those who want to come here, only the deserving people, according to the new High Court, will be taken here. That we will provide.

Shri Ram Sewak Yadav: That they are opposed to.

Shri K. S. Sidhu: No, that is exactly what we want.

Mr. Chairman: I don't think we can provide it here. We will enable the High Court to frame rules. We will see what best we can do.

Shri Gajraj Singh Rao: Are you not subject to the rules of service of the Punjab High Court?

Shri K. S. Sidhu: No, Sir. We are not subject to any rules of service of the Punjab High Court. We are subject to the rules made under Article 309 by the Governor. We are under administrative control of the Punjab Government. As far as High Court rules and orders are concerned, they relate only to the administration of justice and how to operate in the High Court.

Mr. Chairman: Who frames the service rules for the judiciary?

Shri K. S. Sidhu: The Governor of State. He sends the draft to the High Court for their comments. The High Court sends their comments back and the Governor may accept those comments or may alter here and there or may ignore them. The Governor is not bound to accept them. All that he is bound to do is to consult the High Court.

Mr. Chairman: We will bear in mind what he says.

Shri Ram Sewak Yadav: Besides judges, are there some judicial magistrates still working in Delhi?

Shri K. S. Sidhu: Yes, Sir.

Shri Ram Sewak Yadav: Are they under the control of the administrative officers, *e.g.* the Deputy Commissioner, or are they directly under the control of the High Court?

Shri K. S. Sidhu: This question, in our opinion, is very important. In the definition of the judicial service by the Constitution only district judges and subordinate judges are included; the magistrates are not included. Therefore, the magistrates do not come under the category of rules that we are governed by. They are already under the Delhi Administration.

Shri Mangli Prasad: The specific point of the hon. Member is whether separation of the executive from the judiciary has been effected in Delhi and whether the judicial magistrates are under the High Court or under the Deputy Commissioner.

Shri K. S. Sidhu: There is no separation. The magistrates are under the control of the Administration, that is the Deputy Commissioner. In Punjab the separation is complete.

Shri Ram Sewak Yadav: In U.P. there is separation of the judiciary from the executive; but really it is not so, because judicial magistrates are directly under the control of the Collector.

Shri Mangli Prasad: This Bill is not for making provisions of the kind you suggest. Your case may be a very good, but it is not for this Bill.

Mr. Chairman: We will do what best we can. Who is the President of your association?

Shri K. S. Sidhu: Sardar Jagjit Singh, Secretary, Law Department, Punjab Government.

Mr. Chairman: You have been authorised by him?

Shri K. S. Sidhu: We have been authorised by the general body of the association.

Dr. M. S. Aney: One of the objects mentioned in this Bill is that our Bill should be such as to facilitate the implementation of the scheme for separation of the judiciary from the executive in the Union Territory of Delhi. So in view of that, let us see how far we can meet his suggestion and if possible it must be accepted for this purpose.

Mr. Chairman: I am informed that a separate legislation is being drafted and it will come before the Parliament.

Thank you very much.

(The witnesses then withdrew)

(The Committee then adjourned)

MINUTES OF EVIDENCE GIVEN BEFORE THE SELECT COMMITTEE ON THE DELHI HIGH COURT BILL, 1965.

Friday, the 1st *April,* 1966 *at* 15.00 *hours.*

Shri M. C. Chawla—*Deputy Secretary.*

WITNESSES EXAMINED

District Bar Association, Gurgaon.

Spokesmen:

1. Shri Purshottam Lal, President.
2. Rao Gyasi Ram, Secretary.
3. Rao Prabhu Dayal, Member.
4. Shri Babu Lal, Member.
5. Shri Badri Prasad Gupta, Member.

District Bar Association, Gurgaon.

Spokesmen:

1. Shri Purshottam Lal.
2. Rao Gyasi Ram.
3. Rao Prabhu Dayal.
4. Shri Babu Lal.
5. Shri Badri Prasad Gupta.

(*The witnesses were called in and they took their seats*).

Mr. Chairman: We have just now received your memorandum. Whatever evidence you give will be printed and published and distributed to our members. Even if you want anything to be confidential, it is liable to be printed and given to our members.

Shri Purshottam Lal: Nothing confidential.

Mr. Chairman: You may read your memorandum now. After that if you want to say anything more, you can add.

Shri Purshottam Lal: "The Bar Association, Gurgaon, is emphatically of opinion that a provision be made in the Delhi High Court Act for extending the jurisdiction of the said High Court to Gurgaon District in respect of civil, criminal and allied matters.

Justice at the door is the latest slogan to avoid unnecessary delay in the administration of justice. Justice delayed is justice denied. On account of the Gurgaon District being contiguous to Delhi, the proposed step will lead to curtail expenses of the litigants who have to go all the way to Chandigarh to seek justice in the High Court. It will also give a chance to lawyers of Gurgaon to appear in the Delhi High Court and they can then attend both the local courts and the High Court even on the same day.

Very few lawyers have been elevated to Bench from Haryana Prant for the reasons that the Haryana Lawyers can ill afford to attend the High Court on account of the distance. Ballabgarh Tehsil was previously a part of Delhi District and the Gurgaon District was within the jurisdiction of Commissioner of Delhi. The District Judge of Delhi had been *ex-officio* District Judge of Gurgaon.

It is therefore prayed that in view of Public interest and cheap and speedy justice the jurisdiction of the proposed Delhi High Court may be extended to Gurgaon District even though it may necessitate the amendment of the Constitution.

In case it is not possible, it is worthwhile to drop the Bill itself.

Oral evidence will also be led."

I want to add a few words more. After this memorandum was given, the position has changed a little. We have the declaration that Punjabi Suba is to be carved out of Punjab State. It being so, a Haryana Prant is likely to be established. That being the case, it is more in the interest of the public and its welfare that Haryana as a State as a whole, which is likely to be formed, be included in the jurisdiction of the Delhi High Court; because we don't know what will be the political situation. But if Himachal Pradesh can be within the jurisdiction of Delhi High Court, why not Haryana area? Because, every part of Haryana area is situated at a lesser distance than Himachal Pradesh area. That would be more proper in view of the nearness of the place and cheap and speedy justice. Then we need not amend the Constitution since it is provided in the Constitution that a State can as a State form part of the jurisdiction of another High Court. If

Gurgaon alone is to be amalgamated, then it will be amalgamating part of a State. But if Haryana as a whole is to be included in the jurisdiction of Delhi High Court, it means a State is being included and for that there is no necessity to amend the Constitution. So, that is another point which I wanted to submit because the circumstances have changed since then.

Shri U. M. Trivedi: Now you know that a Haryana State is going to be formed. In view of that, do you still want to adhere to the memorandum that you have submitted or your memorandum goes by the board and now you make only this suggestion that in view of Haryana State being formed, it is better to have the High Court of Delhi to be a High Court for Haryana also?

Shri Purshottam Lal: We wanted that the jurisdiction of the Delhi High Court to be extended to Gurgaon district.

Shri U. M. Trivedi: If Haryana State is to be formed in view of this statement of yours do you still want that High Court of Delhi should have the jurisdiction over Gurgaon or do you want that the High Court of Delhi should have jurisdiction over the whole of the Haryana State?

Shri Purshottam Lal: That is an alternative suggestion.

Shri U. M. Trivedi: Not an alternative suggestion. Supposing Haryana is formed and Haryana gets a High Court. Do you want that Gurgaon should be brought under its jurisdiction? This you do not want. Therefore, your demand is if Haryana State is formed you want that Delhi High Court shall be the High Court of Haryana.

Shri Purshottam Lal: Yes, Sir.

Shri Shiv Charan Gupta: In case the Punjab State is formed and the Haryana Prant is also formed, and it is proposed that the High Court of Punjab should be the High Court of Haryana also in that case would you like the Haryana to be under the jurisdiction of the Punjab High Court or the Delhi High Court.

Shri Purshottam Lal: The High Court of Delhi.

Shri Gajraj Singh Rao: Now according to the Constitution any Union Territory or Union Territories can, with a State, have one High Court. In that case if the High Court is located at Delhi would it be to the convenience of bars of Haryana or the litigants of Haryana or not?

Shri Purshottam Lal: Very, very convenient, Sir.

Shri Gajraj Singh Rao: Is it a fact that previously the Divisional Commissioner before 1912 used to be Divisional Judge?

Shri Purshottam Lal: It is a fact that District Judge of Delhi had been *ex-officio* District Judge of Gurgaon.

Shri Gajraj Singh Rao: And Delhi was the headquarters of the Division and all the so-called Haryana districts were part of this Division and there used to be Commissioner and so also the Divisional Judge and it is a fact that you were with Delhi before 1912 for judicial purpose.

Shri Purshottam Lal: Yes, it is a fact. I may disclose one more fact. This part of Gurgaon was known as Old Delhi and it was after mutiny, I understand, that it was tacked with Punjab as a matter of punishment.

Shri Gajraj Singh Rao: Six districts you have got in Haryana Prant. Will the High Court have sufficient work and good number of judges? Along with Delhi they can have good number of judges. Am I correct or not that there can be dispensation of justice very speedily?

District Bar Association, Gurgaon.

Spokesmen:

1. Shri Purshottam Lal.
2. Rao Gyasi Ram.
3. Rao Prabhu Dayal.
4. Shri Babu Lal.
5. Shri Badri Prasad Gupta.

(*The witnesses were called in and they took their seats*).

Mr. Chairman: We have just now received your memorandum. Whatever evidence you give will be printed and published and distributed to our members. Even if you want anything to be confidential, it is liable to be printed and given to our members.

Shri Purshottam Lal: Nothing confidential.

Mr. Chairman: You may read your memorandum now. After that if you want to say anything more, you can add.

Shri Purshottam Lal: "The Bar Association, Gurgaon, is emphatically of opinion that a provision be made in the Delhi High Court Act for extending the jurisdiction of the said High Court to Gurgaon District in respect of civil, criminal and allied matters.

Justice at the door is the latest slogan to avoid unnecessary delay in the administration of justice. Justice delayed is justice denied. On account of the Gurgaon District being contiguous to Delhi, the proposed step will lead to curtail expenses of the litigants who have to go all the way to Chandigarh to seek justice in the High Court. It will also give a chance to lawyers of Gurgaon to appear in the Delhi High Court and they can then attend both the local courts and the High Court even on the same day.

Very few lawyers have been elevated to Bench from Haryana Prant for the reasons that the Haryana Lawyers can ill afford to attend the High Court on account of the distance. Ballabgarh Tehsil was previously a part of Delhi District and the Gurgaon District was within the jurisdiction of Commissioner of Delhi. The District Judge of Delhi had been *ex-officio* District Judge of Gurgaon.

It is therefore prayed that in view of Public interest and cheap and speedy justice the jurisdiction of the proposed Delhi High Court may be extended to Gurgaon District even though it may necessitate the amendment of the Constitution.

In case it is not possible, it is worthwhile to drop the Bill itself.

Oral evidence will also be led."

I want to add a few words more. After this memorandum was given, the position has changed a little. We have the declaration that Punjabi Suba is to be carved out of Punjab State. It being so, a Haryana Prant is likely to be established. That being the case, it is more in the interest of the public and its welfare that Haryana as a State as a whole, which is likely to be formed, be included in the jurisdiction of the Delhi High Court; because we don't know what will be the political situation. But if Himachal Pradesh can be within the jurisdiction of Delhi High Court, why not Haryana area? Because, every part of Haryana area is situated at a lesser distance than Himachal Pradesh area. That would be more proper in view of the nearness of the place and cheap and speedy justice. Then we need not amend the Constitution since it is provided in the Constitution that a State can as a State form part of the jurisdiction of another High Court. If

Gurgaon alone is to be amalgamated, then it will be amalgamating part of a State. But if Haryana as a whole is to be included in the jurisdiction of Delhi High Court, it means a State is being included and for that there is no necessity to amend the Constitution. So, that is another point which I wanted to submit because the circumstances have changed since then.

Shri U. M. Trivedi: Now you know that a Haryana State is going to be formed. In view of that, do you still want to adhere to the memorandum that you have submitted or your memorandum goes by the board and now you make only this suggestion that in view of Haryana State being formed, it is better to have the High Court of Delhi to be a High Court for Haryana also?

Shri Purshottam Lal: We wanted that the jurisdiction of the Delhi High Court to be extended to Gurgaon district.

Shri U. M. Trivedi: If Haryana State is to be formed in view of this statement of yours do you still want that High Court of Delhi should have the jurisdiction over Gurgaon or do you want that the High Court of Delhi should have jurisdiction over the whole of the Haryana State?

Shri Purshottam Lal: That is an alternative suggestion.

Shri U. M. Trivedi: Not an alternative suggestion. Supposing Haryana is formed and Haryana gets a High Court. Do you want that Gurgaon should be brought under its jurisdiction? This you do not want. Therefore, your demand is if Haryana State is formed you want that Delhi High Court shall be the High Court of Haryana.

Shri Purshottam Lal: Yes, Sir.

Shri Shiv Charan Gupta: In case the Punjab State is formed and the Haryana Prant is also formed, and it is proposed that the High Court of Punjab should be the High Court of Haryana also in that case would you like the Haryana to be under the jurisdiction of the Punjab High Court or the Delhi High Court.

Shri Purshottam Lal: The High Court of Delhi.

Shri Gajraj Singh Rao: Now according to the Constitution any Union Territory or Union Territories can, with a State, have one High Court. In that case if the High Court is located at Delhi would it be to the convenience of bars of Haryana or the litigants of Haryana or not?

Shri Purshottam Lal: Very, very convenient, Sir.

Shri Gajraj Singh Rao: Is it a fact that previously the Divisional Commissioner before 1912 used to be Divisional Judge?

Shri Purshottam Lal: It is a fact that District Judge of Delhi had been *ex-officio* District Judge of Gurgaon.

Shri Gajraj Singh Rao: And Delhi was the headquarters of the Division and all the so-called Haryana districts were part of this Division and there used to be Commissioner and so also the Divisional Judge and it is a fact that you were with Delhi before 1912 for judicial purpose.

Shri Purshottam Lal: Yes, it is a fact. I may disclose one more fact. This part of Gurgaon was known as Old Delhi and it was after mutiny, I understand, that it was tacked with Punjab as a matter of punishment.

Shri Gajraj Singh Rao: Six districts you have got in Haryana Prant. Will the High Court have sufficient work and good number of judges? Along with Delhi they can have good number of judges. Am I correct or not that there can be dispensation of justice very speedily?

Shri Purshottam Lal: Certainly, Sir. One more fact I would submit. Suppose Delhi High Court is established and without any more territory where are judges to be transferred because for an efficient administration of justice transfer is the first thing which is to be kept in view. A judge working at Delhi where will he be transferred in case it is found that his work is not satisfactory? So the question of transfer is also very material.

Shri Gajraj Singh Rao: The maximum distance, is it correct or not, from Delhi to any part of Haryana is about 60 miles.

Mr. Chairman: Anything more. This we can discuss among ourselves.

Sardar Kapur Singh: Have I understood you correctly that before the decision was taken to demarcate a Punjabi Suba and now that decision has been taken your position remains unchanged that you are not very happy to be attached with Chandigarh High Court and that you would like to be attached to Delhi High Court or to have a High Court of your own in Haryana Prant?

Shri Purshottam Lal: Haryana State will be a very small State and it would not be feasible to have a separate High Court in Haryana. We would therefore like to be attached with the High Court of Delhi.

Sardar Kapur Singh: Do I understand your position correctly when I say that if there is a proposal for the Delhi High Court or if the decision to carve out the Punjabi Suba is implemented—in either case, you are reluctant to stay as part of the judicial paraphernalia which is in Chandigarh?

Shri Purshottam Lal: That is the position.

Shri Bakar Ali Mirza: Why?

Shri Purshottam Lal: There are so many circumstances.

Shri Vidya Charan Shukla: There is no quarrel with Chandigarh. The reference is to the Punjab High Court.

Shri Purshottam Lal: We are here for the welfare of the people and the welfare of the people demands that we should be attached with Delhi High Court. It is in the interest of the public.

Shri Bakar Ali Mirza: After all judiciary is the same. Judges are appointed by the Chief Judges and the Government. The system of judiciary is the same here or there.

Shri Purshottam Lal: There is no question of judicial system. We have to go to Chandigarh, where the Punjab High Court is situated, *via* Delhi. There is no other route or any other conveyance. We have got to pass through Delhi. And Delhi is only eighteen miles from Gurgaon. Instead of that why should we travel one hundred and eighty miles to Chandigarh? Why should we not get justice at Delhi? Why should we first come to Delhi and go to Chandigarh by Kalka Mail or so which is always overcrowded?

Mr. Chairman: Thank you.

(The witnesses then withdrew)

SELECT COMMITTEE ON THE SEEDS BILL, 1964.

MINUTES OF EVIDENCE GIVEN BEFORE THE COMMITTEE

Monday, the 4th July, 1966 *at* 10·00 *hours*

PRESENT

Shri S. C. Samanta—*Chairman*

MEMBERS

2. Shri Maganti Ankineedu
3. Shri Brij Raj Singh
4. Shrimati Jyotsna Chanda
5. Shri N. T. Das
6. Shri M. L. Dwivedi
7. Shri Gajraj Singh Rao
8. Shri Badshah Gupta
9. Shri Hari Vishnu Kamath
10. Shri Kisan Veer
11. Shri Jiyalal Mandal
12. Shrimati Shashank Manjari
13. Shri Mohan Nayak
14. Shri S. K. Paramasivan
15. Shri Deorao S. Patil
16. Shri Pratap Singh
17. Shri H. C. Linga Reddy
18. Dr. Sarojini Mahishi
19. Shrimati Shakuntala Devi
20. Shri Annasaheb Shinde
21. Shri Sivamurthi Swami
22. Shri C. Subramaniam
23. Shri Sarjoo Pandey

Shri S. D. Mishra, Deputy Minister in the Ministry of Food, Agriculture, Community Development & Cooperation was also present.

DRAFTSMAN

Shri S. Harihara Iyer, *Deputy Draftsman, Ministry of Law.*

REPRESENTATIVES OF THE MINISTRY

1. Shri I. J. Naidu, *Joint Secretary, Ministry of Food, Agriculture, Community Development & Cooperation.*

2. Shri Hit Prakash, *Deputy Commissioner (Seeds Development), Ministry of Food, Agriculture, Community Development & Cooperation.*

SECRETARIAT

Shri M. C. Chawla—*Deputy Secretary.*

WITNESSES EXAMINED

I. All India Seed Growers, Merchants and Nurserymen Association, Madras.

(1) Shri V. N. Palekar, President.

(2) Shri L. C. Thirumalachari, Secretary-Treasurer.

II. Shri G. A. Patel, Director of Agriculture, Government of Gujarat, Ahmedabad.

I. All India Seed Growers, Merchants and Nurserymen Association, Madras.

1. Shri V. N. Palekar, President.
2. Shri L. C. Thirumalachari, Secretary-Treasurer.

(The witnesses were called in and they took their seats).

Mr. Chairman: I want to make it clear in the beginning itself that under the Directions of the Speaker your evidence shall be treated as public and is liable to be published unless you specifically desire that all or any part of the evidence tendered by you is to be treated confidential. Even if it is to be treated as confidential, it is liable to be made available to the Members of Parliament.

Copies of your memorandum and the further explanation have been circulated to the members of the Committee. If you want to add any new points or emphasize some particular points, you may do so. Otherwise, members will ask questions.

Shri V. N. Palekar: Mr. Chairman, I would have very much liked to speak in Hindi but, I am afraid, I will commit many mistakes. So, with your permission, I will speak in English.

In the beginning itself let me assure you on behalf of our Association that we will give the fullest support to any measure which will be in the interests of either agriculture or horticulture. In our opinion, the present Minister has put in much more dynamism than any of his predecessors in his work. We want to extend our co-operation to him in his work. However, our Association feels that if we hurry less, we will progress more.

For instance, what we have been suggesting for the last twenty years is that we should have a very sound base before we build up the superstructure. Hon. Members will remember that until the last world war we used to import all seeds of temperate types of vegetables from abroad. During the war it had to be stopped because the exporting countries, particularly, Netherlands, could not export any more. At that time, the ICAR lead by Shri Feroze Karghat, ICS, initiated a scheme to produce seeds in India. That was in 1943 or 1944. Perhaps hon. Members do not know that most of the seeds which we used to import were not really produced in the countries from which they were exported. They were simply putting their seal on things produced in other countries. This was made possible because of the mentality or craze of Indian people for goods made in England, America, Germany or Japan in preference to goods made in India. So, Shri Feroze Karghat wanted to produce these seeds in India, especially because we have the climate suitable for these seeds in certain parts of our country. Till then the seeds of foreign type of vegetables like cabbage,

cauliflower or carrot etc. were not produced in India. So, we selected some areas in Kashmir, Quetta, Kulu, Darjeeling and the Nilgiris for the growing of these seeds. From the harvesting point of view because of heavy rains in Darjeeling, Kalimpong and Nilgiris, only Kashmir and Quetta were supposed to be the best places. Some of us did not like Quetta for the simple reason that we at that time felt that Kashmir was much nearer to us than Quetta. Anyhow, some scheme was initiated by the ICAR and certain rules and regulations were framed to be followed by the State of Kashmir and the Province of Quetta for growing seeds. Unfortunately, because of various developments—we need not discuss whose fault it was—the scheme did not make any progress.

At that time, even though there was no association, some of our trade people also took the initiative to grow seeds on a small scale. Those seeds were even exported and reports from foreign countries showed that Indian seeds were definitely superior to foreign seeds. When the Government came to know about it, they wanted to have a proper scheme for the regulation of this trade. It was decided, on the initiative of our association, that a research station should be established for producing nucleus seeds. So, the Government of India decided on Kulu and Katrain for producing nucleus seeds. Here I must admit that our Association could not function effectively because of internal quarrels and jealousies.

On the other hand, I should say mildly, the Government made a blunder. The main object was to produce nucleus seeds and then give them to the cultivators for multiplication; instead of that, somebody here from the Ministry—I think, it was the Ministry of Education and Lands in those days—thought that they should also trade in seeds so that the original object of growing nucleus seeds was left aside. Unfortunately, that nucleus seed was given to some farmers far away in Manali and distant places. Some of the refugees from Quetta, when they came over here after 1947, tried to get hold of that particular seed so that the whole effort of Government and also of the private trade was spoilt by this sort of thing.

Anyway, after so many ups and downs, now we feel that there is a lot of co-operation between Government officers, particularly on the research side, and trade. We do feel that there should be some sort of rules and regulations but we humbly suggest that before a Seed Bill is actually passed into a Seed Act, we should form a sort of a base.

There are certain essential things which are done in foreign countries. Take the Netherlands for instance. The biggest exporting countries have got no such legislation so far, but what they have done is that they have established—initially the trade had established and ultimately the whole thing was co-ordinated between the trade and the Government —what they call, N.A.K.G. and N.A.K.B. Services. They had divided the subjects first into agricultural seeds and horticultural seeds and then under horticultural seeds had subdivided them into some other seeds. Then, there are some other subjects for plant material. They built up certain services and after building up certain services and establishing a sort of uniform standard, now they are thinking of legislation.

I humbly submit that we should follow the same method because once a Seed Bill is passed into an Act, it is very difficult to amend it. Secondly, as far as we know, there is no legislation on farms; there is no farm inspection service; there is no plant protection service—nothing is there. So, what is the idea of passing a Seed Bill into an Act before there are any of these services? In foreign countries every export is accompanied by, what is called, a phytosanitary certificate. That means that

the seed is of a certain quality and is free from pests and diseases. We have no such service here. Suppose, we want to export tomorrow. What will be the basis of that export? There should be some sort of a service which will certify that the seed is good.

So, what I would suggest is to leave it to voluntary organisations, like the All India Association or to whomsoever you trust. Let us organise the thing. We are prepared to co-operate fully with the Government particularly with the Government scientists because we are very very proud of our scientists. Those scientists have done remarkably well and they are the envy of foreign nations also.

Then, there is one particular thing over which there has been so much trouble. We have been alleged of doing blackmarketing. On the other hand, we have to point out that some of the Government's own organisations are blackmarketing. I say this with due respect to the Government people who might be present here---I do not know if they are present here. We are trying to create certain discipline in the trade and I may say that the present Government officers for the last four or five years have been prepared to co-operate with us. We know fully well that if we really take up this work, we can get the work done much more quickly than any number of Bills that are passed into Acts because, with all due respect to you, there will always be loopholes in them. Secondly, as you know, the main object of the Bill will be frustrated.

Here I will tell you how difficult it is to certify certain seeds. In America there is supposed to be only one lady who will be able to distinguish between a cabbage seed and a cauliflower seed. It is a very technical thing. Suppose, you pass this Bill and the Government appoints a certifying officer. He will say that a particular seed is not a cabbage seed even though it may be a cabbage seed. So, unless we have a trained cadre of officers, to pass a Bill at this stage will more or less be a theoretical affair.

I would respectfully submit that we should first start with rules and regulations. Then, we should have a sort of an inspection service and a plant protection service. On the top of it we should have propaganda, particularly as the Government is the biggest buyer now. I would request the Government to support the Indian claim rather than put in in their tenders "Indian as well as foreign". They know fully well that foreign things are not available and even supposing they are available, I would request the Government to support our industries first. I hang down my head in shame when I see this. I am really pained to see that some Government officers even proudly display foreign things. We feel all these things and then day in and day out we are told that we are naughty boys. Some of us may be naughty and some of us may be too naughty, but definitely all of us are not naughty. The ISI lays down standards and when those standards are laid down why should Government departments not follow them? We are prepared to follow them. Every time they want implements, for example, they would want foreign implements. Wherefrom to get foreign implements these days? Are we going to smuggle them? What are we to do?

So, what I would suggest is that first we should have rules and regulations. I can assure you, on behalf of all the interests I represent, that we will support the Government if they do these things on these lines. I am sure that if the Seeds Bill is passed as it exists now, there will be too many clashes and too many conflicts, unfortunately. It is the interest of the country that will suffer. Whatever may be your scientific theories, you have got to get the work done

To stop the import of seeds you have got to do this and the sooner you do this the better it will be for all of us.

Shri L. C. Thirumalachari: Mr. Chairman and gentlemen, I have just to supplement what my friend has said just now. His plea has been that basically the Seeds Bill is inopportune at the present moment; so, it is worth-while postponing it, bringing into being the voluntary certification scheme and other services. But if it is still felt that the Bill is to be passed into an Act, there are certain improvements that could be effected into the body of the Bill. They find a place in the memorandum that I have submitted already. An explanation thereof I have also circulated today. I will just explain that and if still any doubt is felt, I am here to explain how we feel on the subject.

I classify these into two categories. One is "General" and the other is "Clause-by-clause." In General I have stated the important functions. A major part of the working of the provisions of this Bill is entrusted to a Seed Committee which is composed, except by a couple of non-officials, of various executives of the Government and even those non-officials are to be nominated by the Government out of their free will.

Further the entire administration of the Act is entrusted to the State Executive such as licensing, certification, etc., and the basis for their action is being formulated by the Seed Committee which is again virtually a channel of the executive. Hence, if the composition of the Seed Committee is statutorily meant to contain more of independent non-officials, that might make matters better. In this case I would also submit that in working this, it has been sought to place the services of a row of certification officers who are from the lower rung of the ladder and unfortunately we fear that in seeds, as such, there are not sufficiently trained people to execute these plans and unfortunately we need hundreds and hundreds of such people within the country to take charge as licensing authority after it is notified according to this Bill. So here it is better that some experienced non-official is grafted into this Seed Committee.

Secondly, I have stated that whereas this Bill provides more for the physical quality of the seeds it covers very little about the intrinsic worth of the seeds. A casual study of the Bill will show that more stress has been laid on the germination powers of the seed and all those powers pertain to physical quality and except in a very minor way,—one or two—stress has not been placed on the intrinsic worth of the seed which they are made to supply. If, for instance, the distributor takes care to see that the physical quality of the seed is all right, if it germinates all right, then it goes to the cultivator. Unfortunately, if instead of giving some crop it gives different crop it makes a lot of difference. The ultimate cultivator will lose. So I submit that due care has not been taken to see that the intrinsic worth of the seed is fully taken into consideration in this Bill. In this connection if you please go through the Jammu and Kashmir Seed Act which was passed a decade ago but which came into being only a few years ago there are certain sections: section (3) regulates the sowing of the vegetable seeds of standard quality giving various qualifications for the various varieties; section (5) prescribes the grower to follow certain methods of cultivation. These steps are taken to ensure the quality. These are not contemplated in the present Bill whereas sufficient precaution is taken to ensure the physical quality of the seeds.

The major lacuna which we feel is that it is most anomalous that the producers who supply the seed materials for distribution to the retailer are exempted from the purview of this Bill. Unfortunately, it is not always possible for the seed producer to sell his own seed rather for the

distributor to produce his own seeds for sale. In foreign advanced countries there is a big category of mere seed producers and a similar category of retailers and they are complementary. So if, for instance, it is followed here, that is, if the producer is exempted from the purview of this Bill, two things will arise. The producer may produce any trash and the distributor has to depend on the producer and he will distribute those things alone. According to this Bill, if passed into an Act, a seed may qualify for being good physically and theoretically but it will be bad in the ultimate end. In this connection it may also be said that the small producer should not be hit hard. But, of course, whomsoever it is, if the ultimate interest of the cultivator is dearest to the heart of the legislators, it should be seen that the producer, once he becomes a seller, should be subjected to the same provisions of this Bill as other dealers are. Hence we submit that the producers should not be exempted so long as they offer to sell any part of their produce which they grow.

It has been a sad experience that inter-State movement has been hampered by certain States in India. Luckily we have got very fine climate conditions in India which no other country in the world can boast of. You have got the hottest and the coldest regions in the country and you can produce from A to Z any kind of seed. So, certain seeds are salubrious to be produced in certain areas and it is absolutely necessary that there should be free inter-State movement which is in the interest of the country as a whole. It is out of sheer experience I am putting these facts before you. States have got full power to restrict inter-State movement of seeds. Hence our plea has been to centralise the seed legislation so that peculiar attitudes of some States may not hamper the free movement of seeds from certain specialised growing areas to other States. Luckily the Central Government has taken up this legislation. However, a proviso in this Bill is absolutely necessary whereby free inter-State movement of all kinds of seeds is made possible as provided for in the Federal Bill of the U.S.

There is one more point, that is, our awareness of the scientific side of the seed production of certain items. There should be necessary isolation distances to prevent contamination in the cross-pollinating varieties if one is expected to produce pure uncontaminated seeds for distribution. Provision is not particularly made in the Bill to protect crops from such contamination from neighbouring contaminable crops as it specifically provided for in Section (3), sub-section (5) of the J. and K. Seed Act. Similarly a provision in this Bill has to be made to protect pure crops from contamination. Unless a specific provision is made in this Bill that the Government is empowered to prohibit growing contaminable crop within the vicinity of registered seed crop, the actual crop will be contaminated and the country will be very much handicapped. The producer will unfortunately have to distribute something bad to the actual cultivator. These are the broad general comments, which our Association is just making.

As regards the specific clauses, our Association has submitted that under Section (1) Sub-section (2), Jammu & Kashmir is beyond the pale of this Bill. I may state that the majority of the—rather most of the—temperate type of vegetables which form the majority of the vegetables produced in this country, emanate from Jammu & Kashmir and I hope a Study Group had gone there and studied the Jammu & Kashmir Seed Production Centre, which is a major centre for the whole of India and the entire country is dependent on them. Jammu & Kashmir has got a Seed Act of course, but certain clauses there are very very lenient and the standards far far below the international standards and the standards which even our Indian Standards Institute has fixed and which possibly our Seed Committee, envisaged in this Act, will adopt.

nothing short of it will be fair to be adopted. Unfortunately, for instance, take carrots. The minimum germination power that might be adopted by our Bill will be about 60 per cent. Perhaps, the minimum is only 50 per cent. in Jammu & Kashmir and the Jammu & Kashmir growers are at liberty within their limits to supply seeds with 50 per cent germination power and according to our law it may be necessary to have 60 per cent. whereas international standard is 70 per cent. Supposing we are only to get from that area and no other area seeds having 50 per cent. and we allow to our distributors not less than 60 per cent., how is it possible unless we control even Jammu & Kashmir. I think, a major part of the seed distribution will be affected and I wish Jammu & Kashmir is also brought under the purview of this legislation.

Section (2) *Sub-Section* (17)—*Clauses* (*i*) *to* (*iii*):

It is another moot point. Unfortunately, in this definition of seed, seeds are supposed to include fruit seedlings and vegetatively propogated fruit plants. Literally, for instance, if these two things are substituted *i.e.* fruit seedlings and vegetatively propogated fruit plants in sections 7, 15, 16, 17, 18, 19, 20 and 21, that will rather read a little absurdly, because analysis of seeds may not mean analysis of plants or vegetarian propogated fruit plants. Germination is spoken of in these sections and if the seed is substituted for these things, there is no germination in plants, in vegetatively propagated plants or seedings. So they are incongruent. Secondly, I do not think anywhere in any part of the world you have got a plant legislation of that kind. Only recently in the U.K. they have passed one Plant Breeders Rights Law and a little before in Holland and Denmark, they had a similar legislation. In America there is no such legislation on plants. Unfortunately, according to this definition, even plants are brought within the purview of this legislation which is not fair. I wish that the fruit seedlings and the vegetatively propagated fruit plants be excluded from this definition so that those evidently conflicting meanings may not arise and also the legislation may be confined only to the seeds.

Section (3) *Sub-Section* (2) *clause* (*iii*):

According to this sub-section, a Seed Committee is supposed to do the whole thing, according to this Bill. Here there are various representations given to various bodies and one of them is the National Seeds Corporation which came into existence some years ago. It is a trading body. Originally it was meant to be a producing body, but now it has turned into a trading body similar to those we represent here. If a statutory representation is given to such a trading body, it is but fair that our Association which is in the existence for a long time, rather the only representative Association of seed growers and whose membership controls almost the majority of the distribution of seeds in the country—numbers do not count but the majority of the seeds distributed in the country are passed through our members—may be given statutorily its place in that Seed Committee.

In Section (3) sub-Section (3), the term of the membership of the Seed Committee is limited to one year. I wonder if this will be very useful. because by the time each member comes to know about the intricacies of the working of this Act, he will be out and the next man possibly will take some time to study it and the consecutiveness will break. Of course, in the last category you have rotation being given to several States, for which if the length of the tenure is prolonged, that will hit hard several States. You can limit for that particular category the term as one year and for others, three years, if it is possible.

Section (9) *Sub-section* (1) *clause* (*b*):

Here in a particular kind, there may be only certain varieties which in the opinion of the Government are fit to

be sold. That will be very hard, because, firstly, it may not be suitable to that particular area and there will be areas in which there are other varities which will be more suited and more beneficial also. If this is pressed, it will work hardship to the actual cultivators.

Section 12 *Sub-section* (3):

We know, in practice, if the certification is applied, it takes even 6 months or even 9 months for somebody to just take into consideration that thing. If a crop certification is applied for, by 6 months the whole crop will be harvested. If the certificate is delayed, the whole crop is unfit to be sold. Hence a limitation to the certification process, if imposed, would be beneficial, for instance a period of 20 days or 30 days, or some such thing, may be laid down.

According to this Act samples are meant to be taken from seeds that are distributed and after they are in the hands of the purchaser. That will work the greatest hardship to the distributor, because once it reaches the hands of the purchaser, anything may happen to it. He is not sure that what he has distributed is exactly in his hands and if that sample is going to be taken by the Government and analysed or tested, the reality may not be there. In no part of the world such a clause is there. Either if it is in the custody of the distributor or in the process of transfer to the distributor, then only it should be allowed to be tampered by the Government and taken samples thereof. It will be fair even here to limit to that position and not to take samples when actually the seeds reach the hands of the purchaser or the cultivator, whoever it is.

Under Sec. 17(3), samples are to be taken from any place. Of course, there are some qualifications. Here the proviso should be so amended as to apply only to the owner or his duly accredited representative in charge of sales in the premises, if he refuses to open and not a third party or a servant refusing to open the door. Suppose a servant refuses to open. Then if you take the owner to task, that will be a little hard.

Section 22 deals with the punishment to be given. Imprisonment is never prescribed if the act is not intentional. Of course, punishment should be there to strictly see that things are observed fully. But it is quite possible that sometimes inadvertence may creep in, in which case imprisonment is never prescribed even in U.K. and U.S. Acts. If the intention is proved, then only imprisonment is prescribed. So, imprisonment may be removed from the punishment clause here.

About the next item, Section 25, I wonder if it will be accepted in the spirit in which it is given. In practice, if some people of the lower rung or certifying inspection agencies, who are corrupt nowadays—this may be known to Hon'ble Members—take some action against some honest men and if it is proved that that is immune from any action, they are at liberty to take any action against any distributor and do it with impunity. If as a sort of check, a small punishment is given for the malicious persecution on the part of Government servants, that will limit the *mala fide* action of some of the inspection and other agencies.

So, these, I submit, are the possible changes to the Bill that we suggest, if it is found that the Bill is at all necessary. As my colleague has already said, the Bill itself is premature and too early, unless the ground is cleared and a set of experts are brought into being and the voluntary certification is brought into force, when you will develop a set of people who will inspect and certify and who would get qualified. Also in our agricultural service, there is a dearth of experts and you have in the highest category here administrators in the post of experts. So in such a dearth, if this Bill also comes into force as an Act, you will have a set of people who don't know anything about certification or about qualification or the purity and

all those things about seeds and if they are given the power to do all those things, it will work very great hardship not only to the distributors but to the public at large. So our association submits that it is too premature and that the Bill may be postponed for a long time. Meanwhile a voluntary certification scheme may be brought forth and the Government people may be instructed to consume only such certified seeds. If the Government prefers only such certified things, definitely everyone will run into the voluntary certification scheme, which will unofficially bring into the forefront a fine scheme which will prove a good ground for such a legislation to come in at a later period.

Mr. Chairman: The witnesses have given their views and have also given long comments on them. Now I would request any Hon'ble Members who want further clarifications to put questions.

Shri M. L. Dwivedi: You have mentioned in your memorandum that Jammu and Kashmir be included within the purview of the Bill. You have also said that a lot of seeds emanate from Jammu and Kashmir and, therefore, it is necessary. Now do you say these are the only reasons why Jammu and Kashmir should be included within the purview of the Bill, and whether it is necessary for the committee to visit the seed farms there and if so, what will be the special advantage in doing so?

Shri V. N. Palekar: I will explain why I insist on Jammu and Kashmir being included. Constitutionally it may not be possible. But it is likely some way will be found out; if the Seed Bill is passed here, the same Seed Bill can be enacted in Jammu and Kashmir. Now our emphasis on Jammu and Kashmir is only for one reason. As I told you, the major portion of the different types of vegetable seeds used to be imported. During the war, when that was stopped, the only source of seeds was Jammu and Kashmir where the Government and the trade took up the multiplication work. Now the question will be asked "why Jammu and Kashmir". The whole point is that there are certain seeds which can be raised only at a certain altitude, *e.g.* the Brassaica types cauliflower, etc. Such varieties can be raised only at a particular altitude. They require a particular type of climate. They require some sort of a snowy climate. Now in the hills, there are certain places where also such climate exists. But the most essential point is that at the time of harvest of seeds, there should be no rain and no possibility of rain. Most of these seeds generally ripen and are harvested sometime in July-August. That is just the time when you get rains in the Nilgiris and Kalimpong. Even in Kulu, the rains start earlier.

The second thing is that they require a certain day-light period. In Jammu and Kashmir you get that day-light period and there the weather is also ideal—no excessive heat and no excessive coldness. So from all points of view, that is the only place where certain types of vegetable seeds can be grown most economically and I can assure all the Hon'ble Members present here that if the thing is properly done as it was done in the pre-war days, these seeds can beat the foreign seeds not only in quality but also in price. I can assure you that they will be absolutely up to the international standard.

Now I will give you one example to show that what we suggest is much more constructive than what the Bill suggests. We are proud that we have one variety of cauliflower known as Early Patna. Now during the British days it was obvious that nobody would encourage that sort of thing. But even after Independence, our people have not cared to look after that variety and unfortunately that variety has gone to Japan. From Japan it has gone to Israel. Israel has improved on that and they call it 60 days. The source was India, and though I have been urging Government for the last two or three years to concentrate on it, nothing has been done. The trade

is willing to co-operate with Government, and we expect co-operation from the other side.

Similarly, by exporting orchids we can earn lakhs of foreign exchange, and yet we are after the export of bananas which are required by the common man. Orchid flowers are sold as cut flowers here for Rs. 1.50 whereas each cost five dollars in America.

I would suggest Members of the Committee visiting Jammu and Kashmir for definite types of vegetables sometime in October-November; Faizabad, Jaunpur, Banaras and Bareilly in U.P.; where cauliflower seeds are grown; Hajipur in Bihar which can easily compete with Israel; Bamania in Madhya Pradesh where they have started Pusa Savani Bindi; Pacha in Gujarat and Jalna in Maharashtra.

There is a lot of confusion about this word certificate. What I find in the Bill is different from what it is in America. Supposing a farm sells seeds of Tomato Marglobe variety; there is no objection provided the seed is all right. But it can also ask the Government people to visit the farm and certify the purity of the strain. When they do so, that would be called a certified crop. If I sell certified seeds, that means that the Government scientists treat that variety as a better variety, more pure and more desirable.

You must be having some witnesses from the States. I am sure there are States which feel that this is a little early, and there will be too much confusion if this Bill is passed immediately. At some of our regional conferences certain opinions have been expressed and ultimately it boils down to this that both the Government and the trade should realise that they have to work together. Our Association is ready to co-operate with Government but not in the proposed way.

Shri M. L. Dwivedi: It has come to light that there are certain seed growers who have got limited capacity of producing seeds but they are selling much larger quantities.

Shri L. C. Thirumalachari: That is why we request you to visit Kashmir. A sort of Seed Act is in force there, but it is enforced more in the breach than in observance. A man who produces only 500 kilos exports 5,000 kilos. That is the system of certification in vogue there. That is why we want all-India control so that these areas may be required to be more careful and rigid.

Shri H. C. Linga Reddy: In one breath he says it should be postponed. In another breath he says it is necessary. May I know the reason he assigns for not bringing the Bill in the present form, and if he feels it can be brought, what is the way in which it can be brought?

Shri L. C. Thirumalachari: Our submission is that we do not want a Bill to be passed at all. We want a voluntary system of certification agencies brought into being by the existing powers of the Government, by which those who submit to it will be given all facilities. If that is brought into being this Act is absolutely unnecessary at present. When the whole thing is clear then it would be appropriate that a Bill of this sort may be brought into being.

Shri H. C. Linga Reddy: That may also mean control of seeds.

Shri L. C. Thirumalachari: It is not statutory control. You certify a certain thing as good, and if you insist that Government purchases or prefers to purchase only such good things, normally every producer will run for certification and there will be voluntary participation of that service which is meant to be forced now. Little by little, that will be growing and by and by you will be getting into service, people who are trained in this particular aspect, such as examination and other things, which are not taught ordinarily in colleges. That is a specialised thing which they can learn and in the course of years you will

get a large number of such qualified people. At that time, if you get this kind of Bill, then you will be in a position to control the entire thing successfully.

Shri H. C. Linga Reddy: You have not given reasons for not having this Bill.

Shri V. N. Palekar: I will give you an instance which will illustrate it better. When the ICAR framed certain rules and regulations and Kashmir was supposed to follow, that was done on a Government to Government basis. There were certain members who started doing this. The seed was wanted and it was supposed to be dumped in the Government godowns. I was one of the people who, in spite of the Defence of India Rules, told the Chairman of the ICAR that I refused to give the seeds. I jotted down the reasons. He appointed an officer and found out that every reason of mine was right. Not as a private trader on a big scale but even as a small man, I must say that I have Indian interests at the back of my heart. I think I can say that even after the war I was going to continue the work. In the case of the Government it is not like that. Government would have the authority to import again. We as Indians thought that we could compete with the foreigners in spite of the absence of any tariff protection. So, according to the Government rules, in Srinagar and Quetta, they grew these things; they registered farms. They were supposed to have certain ideologies. For instance, what did they do? They had registered certain farms. What I did was, supposing there were four varieties, I asked my men to grow them in an order; if one farm is located in a certain place, the next will be just two miles away. Automatically, they got isolated. It was the Government which followed our system rather than our following the Government system. What I am suggesting is that by mutual co-operation, we could do this voluntarily and much more quickly, than having these rules and files and increasing the number of forms and formalities, etc. What I would urge before the Government is, we are prepared to organise the farms and grow crops, but provide us with the technical knowhow and assistance. Let there be a small committee appointed for this purpose. We will go and accompany them; three or four at a time go and see the crops at the proper time; let some assistance come. One group may see the crop; the second group may come at the time of the harvest; and so on. All these can be easily done rather than making the whole thing a compulsory affair. The only point is, we have to get rid of our inferiority complex. The moment we think that our seed is all right and that it is of international standards, you will see that there will be absolutely no trouble at all. I have been doing this for the last 20 years in Kashmir.

Consistently, the ICAR people have been asking me as to how I succeeded in Kashmir when they failed. I gave them instances as to how I proceeded with the work. I have sent the samples of these seeds to them, and to countries like Holland which is one of the biggest seed-producing countries and also to Australia. It was a doctor, who asked me how I did it; I have before me letters from foreign countries. They had written to me that those seeds were better than their own. This is only an illustration as to how private people can do this in co-operation with the Government, rather than Government themselves by legislation. Personally I feel that the Seed Bill should come in afterwards, when we have all the services. Excuse me if I am a little frank.

Shri H. C. Linga Reddy: In your explanatory memorandum at page 4, you have said that a proviso should be added to the relevant clause, to exclude from the meaning of seed, fruit seedlings and vegetatively propagated fruit plant. But from the definition of seed given at page 2 of the Bill, it includes seedlings, and tubers bulbs rhizomes, roots, cuttings and other vegetatively propagated material, of food crops or cattle fodder. If these two things are excluded, will not the Bill become

narrow in its scope, or, is not necessary that you should have both these categories also? I mean the vegetatively propagated material and cuttings also, so that it may be fully comprehensive.

Shri L. C. Thirumalachari: What is meant in the Bill is seeds as such.

Shri H. C. Linga Reddy: It includes tubers and cuttings.

Shri L. C. Thirumalachari: I do not want to get them in this Bill, within its purview. I want only seeds as such.

Shri H. C. Linga Reddy: According to the definition in the Bill, it should include seedlings a so.

Shri L. C. Thirumalachari: Seedlings and vegetatively propagated fruit plant. That is a different thing altogether. That comes in nursery stock. I do not want to delete them. I say that a proviso may be added to exclude them so that the whole thing may be there; that is to say, tomato is sold even as a seedling. The Act should also apply to that.

Shri H. C. Linga Reddy: By exclusion of these items, how can the whole thing may be there?

Shri L. C. Thirumalachari: That category of plants may be excluded.

Shri Shyam Dhar Mishra: Are you thinking of another Bill for these vegetables, nurseries, etc., or, are you thinking that there may be no Bill at all?

Shri L. C. Thirumalachari: No Bill is necessary for plants at all. As it is, in the whole world, there is no legislation for plants.

Shri Shyam Dhar Mishra: Are you satisfied that seedlings and seeds are available for vegetable production?

Shri L. C. Thirumalachari: That is under contemplation at present. Vegetables or cereals are meant to be controlled by this legislation. We think that they should be controlled voluntarily. Voluntary certification will solve the problem.

Shri Hari Vishnu Kamath: In your memorandum, on the first page, you have repeated an old dictum, which you think is a very valid dictum, namely,

> "A good enactment is always elaborate and unambiguous with well defined functions to the executive and minimum number of regulations in the rules pertaining to the Act without leaving them much to use their discretion."

I believe you are not quite conversant with the modern trend in legislation. That is, the Bill itself does not contain too many provisions and much is left to what is called delegated legislation. If you turn to page 13 of the Bill, clause 28(3) lays down that every rule made under this Act will be laid before Parliament. It is not that the Government is left unfettered to make any rule they like. Every rule comes before Parliament and Parliament has the power to modify or even throw out that rule.

Shri L. C. Thirumalachari: In actual practice, we find that most of the rules are made as a skeleton and are filled up by the executive.

Shri Hari Vishnu Kamath: Government has got the rule-making power, but every rule will come before Parliament and Parliament can even throw out the rules. You need not be anxious on that score.

Dr. Sarojini Mahishi: In page 5 of your memorandum you have said that section 17(1)(a)(iii) may lead to undesirable consequences, etc. Supposing the dealer, with a view to defraud the purchaser, shows some good seeds at the time of inspection, but at the time of actual sale, give bad seeds to the purchaser, what can be done? So, immediately after delivery, if you take samples from the purchaser and test them, what is the harm?

Shri L. C. Thirumalachari: If the purchaser has some grudge against the seller, he can substitute some bad seeds and say that they were supplied by the seller. Every seller has to maintain a tag showing the date on which it was tested, etc. These are checked now and then by the inspecting staff. He is not supposed to stock anything which has not been according to the prescribed standards.

Dr. Sarojini Mahishi: If the tag is kept intact along with the seal with the purchaser and if a sample is taken out of that and tested, what is the harm?

Shri L. C. Thirumalachari: If the seal is intact, how can the purchaser find out that it is bad?

Dr. Sarojini Mahishi: If a sample is taken from the same bag which was delivered to the purchaser and if the seal is in tact, what is the harm?

Shri L. C. Thirumalachari: If the seal is intact, it is all right.

Dr. Sarojini Mahishi: You want section 17(3)'s proviso to be amended. But is it not that the servant who is there during the working hours will be there as the representative of the owner, as his agent? A servant or third party has no business to be there during the working hours and say that he is not going to open the door.

Shri L. C. Thirumalachari: If it is during working hours, it is all right.

Dr. Sarojini Mahishi: You can add the words "working hours" if you want.

Regarding section 22, are you not satisfied with the proviso to clause 24 which says that no person shall be punishable under this Act if he proves that the offence was committed without his knowledge and he exercised all duediligence to prevent it? If you want that there should be distinction between imprisonment and fine and minor offences should be punishable with fine only, that distinction is already there in section 22.

Regarding section 25, clause 14 provides that if any person is aggrieved by a decision of a licensing officer or a certification agency under section 11 or 12 or 13, within 30 days he can make an appeal and the decision of the appellate authority shall be final. The rules applicable to public servants will be applicable to these persons also.

Shri L. C. Thirumalachari: We want that they should be taken to task if there is malicious prosecution.

Dr. Sarojini Mahishi: In theory the provision is there and there is no scope for malicious exercise of these powers.

Shri L. C. Thi umalachari: In practice, it is there in plenty.

Shri V. N. Palekar: We have made our suggestions. You can take the spirit of it and do the drafting as you like.

Dr. Sarojini Mahishi: Then I come to clause 27(2). The conditions are going to be prescribed. Any producer cannot enter into competition with a registered seed-grower unless he fulfils the necessary conditions that are going to be laid down.

Shri L. C. Thirumalachari: It is not a question of competition. If you say: "except for his own sowings" then it is quite all right. Whatever conditions you may lay down, it is provided here that he can sell. Our submission is that you should be more specific.

Shri S. K. Paramasivan: Supposing one sells, say, ordinary maize as hybrid maize, how are you going to prevent that without this Act?

Shri L. C. Thirumalachari: At present hybrid seeds are not being produced by all. I do not think anybody will purchase hybrid seeds from an ordinary man unless it has been certified as such by the inspecting Officer.

Shri V. N. Palekar: I think the particular difficulty that you envisage is going to arise next year because the cultivators, as is usual with them, are

going to keep a part of the crop as seeds for the next year. It is for the Government to find out measures against that danger. For all this, proper propaganda is required.

Shri Shyam Dhar Mishra: In the explanation to the memorandum that you have submitted, you have rightly commented on the merits of the Bill and also the procedures and methods that are going to be employed. Firstly, you have said that representation on the Seeds Committee should be provided statutorily, the membership should be for three years and that your Association should be statutorily represented on this Seeds Committee. I want to know how your body, which is the All-India Seeds-growers, merchants and nursery men Association, can represent both the growers and the merchants at the same time. In a developing state of affairs where there are no certified seed growers or dealers if you statutorily give representation to one association, will it not conflict with the very purpose with which we are bringing this Bill. If you read the composition of the Committee as provided in the Bill, you will find that we have provided for four persons to be nominated by the Central Government from the Central Seeds Laboratory, the National Seeds Corporation, growers of seeds and plant breeders; two persons to be nominated by the Central Government to represent dealers in seeds and so on. Therefore we are having separate representation for growers and separate representation for dealers. Even though you are a resigtered body, it is a federal body in the sense that it is really a federation of people from below. Therefore, if we put in the Act a provision for representation of your association, in the growing economy that we are in, we might be in trouble. Under the present provision, it is within our competence to nominate one of your persons. But if you want a statutory provision, I think it will defeat the very purpose with which this Bill has been brought.

The other point is, the period should be three years and not one year. The provision is: "The members of the Committee shall, unless their seats become vacant earlier by resignation, death or otherwise, be entitled to hold office for one year and shall be eligible for re-nomination". We have put in this with a definite purpose. We expect that in furture there will be more people wanting to have representation on this Committee. Therefore, if we have a quick succession of representation every year instead of every three years, that would be better.

Coming to the merits of the Bill, you want that the producers should also be roped in this Bill. While your objective in suggesting this may be laudable, don't you think that in a country like ours with about 360 million acres cultivated by about 60 million families it will be difficult to rope in all the seed producers? It will create a lot of complications at the lower level. May be, after 10 or 15 years, we may do this. At the moment, will it not serve our purpose if we just involved, at the beinning stage, only the dealers? In that case, your suggestion here does not find any place. What are your comments on this?

There is one thing more. You have said that there should be voluntary certification I think the whole Committee could be for this if it had observed earlier that voluntary efforts in this sector and in other sectors had been very encouraging But our experience is otherwise. There are various complaints even from some of the States that seeds are collected from the cultivators, sometimes genuine and sometimes non-genuine, and the dealers are trying to pass non-genuine or a mixture of genuine and non-genuine as genuine seeds. Therefore, how do you think that the voluntary efforts will succeed and thrive. We have seen the results of that in other fields of the seeds sector. For example we have the quality-marking schemes. We have the voluntary quality-marking schemes and we have also the compulsory

quality-marking schemes. The experience of the Government is that compulsory-marking schemes are successful. They fetch better prices. But the voluntary quality-marking schemes are just slacking. What have you to say to all these three points?

Shri Gajraj Singh Rao: They have themselves admitted that that evil is there to a very great extent. In view of that, how do they say that there is no need for this Bill?

Shri L. C. Thirumalachari: As regards this voluntary certification, because the scope is limited here and it is the purchasing agency which is going to prefer the voluntary certification, and if it is made compulsory for the Government purchases which are the major part of the purchases in India, it will automatically go on increasing. If the Government agencies prefer the voluntary certification, it will increase day by day.

Shri Gajraj Singh Rao: What is the sanction behind it? As you have stated, that evil is prevalent to a very great extent. Except on moral grounds, what is the sanction behind the voluntary certification? Legally speaking, if there is no warranty, what is the sanction behind it and how to punish the guilty? Either it is civil damages or it is criminal prosecution. These are the only two sanctions.

Shri Shyam Dhar Mishra: I think we have to convert them by persuation?

Shri Gajraj Singh Rao: In their own statement, they have said that it is in a very very bad form and that all these bad practices are going on. Therefore, there is the need for this Bill. What are the remedies that you suggest if you do not want this Bill? Is it only morality?

Shri L. C. Thirumalachari: Not mere morality.

Shri Gajraj Singh Rao: In case of non-warranty, what is the remedy for the general public? He may say that this is a pure seed but that may not be so.

Shri L. C. Thirumalachari: The voluntary certificate scheme only means...

Shri Gajraj Singh Rao: We know its meaning. But in case of non-warranty what remedy is there for the general public to punish those people unless there is a Bill like this?

Shri L. C. Thirumalachari: If a man sells a certified thing which is not so, that amounts to cheating.

Shri Gajraj Singh Rao: So, according to you, he should be prosecuted for cheating. On the one hand you say that there should be no question of imprisonment, on the other hand you say, he should be prosecuted for cheatting. In that case, you shall have to provide an amendment to the Indian Penal Code for these things.

Shri L. C. Thirumalachari: If it involves moral turpitude, the only punishment is imprisonment. We do not plead for anything less than that.

Shri Gajaraj Singh Rao: You say, it is cheating. So, there must be a provision to the effect that such acts come within the purview of cheating as defined in Section 420. But rather I feel that this Bill provides a leinent punishment clause. Don't you think so?

Shri V. N. Palekar: I appreciate your point. Ultimately, the idea is that if some crime has been committed, it has got to be punished. That is the basic idea. What we say is this. We do not say that such a Bill is not required. What we say is that it is too early to have this Bill.

Shri Gajraj Singh Rao: That is contradictory by itself. You have said so many times that this Bill is not required. Now, you say that this Bill is required but not at this time. That means it is not required. We are considering the thing at present and not in future.

Shri V. N. Palekar: We are not ready at all for any of these things. Suppose we apply for sanctions and so on. Where is the expert service available? Where are the experts who are going to certify the things. You provide all this and we are prepared to support the Bill.

Shri Shyam Dhar Mishra: We understand that. You say that there should be technical people to certify the seeds. By this time, we have enough extension people who know all this or who are supposed to know all this. If they do not know it, we have to train them. The machinery for that has to be created.

Shri Gajaraj Singh Rao: Don't you think our farmers know much better than experts barring a few exceptions? Are they not experts in their own line to say that the seed is good or bad?

Shri L. C. Thirumalachari: Only the experts are supposed to know everything.

Shri Deorao S. Patil: In your Memorandum, you have suggested for specific provisions for regulating the cultivation of any particular variety of seed.

Shri L. C. Thirumalachari: Which point?

Shri Deorao S. Patil: You have suggested that there should be specific provision for regulating the cultivation of any particular variety of seed. Anyway, the second thing that I wanted to ask was this. Do you not think that there should be representation of seed users on this Committee?

Shri L. C. Thirumalachari: Certainly, there should be.

Mr. Chairman: On behalf of the Committee, I tender my thanks to the witnesses who took the trouble to come over here and give their views on the Bill.

(The witnesses then withdrew.)

II. Shri G. A. Patel, Director of Agriculture, Gujarat, Ahmedabad.

(The witness was called in and he took his seat.)

Mr. Chairman: First of all, let me read out the direction of the Speaker on the examination of witnesses. It runs thus:

"Where witnesses appear before a Committee to give evidence, the Chairman shall make it clear to the witnesses that their evidence shall be treated as public and is liable to be published, unless they specifically desire that all or any part of the evidence tendered by them is to be treated as confidential. It shall, however, be explained to the witnesses that even though they might desire their evidence to be treated as confidential, such evidence is liable to be made available to the members of Parliament."

Now I would request Mr. Patel to give his comments on the Bill and the circumstances connected with the Bill.

Shri G. A. Patel: I particularly like to point out that the spread of an improved variety is a programme, which is usually connected with agricultural extension work and, therefore, a lot of effort is needed in order that it ultimately spreads. This Bill, as I understand it, connects both the variety part of it as well as the seed part of it; the seed trade part of it. Experience in the past years has shown that any impediments that we might put in the spread of a variety by any manner is likely to slow down the progress rather than speeding it up and I am quite sure that the intention is that we must speed up progress and spread a variety rather than restrict it in any manner.

The main reason for myself appearing here is that we were concerned over certain provisions of the Bill in so far as they affect the seed trade.

As far as we understand, this Bill does not control in any manner the growth of a variety of crop as it is governed already by such acts as Cotton Control Act, which envisage the State Government to regulate the growth of certain varieties in specified areas. What I would like to make out is that it is not correct to separate two aspects, *i.e.*, seed trade and growth of varieties. These are two aspects which are intimately connected with each other and any law that we might consider should be a law which combines both of them rather than creating a distinction between the two. For example, at present the State Government can prohibit the growth of certain varieties of cotton in certain areas. At the same time the present law also provides that a variety to be traded in an area will be controlled by what is known as Central Variety Release Committee. The release of a variety in an area is so much dependent on local public opinion. This opinion has to be cultivated first of all: it is not born suddenly. It is a matter of stages before the public opinion gets created in favour of a certain variety. Secondly when the breeder has evolved a variety, he usually tries it out and gets ready to release, but it will be done at the end of a certain season. This usually happens in certain crops, say, in October and in some cases in February. Growing a variety over a large area or distributing the seed has to be decided sometime between November and the next growing season, *i.e.*, June. It would not, therefore, be practicable, under any circumstances, to obtain clearance from the Central Variety Release Committee in a very short time. Even today, there are certain Variety Release Committees in certain States, as advised by the Central Government. Even the State Variety Release Committees find it very difficult to keep apace with the individual varieties that are being released. Therefore, the present provisions of the Central Variety release Committee seem to be rather difficult to be implemented, if this is passed. If we understand what is the implication of the Central Variety Release Committee, it is not so much, in my view, to regulate the seed trade, but on the other hand it is going to regulate the plant breeder who is going to release a variety; it is he who is to be controlled by the Central Variety Release Committee; it is his variety which is to be opined upon by the Central Variety Release Committee. If I understand correctly and if this is the case, I think perhaps a law is not necessary for controlling the plant breeders because, as you are quite aware, most of the work at present is done by government institutions, either financed directly or controlled directly. It does not, therefore, seem necessary that the activities of the plant breeder, who evolves the varieties, should be controlled in any manner. If this happens, I am afraid it is likely to slow down the progress and their enthusiasm and slow down their effectiveness because, before he even introduces a variety, he will have to go to the Central Variety Release Committee for approval for releasing and distributing the variety. I am quite aware that there are certain private seed traders in vegetables, particularly in ornamental plants. I, however, confine my remarks only to certain crops, which are the field crops with which we have the maximum experience. Nevertheless, I cannot help making a remark on things like certification of seedlings of some crops. We have a system of voluntary certification in our State, under which we certify the parents, the mother plants, as well as the crops which are produced from such mother plants. This is entirely done on a voluntary basis. The voluntary nature of it itself is a beginning towards perhaps the ultimate end, which the Seeds Bill proposes to have. My submission mainly is that in such matters as the quality of seed, which is intimately connected with a variety of seed itself, it is necessary that a large amount of public opinion needs to be created before we have statutory provisions. The cotton seed which we certify on an

area of about 33 lakh acres, the seed cotton sold as seed amount to 15,000 tonnes of seed in about a thousand different lots produced by various gins. You can well imagine what will be the implications if the Seed Act is passed under which the seed quality is to be controlled without a prior creation of public opinion in regard to the quality of the seed. We feel this creation of public opinion is a first necessity even in a crop like cotton. Certification regarding the quality of the seed has not yet been acted upon because there is no provision in regard to that. Even at present our experience shows that the seed quality itself as assessed from the large number of samples that we certify has a large variation without uniformity and hence it will hardly be possible even in a small State like Gujarat much less for the country as a whole to have uniform seed standards. Here, I would particularly emphasize that even in manufactured products like the pesticides and fungicides there are no orders, no laws enforcing the quality of the product. There are at present only voluntary organizations like the Indian Standards Institution and it is the willingness of the producer which can decide what quality he wants to produce. When we are at this stage of development even in the case of a manufactured product like pesticide, I feel it is rather premature to enforce an Act which will control the quality of seeds. That is my general submission.

Regarding other things, I have given my views in detail in my notes which have been circulated.

Shri Sivamurthi Swami: Can you enlighten the Committee that as in Gujrat you were controlling the quality of seeds in cotton earlier, what objection is there if on all India basis you take the approval of an all-India Committee or you could suggest to the Committee which are the seeds suited to each area on the basis of the rain or particular situation in each part of your State? As you have got these Cotton Seeds Variety Committee in Gujarat—in the previous State also when it was Bombay State, the same thing was applied; it is so even in Karnatak and Maharashtra and all these areas—and there has been lot of improvement due to that Cotton Seeds Committee. So also, if a uniform Committee is organized here under this Act, I think it will help to improve the varieties in all the States and there may be differences as you have suggested in the varieties. So, may I know what objection you have, if there is any, as all the Rules are framed on an all-India basis by this Committee?

Shri G. A. Patel: Two principal reasons against having a Central Variety Committee are: one—the time factor involved here. Secondly, we feel that the decision to grow a certain variety in a certain area is best known to the workers in that area. The country is sufficiently large and no single person or no single body can ever hope to attain that much acquaintance and knowledge about a particular terrain and a particular variety in an area. These are two principal reasons why we feel that the Central Variety Release Committee is not conducive for the progress.

Shri Sivamurthi Swami: Under the Bill itself nomination has been given to the States—please see clause (2) (iv) on page 3.

Shri G. A. Patel: Not all the States are represented all the time. They come in rotation and the States which are the principal persons to be effected are, if I may use the word, in a minority in the suggested Variety Release Committee.

Shri Sivamurthi Swami: Then you support the voluntary certification?

Shri G. A. Patel: Yes, that should be continued.

Shri Sivamurthi Swami: Do you think that in this voluntary certification lot of fraud takes place. There

is no check on selling the lower grade varieties saying that it is high-grade jowar or high grade bajra if there is no statutory restriction on dealers. What check would you suggest?

Shri G. A. Patel: By voluntary certification I did not mean that there should be no certifying agency but the choice as to whether the seed must be certified or not must be of the producer himself. It should not be statutorily laid down that he shall get the seeds certified before he can sell it. By voluntary nature I also meant that the Government will create organizations which will help in certification of seeds as it is being attempted in the cotton. I do not mean by voluntary that it will be entirely open or it will be as a grower himself says 'I have certified it myself that it is of so much purity.' I do not mean the voluntary nature of that type. What I meant was that there should be an organization created to help the voluntary certification by the growers themselves.

Shri Shyam Dhar Mishra: Some fears have been expressed. For example, for cotton, under the Cotton Control Act the seeds are released for cotton growing. And this Seed Committee what you call in your comments as Central Variety Committee. You have fears that because it will not be representative of all the States; at any particular time there will be only three States according to the provisions of the Bill and so there will not be a proper consultation by the Central Government with all the States concerned. I suppose this Committee concedes your point and instead of having three representatives from three zones, *i.e.* at a time only from three States, if we have in this Committee one representative minimum from each State, will that satisfy you because in that case there will be proper consultation and your point will be met.

The other point which I wanted to bring to you is: you know that this Seeds Bill will cover mostly inter-State variety. It is not going to touch local variety and if you have a local variety you have a State level Committee which will take care of it. What are your fears for the inter-State variety to come under the Central Act which will be implemented in consultation with the State Governments?

Shri G. A. Patel: As I earlier mentioned, we have submitted as to who are the members of the State Committee. There are not only specialists concerned included in the State Varieties Release Committee but also plant pathologist, agronomist as well as the Deputy Director of Extensions who are all intimately connected with the seed production programme. Therefore, the decision that will be taken at the State level by this Committee will be likely to be more mature and due considerations will be given to many aspects which cannot possibly be given at the Central level. As regards your query if the committee is enlarged, whether the purposes would be served, I would like to say they will not be served, because the decisions will be anyway taken by groups of persons who are not intimately connected with the conditions in a particular area. Secondly, regarding the inter-State variety.....

Shri Shyam Dhar Mishra: Excuse me for the interruption. Now suppose Gujarat State is represented and all the other 15 States are also represented. Is it your view that the Gujarat representative will not be able to reflect the viewpoint of Gujarat? If you are representing Gujarat State, you will be heard by the Committee and the interchange of opinions will help the Committee to form its own opinion. If you have a local variety in cotton wheat or paddy and say that you have got this variety and that should be sufficient, do you think even then the Committee will not pay any attention to your views?

Shri G. A. Patel: But the other members of the Committee are not acquainted with that variety. In the State release committee all the knowledgeable persons concerned are there, while in the Central variety release committee, only one member will be fully acquainted with the variety. That is my point. If the purpose of the present Act is only to regulate inter-State trade of seed, well, I have very little to say and such regulations may be introduced if the Government of India thinks it desirable, it being understood that within the State trade and release of variety will be continued to be managed as at present either by introducing an Act which would cover it or without an Act.

Shri Hit Prakash: This Bill is exclusively intended to regulate the quality and trade in seeds and not the cultivating of a variety which may be applicable to one region or to more than one region. But as the Deputy Minister earlier indicated, this Bill will not regulate cultivation of the varieties. Supposing in Gujarat in a particular region, you have notified under your Cotton Control Act that only a particular variety shall be grown and if it is found by the Central Seed Committee that that particular variety is also suitable for so many other regions in the country, then the intention is that the quality of those seeds should be regulated by this Bill. The Bill does not seek to regulate the cultivation of that variety. If a particular variety which you have found suitable for a particular region in Gujarat is also found suitable by technical experts for other regions also, then the intention is that the quality of the seed to be utilised for cultivation of that variety in those regions, should be regulated. The Bill does not seek to regulate the cultivation of the variety.

Shri G. A. Patel: As for as the existing varieties are concerned, the Act will, of course, provide for covering them. But suppose a new variety of cotton has been evolved at a small farm in Saurashtra and we release that variety in that particular area. Now, if I have correctly understood, if this variety can also be grown in other areas, then it will come under the purview of the Act. My submission is that before that stage is reached, there is another stage when the variety is traded in a particular State. If this law will not apply to that, then I have nothing to say . . .

Shri Hit Prakash: I will clarify the position. The varieties and the kinds to which this Bill shall be applicable shall be notified by Government in the Gazette on the recommendation of the Central Seed Committee. The rules will provide the procedure before a new variety can be released by the Central Seed Committee. But suppose in Gujarat you yourself have evolved a local variety and you yourself start growing it, the Bill will not stop that. But if it is found that the new variety which was evolved by you is so good that it should also be made available to other regions and the Central Seed Committee feels that the variety should be regulated, then the Central Variety Release Committee will approve of it and the Government will notify that the Act shall become applicable to that variety. Till it is notified, you are at perfect liberty to grow it in your State and certify the seed, etc. There may be hundreds of varieties in every State and the Bill cannot be made applicable to all those varieties.

Shri G. A. Patel: May be my understanding or reading of the Act is not complete. But if it is intended that the Act will apply only to inter-State trade, as different from trade within a State, for a particular variety, I have no objection, as I have already stated. I would like to be clear on this point that if the variety is first evolved in an area in Gujarat and if the seed trade, seed multiplication, variety release, etc., go on as at present, then there is no objection. In case the seed has to be taken out to

another State, then it should come under the purview of the Act. That is my proposal.

Shri I. J. Naidu: Kindly read clause 3: it says "the Central Government shall, as soon as may be after the commencement of this Act, constitute a Committee called the Central Seed Committee to advise the Central Government and the State Governments on matters arising out of the administration of this Act and to carry out the other functions assigned to it by or under this Act." In sub-section (5), it is said "the Committee may appoint one or more sub-committees consisting wholly of members of the Committee or wholly of other persons or partly of members of the Committee and partly of other persons, as it thinks fit, for the purpose of discharging such of its functions as may be delegated to such sub-committee or sub-committees by the Committee." So your view, rather your excessive fear, that the State Governments representative's case will not be heard or will be overruled by a mere majority, I think, is rather unjustified. In fact, in agriculture, most of the things are done by the State. Even in administering Agriculture, the Central Government takes the views of the State Governments and respects them. That is how we can carry on. The fear that a case will be overruled by a majority vote is not really well-founded. No Central Committee or a technical committee can ignore the technical opinion of the State representatives in a matter like agriculture. I mean, unless you have any bad experience in the past, I do not think you should entertain these fears as far as the purpose of this Act is concerned. As our Minister has already pointed out, if you feel that at all time instead of by rotation there should be representation from all the States, perhaps that could be considered.

Mr. Chairman: No more questions? Thank you, Mr. Patel. About the sitting tomorrow, we will have it at 2 o'clock and there will be only one witness of Birla Institute. We will sit here. Thank you friends.

(*The witness then withdrew.*)

(*The Committee then adjourned till* 14.00 *hours on July* 5, 1966)

SELECT COMMITTEE ON THE SEEDS BILL, 1964

MINUTES OF EVIDENCE GIVEN BEFORE THE COMMITTEE

Tuesday, the 5th July 1966 *at* 14.00 *hrs.*

PRESENT

Shri S. C. Samanta—*Chairman.*

MEMBERS

2. Shri Maganti Ankineedu.
3. Shri Brij Raj Singh.
4. Shrimati Jyotsna Chanda.
5. Shri N. T. Das.
6. Shri M. L. Dwivedi.
7. Shri Gajraj Singh Rao.
8. Shri Badshah Gupta.
9. Shri Hari Vishnu Kamath.
10. Shri Kisan Veer.
11. Shri Jiyalal Mandal.
12. Shrimati Shashank Manjari.

Shri S. Harihar Iyer, *Deputy Draftsman, Ministry of Law.*

REPRESENTATIVE OF THE MINISTRY

Shri Hit Prakash, *Deputy Commissioner (Seeds Development), Ministry of Food, Agriculture, Community Development and Cooperation.*

SECRETARIAT

Shri M. C. Chawla—*Deputy Secretary.*

WITNESS EXAMINED

Birla Institute of Scientific Research, New Delhi.

Spokesman:

Shri V. N. Kohli.

(The witness was called in and he took his seat).

Mr. Chairman: Before we begin our work I would like to refer the direction of the Speaker to the witness present. The direction is that, where witnesses appear before a Committee to give evidence, the Chairman shall make it clear to the witnesses that their evidence shall be treated as public and is liable to be published unless they specifically desire that all or any part of the evidence tendered by them has to be treated as confidential. It shall, however, be explained to the witnesses that even though they might desire their evidence to be treated as confidential such evidence is liable to be made available to the Members of Parliament.

Now, from the Birla Institute of Scientific Research a Memorandum was received by us. Shri Kohli himself has now come before us and we would like to hear from him anything that he might like to add to what he has already said in the Memorandum.

Shri V. N. Kohli: Mr. Chairman, hon. Members of the Committee, I do not claim to be an agriculturist and my experience of seed industry is limited to the last one year only. I want to make that clear so that there may not be any misapprehension that I am going to answer any questions on technical matters. The Birlas have been dragged into this seed production by the hon. Minister of Food and Agriculture during the last one year. It was suggested that the private sector should also start taking interest in the production of high quality and pure breed seed so that the yield of crops could be increased substantially particularly when the country is facing food shortage. We started the Birla Agricultural Farm in the Punjab about one year ago and we have raised two crops there—kharif and rabi. We were faced with a number of problems.

As you all know, seed industry has not been established as yet; in fact, it is yet to be established. Therefore, I would only preface my remarks by saying that any Act that the Parliament may pass on the subject must take into consideration the fact that take into consideration the fact that dustry.

Seed production was hitherto only in the domain of the Government. The private industry has yet to come into the picture. The Birlas got interested in the seed production only from the point of view of helping the agriculturists. We have even approached two or three of the Seed Corporations in America who sent their technical experts here and we had the benefit of their advice. We also gave them a copy of the Seed Bill which was then introduced in the Parliament. They have given certain suggestions which have been incorporated in the Memorandum which I submitted to you. All those points may require clarification or amplification and I shall be glad to do so.

Apart from that, there is one basic fact which has got to be remembered. The seeds trade and grains trade have got to be identified. They have got to be separate. Our experience of one year in the Birla Agricultural Farm has been that seeds cultivated under scientific conditions with proper technical guidance involve quite substantial expenditure especially when they have got to be processed and certified. Since the Birlas are not interested in making any profit out of this venture, they could afford to sell it at almost the same price or at a slightly subsidised price. But if the seed industry is to be established in the private sector, the profit aspect cannot be ignored. Therefore, it is very important that the seed and the grain must be identified. Normally, the seed costs 3 or 4 times the grain. In America sometimes it costs 8 times the price of the grain.

Secondly, if the seed industry is to be established in the private sector, apart from making some provision for profit, there should be no red tape either in certification, registration or inspection which will involve considerable time and energy. Here I will mention one small point arising out of this. There is one company which has 89 years of experience in seed production. When some representatives of that company came here, we showed them the draft of the Seeds Bill and stated that our Government want every new strain to be certified by the Government before it is put on the market. They remarked that evolving a new strain of hybrid maize or hybrid wheat takes years and years. The same company have evolved a hybrid wheat which is capable of producing almost 200 maunds per acre. They have taken four years to do that. It may be successful or may not be. If it is successful, well and good. So, if a company has to evolve high yielding strains, it should not be hedged by too many rules and regulations about certification etc. Even if it is certified, it will take the experts another five years to test the quality alone. So, that aspect has to be borne in mind. These are the preliminary remarks that I want to make. Now I will answer questions.

Shri M. L. Dwivedi: At the outset you stated that the seed industry is yet to be established in the private sector. You also stated that your experience in seed production does not go beyond one year. From what you have stated it appears that the Institute has not allowed you to travel to places where seed production is already going on in India. Because, there are lakhs of acres in the private sector under seed production. Government want to have some sort of regulation and control over the people who produce seeds so that the farmer is not cheated by the supply of bad quality seed. So, Government have framed this draft Bill. We expect you to give us some guidance on this subject. Your memorandum does not mention any important point.

Shri V. N. Kohli: By and large, we agree with the Bill. We simply wanted to amplify some of the points.

Shri M. L. Dwivedi: In the research side of your institute are you assisted by some experts who know something on this subject? Secondly, what is the quantity of seeds produced by the Birla Institute and what is the total land under seed cultivation? Thirdly, how are they able to produce good seeds when they do not have good technical know how?

Shri V. N. Kohli: I will take them one by one. We have started our work with 1,000 acres of land which have been leased out to us by the Punjab Government exactly a year ago. We have already raised two crops on it. During the last rabi crop we have grown in 500 acres the Mexican and varieties of wheat. We have at present in the farm about 8 technical experts. The Manager is a retired Agricultural expert of the Punjab Government. We have also got agricultural graduates and engineers. Apart from working in the farm, they will have to go round and give guidance to the farmers. Besides, we are setting up a seed processing plant. As you know, Punjab has so far got only one seed processing plant of the National Seed Corporation. It is an American plant. The building is almost ready and the plant will be installed next month.

We have got a large number of equipments, both imported and indigenous, which we are working and which we propose to give to the farmers on loan. We have produced seeds of high-yielding varieties of hybrid maize, hybrid bajra, hybrid sargam and Mexican wheat. We get foundation seed from the National Seed Corporation or agricultural institutes. But I must make it clear that

the scheme is still in its infancy. We want to extend it as quickly as we can arrange for the equipments.

Over and above that, Government have suggested that we might try and bring some people from some seed Company who have the know-how in a foreign country which is producing good quality seeds for a number of years so that the foreign exchange element may be saved. It would be a sort of joint venture with outside companies and we have already one such arrangement. When I was in America last time I persuaded a well-known Seed Company and they recently sent four experts. That company has 89 years of experience in seed production. Naturally, they are keen to come here and help us not without profit motive.

The Rupar farm of Birlas is working on "no profit no loss" basis. We want to do all that is possible to improve agriculture. The seeds that we produce are certified by the National Seed Corporation and they are packed under their supervision. Then we sell them direct to the farmers. For the kharif season we will do it for hybrid maize, hybrid bajra and for Rabi Mexican wheat seed will be produced. That is our programme.

Shri M. L. Dwivedi: You have mentioned that you have got some equipment. Do you lend it to the farmers?

Shri V. N. Kohli: That is on the programme. We have not yet started doing that.

Shri M. L. Dwivedi: Have you actually started seed production? Have you any laboratory, seed testing equipment and all the other things?

Shri V. N. Kohli: As I explained to you just now, this farm was started only one year ago. Work on the buildings has already commenced and half the buildings have come up. They will include the laboratory building, soil testing building, seed testing building, auditorium, training centre for agriculturists etc. Buildings under construction are for processing plants, seed store, fertiliser and equipment and so on. We have already got 9 tractors and a large number of imported as well as indigenous equipment. We have made a start, but I cannot say that we have produced any spectacular results as yet.

Shri M. L. Dwivedi: So, your seed production has not started yet. Even if it has started, the seed cannot be tested and it cannot be known whether the seed is of good quality or bad quality, unless all your equipment and laboratory functions. Therefore it is simply a sort of agriculture work going on on the farm and not seed production.

Shri V. N. Kohli: Whatever seed has been produced that has been processed at the Government plant because our plant was not ready. It has been tested in the laboratories there and has been bagged under their supervision. We only produced the seed; all the other things have been done by Government at Government level and they have certified that it is pure seed. The next crop that we are going to grow, we will do it on our own. In the next six months or so we will be fully equipped for the purpose.

Shri M. L. Dwivedi: How many seed crops have you already had?

Shri V. N. Kohli: We have had two last year, that is, hybrid maize and hybrid bajra. In this rabi crop we have had Mexican and indigenous varieties of wheat. We have thus produced four varieties so far.

Shri M. L. Dwivedi: I will request the Committee to see this farm and see whether they are doing good work.

Shri V. N. Kohli: I will be most grateful if some of you gentlemen could make it convenient to come and

we will be very glad to show you round. It was an undeveloped land which we got. It is in Rupar about 24 miles from Chandigarh.

Shri M. L. Dwivedi: What is your assignment there?

Shri V. N. Kohli: I am their industrial adviser; I am not an agriculturist. I look after the industry aspect, but we have agricultural experts there. I do not live there; I live in Delhi and sometimes I have to go abroad also.

Shri Hari Vishnu Kamath: You are on the managerial side.

Shri V. N. Kohli: We have got managers.

Shri H. C. Linga Reddy: What is the investment made in the farm?

Shri V. N. Kohli: The investment so far made is Rs. 8 lakhs and we expect to spend in the next kharif and rabi crops another Rs. 7 lakhs making a total of Rs. 15 lakhs.

Shri H. C. Linga Reddy: What is your production?

Shri V. N. Kohli: For the kharif crop last year we could sow only 55 acres, 50 acres of hybrid maize and 5 acres of hybrid bajra. That was disposed of at very reasonable prices. The yield was 10 quintals for hybrid maize and 5 quintals for bajra. Now we have produced the Mexican variety of wheat. We had no irrigation facility. There was no electricity there. Now electricity is likely to come. We have got heavy bulldozing equipment there. But we want to expand this further by giving our seed to the farmers and asking them to multiply it, process it in our plant and bag it under our supervision. We wish to have about 100 experts in about two years. We had those initial difficulties but just now there is no problem. But if we are successful in getting the American Seed Corporation to come here, we will set up a new company. It will be a separate venture altogether and not part of this farm. Land will not be involved in that because we will be entering into contracts with the growers, take away their production, process it, bag it and seal it off. We will have a marketing organisation. That is why we are interested in this Bill.

I entirely agree with the main objects of the Bill. The American experts who came here also agree with the provisions of the Bill except on two or three points mentioned in my memorandum. Such Seed Act will be a safe-guard against unscrupulous people who will bag the grain and say that it is seed. There is no difference of opinion on that point. The only slight difference that we have is that the rules or the Act should be framed in such a way that there are no bottlenecks and no impediments; free hand should be given to people who know their job and know how to produce seed.

Shri Sivamurthi Swamy: How much is the Punjab Government taking for the lease of the land?

Shri V. N. Kohli: This lease is for 25 years and we are going to pay them Rs. 7½ lakhs.

Shri Sivamurthi Swamy: Have all the 1,000 acres been cultivated?

Shri V. N. Kohli: When we got this land about 700 acres was partly developed and 300 acres was not at all developed. Now almost 800 acres have been developed and our next sowing programme is for 800 acres of Mexican variety of wheat.

Shri Sivamurthi Swamy: Did you use bullocks?

Shri V. N. Kohli: No bullocks are involved. We have got all mechanical equipment. We have got the biggest seed drills in India. Wheat is sown not by hand or bullocks but by huge seed drills, as big as from where I am

sitting to the Chairman's table. The farm is worth seeing. Now electric power is expected to come. We have got 10 tubewells now and five more are being installed. They will all be energised. We have got a processing plant. All the plant is ready; it is only to be fitted there

Shri S. K. Paramsivan: Have you got canal irrigation?

Shri V. N. Kohli: It is not canal irrigation. Although the land is by the side of the river, irrigation is by tubewells.

Shri Sivamurthi Swami: Mainly you are growing maize and wheat.

Shri V. N. Kohli: We grew hybrid maize and hybrid bajra last year. Then we grew wheat. This year we are taking hybrid maize, sorghum and improved varieties of rice just to see whether it can be done there or not. All this seed we have taken from the National Seed Corporation.

Shri Sivamurthi Swami: Can you give us some idea of the sale price per quintal or per kilogram?

Shri V. N. Kohli: We sold it very cheap last year. We sold a 6½ kilo bag of hybrid maize for Rs. 10 and bajra we sold at Rs. 2.50 a kilo, as against Rs. 15 or Rs. 16 in Mysore. But money was not the point; the point was to develop something new and help the farmer.

Shri Sivamurthi Swami: Do you supply the seed to Government agencies or to the ryots?

Shri V. N. Kohli: If Government agencies want it, they are welcome to have it; we have no objection. We are selling it direct to the cultivators.

There are two more points which I would like to add. One is that in the Seed Bill there should be a specific provision so that we should be able to market seed not in any particular area but in the whole of the country. Suppose we want to send improved varieties to Maharashtra or Madras we should be able to do so. We are getting requests from all over India. But we are precluded from doing so because there are all sorts of regulations, zones and so on.

The second point which I want to raise is that at present there is no price control on the seed. This is an important matter from the point of view of companies who want to develop this industry. That should not be there if the seed industry is to develop.

Shri H. C. Linga Reddy: Is it your ultimate aim to make this farm self-sufficient or is it your point that your cost is not the consideration at all?

Shri V. N. Kohli: This particular farm has developed but we want to develop it further. The idea is to make the seed available to the farmer at as low a price as possible and not add unnecessary profits and so on and so forth. We are not interested in the profits. But when we have a regular seed company in collaboration with a foreign company which is very much on the card, the element of profit may become an integral part of the venture as they have got to consider the aspect of profits also. The two things should be kept separately. We are still having discussions with those people and they have laid down certain terms and conditions which are being now examined by the Government.

Dr. Sarojini Mahishi: What are the difficulties that you are experiencing now in delivering seeds? You said just now that seeds cannot be delivered in different parts of the country.

Shri V. N. Kohli: We are experiencing difficulties. For example, bajra was practically unobtainable anywhere. We were luckily to get a very good yield of bajra in Punjab and everybody wanted to have small quantity. There were requests from Rajasthan, Mysore, Madhya Pradesh and

other States. They said that they would like to have small quantity and try it out. Similarly, it was so in hybrid maize. But we were told that we cannot export it without undergoing cumbersome procedures in asking the State Governments to issue permits and so on.

Dr. Sarojini Mahishi: Don't you think that for maintaining the purity and the quality of the seed, there should be certain restrictions and that there should not be any adulteration in the process of their being delivered from one part to another part of the country?

Shri V. N. Kohli: By sending the seeds from Punjab to Rajasthan, would they become impure?

Dr. Sarojini Mahishi: Not necessarily. Unless the area is restricted, it may be very difficult to maintain the purity and the quality of the seed.

Shri V. N. Kohli: They are always sealed in bags. The seeds are not sold in bulk. They are put in bags and sealed and then sent to various parts of the country.

Dr. Sarojini Mahishi: Clause 17 of the Bill says:

> "The Seed Inspector may take samples of any notified seed from any person selling such seed or from a purchaser or a consignee after delivery of such seed to him;"

I know some persons have taken objection to this that a sample cannot be taken from a purchaser. Even considering that it is an opinion coming from a farmer who is in the field, what is your opinion on this?

Shri V. N. Kohli: When the seller sells a seed to a farmer, the Inspector can go there and take a sample. If the purchaser is willing to give a sample, let the Inspector take it and test it.

Dr. Sarojini Mahishi: You say, if the purchaser is willing to give a sample, the Inspector can take it. Should it depend upon the will of the purchaser or the will of the Inspector to take a sample? Even if he so desires, I want to know whether there should be any provision for that.

Shri V. N. Kohli: There is the risk involved in this. If the Inspector has to take a sample, he should go to the source. Why should he go to somebody else? He should ask the purchaser as to from where he got the seed. He should take a sample from the source.

Dr. Sarojini Mahishi: I want to know whether it will be sufficient if it is checked at the source or it requires to be checked at different points.

Shri V. N. Kohli: It is sufficient if it is checked at the source.

Dr. Sarojini Mahishi: As regards the colour, you have stated that along with the label, there should be a specific colour for certified seeds. Do you mean the colour for the bags or the colour for the seeds?

Shri V. N. Kohli: Certain colour is added to the seed. Take, for example, the Mexican seed. It is to distinguish it from the grain.

Dr. Sarojini Mahishi: When the seed is put into the bag and the label is put on that, is it necessary to add the colour also to it? At the cultivator's level, it may be necessary but at the seller's level, it may not be necessary.

Shri V. N. Kohli: That is the practice in America.

Shri H. C. Linga Reddy: Have you applied some colour to the seed in your farm?

Shri V. N. Kohli: We have not applied any colour as yet.

Shri Pratap Singh: Under item 3(2)(iii) of your Memorandum, you have suggested that the word 'wholesale' should be added so that it would read 'represent wholesale dealers in seeds'. I would like to know what is your opinion on this. Do you think it proper that some representation should be given to the growers or that only the dealers should come in the picture?

Shri V. N. Kohli: That is a very moot point. The point is how many seed growers there are going to be. There may be 50 growers or 60 growers or 100 growers. If you want to give representation to growers, it will be very difficult for you. But if you want to give representation to wholesale producers of seeds, it will become comparatively easier. It would be in the interest of the seed producers themselves to produce the best quality of seed if they want to sell it. Otherwise, supposing I produce a seed and nobody purchases it because there is some prejudice against me or it is not of a pure quality, all the capital which is invested is wasted. Therefore, it is from his own stand point, from the producer's stand point that he maintains purity, quality and suitability of the seed, if he has to sell it or develop the industry. This is just like setting up a textile mill; for example, if my textile is good, then everybody will buy it; if it is not good, nobody will buy it. The seed is more or less in an analogous position. That is why it has been suggested.

Shri Hari Vishnu Kamath: Did I hear you right when you said that you were an industrial adviser to the Birla Institute?

Shri V. N. Kohli: I am not in the Birla Institute. I am a member of the Governing Body of the Birla Institute. I am an industrial adviser to Birlas.

Shri Hari Vishnu Kamath: You control the Rupar farm?

Shri V. N. Kohli: Yes; I control the Rupar farm. I give the necessary guidance. If the technicians come and say that they want to do this, I say, 'yes'.

Shri Hari Vishnu Kamath: You live in Delhi mostly.

Shri V. N. Kohli: But I go there every week.

Shri Hari Vishnu Kamath: Off and on.

Shri V. N. Kohli: Yes.

Shri Hari Vishnu Kamath: You have no intimate knowledge of the seeds business as such?

Shri V. N. Kohli: Actually we have not yet established it fully. We propose to place a highly qualified scientist at the top. We are already negotiating with the people. We have asked the Punjab Government to give a suitable officer; when he comes, he will be the controller of the entire area, but that may take time. Meanwhile, we are carrying on like this.

Shri Hari Vishnu Kamath: I was only wondering why the Birla Institute—of course. I do not question your capacity or ability—did not depute some one else to discuss matters with the Select Committee on the Seeds Bill, considering that you are not in intimate touch with seeds.

Shri V. N. Kohli: The Birlas have got experts on farms, but this Bill which has been circulated does involve certain amount of technical experience or knowledge...

Shri Hari Vishnu Kamath: Of which you are somewhat ignorant...

Shri V. N. Kohli: This is more a sort of procedure, i.e., how this Bill is going to be framed. We have discussed this Bill at great length with the Americans who sent two teams here and they welcomed the idea of the Bill and suggested some points which I am bringing to your notice. The Farm Manager would not have

added anything more. What we have put down is based on the discussion that we had with the Americans who have a tremendous amount of experience in that field. They were given copies of the Bill and they studied it and said "yes, we welcome the idea because it will stop unscrupulous seed producers from selling their seeds and hoodwining the cultivators". There were certain points which arose during the discussion and they have been embodied in the Memorandum that has been given to you.

Shri Hari Vishnu Kamath: I think, you have been here only for the past one year.

Shri V. N. Kohli: Yes, I have been in the farm for the past one year. As I told you earlier, this is a new thing altogether. Birlas have started with all good intentions....

Shri Hari Vishnu Kamath: Until the contrary is proved, we have to assume that they have good intentions.

Shri V. N. Kohli: We have got farm managers and technical experts. and we expect them to produce results.

Shri Hari Vishnu Kamath: 1.000 acres are very little for you. You said that you wanted more....

Shri V. N. Kohli: We do not want land. This is enough for us. We want to develop it with growers. We send our agricultural inspectors; they go to the farm and give our seed and then process it further.

Shri Hari Vishnu Kamath: How much does one kilo of hybrid maize seed cost now? I think you said Rs. 10 or so.

Shri V. N. Kohli: We have sold 6½ kilos of hybrid maize for Rs. 10. That is meant for one acre. We have also sold 2½ kilos of *bajra*.

Shri Hari Vishnu Kamath: Do you think that the price can be reduced further, later on?

Shri V. N. Kohli: It is not possible to reduce it further. We have given it at practically lower than the cost price.

Shri Hari Vishnu Kamath: Are they rock-bottom prices?

Shri V. N. Kohli: Yes. It may be of interest to you to know that the price of the National Seeds Corporation is still slightly higher. Of course, that is not the point. We have no profit margin. We give it almost at the cost price.

Shri Hari Vishnu Kamath: Who *does the certification of the seed?

Shri V. N. Kohli: It is done by the National Seeds Corporation.

Shri Pratap Singh: A regards price, you are selling on no-profit-no-loss basis. Is that so?

Shri V. N. Kohli: Yes.

Shri Pratap Singh: That is, the actual price?

Shri V. N. Kohli: Yes. To that price, we have not added depreciation; we have not added any interest on capital. If we add up all these, then it will be higher, but we are not interested in that.

Shri Gajraj Singh Rao: Do you think that this Bill will be in the interest of growers?

Shri V. N. Kohli: I should think so. It will be very much in the interest of growers.

Shri Gajraj Singh Rao: Do you appreciate all the main principles of the Bill?

Shri V. N. Kohli: Yes.

Shri Gajraj Singh Rao: Do you not think that while it will avoid the evil for which this Bill is brought, it will create so many other evils, for instance, the difficulties that you have

with the Civil Supply Department when you start a new industry. In other words, have you any experience by reading news or otherwise as to what the Civil Supply Department has been doing in various other fields? Would it not be worse here?

Shri V. N. Kohli: My experience is in foreign countries and I assure you that it works very well.

Shri Gajraj Singh Rao: I am confining myself to India. You have been emphasizing Americanism, but I emphasize the local conditions of India on production as well as on certification.

Shri V. N. Kohli: If you ask for my personal opinion, I feel that this certification and the precautions which have been envisaged in the Bill are very necessary.

Shri Gajraj Singh Rao: The experience which the public men here have got with the Civil Supply Department is not good. Would it not be worse here?

Shri V. N. Kohli: What is the alternative to this?

Shri Gajraj Singh Rao: I ask you. You are the witness. Whatever opinion we hold, we would express at the appropriate time. I want to know your opinion. With so many inspectors and others going round, it may be confined to a few capitalists who can just manage them—2½ acres are the average holding in Punjab..

Shri V. N. Kohli: Seed production will not be on 2½ acres.

Shri Gajraj Singh Rao: Even with half an acre, he enters into an enterprise and produces a better seed. Would he be able to carry on that considering the experience with the Civil Supply Department?

Shri V. N. Kohli : If I understood it correctly, the idea of the Bill seems to be that it should control the seed production under which the seed-producers should be registered and the seed production should be confined to those people who have the requisite experience, knowledge, know-how and resources to do so. A man having 2½ acres of land, whatever he produces, he consumes it himself and he cannot seeds?

Shri Gajraj Singh Rao : From our experience and also from the statistics we have collectd from all over India, the best producer of the best seed has been the small peasant proprietor. Do you think that a small man with a small holding cannot produce better seeds?

Shri V. N. Kohli : I am not suggesting that he cannot. He can produce. but that seed requires grading, drying; it requires processing and it requires packing and it requires certification. All that he cannot do.

Shri Gajraj Singh Rao: Because of all this paraphernalia would it not have the effect of discouraging a small producer who produces good seeds?

Shri V. N. Kohli : I cannot answer that question.

Shri Gajraj Singh Rao : For a particular crop a particular soil is suited. with particular quality of water and certain experiene and of course, hard labour. Do you think that the Rupar farm has soil suited to Bajra?

Shri V. N. Kohli : Yes.

Shri Gajraj Singh Rao : And the experience goes, if you see the records the sandy soil of Bikaner has been producing the best seeds so far. The soil at Rupar I have seen . . .

Shri V. N. Kohli : That is also sandy.

Shri Gajraj Singh Rao : On that soil only the *bajra* was sown.

Shri V. N. Kohli: That is the soil where we produced *bajra* last year.

Shri Gajraj Singh Rao: You are talking about last year. If I were to say that certain other kinds of soil are more suitable to *bajra* like the Rajasthan area, the Hariana area, would it be incorrect? Again I would say that for seed potato Himachal Pradesh is most suited for a better quality of seed potato.

Shri V. N. Kohli: We are only experimenting what would be the best crop that can be produced there.

Shri Gajraj Singh Rao: To concentrate on one single farm all these things we cannot have better seeds. Only by soil testing and other things we can know what is the best crop and where the best kind of seeds can be grown.

Shri V. N. Kohli: That is what we are trying to plan to do.

Shri Gajraj Singh Rao: Have you tested the Australian *bajra*?

Shri V. N. Kohli: No, we have not yet.

Shri Gajraj Singh Rao: That gives the maximum yield if I may tell you and you can just find it out from the records of the Punjab Government. In Gurgaon we have got 44" stalk. What quality of *bajra* have you sown in your farm?

Shri V. N. Kohli: That was the hybrid *bajra*.

Shri Gajraj Singh Rao: Hybrid means the process and not the quality. The seeds are known by other names. So, do you think that the foreign *bajra* is better than the Indian *bajra*?

Shri V. N. Kohli: I do not think so.

Shri Gajraj Singh Rao: Have you seen the Indian seed?

Shri V. N. Kohli: Yes, we have seen. We have got it from the National Seeds Corporation, from their farm in Ludhiana.

Shri Gajraj Singh Rao: Have you seen the agricultural statistics of these places. What is the yield of *Bajra* there? What is the specific quality of that *bajra* in Ludhiana? In your laboratory have you got statistics called out from the hormal gazette about the grades? Have you studied them? You have given instances from America and you may be expert in that. But have you made a study of the agricultural statistics of Punjab? There are complete statistics.

Shri V. N. Kohli: We were advised by the Director, Agriculture, Punjab that this is the best *bajra*.

Shri Gajraj Singh Rao: My question is: have you studied the agricultural statistics of Punjab or the settlement reports or so many other books on agricultural production.

Shri V. N. Kohli: We do. But we were given particular type of seeds to grow there and we grew.

Shri Gajraj Singh Rao: Then as an expert and I say you are becoming an expert, you say that you were given certain quality and therefore you grew it. Is that an answer?

Shri V. N. Kohli: We have not evolved any strain of our own. We were given the seeds that they were the seeds most suitable and we grew them. That was the first year. As we progress, we will probably evolve our own strain.

Shri Gajraj Singh Rao: I do not want the testimony of your farm. The The question before us is this: so you have been doing as they said 'Do this or do that.'

Shri V. N. Kohli: That is all.

Shri Gajraj Singh Rao: But on your own expert knowledge of the soil and the production quality, quantity in Punjab, now in the Hariana part of it, that this should be done with the exjpert knowledge of the local people who have been growing and with that scientific knowledge you can do anything—have you gone on that line?

Shri V. N. Kohli: We have not gone on that line. That stage has not yet come. We have not reached that stage but when we reach that in the course of the next few years, then we will do.

Shri Gajraj Singh Rao: Then you suggest that there should be big seed farms. But no man in Punjab, even the biggest landlord, can have more than 30 acres and if they were to go in competition and want to produce best seeds, would they be able to do that with all the paraphernalia; can they produce and come in the market?

Shri V. N. Kohli: That is a question of opinion. I am not expressing any opinion on that subject.

Shri Gajraj Singh Rao: 30 acres is the maximum allowed according to law. Punjab is a land of peasant proprietors where the holding was about 2½ acres in 1940; it may be much less now. How do you think if the Rules-making body takes into its head that the peasant proprietors should be encouraged to produce seed in competition, what facilities would you suggest they should be given?

Shri V. N. Kohli: We would give them all facilities we have got. In fact they should be given facilities by the Government. They should be given good seeds.

Shri Gajraj Singh Rao: You in turn want to be an expert adviser to them?

Shri V. N. Kohli: We have not been given any facilities. We have created the facilities ourselvs for the good of the people. We have not got one paisa from the Government. We are setting up laboratories at a cost of Rs. 7 or 8 lakhs with our own funds.

Shri Gajraj Singh Rao: What is your cost of production as compared to ordinary cultivator? I am talking of the seed—the high-quality foodgrain which I would call the seed.

Shri V. N. Kohli: Our cost will be higher because we will be providing for all this processing and various other things which the cultivator will not do.

Shri Gajraj Singh Rao: What is the ratio if you have studied it in your laboratory? You say that there is a Corporation of yours. If you have these figures, what is the cost of production of the same quality of seed—you might call foodgrain—by ordinary cultivator in that locality and in your farm?

Shri V. N. Kohli: I have not got the figures.

Shri Gajraj Singh Rao: Because if you were to advise us, we would tell you that there cannot be any comparison between your cost of production and the ordinary cultivator's because you get so many subsidies from the Government and other facilities. It means the extinction of the ordinary cultivator from this seed production where I would submit the ordinary cultivator is the best producer. In Lyallpur which was a worse area, the land was given to a military man who was demobilised and he produced one-fifth of the foodgrains of the whole of Punjab. And there was no mechanical farming. The seed has been sent to the whole of Europe.

Shri V. N. Kohli: Lyallpur irrigation facilities are not available in Rupar.

Shri Gajroj Singh Rao: Your irrigation facilities are better. I have seen the facilities in Lyallpur in those days. Now because of electricity, they are a little better. Even in the early days of Lyallpur, we could send to the whole of Europe our foodgrains as seed.

Shri V. N. Kohli: This is a very controversial point, whether a cultivator can produce cheaper seed than a capitalist; that is a different issue.

Shri Gajraj Singh Rao: I didn't say that; I would only ask you as to how you want an honest and hardworking cultivator to be in competition in seed production with the big capitalist.

Shri V. N. Kohli : We are not competing, we are only supplementing.

Mr. Chairman : What are the functions of this Birla Institute of Scientific Research? What is the work they are doing? Why have they taken up this work? Who is financing these operations?

Shri V. N. Kohli: This Birla Institute of Scientific Research has been created to propagate the sciences in agriculture, in horticulture, in farming and in various other things. This is a foundation created by the Birlas, in the same way as we have got the Hindustan Charitable Trust, the Pilani Institute, the Ranchi Technological College and various other institutions. The Institute is without any profit motive and it was established about three years agc with the object of helping the country in whatever small way it can. They are just beginning to develop these ideas and to give whatever help they can. Beyond that we have not gone. The main function is to do service. There is no profit motive involved because we are precluded under the constitution of the foundation from making any profit. Whatever is got has to be put back into the Institute. There is no profit; loss, of course there can be.

Mr. Chairman : Subsidy is given?

Shri V. N. Kohli : Yes. It is not a business foundation. It is just that Birla thought "well, the need of the country is to have development in scientific agriculture; let us do something for that." That is what they are doing. But if it comes to business foundation, which we expect to have in course of time, then it becomes a different issue. No land is involved. The company will contract with the growers, take their produce at the market value, process it, dry it, bag it and sell it to the cultivators who are interested.

Mr. Chairman : You have suggested that certification should be optional. Then how can the farmers be supplied with genuine seeds, if there is no certification either by the Government or by some institutions?

Shri V. N. Kohli: I will explain to you the reason. If I produce good quality seed and if I give it to the cultivator and that results in a higher yield, the cultivator will surely come back and ask for that seed again. But if the quality is bad, the cultivator is not going to touch it with a pair of tongs. You can even sell it at half the price; he won't touch it. If the seed is of good guality and gives a higher yield, the cultivator will take to it. So, whether you certify or don't certify, it does not make any difference. Certification leads, as some Hon'ble Member suggested, to a lot of paraphernalia, inspectors, civil supplies staff, etc. It is better to leave it to the company which produces the seed. If the seed is found to be good by the cultivators, he can run his business. Otherwise, he will be forced to close down the show. That is my personal opinion.

Dr. Sarojini Mahishi: If the whole process of growing the seeds and supplying them depends upon the honesty and sincerity of the people, where is the necessity for this Bill, Sir?

Shri M. L. Dwivedi: You have said that certification should be optional. But clause 8 of the Seed Bill says that "the State Government may establish a certification agency for the State to carry out the functions entrusted to the certification agency by or under this Act." Here, "may" does not mean "option". It has the force of "shall", that is compulsory. So, your interpretation is not correct. You may know that the Government of India has passed an Act where it is said that "English *may* continue to be used in addition to Hindi....." There, "may " has the force of "shall".

Shri Hari Vishnu Kamath: I will, if I may, supplement the Chairman's question. We are glad to learn, Mr.

Kohli, that Birlas are actuated by the no-profit motive in this enterprise. Is the Committee to understand that this is a solitary instance in Birlas or that there are other enterprises also that they have launched in this country wherein they are actuated by similar noble motives?

Shri V. N. Kohli: There are so many institutions. We have got one in Hyderabad. We have set up a small farm to improve the yield there. Then we have got the educational institutes; *e.g.* the Pilani Institute and the Birla Institute of Technology in Ranchi. There is a hospital coming up. If you like, I will send you a complete list.

Shri Hari Vishnu Kamath: There is no profit involved in all these?

Shri V. N. Kholi: Where is the profit in running a college? Where is the profit in running a hospital or a school?

Shri Hari Vishnu Kamath: In answer to the Chairman's question, you said there was no profit, no loss...

Shri V. N. Kohli: I didn't say "no loss". What I said was that there is no profit motive involved.

Shri Hari Vishnu Kamath: The prices of the the Seed Corporation are higher than their prices...

Shri V. N. Kohli: Our price does not include overhead charges, etc.

Representative of the Seed Corporation:

The Seed Corporation does not grow its own seeds. It only buys from the growers, processes it and sells it to the State Governments. Now the price of hybrid seeds varies from State to State. as it must have relationship with grain price. Now Mr. Kholi's firm is located in Punjab. Therefore, I will confine myself only to the price in Punjab. The National Seed Corporation last year in kharif had entered into an agreement with the growers to purchase seeds from Rs. 85 to Rs. 100 per quintal *i.e*, 85 paise to Re. 1 per kilogram. It was unprocessed seed. And thereafter the Corporation spent some money on processing, bagging up and certifying it, and roughly our cost of production had worked out to about 1.50 per kilogram. That included all items of expenditure. Another big firm in Punjab which is Agricultural Association is dealing on a very large scale in hybrid seeds. Now I do not remember the exact figure, but they have also been selling the hybrid maize seed at almost the same price about Rs. 10 or Rs. 10.50 per bag of 6½ kilograms.

Shri M. L. Dwivedi: They have also spent the same thing as the Government National Corporation has done *i.e.* near about 1.50 per k. g. Birlas are also supposed to have spent the same money.

Representative of Seed Corporation: There is a little difference, in the sens the Corporation did not grow its own seeds. It is correct that the Corporation prices are higher, because, in fact, the Corporation does not sell at Rs. 1.50 but is selling at a much higher rate. The reason for this is, production in Punjab, which the Corporation had procured, was so small compared with the demand that it went in for large scale procurement in Maharashtra and Mysore. Now in Maharashtra, the State Government fixed the price of hybrid maize at Rs. 3:50 per kg. and in Mysore it was Rs. 5 per k.g. These were the prices that were fixed by the State Governments and what the Corporation did was that it procured these seeds from the different regions, pooled a price, so that because mostly it was supplying to North Indian States where there is no production in winter of this maize etc. and the pooled price is about 3.5 nP per k.g. that is why Mr. Kholi said the Corporation prices are higher than his prices.

Shri Hari Vishnu Kamath: What has been just now said creates the impression—I may be wrong—that to the poor Kisan, the National Seed Corporation appears as a profiteer.

Shri V. N. Kohli: As I explained a little while ago, ourt cost did not include depreciation, inter-State charges and various other elements, which normally a businessman includes. Therefore, the price was slightly lower than that. There is not much of a difference.

Shri Hari Vishnu Kamath: You have actually sold at that price i.e. Rs. 10 for 6½ k.gs.

Shri V. N. Kohli: Yes.

Shri Anna Sahib Shinde: Mr. Chairman, with your kind permission, I would like to make a few observations in regard to the points raised in the Memorandum by Mr. Kohli. I do not want to enter into controversy but I only wish to state the position of the Government in regard to the two points raised in paragraphs 2 and 3. First of all, I would dispose of paragraph 3. It has been said that normally a specific colour is also used for certified seed and reserved exclusively for its use. Our scientists have been working on this for quite some time and just as, unfortunately it has happened in the case of colourisation of Vanaspati (we have not so far succeeded in evolving a suitable colour for Vanaspati), similarly in regard to seed under Indian conditions, we have not succeeded in evolving a suitable colour. That is the position. Our scientists are working on it. That is the factual position. In regard to the contention that varieties must be approved prior to registration and perhaps he is of the view that this difficulty should not be there, in a vast country like India where if you expose the country to all foreign importers, then all types of seeds, genuine, perhaps sometimes infected, might be imported and our cultivators might be exploited and some racketeers perhaps may intentionally come in. I think a sovereign country should not give up its right to inspect the seed to be imported from a foreign country. We have, as a matter of fact, the case of poultries wherein we tried to import some seeds and wherein some conditions were not strictly observed and we came into trouble. I feel that the insistence of the Government that there should be a pre-condition of registration *i.e.* it should be approved by the Government before it is allowed in the country, is absolutely necessary in the wider national interest. Perhaps Mr. Kohli may have a different view in the matter but Government thinks that it is in the wider public interest and also even taking into consideration the technicalities of the matter, it would be useful. This is all I wanted to submit.

Mr. Chairman: Thank you, Mr. Kohli.

(The witness then withdrew.)

(The Committee then adjourned.)

1. Shri Harish Chandra.
2. Shri Lakhpat Rai Sharma.

I. Municipal Corporation Teachers' Association, Delhi

1. Shri Vishwa Nath Sharma
2. Shri Murari Lal Tyagi
3. Shri Roshan Lal Kakkar
4. Shrimati Savitri Mehta
5. Shri Deep Chand Bandhu
6. Shri Jai Narain Kaushik.

The witnesses were called in and they took their seats.

Mr. Chairman: Who will be the main spokesman among you?

Shri Deep Chand Bandhu: Mr. V. N. Sharma.

Mr. Chairman: At the outset I would like to read out to you Direction No. 58 of the Directions of the Speaker.

"Where witnesses appear before the Committee to give evidence, the Chairman shall make it clear to the witnesses that their evidence shall be treated as public and is liable to be published unless they specifically desire that all or any part of the evidence tendered by them is to be treated as confidential. He shall, however, explain to the witnesses that even though they might desire their evidence to be treated as confidential, such evidence is liable to be made available to the Members of Parliament."

Now, Mr. Sharma, your Association has submitted a memorandum copies of which have been circulated to the Members of the Committee. So, whatever points you have made therein are before us, and if you want to add anything further to it you may do so. That way we will save time, and repetition may be avoided. And if you want to emphasise any point in it you may do so, but you may not cover the whole ground covered in the memorandum again.

Have you read thoroughly the Delhi Secondary Education Bill?

Shri Vishwa Nath Sharma: Not thoroughly, Sir, but some contents of it.

Mr. Chairman: Is the copy of the Bill before you?

Shri Vishwa Nath Sharma: Yes, Sir, I have got the copy.

Mr. Chairman: Look to the arrangement of the clauses in it and at a glance you will come to know the scheme and the purpose of the Bill.

Shri Vishwa Nath Sharma: There is one thing. Though we have not gone through all the clauses in the Bill, there is only one point which we want to emphasise, and that is pertaining to education in Delhi under the Municipal Corporation. We want to emphasise only that under the Municipal Corporation, because of its economic conditions, we do not want to suffer differences in our service conditions. For a long time we have been seeing that with the changes of the structure in Delhi and Education being put under different heads, we have suffered a lot. Our seniority, our service and other conditions etc. were not given to us accordingly. For example sometime ago when the district boards were broken the services of these teachers were taken under the Municipal Corporation, and some teachers were transferred from the Government to the Municipal Corporation, and from the New Delhi Municipal Committee, some teachers were transferred to the Municipal Corporation. Their service conditions have not been decided. Four or five years ago we went on a strike, and as a result some of the teachers who were transferred from Government to the Municipal Corporation service were taken back. But the rest of the teachers were not taken back, and the agreement which was made on that occasion was broken. In these circumstances we only want to emphasise one point, that there must be one and only one pattern of education in Delhi under which all education must go. This is the only point. I would like to submit one thing. For example, our Government has announced four dearness allowances. But here in the Corporation not even the first dearness allowance has been given to some of the teachers so far, though it has been passed by the Municipal Corporation body. This happens because of the separate kind of system under the municipal corporation; a bill or a rule has to be laid down over here before it is passed by our municipal corporation body, and then only it is implemented.

As regards medical facilities also, the facilities provided to the teachers under the Directorate are not given to the municipal corporation teachrers. In regard to many other service conditions also, we have not been brought on a par with them.

For example, a trained graduate serving in a higher secondary school which is a Government institution, and teaching for classes 6 to 8 is given a grade of Rs. 170—380 whereas a trained graduate teacher with the same qualifications and teaching for classes 6 to 8 in a municipal corporation school is given a grade of only Rs. 160—300.

These kinds of discriminations can be abolished only if the whole of education is put under one head. That is our submission which we request should be given consideration by this Committee.

Mr. Chairman: Are you aware that the municipal corporation has passed a resolution that Government should take over these higher secondary schools or in other words that they should take over secondary education?

Shri Vishwa Nath Sharma: Yes, our municipal corporation has passed a resolution, or rather this has been resolved in the Education Committee, that higher secondary education should be handed over to the Directorate, and that is still under consideration.

Mr. Chairman: I think that in view of the new set-up that is likely to

come up, in regard to which the Bill is pending before the Parliament, your wishes might be met.

You have stated in your memorandum certain points regarding the amelioration of the service conditions of teachers, of accommodation, the taking over of the schools by the Directorate and so on. You want only these things and nothing besides that.

As regards the taking over of the schools by the Government and the service conditions of teachers, the relevant provisions are contained in clauses 11 and 12 of the Bill. The Committee will consider these points when they take up those clauses. Your memorandum is there before us, and we shall consider all those points. Do you want to make any further submissions?

Shri Vishwa Nath Sharma: In addition, we have nothing else to urge.

Shri K. Damodaran: The gist of your memorandum is that there should be no discrimination or difference in regard to pay scales, salaries, service conditions etc. as between private school teachers, corporation school teachers, and Government school teachers. Have I understood you aright when I say this?

Shri Vishwa Nath Sharma: Yes. As I have already pointed out, at present, there is discrimination between a teacher in a Government school and a teacher in a corporation school. A trained B.A., B.T. teacher serving in a Government school and teaching for classes 6 to 8 is given a grade of Rs. 170, whereas a trained graduate with the same qualifications and who is teaching for classes 6 to 8 in a corporation school is given a grade of Rs. 160.

Mr. Chairman: We have visited some of the schools, Government schools, corporation schools, aided schools and private schools, and we have got the information that the scales are the same throughout for the same category of teachers. If that be so, then what is your grievance?

Shri Vishwa Nath Sharma: The difference is there in the case of a trained teacher with the same qualifications who is teaching for classes 6 to 8 in a higher secondary school under the Directorate, that is, a higher secondary school with classes 6 to 11 or classes 1 to 11; he is given a grade of Rs. 170, whereas in the case of the schools under the corporation, a teacher serving in those schools and teaching for classes 6 to 8 is given a grade of Rs. 160 only, and this is the case with regard to the corporation school teachers; except in the case of 11 Higher Secondary institutions, in the other corporation schools which are middle or primary institutions, this is the position.

Mr. Chairman: The question about grades is beside the point You have mentioned all these things in your memorandum and you have indicated the schedule of grades also. We shall consider them.

श्रीमती जयाबेन शाह : अभी यहां बतलाया गया कि कुछ स्कूलों के ग्रेड्स में फर्क है । में जानना चाहती हूं कि जो ट्रेन्ड ग्रेजुएट्स मिडिल स्कूलों में काम करते हैं उनको ही कम मिलता है या जो अपर स्टैन्डर्ड के स्कूलों में ट्रेन्ड ग्रेजुएट्स काम करते हैं उनको भी कम मिलता है ।

श्री विश्वनाथ शर्मा : हायर सेकेंडरी स्कूल में 6, 7, 8 कक्षा पढ़ाने वाले अध्यापकों को 170-380 का ग्रेड दिया जाता है जबकि उसी योग्यता के अध्यापकों को जोकि मिडिल स्कूल में 6, 7, 8, कक्षा पढ़ाते हैं 160-300 का ग्रेड दिया जाता है । कारपोरेशन में 400 माध्यमिक विद्यालयों में बी० ए० बी० टी० को 160-300 का ग्रेड दिया जा रहा है । With a view to avoid all these discriminations, we want that education

must be put under one head. Pension, gratuity etc. are also not properly handled by the corporation at present.

Shri Jairamdas Daulatram: Under section III, under item 5, under the heading 'Improvement in service conditions of teachers', you have said that a separate department has to be set up to settle the disputes in regard to services. Do you mean a separate Department of Government to deal with the disputes regarding services for all teachers in Delhi including those under the corporation?

Shri Vishwa Nath Sharma: In our corporation, as it exists now, there are welfare officers to give attention to our grievances off and on. We have submitted here in our memorandum that about Rs. 6 to 7 lakhs are pending as dues; the arrears in regard to fixation of pay, the arrears of dearness allowance etc. are all pending. In order that there should be a quick settlement of these things, we want that there must be a separate office for this.

Shri Jairamdas Daulatram: There should be a separate Officer or a separate Department?

Shri Vishwa Nath Sharma: There should be a separate Officer; that Officer may have a department, or it might be a branch of the Education Department.

Shri Jairamdas Daulatram: He will deal with these questions relating to teachers in Government schools, aided schools, corporation schools, all schools in Delhi territory?

Shri Vishwa Nath Sharma: Yes.

Shri Jairamdas Daulatram: There is another point on which I would like to have a little clarification. On the same page, under section II which starts from hte preceding page, in item 4, you have stated that the number of students in a section is being increased from 33 to 45 or 50. You are against this increase, or do you favour the increase?

Shri Vishwa Nath Sharma: No, we are against the increase.

Shri Jairamdas Daulatram: What is the reason for this increase, and why are you against this increase?

Shri Vishwa Nath Sharma: Particularly in the corporation schools, the accommodation at present is not sufficient even for 33 students. There are sheds, structures and rooms in rented buildings etc. where classes are now being held. It is very difficult to give accommodation even to 33 students now. Individual attention cannot be paid to the students if the number is too large.

Shri Jairamdas Daulatram: Based on your experience, what should be the maximum number of pupils in a section?

Shri Vishwa Nath Sharma: It must not exceed 30 in any case. Only then we will be able to pay adequate attention to the pupils.

Shri Jairamdas Daulatram: What should be the reasonable number below the maximum which you think should be proper?

Shri Vishwa Nath Sharma: 25.

Shri Jairamdas Daulatram: On p. 2, under section IV, under the heading 'Revision in pay scales', you have item 7 'Postgraduate teachers 325—690'. What is the salary now?

Shri Vishwa Nath Sharma: 250—470.

Shri Jairamdas Daulatram: Then item 9 'School inspector 325—690'—the same scale as the postgraduate teacher. The school inspector is inspecting the work of the postgraduate teachers and also of other teachers?

Shri Vishwa Nath Sharma: No. They only inspect the work of teachers in middle and primary schools. No doubt, in higher secondary schools, there are postgraduate teachers. They are not inspected by these school inspectors who are working on the scale of 250 at present. They are meant only to inspect the middle and primary schools. At present their salary is 250.

Shri Jairamdas Daulatram: On p. 3 under sec. VI, you have said 'Free higher education may be given to the sons and daughters of teachers'. Have you to say anything in support of it?

Shri Vishwa Nath Sharma: This is the only demand we are making.

Shri Jairamdas Daulatram: Then in Sec. VII under 'Some other suggestions', item 5, you say 'All the middle schools with a strength of 300 students may be provided with a clerk'. I infer that they do not have a clerk now.

Shri Vishwanath Sharma: Definitely not, nowhere.

Shri Jairamdas Daulatram: Who does the clerk's work?

Shri Vishwanath Sharma: The teachers. Even in schools with a strength of 1,000 or 1,500, only the teachers and the headmaster have to do the work and maintain the accounts.

Shri Jairamdas Daulatram: Is this work done during teaching hours or after?

Shri Vishwanath Sharma: Of course, during the school hours, because the schools work on shifts, say, 7·30 to 12·30 and 1 P.M. to 6-00 P.M. etc. There is no time left after that. So either in the vacant period or in the recess, this work is done. Sometimes when they have to answer urgent queries, they have to do that work even in the night. But the teachers are not qualified to work as accountants. Teachers in corporation schools have to prepare their own salary bills with their own hand. No clerk is provided.

Shri Jairamdas Daulatram: That means this interferes with their proper duty of teaching students.

Shri Vishwa Nath Sharma: It is bound to.

Shri Jairamdas Daulatram: This condition exists only in corporation schools?

Shri Vishwa Nath Sharma: As I have already submitted, in the directorate in higher secondary institutions, wherever the number of students is 300, there is provision for a clerk. But here in corporation institutions where there are 1200 or 1500 students in middle or primary schools, no clerk is provided. Naturally the work of the teachers suffers.

Shri Hem Barua: Are we to understand that you recommend a uniform pattern of education and administration for all secondary schools in Delhi in order to improve the economic condition of the teachers and remove the discrepancies existing now? In that context, if these discrepancies are removed and the schools continue to run under the corporation authorities, will you be satisfied?

Next, you have said in your memorandum about overcrowding in classrooms. You say the reason is that the corporation cannot provide for sufficient accomodation by way of school buildings. Do you think that with Government takeover of the schools, sufficient accomodation could be provided so as to remove overcrowding in classrooms?

Shri Vishwa Nath Sharma: All these discrepancies will definitely be removed if education is put under one authority. Based on our experience, we can say this. When something is passed by Government, it is sent to the Directorate for implementation. But before it is implemented here, it has to be passed by the Standing Committee and the General House. For example, take the question of the fourth dearness allowance sanctioned by Government. Government has passed orders in that respect. But some of our teachers have not yet been paid even the first dearness allowance.

These are the difficulties. Whether it is because of the financial difficulties of the corporation or due to some other reason connected with management, this hard fact remains. We have got experience of this for the last four or five years. We have been under the district board, under the municipal committee; we are now under the municipal corporation. So, many heads have changed. Our experience is that these problems cannot be solved unless it comes under one authority, whether it is the directorate or any governmental body.

Take the question of promotions. They are not given according to fixed rules and regulations. Sometimes promotions are given according to a rule; then it is changed the next year without any order by the proper authority. There are so many irregularities which can be mentioned.

Shri Hem Barua: Teachers in municipal corporation secondary schools enjoy certain amount of autonomy and freedom. They can participate in the political life of the country also. If the schools are taken over by Government, you lose that autonomy which you now enjoy.

Shri Vishwanath Sharma: That is something else. But the practical difficulties we are facing at the moment definitely compel us not to want to remain under the corporation.

As regards promotions, persons with higher qualifications, double MA, BT and so on, have no chances thereof. Take the head of a middle school. He has no chance of promotion. But elsewhere, he can become principal and so on. But here he has no such chance because he is in the corporation school Only when secondary education is taken over by Government will this state of affairs improve.

Shri S. N. Chaturvedi: Firstly, I would like to know whether all the higher secondary schools and the middle schools are run directly by the Corporation or whether there are some aided schools also. Secondly, if they are transferred, should they be on the pattern of aided schools or institutions run as private aided schools or should they become government institutions like the government higher secondary schools, or, should they become aided institutions under the Delhi Administration but run by the Corporation? What is your idea of their set-up?

Shri Vishwa Nath Sharma: There are some local institutions which are aided by the Corporation; they are not higher secondary schools. When we say that all the educational institutions under the corporation should be transferred to the Delhi Administration, or the Directorate, I would certainly say that all those institutions which are aided by the Corporation should be transferred along with them.

Shri S. N. Chaturvedi: Transfer could be done in two ways: one is, they come under the Delhi Administration but remain as aided institutions in the same manner as the private institutions, or you want that they should be taken over by the Administration directly and run as government schools.

Shri Viswa Nath Sharma: We want that they must be taken over by the Government; we do not want that there must be three or four bodies: the New Delhi Municipal Committee, the Delhi Municipal Corporation, aided institutions and all that; certainly not.

Shri S. N. Chaturvedi: Are you prepared to forego the concession about which Shri Hem Barua asked: that you are allowed to participate in the public activities? Would you be prepared to forgo those concessions which the Corporation teachers enjoy at present?

Shri Vishwa Nath Sharma: What are those things which are enjoyed by the Corporation teachers?

Shri S. N. Chaturvedi: The Government servants and the corporation employees are two different categories.

Shri Vishwa Nath Sharma: There is triple benefit scheme which we have mentioned here.

Shri S. N. Chaturvedi: I mean the political activities.

Shri Vishwa Nath Sharma: We have not got any political privileges.

Mr. Chairman: With the change-over, they will forego all those things, whatever they are.

Shri S. N. Chaturvedi: At page 3, unter heading No. VII, against item 6, you have said that the representatives of all the recognised associations may be invited to attend the State Banquets. How will it help to improve education or the efficiency of the schools?

Shri Vishwa Nath Sharma: Today, it is said that the social status of teachers has gone down, and that their prestige has fallen. So, at least if the Government bestow some importance to the teachers in this way, that would be good, and that is why we have added this aspect in our memorandum.

Shri S. N. Chaturvedi: The President gives awards to teachers.

Shri Vishwa Nath Sharma: I have submitted that it is one of the things done by the Government.

Shri Deokinandan Narayan: I would like to know how far the corporation officials and others interfere with the admissions, examinations and internal management of the schools.

Shri Vishwa Nath Sharma: In day-to-day life, we see so many things happening. Take for example the transfers that are effected by the Education Department; the day after or, say, four or five days after the transfer order is given, the people are taken back; they are then released and then taken back. In that way, it happens. Particularly in our Education Department, either in the official wing or in the teachers, when a person is transferred, he is definitely taken back; the transfer orders are held in abeyance sometimes. If some pressure is there, the person is released and then taken back. In that way, we see that education suffers.

Shri Deokinandan Narayan: In the matter of admissions and examinations do the officials or others in the corporation bring pressure upon the teachers?

Shri Vishwa Nath Sharma: There is no question of pressure; compulsory education is up to the fifth standard.

Shri Deokinandan Narayan: I am referring to secondary education, where there are examinations. Before the results are out, if presure is brought to bear upon the teachers by the officers or members of the corporation that a particular student should be promoted, what happens? Is such a pressure being brought upon the teachers?

Shri Vishwa Nath Sharma: No such sort of pressure has come to our notice.

Shri Deokinandan Narayan: You said that you have not been provided with clerks. Will you please tell us the number of students in the school, which would require the appointment of a clerk? I ask this question because any school with just 200 or 300 students cannot be provided with a clerk.

Shri Vishwa Nath Sharma: We have said that nowhere has a clerk been provided in the corporation except in the higher secondary schools.

Shri Deokinandan Narayan: I understand that. I only say that a school with just 200 or 300 students cannot be provided with a separate clerk. So, can you point out a particular level or a particular number of students—say, 1,000 or 1,200—which would require the apointment of a separate clerk?

Shri Vishwa Nath Sharma: We have mentioned the number as 300; wherever there are not less than 300 students a clerk must be provided.

Shri Diwan Chand Sharma: May I know if this association is recognised by Government and, if so, what advantages does it enjoy under the rules of recognition?

Shri Vishwa Nath Sharma: As we are recognised by the Education department of the Municipal Corporation. Delhi we occasionally point out to the authorities what our grievances are and to some extent the officials of the corporation too try to satisfy us by accepting our demands to a certain extent. So many times, our demands have been accepted.

Shri D. C. Sharma: I want to know if your association has the power to negotiate to represent and to make suggestions to the corporation or to the standing committee of the corporation? Have you got that right, or, do you wait only in deputation after getting the dates fixed by them?

Shri Vishwa Nath Sharma: We are only recognised by our education Department and not by the Municipal Corporation as a whole, and that is why our demands are only up to the Deputy Commissioner and the Commissioner at the administrative level.

Mr. Chairman: The question was whether, by way of right, your association can represent or bring forward grievances to the corporation machinery or authority.

Shri Vishwa Nath Shrama: We are not supposed to wait on deputation before the corporators at all. In some cases, as things are passed and dealt with by the standing committee, if our question comes up—

Shri Diwan Chand Sharma: How many times did you make representations, if any, to the corporation authorities during the last year, say from 1st April, 1965 up to date, and what was the nature of those representations and how far they were conceded and how far they were not conceded?

Shri Vishwa Nath Sharma: After every two or three months, we see the highest authority, the DC (G), and we see the Commissioner once a year in regard to our pay, arrears, etc. One thing which I forgot to mention is that in our corporation, pay has not been given to any teacher working under the corporation in time. There are so many institutions which have not been given pay up to this moment.

Shri Diwan Chand Sharma: That means you are unrecognised and that you work with the help of the DC or the Commissioner. Now, under the triple benefit scheme which was envisaged by the Mudaliar Commisison—if it obtains in your municipal corporation schools—what are the amenities that you get in the course of the working of your schools, by way of insurance, medical help, accommodation, pension, etc? What are the amenities that you enjoy as teachers of the municipal corporation?

Shri Vishwa Nath Sharma: Corporation school teachers do not enjoy medical facilities. Only those teachers whose services have been transferred from the Directorate get it. Also, they get pension, whereas Corporation school teachers get only PF. This is aslo a discrepancy. The triple benefit scheme of gratuity, PF and pension is not there for Corporation teachers.

Shri Diwan Chand Sharma: Generally, how many years after retirement do they get the PF from the Corporation?

Shri Vishwa Nath Sharma: It takes from 4 to 5 years or even 6 years. There are examples of non-payment of PF for teachers who retired 6 years ago. Also, the families of those who died while serving have not been paid their PF for years together.

Kumari Shanta Vasisht: Even in the government schools you may be aware that a number of teachers have been

temporary for as long as 15 years or more in the Directorate of Education Some of them retired without pension also. Are you aware of that?

Shri Vishwa Nath Sharma: Then there must be some amendment.

Kumari Shanta Vasisht: Even seniority lists were not prepared for many years.

Shri Vishwa Nath Sharma: There are cases of Corporation teachers also who have not been confirmed even after 7 or 8 years. Under the rule after one years' probation they must be confirmed or the probation period must be extended. But neither is done.

Kumari Shanta Vasisht: How many schools were opened by the Corporation each year in 1964, 1963 and so on?

Shri Vishwa Nath Sharma: Each year roughly 40 to 45 schools, including boys and girls schools have been opened.

Kumari Shanta Vasisht: Then how do you say in your memorandum that schools cannot be opened and there is no provision for new staff? How could the Corporation have opened 40 to 45 schools every year if there is no budget and you visualise closure of schools? I cannot understand this.

Shri Shiv Charan Gupta: You say in para II that:

> "Education in Delhi has been adversely affected by the shattered economic condition of the Delhi Corporation."

How do you say that?

Shri Vishwa Nath Sharma: There are so many schools where the salaries have not been paid to the teachers. Arrears amounting to Rs. 5 lakhs to 7 lakhs are pending. Arrears of DA are also pending. That is so because of the economic condition of the Corporation. The only reason is on the 1st, 2nd or 3rd there is no money in the Corporation. Had money been there, the specific amount for each particular zone could have been sent to that zone and distributed within 3 or 4 days.

Shri Shiv Charan Gupta: There may be some delay in payment due to procedural difficulties. That happens in all departments, whether in the government or in the corporation or elsewhere. But you should explain it when you make a sweeping remark like that. In the primary class, not a single child is refused admission by the corporation. In the middle class also that is the position. How do you say that opening of schools or providing of facilities for primary or middle education is being adversely affected by the bad financial condition of the Corporation?

Shri Vihswa Nath Sharma: This is only for this year. We have read about this in the newspapers also. For this year, if I am not mistaken, our department has suggested some reduction in the posts. That is why the number of boys in a section is being increased from 33 to 45 or 50. The budget is going to be less this year for the corporation.

Kumari Shanta Vasisht: You are talking of the future. We thought we were dealing with the past and present.

Shri Yamuna Prasad Mandal: With reference to item No. 5 in para II of your memorandum, what are the conditions for the membership of this association? Are these officers members of your association? Are there any conditions for membership of your association?

Shri Vishwa Nath Sharma: The promotion of teachers is affected. If one post falls vacant, one teacher will be given promotion.

Shri Yamuna Prasad Mandal: Mr. Chairman, I want to know from the witness if there are any conditions or criteria for being members of this association.

Mr. Chairman: Your association consists of teachers. What is the number of members?

Shri Vishwa Nath Sharma: 13,000 consisting of primary, secondary and higher secondary teachers.

Mr. Chairman You are also a teacher?

Shri Vishwa Nath Sharma Yes:

Shri Jairamdas Daultram: They may be asked to clarify whether all these 13,000 are paying members, or it is the total number of teachers.

Mr. Chairman: Is there any subscription monthly or yearly for your association?

Shri Vishwa Nath Sharma: Yes, eight annas per year.

Shri Yamuna Prasad Mandal: Do these people pay the the membership fee regularly?

Shri Vishwa Nath Sharma: Generally all teachers are members. About 100,000 teachers were paid members last year.

Shri Yamuna Prasad Mandal: On page 3 you have said that free and higher education may be given to the teachers' sons and daughters. Do you mean college education?

Shri Vishwa Nath Sharma: Yes, we mean even college education.

Shri Yamuna Prasad Mandal: Not Higher Secondary education?

Shri Vishwa Nath Sharma: That is why we have said higher education, even college education.

Shri Yamuna Prasad Mandal: Don't your wards get some benefit in higher secondary or middle schools?

Shri Vishwa Nath Sharma: As far as middle school education is concerned, that is free already to each and every one.

Shri Yamuna Prasad Mandal: Do your children get free education in middle schools or higher secondary schools?

Shri Vishwa Nath Sharma: Up to the eighth class it is free to every body.

Shri Yamuna Prasad Mandal: But after the eighth class, in the ninth, tenth and eleventh classes, in the higher-secondary school classes, don't your children enjoy any free education; any number, one child or more?

Shri Vishwa Nath Sharma: Up to the ninth, tenth and eleventh classes there is reimbursement.

Shri Rama Chandra Mallick: On page 3 of your memorandum, item 3, you have said that every school in Delhi may be provided with full equipment, a radio set, a television set and a telephone. Every school means even a primary school, and you mean that even a primary school will be provided with a radio set, telephone etc.?

Shri Vishwa Nath Sharma: They are middle schools, and as far as equipment is concerned the condition in some of the institutions is that the equipment is not there, not even proper desks and chairs for teachers.

Shri Rama Chandra Mallick: I want to know about radio, television and telephone.

Shri Vishwa Nath Sharma: In some institutions television has been provided, but not in the Corporation schools; only in the social education centres there is television. We want that there must be television at least in a school where the number is large.

Shri Rama Chandra Mallick: Even in primary schools?

Shri Vishwa Nath Sharma: There are so many primary schools, forty to fifty teachers.

Shri Rama Chandra Mallick: Then on page 2, item 4, you have said that all Delhi teachers may be covered under the CHS. You mean all the teachers or their family members also?

Shri Vishwa Nath Sharma: All teachers may be covered. At this moment we are not giving them this facility. Only those who are transferred from

the Directorate are given this facility, and their family too is given that benefit. That comes automatically. When any government employee is given the benefit of the CHS, his whole family gets that benefit.

Shrimati Devaki Gopidas: Are the Corporation teachers free to take private tuition?

Shri Vishwa Nath Sharma: We are not free to take it.

Shrimati Devaki Gopidas: Are there any restrictions imposed?

Shri Vishwa Nath Sharma: We have to take prior permission from the authority and one-fourth has to be deposited.

Shri Rama Chandra Mallick: On page 3, item No. VII(2) you say that 50 per cent of the posts may be reserved for the people domiciled in Delhi at the time of first appointment. Why?

Shri Vishwa Nath Sharma: I am to state about this point that in Punjab and other States it so happens that outsiders are not allowed for the service.

Shri Rama Chandra Mallick: Delhi is a metropolitan city.

Shri Vishwa Nath Sharma: So this is our submission that as it is a metropolitan city, at least 50 per cent of the posts be reserved for those domiciled in Delhi.

Shri S. N. Chaturvedi: Here you have said on page 2, item III(6), that the teachers who do not get promotion after ten years of service may automatically be promoted to higher grades. If there is a teacher in the higher secondary grade, a trained graduate, and if he has put in ten years of service, do you mean to say that he should be promoted to the post-graduate grade, even if he is not qualified for it?

Shri Vishwa Nath Sharma: We are to quote the example of Punjab in this respect. This is pertaining only to the same qualification, not a lower qualification.

Shri S. N. Chaturvedi: But there is no higher grade there. Among them there are only two grades—except for the lower-grade teachers—one is the trained graduate teacher and the other is the lecturer which is a post-graduate grade. Do you mean to say that the higher-secondary school teacher who is only a graduate and who has put in ten years of service should automatically go to the lecturer's grade?

Shri Vishwa Nath Sharma: If there is no post, he cannot be given that post. That is why we have said that after completion of ten years of service the grade must be given to them as in Punjab. As far as a teacher working in a high school, who is a B.A., B.T., is concerned, if his chance does not come to be promoted as headmaster after ten years, 35 per cent of such teachers are given the grade of the headmaster, that is Rs. 250. And that is why we are also demanding it. After completion of ten years the grade must be given to him.

Mr. Chairman: I think the other colleagues have not to add anything besides what you have said. Thank you very much for your valuable suggestions.

(The witnesses then withdrew).

Spokesman:

Shri M. L. Bagai.

(*Witnesses were called in and they took their seats*)

Mr. Chairman: We have received your memoranda and we have gone through them. If in addition to what you have stated in your memorandum you would like to add anything, you may do so, and afterwards, if the Members of the Committee so desire they may put some questions.

I hope you have read the provisions in the Bill.

Shri M. L. Bagai: Yes, we have read the Bill.

Mr. Chairman: If you would like to add anything more, you may do so now.

Shri Kidar Nath: On behalf of the association, I would like to invite your attention to the chapter pertaining to objects and reasons. Our Chairman Shri Sultan Singh will add whatever he has to say with regard to this. Whatever he will now say will be in addition to what we have already submitted in our memorandum.

Shri Sultan Singh: The Bill is based mainly on four or five considerations mentioned in the statement of objects and reasons. I shall deal with them one by one.

(i) Violations of executive instructions regarding timely payment of salaries.

We received a statement from the Directorate of Education mentioning the names of schools which have not been able to pay their staff salary in time, that is by the 10th of every month. It states that out of 150 schools, 13 have not been able to pay the staff salary in time. This is for November. Out of the 13, there is one primary school with which we have no concern. As regards the others, some have already paid the staff salary. But unfortunately, the payment certificate, on the absence of which this letter is based, has not been furnished by the principal. It is the duty of the principal under sec. 89 of the Education Code to send it to the Directorate monthly, that is, a payment certificate saying that the staff salary of each school has been paid. If no such certificate of payment has been submitted to the department, the department takes it to mean that the staff has not been paid. But we have ascertained in some cases that the staff was actually paid by those schools, but the principal did not send the certificate in time to the directorate. The department has given the reason as 'payment certificate not received from the school'. Non-submission of the certificate by the principal does not necessarily mean that the payment has not been made. But as I said, we have ascertained from several schools over the 'phone' that the schools have paid for November the staff salary in time, but that the principal did not intimate to the department as required by sec. 89 of the code which says that the principal of the school shall intimate directly, not through the management, to the department by the 10th of each month whether or not full payment of salary has been made to the staff for the preceding month. So out of the 13, there are 5 or 6 which have actually paid their staff salary but intimation was not sent. The remaining two or three are schools which have been recognised recently. If their financial position was not satisfactory, they should not have been recognised.

But among the old schools which are existing in Delhi for over 5 years, there is not a single one which has failed to pay the staff salary in time. There is one school, the Ladakh Institute of Higher Studies, Bela Road.

That is more or less a semi-government institution. Thus out of the 13, two or three might not have paid. So all this hue and cry about non-payment of salary is not based on facts.

I may say that in case payment is made to the schools by issuing payee's a/c cheques, this trouble also can be minimised. Now the procedure followed is that they send some sort of receipt to the manager; the manager has to sign that. The receipt then goes to the accounts officer. After it is countersigned by the accounts officer, it comes to the management and the manager sends it to the bankers who take at least 15 days to collect the money from the treasury and make payment to the school. So we have made this suggestion to the Directorate and they have kindly agreed to it.

Another point. For contingency expenditure, there is a grant of about Rs. 1000 per month. But from April, 1964 to December, 1965, for 20 months, we have not received any grant. That means Rs. 15—20,000 remain in arrears with Government. If that grant is also paid to us along with the staff salary grant which is paid quarterly, a lot of trouble will be over and in fact there will be no trouble at all.

We have made these two suggestions. If they are implemented at the higher level, all trouble will be over.

(ii) Failure to create a Reserve Fund.

In most of the existing institutions, the deficit is made up from the income from endowments which are generally in the shape of buildings or other properties. Regularly payments are made to the staff and there is in fact no complaint in the cases of old institutions. So I do not know why they should be put to the hardship of having to create a reserve fund. I can say from personal experience that some schools have property worth lakhs and they are earning some amount by way of rent etc. Rs. 1,000 is our deficit per month. I submit that this amount is being paid to us monthly to make up the deficit as the schools have no other ready cash available with them. Now the department makes this demand on the old schools also. How are we to create a reserve of Rs. 15—20,000? I can say from my experience for the last 40 years that there has not been a single default in my school in the regular payment to the staff. So why and wherefrom are we to create a reserve fund? In the case of new schools, do not recognise them without fulfilling this requirement. But for the existing schools, why should this condition be informed there especially when there has been no complaint whatsoever?

(iii) Recruitment of teachers with lower than the prescribed qualifications.

All appointments made are subject to the approval of the Directorate. If there is a teacher appointed who has lower than the prescribed qualifications, it will not be approved. The teacher is taken on the express condition that his appointment is subject to the Directorate's approval. In 1000 or 1500 cases, there may be one case where this happens. Then again, why should we appoint teachers with lower qualification? It is Government which pays 90 per cent or more; we pay only 5 or 10 per cent. So why should we do it at the cost of the students? The managements are not such fools as to appoint teachers with lower qualifications. There may be a mistake by a new principal or new manager; but that can be rectified by the Directorate. In such a case, the teacher will get nothing and there will be no grant in aid.

Mr. Chairman: You have stated that this Bill is not necessary.

Shri Sultan Singh: Yes, Sir. The code is sufficient enough, and during the last 34 years of my experience, there was no trouble with the Directorate or the Board. Everything was

being managed smoothly. I do not know why this question has arisen now.

Mr. Chairman: Supposing the Parliament does not drop this legislation, then what do you say about your amendments to the clauses as suggested in your memorandum?

Shri M. L. Bagai: We have suggested certain modifications, additions and alterations. That way, we are agreeable, if the Bill is not dropped. That is the minimum that we have asked for.

Shri Sultan Singh: Then there is the question of unauthorised borrowing of money from the pupils' fund by the management of the school. The pupils' fund is being administered according to the rules framed by the Department; the pupils' fund is maintained and operated by the head of the school and the amount has to be kept with the State Bank of India, post-office savings bank or a co-operative bank. No cash balances exceeding Rs. 100 can be retained. The accounts are to be submitted to audit every year. The management has no voice in the fund, and the apprehensions expressed have no basis whatsoever: *vide* rules 136 and 137 of the Delhi Education Code, 1965.

Mr. Chairman: I know of a case which has gone to the high court; it was taken up by a teacher and it was contended that there was no statutory Act to enforce the claim of that teacher and therefore, the court was unable to grant him any relief under the Code. Have you read this case?

Shri Sultan Singh: The Director had sufficient powers, instead of the case being taken to court, he should have referred to the Director.

Mr. Chairman: What happened to the teacher who has got to be paid his dues?

Mr. M. L. Bagai: The position is this. In his individual capacity, so to say, he could ask the Directorate to have this done. The Directorate has ample powers to punish that school if that school is not obeying the orders of the Directorate; secondly, according to the contract, that teacher is entitled to have his remuneration for the period he has served the management in that school. I am not aware—I am an advocate myself—of any ruling given by any high court to the effect that the Code is ineffective with regard to the performance of the duties and the obligations that are enjoined on the managements. In that respect, I beg to submit that no aided school can afford to lose its grant.

Mr. Chairman: But you have stated that the Director of Education should have published that school. Would that not mean that the school can be punished and education suffers because of that?

Shri M. L. Bagai: I submit that the Act is being formulated to rope in good schools also. There may be one or two schools or even four or five schools in Delhi, for instance, which have given us a bad name; we accept that position.

Shri M. C. Chagla: I am quite clear, and I made it quite clear in Parliament that this Bill was not intended as a sort of Damocles' sword hanging over good schools which have nothing to fear, and that this is only in respect of the bad schools which would be fearing. If you are doing what you say you are doing, the Bill does not touch you. If you, however, do not pay your teachers regularly and if you draw upon their funds unauthorisedly, then the Bill prohibits you from doing that. Take, for instance, the question of payment of teachers,—clause 9(4) of the Bill. What is your objection to that?

Shri M. L. Bagai: We have no objection with regard to that. The only point is whether a codification of that type is necessary in the shape of a Bill that we have got.

Shri M. C. Chagla: If the schools are good, they will not be touched. I do not know what is the apprehension.

Shri M. L. Bagai: The point is this. Reading the Bill as a whole, with due deference to the sponsors of the Bill or the framers of the Bill, we consider that very vast and unlimited powers have been given to the Executive.

Shri M. C. Chagla: I am quite prepared to meet you in every way if you point out any provision in the Bill where you think vast and dictatorial powers have been given. I am against dictatorship in any form.

Shri M. L. Bagai: It is true, but my only point was that out of 150 schools, if there are one or two or three instances, would it be worth-while to bring in such a Bill, or, when the Code is sufficiently strong enough.

Shri M. C. Chagla: Why should the schools which pay their teachers regularly and carry out the rules object to this? I have received many letters from teachers and many complaints; they complain that they have not been paid regularly. You know how many questions have been answered in Parliament about these things. It may be that the evil exists only in a few cases, but so long as this evil exists, it must be remedied. The majority of schools may pay their teachers regularly.

Shri M. L. Bagai: So far as this clause is concerned, they are more turbulent in government schools than in the aided schools, and this will continue in spite of this Bill and the Act coming in. The only point is, when the management wants a teacher to do a certain thing and because he ignores it then the trouble arises unfortunately, there is no missionary spirit now left. It is only the mercenary spirit that has come in. We know the difficulties which we are experiencing; the teachers as a class are out to run down the managements and probably create a chaos. If that is the position, teachers will be certainly going against the government schools also.

Mr. Chairman: How is it that you are not aware of a case wherein the high court was unable to give any relief to the teacher who was denied his claim? The case to which I was referring to is in respect of one Nand Lal Gupta, M.A., B.Com., B.T. Ex-commercial teacher, L. N. Girdharilal School, Delhi. The judgment in that case said that the rules and regulations framed by the education authorities were not Acts of Parliament. He had to pay Rs. 200 to the management as cost of the suit.

Shri M. L. Bagai: Is that decision given by a High Court? Is that by a Division Bench or a single Bench?

Shri M C. Chagla: High Court is High Court.

Shri M. L. Bagai: That is true, but there are circumstances which my friend is going to explain to you as to what happened in regard to that.

Mr. Chairman: The point in question is that even the highest judicial authority was not able to grant any relief to the teacher. Therefore the necessity of this Bill. It is only a legal point. The Association's contention is that this Bill is not necessary to be enacted into law and that the Code is sufficient. Therefore, I have quoted from the judgment. So you can restrict your reply to that point now.

Shri Girdhari Lal: The case first went to the civil court and not to the high court. It was dealt with in

two or three ways first. The first stage was, an enquiry committee was appointed; it consisted of Dr. B. D. Lariras, Shri Jugal Kishore Khanna and Shri A. N. Puri who was the Principal of the Hindu College, not connected with the management committee. They gave a decision—*i.e.*, the Committee gave a decision that the teacher's association with the school will not be in the interest of the community and that it will adversely affect the school management and the other staff of the school.

After that, the managing committee endorsed the resolution. The case was referred to the then Director of Education who confirmed that the services may be terminated. In the civil court, we referred to this and also to the agreement between the teacher and the management saying that the teacher can leave the service by giving three months' notice and the management also can terminate his services by giving three months' notice. The court took that into consideration and dismissed the case.

Shri M. C. Chagla: What is the objection to statutory protection being given to the teachers? The management should welcome it instead of objecting to it. Good schools will not be touched by this law. Only bad schools will be hauled up.

Mr. Chairman: What is the number of members of your association and what is the fee charged?

Shri Girdhari Lal: The fee is Rs. 10 a year. There are about 123 members.

Mr. Chairman: You must have a constitution. Please submit a copy.

Shri Kidar Nath: Yes, Sir; it is recognised and registered. We will send a copy of the constitution.

Shri S. N. Chaturvedi: Does he deny knowledge of the judgment? Was he not a party to the suit?

Shri Girdhari Lal: I do not deny. I do not know whether it is a High Court judgment or not. I have received no notice from the High Court. If the appeal is dismissed *in limini*, ka-**chi peshi**) we get no notice

Shri M. L. Bagai: That was the judgment of a civil court and not High Court.

Shri S. N. Chaturvedi: But here is is a teacher who has specifically mentioned that this is a quotation from the High Court judgment saying that because the code has no statutory backing, no relief could be given. Was it not the judgment of the High Court?

Shri Girdhari Lal: No. Not to my own knowledge.

Mr. Chairman: Whether it is High Court or not, it is a court of law. He is a poor man and probably he could not go in appeal.

Shri S. N. Chaturvedi: May I know whether the civil court made any such observations or not?

Shri Girdhari Lal: I do not remember. But the case was dismissed on the two grounds I mentioned.

Shri M. L. Bagai: We do not want time to be wasted on this whether the Bill should be passed into an Act or not. That is up to you. We have said that the code is enough. But if the minister considers that it is not a sufficient guarantee for the teachers or if the interests of the public will be served better in that way, for the time being we submit to it and we will give our views on the various clauses.

Shri Kidar Nath: May I submit that the Director has the power to make the payment to the teachers out of the grants-in-aid given to the school? If the Director is satisfied that the claim is just, he can pay it and deduct it from the grants-in-aid.

Shri Sultan Singh: As regards quality of education referred to in para 2, the aided schools have all along shown much better results both in quality and quantity as compared to government schools. The per capita ratio of expenditure in aided schools comes to one half of what the government has to spend for their own schools. This is clearly borne out by the comparative data for 1964-65 as given in this statement, which we will pass on to you.

Shri M. C. Chagla: I have paid a public tribute to you in Parliament saying we are grateful to the private schools. A large number of them are very good, but some of them are bad.

Shri M. L. Bagai: Coming to the clauses, I shall first take up definitions in clause 2(k) "manager" is defined. My submission about the definition of "manager" is that the words in the end are "and approved by the Director". We object to this.

Mr. Chairman: You have put that suggestion in the memorandum. What is the next point?

Shri M. L. Bagai: We are sure that the members of this august body would have read it. Our only idea is to impress upon the members as to what our new point is. I am therefore, taking a few ones.

Then there is another definition—because the definitions hit us most and when once they form part of the legislation we cannot get out of it. Definition of "school property" includes land, buildings, etc. Our suggestion is that at the end the following words should be incorporated, namely, "for which grants have been received from the Government". You know, these trusts have spent large amounts. They have their buildings and other things. If all these things become school property, then it would be very difficult for the management to have any endowments, because that is all sunk in that property. And whenever a question comes later on for the school property being taken away by the Government—because there are clauses about that later on—it is then that it affects us. Therefore school property should be considered to consist of the things which have been purchased from the grants given by the Government. Those properties which have been given by the trust should be left to be property of the trust and not of the school. That is our contention, that those properties which are the properties of the trust should be excluded from the definition of "school property".

Shri M. C. Chagla: If there is a trust which starts a school, if the trust is impressed with this particular thing that it is to be used for the purpose of the school, then this Bill protects it. All that the Bill says is that you cannot use it for any other thing, it is school property.

Shri M. L. Bagai: Suppose a building is given which is worth Rs. 5 lakhs. The trust has several purposes.

Shrimati Anis Kidwai: The trust is for what?

Shri M. L. Bagai: The trust has got so many other things also. The trust is running a school and running many other things also.

Shri M. C. Chagla: That won't be touched by this definition.

Mr. Chairman: I think you would have seen clause 19 which says:

> "The Central Government shall, while taking over the management of any school, exempt any immoveable property from being so taken over if such property is being used for any religious purpose,....

Shri M. L. Bagai: That is only one instance.

Mr. Chairman: "or if the Central Government is satisfied that such property on account of its proximity to any buildings of worship should be exempted."

Shri M. L. Bagai: That is quite a different thing.

Prof. Mukut Behari Lal: If the trust is in general terms, only such property of the trust as is transferred to the school shall be school property. If the trust is created for the school alone, then the entire property will belong to the school and will be school property, and you cannot say that the school property will consist of the grants-in-aid property only.

Shri M. L. Bagai: A certain grant is given by the Government for which a building worth Rs. 2 lakhs is built. The trust has also built property worth another Rs. 3 lakhs. If the entire property worth Rs. 5 lakhs is to be considered as school property and Government takes it away if the opportunity arises, where is the trust which has sunk so much of its own money to go? The wording "school property" is innocuous as it is, but in conjunction with the other clauses where the Government has been given power to take over the property, it is there that we fear that that property will also go away from the trust.

Shri A. F. T. Barrow: May I ask when buildings are put up with the grant-in-aid, is there not a hypothecation deed executed between the management and the Government? Then, the property for which such a deed has been executed would be the property which can be taken over by the Government in case it has to be taken over.

Shri M. L. Bagai: Then you exempt the other property which has not been mortgaged.

Shri M. C. Chagla: I am quite prepared to so amend the clause that any immovable property which has not been dedicated....

Shri M. L. Bagai: Dedication is only with regard to worship

Shri M. C. Chagla: I am quite prepared to redraft clause 18 to make it perfectly clear that what is to be taken over is only that property which is dedicated to the school.

Shri M. L. Bagai: When the clauses are there it will be taken as a dedication. So it should be only the property for which a grant has been given and for which Government has paid.

Shri Girdhari Lal: There are one or two cases. Take a donor who constructs a building for school purposes and gives it in writing in favour of a trust other than the school managing body. And he writes there that so long as the school runs, the school will be run in that building. And the trust has been given the right also to realise rent on the building. Will it be a school building or trust building?

Shri M. C. Chagla: It depends upon the trust deed.

Shri Girdhari Lal: It is given in favour of a trust other than the school managing committee and it is dedicated to the trust with this understanding that the school should run in that building, and the trust is allowed to charge rent on it.

Shri M. C. Chagla: If the rent is charged when it is used for the purpose of the school, then it is not a school property. It is a very simple answer.

Shri M. L. Bagai: Then I come to clause 3(1)(a). There we want to have the word "reasonably" before the word "adequate", so that it would read: "Provided that no school shall be recognized if it does not have reasonably adequate funds to ensure financial stability".

Shri M. C. Chagla: Adequate means reasonably adequate.

Shri M. L. Bagai: "Adequate" is a vague term.

Mr. Chairman: We will consider that point. What else?

Shri M. L. Bagai: Then there is sub-clause (d) which says:

> "if its premises or any part thereof is used as a shop, an office or a residence unconnected with the activities of the school". We submit that the words "unconnected etc." be deleted, and in its place the wording should be:
>
> "except where the income obtained therefrom is not utilised for the maintenance of the institution or in any way interferes with the working of the school".

These private schools have to pay a large amount over and above what the Government pays.

An hon. Member: Only 5 per cent.

Shri M. L. Bagai: It is euphemistically said to be 5 per cent, but in fact it comes to 20 per cent, because we find that there are non-recurring items also; the grants which are given are only to the extent of 66 per cent, and the balance of about 33 per cent is to be borne by ourselves. Then, there are other expenses also.

In my case, a school which is only nine years old and which is a displaced institution, has spent Rs. 75,000 during a period of nine years from its own funds. So, it is not only 5 per cent which has to be paid but it is much more than that. It is necessary to augment the income in order to meet it. The question is how to meet it. We do not want to employ any cheating methods or anything of that sort. The Trust has not got so much that every year they should pour out Rs. 15,000 or Rs. 20,000. For that reason, we submit that if a canteen or any other buildings are given for the purposes of rent and they are brought within the fold of the trust for the utility of the school, then in that case, recognition should not be refused on that ground. For, after all, we are not taking away any money that we get by way of rent or other things. We are only putting it in the trust for the purposes of the school. If a portion of that goes, say 5 per cent or 10 per cent, then I think there should be no grudging about it.

Shri Yamuna Prasad Mandal: But suppose they are uncongenial for academic pursuit or for the academic atmosphere?

Shri M. L. Bagai: Suppose we have to pay Rs. 10,000 from our own funds; after all, we have not got estates such as those of rajas and maharajahs; we only live upon the philanthropy of the people. If we cannot meet that amount from out of our own funds, then there should be some method of meeting it; suppose I have got six acres of land, and the school requires only two acres of land, then the rest of it would lie vacant; with a view to get an income or create an income for the purpose of running the school and for the purpose of spending on the school. If we have a building there and we get rent money for the school, then that should not be considered a ground for refusing recognition.

Shri M. C. Chagla: That is covered by the clause, because the words 'unconnected with the activities of the school' are there.

Shri M. L. Bagai: That would be unconnected with the school, because it is commercial, and what is commercial is unconnected with the school. But we say that if it is made a commercial estate but the income of that commercial estate is brought in with a view to spend on the school, then that should not be made a ground for refusing recognition.

Shri M. C. Chagla: The clause is intended to apply to the premises of the school only.

Prof. Mukut Behari Lal: Suppose there are six acres of land, and for the school only two acres of land are needed, then there should be a boundary after two acres, and that will define the school premises. The other four acres may be the property of the trust mainly used for purposes beneficial to the activities of the school.

Shri M. L. Bagai: That is what we want. That which does not interfere with the working of the school should not be made a ground. If there is a spare portion which can be separated from the school premises, and which is not within the premises, then that should not be considered as the premises of the school or school property; recognition should not be refused merely on that ground. Let us suppose there is a canteen; that is connected with the school in a sense because it is used for the boys. But suppose there is a shop or something of that sort, the rent for which is paid to the trust and the trust in return is spending that money on the school, that should not be made a ground for refusing recognition.

The next controversial point is about caste and sect.

Shri M. C. Chagla: I might mention that I am accepting the amendment of Shri S. N. Chaturvedi. We are dropping that.

Shri M. L. Bagai: In clause 5 it is stated that there shall be a scheme of management. But we do not know what that scheme of management would be. So, our contention is that either a schedule should be attached to the Bill or the scheme should be formulated in advance before the Bill is passed so that we may know what the scheme of management is.

Mr. Chairman: We shall consider that point.

Shri M. L. Bagai: In clause 6, the words 'appoint any person to be the manager of the school' are there, but that is subject to the approval of the director. That takes away the entire liberty of the management. Our contention is that the managers are elected by the managing committee, and it will become a farce if we elect a person but the director refuses to approve him.

Mr. Chairman: In your opinion, what should be the qualifications for the manager of a school in the matter of educational experience or experience in the educational field? The refusal to recognise a person as a manager would be on a very sound and reasonable grounds. After all, the refusal would not be on whimsical grounds. If the manager has adequate qualifications, then there is no question of refusal. But if the trust wants to appoint any person without any qualifications or without proper experience or standing in the educational field, then what in your opinion should be the qualifications for a person to be a manager?

Shri M. L. Bagai: There is another clause for the removal of a manager. Subsequently, you will find that provision.

Mr. Chairman: If in the beginning the appointment is a sound one, why should there be any necessity for removal afterwards?

Shri M. L. Bagai: That would mean giving unlimited powers to the director to smash anybody. After all as you know, these managers are honorary workers, and they are no paid people. If one submits himself to the decision of the director, then no public man will come forward to be a manager.

Shri M. C. Chagla: Suppose you appoint a person as a manager, who is a drunkard or who has been convicted of corruption of bribery and so on.

Shri M. L. Bagai: Do you think the managing committee will damn itself by appointing such a person?

Shri M. C. Chagla: Do you think that the director will refuse to give his approval if the manager is a good one?

Shri M. L. Bagai: What we would suggest is this. If the director has got any objection to the appointment of a certain person, then he should refer the matter back to the managing committee giving his reasons why that person should not be appointed. That is what should be done, rather than to say that the appointment would be subject to the approval of the director.

Mr. Chairman: After all, the approval would have some content in regard to the educational qualifications or experience in the educational field of the person to be appointed. That is the meaning of approval. I would again put it to you what should be in your opinion the minimum qualifications of a manager in order to decide his fitness for the post?

Shri M. L. Bagai: It is a very wide thing. It cannot be defined. For instance, I am an advocate and I am a manager. I am not an educationist myself and yet I am running a school, and all that I can say is that I have got connections with such institutions for the last 20 or 30 years. Do you think that it is only the teaching class or the educationists who should become managers? It is very difficult to define the qualifications at this moment. Let me put it this way. When the managing committee appoints a manager or elects a manager, they know that they have to select a person who knows his responsibilities and obligations as a manager, and they will be damning the institution itself if they appoint a drunkard.

Shri Swell: On principle are you averse to the proposal of qualifications being laid down for managers?

Shri M. L. Bagai: That can come in the management scheme. You can say that the manager should have such qualifications. In that case, if we do not come within that, we are out; but if it is within the qualifications, then the approval of the Director is not necessary. I would only submit that it should be a loose term because if you today define who should be manager and prescribe his qualifications. I doubt if even 10% will be able to come forward.

Cl.6(4).—The managers are honorary persons. They have only overall supervision. The department has given a bursar to the school. I have no grouse against this, but I say that it should be 'cause to be maintained' instead of 'maintain'.

My submission is that the managers are unable to go in detail into the accounts. The principal responsibility of maintaining accounts is that of the bursar who is appointed by the department and the principal. At the same time it is the duty of the manager to see that the accounts are properly maintained.

Shri M. C. Chagla: The word used is 'wilful'. As a lawyer, you should understand it.

Shri M. L. Bagai: The language used should be such that he should not have a direct responsibility of maintaining the accounts.

Mr. Chairman: Can be "to cause to be maintained?" It would imply that also.

Shri M. L. Bagai: That means direct responsibility.

Shri M. C. Chagla: The clause makes it quite clear—wilfully maintains false accounts. Not that if a clerk of his makes false accounts, the manager will be damned.

Shri Jairamdas Daulatram: Could we have both the words—maintain or cause to be maintained?

Mr. Chairman: We will consider it.

Shri M. L. Bagai: Cl. 16—school fund. We want that sub-clause (c) of (1) to be deleted. This should not be taken as school fund, but as trust fund because if certain person pays us money and we have to maintain

the school, that will be an endowment to the trust rather than to the school but for the purposes of the school. We have to augment our resources for meeing the deficit also.

Shri M. C. Chagla: I want to understand it. If a person specifically makes a donation for the school, should it not go into the school fund?

Shri M. L. Bagai: To the trust for the benefit of the school. If it becomes a school fund, it comes directly under the Director. We cannot spend out of that that 5%.

Cl.11: Suspension is not a punishment. So suspension should be allowed to the management without first getting the Director's approval. To the other things, we do not object.

Cl. 18—taking over of aided schools. We have submitted that the period should be 'not exceeding two years'. Also whenever such an action is taken by the executive there should be a clause allowing for a right of appeal. Also we have suggested an addition under sub-cl.(1):

> "The decision of the administrator, shall be subject to the right of appeal to the tribunal appointed by the Central Government consisting of a retired High Court Judge assisted by two educationists of repute. Till such a decision is arrived at by the tribunal the administrator shall have no right to take over the management of the school".

Shri M. C. Chagla: There is provision in sub-cl. (3).

Shri M. L. Bagai: That is appeal to the Central Government. Our submission is that it should be to a tribunal. If it goes to the Central Government, it is again executive authority. We are only saying that there should be some tribunal constituted by the Central Government. We do not deny this because the power is there.

Mr. Chairman: You as an eminent lawyer, can take recourse to writs.

Shri M. L. Bagai: When a Bill is being made, it is not being made for the powers to be given to the executive; there is a corresponding obligation to the institutions. If no Bill is made, we can go to file a writ, but once a Bill is made, we are, at the initial stages, asking for it. Whether it is given or not is a different matter. It is a fundamental right of an independent body.

Without meaning any disrespect to the authorities, what we submit is that it should be a level hand, an even hand, between the executive and the bodies which are controlling and which should have a control, and which should have a right to go to a tribunal, whenever any excessive power is used.

Shri M. C. Chagla: The Central Government has got a scheme on hand.

Shri M. L. Bagai: It is still a part of the executive. Then there is section 18(6); we are only asking for compensation whenever the property is taken over and want to add the following after the last word of this sub-clause:

> "and the property of the school shall vest in the management or if the Government desires to take over, it shall pay compensation at the market value to be mutually decided and in case of difference, be decided by the tribunal to be constituted under section 18 above."

Supposing the Government takes over the property, the Trust can start another institution. The Trusts are meant for starting these public institutions; in that case, if the Government wants to take over, let it do so, but compensation should be paid.

Mr. Chairman: It is a permanent taking over.

Shri M. L. Bagai: If it is unpalatable to the management, they can still make an offer saying let the Government take it over.

Shri M. C. Chagla: Taking over will always be unpalatable.

Shri M. L. Bagai: Then in regard to clause 20—advisory committee—we submit that this should be made clear, namely, what type of advisory committee it would be and what will be its functions. It may be said that this will be regulated by the rules, which will be made. I take it that clause 26 covers that.

Mr. Chairman: We will consider that point.

Shri M. L. Bagai: My submission is that educationists of repute and the representatives of the management should also be taken in.

Mr. Chairman: We shall consider that.

Shri M. L. Bagai: Then in regard to clause 26(1)—terms and conditions of service, I have to say that this should be deleted.

Mr. Chairman: How can you delete this, when the Government is vested with the authority and is entitled to make rules?

Shrimati Soundaram Ramachandran: It is very necessary that qualified teachers are appointed.

Shri Kidar Nath: But the right of appointment must lie with the managing committee.

Shri M. C. Chagla: You can have a selection committee to see that proper teachers are appointed; there should be no nepotism because of caste and so on.

Shri M. L. Bagai: Whenever we appoint a teacher, we have sub-committees and we call also from the Employment Exchange.

Shri Swell: What are your apprehensions?

Shri Kidar Nath: The apprehension is that the Directorate should not have any direct hand in the appointment of the people in the school. They can lay down the qualifications and the school must be left free to appoint the people according to the qualifications prescribed.

Shri A. E. T. Barrow: Have the managers read the opinion of the Supreme Court, the Supreme Court Judgment, on the Kerala Bill reference in this matter, wherein they say that in aided schools, even the panel may be drawn up by the department from which the recruitment will have to be made? They are wanting to have complete freedom in this matter. I am referring them to the judgment which is already there.

Shri M. L. Bagai: The panel still leaves some freedom to us to get out of the panel. But when you say that this man or that man should be appointed, then you take away the liberty.

Shri M. C. Chagla: No one is suggesting it.

Shri M. L. Bagai: In respect of clause 26—power to make rules—we suggest an addition after sub-clause (q) "the manner of inspection of recognized schools;" Our addition is: "the constitution of tribunal, its scope of work and its powers, as contained in clause 18". If you accept that, this should follow as an addition.

The existing sub-clauses are to be renumbered as (s) and so on. "The qualifications, and powers and composition of the Advisory Committee created under section 20".

Shri Kidar Nath: I have to make a concluding remark, and that is, the management and the philanthropists who have all along financed the institutions are feeling a sense of frustration and disappointment and somehow

or other this must be removed from their minds, because psychologically speaking, it will go a long way against the healthy traditions that have been maintained in the field of education by these institutions, by playing a very important role in the cultural and academic and other fields which our hon. Minister has so very kindly appreciated This is my submission.

Shri Vijay Sinhrao Ramrao Dafie: We have left out the Jan Sangh representative, if he is also permitted to have his say then we can have a round of questions.

Mr. Chairman: I thought they are all together.

Shri Hardyal Devgun: I am separate.

Mr. Chairman: After the questions, I will come to you.

Shri P. C. Mitra: Arising from your memorandum, what are the differences between the Education Code and the Bill as regards the appointment of teachers, etc.? Why do you say that the Bill is punitive?

Shri M. L. Bagai: Under the Bill as it is unlimited powers are being given to the executive. Previously under the code, we had the right to select anybody as teacher provided he had the prescribed qualifications. If we appoint teachers who do not have those qualifications, we are not entitled to any grant. Now that power will be gone. Only the Directorate can appoint teachers.

Mr. Chairman: The representative from the Jan Sangh may say what he has to say.

Shri Hardyal Devgun: Much of my burden has been lightened by the announcement made by the minister that clause 3(f) will be deleted. I welcome it.

I submit that further consideration of this Bill should be postponed because we are going to have a democratic set-up in Delhi and it will be appropriate if the elected representatives of Delhi are given a chance to consider this Bill in detail. I do not question the authority of the august Parliament and this committee, but it will be fair and proper if this is referred to the metropolitan council or to whatever new democratic set-up is going to come.

Then, this Bill gives very wide powers to the executive. The managements are now presided over by some very eminent persons. For example, the DAV College managing committee was presided over by an ex-Chief Justice of the Supreme Court, Shri Mehr Chand Mahajan and it had many prominent educationists, ex-Directors of Public Instruction, Judges, etc. If a person used to be nominated by such a committee is going to be approved by a Director, it will not be in keeping with a public spirit.

You have said some manager can be a drunkard. But we have not had good experience of Directors also in Delhi. You first frame the rules and code of conduct for the managers. If they do not come up to that standard, they or their schools should not get recognition or aid.

Then, it is said this Bill has been brought to give some relief to the teachers. I submit it does not give any relief.

Mr. Chairman: You have heard whatever has preceded and still you say this.

Shri Hardyal Devgun: Yes, Sir. Clause 18(5)(i) says:

> "the approved conditions of service of the existing employees of the school shall not ordinarily be adversely affected".

We want the word 'ordinarily' to be removed to give security of service to the teachers.

In sub-clause (6) of the same clause, it is said:

> "....on such discontinuance the liability of the Central Government to run the school shall cease".

Then what will happen to the teachers?

Shri M. C. Chagla: The Central Government will pay the teachers for the period when the school is under them. But once it is handed over back to the management, the management will pay.

Shri Hardyal Devgun: My suggestion is even after it is handed over to the management, the Central Government should pay the teachers, instead of giving them aid for the payment of salaries. The liability of payment to the teachers should be accepted by the Government.

Shri M. C. Chagla: Teachers' salary will be the first charge.

Shri A. E. T. Barrow: His point is different. He says, "Don't give that part of the grant to the managers, pay the teachers directly". You are saying that the first charge shall be the teachers' salary. He says: no, Government shall pay their salary and the grant shall be less by that amount.

Shri M. C. Chagla: It has nothing to do with this section, it is a general thing.

Shri Hardyal Devgun: The service conditions of teachers in private schools.

Shri Diwan Chand Sharma: We are responsible not only for giving free and compulsory primary education, but the education after that is the concern of the Government and the private bodies. May I know, if this Bill, when enacted with due modifications, is going to discourage people from coming forward to open new schools in order to give the benefits of higher education to those persons who cannot get admission into the government schools.

Shri Vijaysinhrao Ramrao Dafle: That is a question to the Government, I think.

Mr. Chairman: Any one of you can answer.

Shri Girdhari Lal: We think under such hard conditions no private body will come forward to start new schools.

Shri Diwan Chand Sharma: There has been some talk about managers. If a manager is honorary..

Shri Girdhari Lal: He is honorary.

Shri Diwan Chand Sharma: If a manager is honorary and is elected by a representative body which has got some prestige, the managing committee, do you think that the provisions of this Bill with regard to the manager should not apply to him?

Shri Girdhari Lal: They should not apply.

Shri M. L. Bagai: We consider it derogatory, as a matter of fact.

Shri Girdhari Lal: There are two nominees of Government.

Kumari Shanta Vasisht: If the Directorate of Education has a greater say in the affairs of private schools you fear that your autonomy and your functioning would be affected. You have also mentioned your experience of Directors. In what way do you fear there would be difficulties? You may also explain what is the situation obtaining in the Directorate and the functioning of the government schools, as to what are the conditions there regarding appointments, promotions and transfers etc. and how you think that any particular interference by the Directorate will not be of advantage to the private schools.

Shri M. L. Bagai: Are we asked or is the Government asked about that? What is our opinion why vast powers should not be given to the Director, is that the question?

Kumari Shanta Vasisht: I want to know why you fear that the Directorate's interference will affect you badly, and what are the conditions prevailing in the government schools regarding appointments, promotions, transfers, etc.

Shri M. L. Bagai: The condition prevailing in the government schools is that the director himself is the educational secretary of the administration. There can be no two opinions or any contest between the two. The government schools are controlled by the Government of which the director is the educational secretary. Therefore there can be no dispute between the government schools and the director. The only point comes in when the aided schools are at loggerheads with the director, which we cannot afford to be. We are servile and submissive. Whenever a director shows his eyes we have to submit. So if more powers are given to the director, it borders on servility for the aided schools. And we consider, when a managing committee is appointed with the constitution which the director has made under the code, why should the director be given further powers and the managing committee's decision should be abrogated altogether. That is why we say that circumstances might occur, opportunities might happen in which there may be a contest between the prestige of the director and the rationale of the managing committee's decision, and therefore we object to it.

Kumari Shanta Vasisht: As the management of private schools I suppose you have at least fifteen to twenty years' experience of the Directorate of Education. I would like you to explain to this Committee as to whether you fear that any kind of favouritism or jobbery would creep into your management if the Directorate is given a greater say.

Shri M. L. Bagai: We cannot have an independent view. If we discuss with the director "this is our view", he says "no". In that case a sort of struggle comes in. If the code is not enough and if larger powers are given to the director, the position will be still worse.

Kumari Shanta Vasisht: Finally, how would you ensure a fair deal to the teachers, apart from giving them a cheque from the director of education?

Shri M. L. Bagai: The director of education is the sole authority in respect. When we appoint a teacher, information is given to the director, and if the director says that such and such appointment is irregular and we won't get the grant we definitely chuck off that man and find another. In that way the teachers are fully safeguarded in that respect. So far as aided schools are concerned, except for those small schools or those schools which are on the brink of bankruptcy and are unable to pay their teachers, such instances do not happen in other schools. Therefore, the point is whether it is a malady which is extensive in the schools or it is a malady which is limited to a few schools. If it is a malady limited to a few schools, then the general code itself is quite sufficient rather than that this Bill should be enacted.

And one thing more I must submit, that the principal responsibility is of the Government to educate the nation. We are only helping the Government by our voluntary help. If in that we are hit by these hedges and these uncontrolled powers, then this will dampen the spirit of these philanthropists and educationists who are coming forward and helping the nation to be educated with the aided schools side by side with the government schools. Then that element will disappear altogether.

Shri Girdhari Lal: About the fear I must say that nobody can know; at least we want to learn that art, how to konw a man within five minutes. The teachers and the principal or other staff, even peons and sweepers, are appointed on probation for one year. Suppose even after one month we cannot trust them, we cannot remove them or terminate their services without obtaining the permission from the Directorate. It is very difficult to know on the first day what sort of a man he will be. This is the first flaw. The period of probation is meant for that. It cannot be that a teacher once appointed is permanent from the very beginning.

The second flaw is, you will excuse me, about the appointment of new principals. One person will be from the management, one will be from the Directorate, the Inspector of Schools. The two will sit, and there will be another educationist to be appointed by the Director who has no voice or no vote. In case of difference of opinion the matter will be referred to the Director. Whatever directors we may have tomorrow we do not know. But the position is, naturally it is presumed that he will side with his own man. Therefore the principal knows everything in detail. He knows that the manager is not in favour but the director has appointed him. He will always look to this aspect.

Shri Hardayal Devgun: My submission is this. A large power has been given to the director under this Bill. I would submit in this connection that the director is responsible for all Government higher secondary schools in Delhi, whose number comes to about 150. We would appreciate very much if he first improves the conditions in the Government higher secondary schools in Delhi. You will be surprised to konw that the results in Government higher secondary schools are as low as 14 per cent in some cases. So, the best thing would be to set an example in the Government higher secondary schools where the director is all-powerful and cannot be questioned by anybody.

Shri Shiva Charan Gupta: During the last few years, the Directorate of Education has tried a scheme of management. Are there any aided private schools in Delhi where this scheme of management introduced by the Directorate of Education is not yet in force?

Shri M. L. Bagai: Every aided school has to observe the instructions of the directorate, and they are being observed strictly. There has been no recalcitrant element in that respect; barring a few cases which the director will be knowing, there is no school in Delhi which has not been observing the management scheme formulated by the director. But the scheme of management contemplated in the Bill is something about which we do not know; in the absence of formulation of that scheme we do not know what will happen to us.

Shri Shiv Charan Gupta: There are two types of expenditure incurred by you; one is on the salaries and on the establishment of teachers and the other is the contingency expenditure. In your opinion, is the yard-stick to determine the contigency expenditure satisfactory?

Shri M. L. Bagai: It is very unsatisfactory. While Government allow only, say, Rs. 300, the management is actually spending over Rs. 1000.

Shri Shiv Charan Gupta: In the memorandum submitted by the Jan Sangh it has been stated that the present Bill is anti-Hindu. Could the witness from the Jan Sangh elucidate this point?

Shri Hardayal Devgun: This was what I gathered from the speeches made by some Members in the Lok Sabha and the answer given to them by the hon. Education Minister. That was what gave rise to these fears.

Some Members had suggested that the Bill would not affect the schools run by the minority communities. So, I presume that it is a sin to be a Hindu because the Hindus are not a minority community and the Bill would affect them; the Hindu schools will not be recognised if they are named after some sect or caste. For example, there is the Dayanand school, the DAV school, the Arya School, the Khalsa School, the Jain School and so on.

Shri M. C. Chagla: May I clarify the position? This was with reference to another clause regarding the taking over of schools. I said that we could not take over minority schools.

Shri M. L. Bagai: For instance, there are schools named after sects, such as the Jain School, the Khalsa School and so on. Schools named after a sect are hit by this. Anyhow, we are not dealing with it further, because the hon. Minister has clarified the position.

Shri Shiv Charan Gupta: You had stated some time back that if clause 3 (1) (f) is deleted, that would be satisfactory. I would like to know whether what you want is that the present institutions should remain as they are, or whether you would like that in future also the institutions to be started should be named after a sect or caste.

Shri Hardayal Devgun: In future also, they should be allowed to be named after a sect or caste.

Shri Shiv Charan Gupta: You have made some submissions regarding caluse 18 (5) regarding protection to teachers. I think there is some misunderstanding about it. For, clause 18 (5) relates only to the taking over of the management and not in regard to safeguarding the rights etc. of teachers; it relates to taking over of the management and thereafter the return of the management to the managing committee if the latter apply for it. How do you feel that under clause 18 (5) protection would be given to teachers, and under clause 18 (6) such protection may be withdrawn?

Shri Hardayal Devgun: I thought that it was with regard to discontinuance of a school.

Shri Sultan Singh: So far as the security of the teachers is concerned, no management can stop the promotion or stop the salary or increment or take any action whatsoever against a teacher without the prior approval of the director.

Shri Hardayal Devgun: I thought that it was in regard to discontinuance of a school. But what I now understand is that it is in regard to the return of the school back to the management.

Shri Shiv Charan Gupta: Where does the question of protection to teachers come in?

Shri Hardayal Devgun: My misunderstanding was because I thought that it referred to the discontinuance of a school. But now I understand that it relates to releasing the school back to the mangement. If that be so, I do not mind it remaining as such.

Mr. Chairman: We shall consider that point.

Shri Yamuna Prasad Mandal: Let us know the number of schools which you run as aided ones or unaided ones or partly aided ones?

Shri M. L. Bagai: Those which we represent are all aided schools, and they number 150.

Shri Yamuna Prasad Mandal: You get 95 per cent aid?

Shri M. L. Bagai: 95 per cent only for teachers; in other cases it is 66 per cent.

Shri Sultan Singh: It is 95 per cent only for staff.

Shri M. L. Bagai: I might explain this to you. So far as the recurring expenditure like payment to the teachers is concerned, it is 95 per cent. So far as the other grants are concerned such as furniture, building etc., which are non-recurring ones, it is only 66 per cent from Government. But, then, as I have said, so far as the running of the schools is concerned; Government do not pay anything in the proper measure for all the other expenditure such as contingencies etc. So, those expenses have to be met by the mangement. In effect, it comes to about 80 per cent or 75 per cent of the entire bill of expenditure.

Shri Yamuna Prasad Mandal: What are the specific points in the Bill which adversely affect you?

Mr. Chairman: They have stated in their memoranda.

Shri P. K. Vasudevan Nair: It was stated in the course of evidence of the management that the teachers were generally in the habit of running down the management. If that is the situation, it is really a very unfortunate situation. I should like to know whether there is any mechanism or machinery at present by which you take the teachers or their association into confidence as much as possible? If not, what will be your attitude to some provision being made in some form or the other so that the present situation, if it is so bad, can be put an end to and the teachers also may have a feeling of having some share in the running of the school also? I am sure you may not like to treat this relationship or approach this relationship as that between a capitalist and a worker.

Shri M. L. Bagai: It is not so much that we have any complaint with regard to the teachers. But specifically when a certain matter comes up, the teacher class definitely take the side of the teachers. However, leave that point. The point is that already machinery is working to create goodwill between the management and teachers and between the teachers and parents. There is a parents teachers' association in almost every school now. There is association of teachers with management of the school; their representatives are on the managing committee. That is defined by the Director in the code itself. The teachers who are elected by their own union come to the managing committee and any grievance that the teachers have regarding pay or anything else or the treatment meted out by the management to the teachers is voiced in that meeting and then they are heard. I would say that in the managing committee there has been no discontent so far as the teachers are concerned. Therefore, it is unnecessary to issue a commission. Fixation of representatives is already there by the order of Director who is the custodian of the teachers more than that of the management.

Prof. Mukut Behari Lal: In Delhi, quite a large number of higher secondary schools are named after caste. By so naming schools, a caste atmosphere prevails. There are so many schools named like that in the case of the Hindu community. How is the cause of Hinduism or of the Hindu community served by promoting that sort of caste feelings and caste atmosphere?

Shri M. L. Bagai: These aided institutions are financed by philanthropists who belong to those castes. Whenever they give any money for the running of the schools, certainly they want to have the privilege of naming the schools after those castes, for two reasons. One is to bring the respective caste up in importance before the public. This is also to bring it to the notice of their co-castes people to contribute for the maintenance of the school.

No religious instruction is imparted in these schools as such. We are not allowed to do that. If an Arya Samajist is running a school, he won't bring the mantras or havans there; if a sanatanist is running a school, he wont' bring the bells

etc. there. The idea underlying this is that the importance of that caste should be known to the other caste people who may contribute for the running of the school.

Prof. Mukut Behari Lal: Does not the witness feel that the cause of the Hindu community will be better served if those philantheropists are persuaded to have a broader outlook than the caste look?

Shri M. L. Bagai: They have a limited mentality of their own.

Shri Deokinandan Narayan: There are many schools in Delhi named after some caste or sect. You have something to do with such schools. What benefit, if any, is derived by the pupils belonging to that caste in those schools or by teachers belonging to that caste who are appointed as teachers in such schools?

Shri Girdhari Lal: I do not think there is any advantage or benefit that accrues to students or teachers on that score, not at all. I have got a Khatri school. But there are more bania students than Khatri students there. There are students belonging to different communities and not of that community alone.

Shri Deokinandan Narayan: Is any special benefit conferred in the number of appointments of teachers or in the number of seats of students so far as members of that particular community are concerned?

Shri Girdhari Lal: No.

Shri M. L. Bagai: It is only giving a particular name, a permissible human failing.

Shrimati Devaki Gopidas: Are you aware that there is a school in Shahdara which does not have the minimum requirements as regards seating accommodation and other things. It is the oldest institution. Has anything been done to improve those things?

Shri M. L. Bagai: We accept that position, but we do not know about it.

Shri Jairamdas Daulatram: This principle of naming a school after a sect or caste is not desirable. But I want to check up one thing from another point of view. To what extent the impact of that naming by way of spreading sectional or caste feeling prevails among the pupils who are educated in those institutions

Shri M. L. Bagai: No such influence is there. Suppose there is a Jain school. They do not say that the Jain religion is good and the other religions are bad. They are given only the syllabus of education which is prescribed.

Shri Jairamdas Daulatram: To put it more bluntly, is there a sect or caste atmosphere in that school?

Shri M. L. Bagai: Not at all we guarantee that.

Shri Jairamdas Daulatram: Could such an atmosphere not be the result of naming that school in that way?

Shri M. L. Bagai: No no. As I said, it is only to get money from the philanthropists of that sect or caste to run the school.

Shri Jairamdas Daulatram: In the letter dated 26th December, sent by the School Managers' Association, signed by Shri Girdhari Lal, there is reference to a further communication giving factual information. Has that further communication giving factual information been sent to the office? I would like that to be made available to us.

Shri Girdhari Lal: Here is the information.

Shri M. L. Bagai: That says that the expenditure borne by the government schools is double that is borne by the aided school, and it is in respect of the results also.

Shri Jairamdas Daulatram: Turning to clause 11, at page 7 of the draft Bill, it says that "the terms and conditions of service (including conditions regulating recruitment) of teachers and other employees of an aided school shall be such as may be prescribed." Has the Managers' Association anything to say with regard to other employees, because I want to know what exactly will be the position of those who are below the rank of teachers, the ordinary employees such as the cowkidars and so on.

Shri Girdhari Lal: They are also governed by the same rules at the present moment, as the teachers.

Shri Jairamdas Daulatram: Have you anything to say with regard to that?

Shri M. L. Bagai: We do not object to that. Even the pay and the scale of pay, etc., are all prescribed by the department.

Shri Jairamdas Daulatram: According to clause 15, "No person who has not attained the age of five years shall be admitted to class I or euivalent class in a Government or recognized school." Have you any objection to this age-limit?

Shri M. L. Bagai: No.

Shri Jairamdas Daulatram: Then have you any objection to the clause which says:

"No person studying in any such school shall, without the permission in writing of the Director, be retained in the school after such person has attained the age of twenty years."

Shri M. L. Bagai: No objection.

Shri Jairamdas Daulatram: There is a proposal that we should limit the number of students in each section of each class. There is a suggestion that not more than a particular number should be admitted into the classes.

Shri M. L. Bagai: It is prescribed in the Code itself; not more than 40 boys in a class. There is no objection to that.

Shri Jairamdas Daulatram: You do not consider it too high?

Shri M. L. Bagai: No. We accept that, but sometimes we have no room, and when the number is large, and we cannot form another section, we huddle up another 10, 20 or 30 in one class.

Shri Jairamdas Daulatram: There is a provision for the formation of an Advisory Committee—I am referring to clause 20. Have you anything further to say than what you have already written?

Mr. Chairman: He has completed his say.

Shri Jairamdas Daulatram: Clause 23 provides for certain exemptions for certain schools either from all the provisions or some of the provisions of the Act. Have you anything to say on that?

Shri M. L. Bagai: Let the lucky get it. We do not grudge them.

Shri Jairamdas Daulatram: Page 12, sub-clause (q)—the manner of inspection of recognized schools—have you any suggestions with regard to that?

Shri M. L. Bagai: That is for the department. We are amenable to any inspection, even the hardest one.

Shri Rama Chandra Mallick: At present, is any manager of the school appointed by the Director, or is he elected by the management? Also, do the managers get any remuneration for their work?

Shri M. L. Bagai: They are elected by the management.

Shri Rama Chandra Mallick: You say that the manager or the secretary as the case may be must be elected by the Managing Committee and not by the Director of Education.

Shri M. L. Bagai: We say. We object to the phrase "with the approval of the Director".

Shri Rama Chandra Mallick: What are the duties of the secretary of the managing committee and the manager of the school?

Shri M. L. Bagai: There is no secretary of the managing committee. The Secretary is only to the Trust. The world "manager" is used in schools.

Shri Rama Chandra Mallick: How-many members are there in the mangaing committee at present and who are they, and is the manager one of them?

Shri M. L. Bagai: There are 15 persons, and the manager is one of them.

Shri Rama Chandra Mallick: The Delhi Managers' Association has suggested the dropping of this Bill.

Mr. Chairman: They have answered those questions.

Shri Hem Barua: From what the representatives of the Delhi School Managers' Association have said, I understand that the schools here do not have any reserve fund to meet emergencies in case any emergency arises. In that context, may I know whether this association has ever given any thought to the formation of any reserve fund in the interests of the institutions themselves?

Shri M. L. Bagai: The department wants the management to doposit Rs. 10,000 to Rs. 15,000 according to the number of the boys, in a scheduled bank or any other institution which the Government prescribes, with a view that in the case of any emergency, that fund could be used.

Shri Hem Barua: When recognition is accorded, usually it so happens that a school must show a certain amount in deposit. Do you set apart a certain percentage of the fee collections towards the reserve fund on a monthly basis?

Shri M. L. Bagai: The entire fees are taken by the Government; we are paid only on the expenditure side; not a single income-side is given to the management. It is all taken by the Government.

Mr. Chairman: Is there any reserve fund at all?

Shri M. L. Bagai: There is no specified amount but there are reserve funds in one sense. Supposing, the grant is not received in advance; nowadays it is received in advance, but previously it was not received in advance; then, it was only a drain on the reserve funds of ours, with which fees and other expenses were met. It may be an institution like the Ramjas Society where they have lakhs and lakhs of rupees—

Mr. Chairman: We are referring not once institution but generally.

Shri M. L. Bagai: If they can run the institution from their own fees and meet all the expenditure it means that they are societies of means.

Shri S. N. Chaturvedi: In the aided schools, the teachers have got even representation on the management and have some say in it, while in the Government institutions they have no say so far as the administration is concerned.

Shri M. L. Bagai: We are not aware of it. It is for the Government.

Shri S. N. Chaturvedi: While they are represented on the management,

I want to know why there is so much dissatisfaction; if there is security of tenure, why are the teachers so much against private management and why should there be an outcry? They get certain advantages which those in the government schools do not get. Is there any partiality or is there any arbitrary termination of the services? Could you say something on this point?

Shri M. L. Bagai: I think it is the sense of freedom of expression that gives them the right to do it.

Shri S. N. Chaturvedi: No no.

Shri M. L. Bagai: So far as we four are concerned, there has been no tug-of-war between the management and the teachers. There may be such schools but we do not own them. Any management which has got a dispute with teachers cannot run properly. Aided schools cannot afford it. They can be maligned and put into trouble. The Director can take them to task. As a matter of fact, we have become cowards.

Shri S. N. Chaturvedi: You are demoralised.

Shri M. L. Bagai: The Bill has demoralised us.

श्री नवल प्रभाकर : आपने कहा कि आपके स्कूलों के रिजल्ट अच्छे होते हैं और आपके स्कूलों में गवर्नमैंट के स्कूलों के मुकाबले में पढ़ाई भी अच्छी होती है । मैं जानना चाहता हूं कि क्या आपके स्कूलों में एडमिशन भी उसी तरह से होता है जिस तरह से गवर्नमैंट के स्कूलों में होता है ?

श्री बगई : कहीं कहीं शायद कुछ हो गया हो, कुछ में शायद ऐसा हो गया हो लेकिन Generally we cannot refuse a boy even with the lowest qualifications provided he has got a certificate of the class.

श्री नवल प्रभाकर : जहां तक मेरी जानकारी है ज्यादातर स्कूलों के अन्दर टैस्ट लिये जाते हैं और उसके बाद बच्चों को दाखिल किया जाता है ।

Shri M. L. Bagai: This is natural. If our capacity is only 40 boys and if there are 80 applicants, we have to make a selection. Would you not leave this discretion to us.

श्री नवल प्रभाकर : फर्स्ट कम फर्स्ट सर्व्ड का प्रिंसिपल आप भी क्यों नहीं लागू करते हैं ?

Shri M. L. Bagai: That is a point which may be discussed with the Directorate. There are some prescribed rules. There are zones and preferably boys from that zone should be taken.

श्री नवल प्रभाकर : आपने कहा है कि आप के सब स्कूल हायर सैकेंडरी स्कूल हैं । क्या आप बतलायेंगे कि एक छटी क्लास और नवीं क्लास के रिजल्ट आपके कैसे रहते हैं । क्या आप स्टेटमेंट दे देंगे इसके बारे में ?

श्री बगई : दे देंगे बेशक ।

श्री नवल प्रभाकर : मैं स्कूलों में गया हूं और वहां देखा है कि जब पांचवीं क्लास पास करके छटी में बच्चे आते हैं मिडिल में बच्चे आते हैं उस समय ऐसा होता है कि उन बच्चों में से अधिकांश को फेल कर दिया जाता है और फेल करने के बाद जो अच्छे बच्चे होते हैं उनको ही आगे प्रोमोट किया जाता है । उसी तरह से आठवीं क्लास के बाद नवीं क्लास में जब बच्चे आते हैं उनके साथ भी उसी तरह से किया जाता है । इसी तरह से चलते चलते दसवीं क्लास के बाद ग्यारहवीं में उनको ही चढ़ाया जाता है जोकि सर्टनली पास होने वाले होते हैं । पच्चीस परसेंट जो पास होने वाले होते हैं उनको ही चढ़ाते हैं । ऐसी सूरत में रिजल्ट तो अच्छा आएगा ही ।

श्री सुलतान सिंह : डायरेक्टर साहब ने एक स्टेटमेंट मांगा था हर एक स्कूल से, एडिड स्कूल्ज से भी और गवर्नमैंट स्कूल्ज से भी इस बारे में । यह स्टेटमेंट उनको दे भी दिया गया है । इससे आपको पता चल जाएगा कि प्राइवेट स्कूल्ज में 50 और 60 परसेंट तक बच्चे पास होते हैं उन में से जो आठवीं से नवीं में आए हैं । इसी तरह नवीं से दसवीं से जो ग्यारहवीं पास करते हैं गवर्नमैंट स्कूल्ज में उनका रिजल्ट केवल 25 और 30 परसेंट रहा है जबकि इन प्राइवेट स्कूलों में 75 परसेंट के करीब रहा है । यह स्टेटमेट डायरेक्टर के पास मौजूद है ।

श्री नवल प्रभाकर : आपने कहा है कि जो जैन स्कूल हैं, या सनातन धर्म स्कूल हैं या आर्य समाज स्कूल हैं उनमें जाति पाति के आधार पर टीचर्ज को नहीं लिया जाता है । आपको मालूम ही है कि गवर्नमेंट स्कूल में साढ़े बारह परसेंट जगहें हरिजनों के लिए रिजर्व्ड हैं । क्या आपके यहां भी ऐसा किया जाता है ?

श्री सुलतान सिंह : हमारे यहां सिलैक्शन मेरिट पर आता है और उसको डायरेक्टर एप्रूव करता है

श्री नवल प्रभाकर : 150 स्कूल्ज में कितने हरिजन टीचर्ज हैं, क्या ये फिगर्ज आप दे सकते हैं

श्री किदार नाथ : ऐसी कोई इंस्ट्रकशंज डायरेक्टर से स्कूल को नहीं आई हैं ।

श्री हरदयाल देवगुन : तब तो यह कास्ट पर हो गया ।

श्री नवल प्रभाकर : डेढ़ सौ स्कूल्ज में क्या कहीं भी हरिजन टीचर्ज को आपने प्रेफ्रेंस दिया है या उनको मैरिट के आधार पर लिया है :

श्री सुलतान सिंह : प्रेफ्रेंस कोई नहीं है । हमारे यहां मेरिट पर सिलैक्शन होता है ।

श्री वगई : रिजैक्ट किसी को नहीं किया है । उतना हम कह सकते हैं ।

Shri A. E. T. Barrow: Do you have any unaided schools in your association ?

Shri M. L. Bagai: No.

Shri A. E. T. Barrow: Do you consider it necessary that unaided schools should be subjected to the same conditions as are put in this Bill?

Shri M. L. Bagai: We cannot say about unaided schools. It is for the government to decide.

Shri A. E. T. Barrow: They want a separate managing committee for each such school. Do you think it is advisable to have one managing committee?

Shri M. L. Bagai: We have asked for it.

Shri G. G. Swell: About teachers' representation in the managing committees, would you like teachers to come in by seniority, by rotation or that they should be elected by the teachers' council?

Shri M. L. Bagai: A combination of both. If a senior man is equally capable, he should be given preference. But seniority alone will not count, because that will not help the teachers.

Shri G. G. Swell: You cannot have it both ways. Either the teachers elect their representatives irrespective of seniority or they come by virtue of seniority.

Shri Sultan Singh: Nowadays teachers ar taken by seniority as directed by the Director of Education as provided in the Delhi Code, 1965. Formerly they were elected by the teachers themselves.

Mr. Chairman: Thank you.

Shri M. L. Bagai: We are very much obliged to you. We can assure the Minister that we are law-abiding citizens. We have not come to wreck the Bill. We have come only to give our suggestions and we assure him we will abide by it when it is passed. But the managements' views also should be looked into by the government.

Shri Kidar Nath: I have been a teacher and also a manager. As such I find there is no clash between the two so far as Delhi is concerned. We have, as a matter of fact, accepted whatever the Central Government has asked us to do, because we want to keep our teachers satisfied. We do not want to keep them dissatisfied in any from whatsoever. If you have got any apprehension, we are prepared to act as liaison for improving those schools about which you have some apprehensions.

Shri Gidhari Lal: About the case of Master Nandlal, I want your permission to send a brief to you clarifying the position.

Mr. Chairman: Yes; you may send it to the Secretariat. Thank you.

(The witnesses then withdrew)

(The Committee then adjourned to meet again at 14·40 hours)

(The Committee reassembled at 14·40 hours)

V. Salwan Education Trust
New Delhi

Spokesmen.

1. Shri Labh Singh.
2. Shri N. C. Mullick.
3. Shri R. S. Roora Ram.
4. Shri S. D. Salwan.

(The Witnesses were called in and they took their seats)

Mr. Chairman: First of all I will refer you to Direction 58 by the Speaker. It reads thus:

> "Where witnesses appear before a Committee to give evidence, the Chairman shall make it clear to the witnesses that their evidence shall be treated as public and is liable to be published unless they specifically desire that all or any part of the evidence tendered by them is to be treated as confidential. It shall, however, be explained to the witnesses that even though they might desire their evidence to be treated as confidential, such evidence is liable to be made available to the Members of Parliament".

This is for your information.

We have received your memorandum and we have studied it carefully. Copies of the memorandum have been circulated to the Members and all your points are before the Committee. In order to save time for the other representatives that are waiting to give evidence, I would request you just to place before the Committee any other important points that you may have omitted from the memorandum or any point which is controversial and you want to specially emphasize. You kindly cover those controversial points which you want to emphasize and the points that you have not touched upon in the memorandum. Have you got a copy of the Bill for ready reference?

Shri Labh Singh: I have got one. One point that I would like to make atonce and which should be the foundation of such legislative enactments is this: In a welfare State, by which we have chosen to call ourselves, it is the duty of the Government to make provision for the education of all. But as things are, we find that the so-called aided schools or private schools have taken upon themselves the major portion of the burden. So far as the proposed Bill is concerned, its intention is explained

in the Statement of Objects and Reasons. The intention is to regulate. But what we find in the clauses of the proposed Bill is not only regulatory it is something different. It is strangulation. It is almost like treating the private and aided schools as something that required to be punished and straitjacketed. This provides a straitjacket.

Mr. Chairman: When you proceed with your general observations, you may refer to the clause also so that we may not come back again to it.

Shri Labh Singh: I want to emphasize one or two general points. In the States which existed prior to the partition in the form of Provinces, what did we find? There was only one Government school for a district whereas almost all the districts had a dozen private schools in the sense, schools which were put up by private agencies, by charitably disposed individuals or societies and only a small fraction of these schools was financed by the Provincial Governments. The same you will find here in this small State of Delhi. You will find that the total number of schools is 391 and out of these the private schools number 138. You take the population of students attending these schools. You will find that . . .

Mr. Chairman: We would like to skip over the history part of the evidence.

Shri Labh Singh: History part is not mentioned in the memorandum. I have just had a chart prepared showing the results in 1964. . . .

Mr. Chairman: You pass on a copy of that to us.

Shri Labh Singh: A perusal of this statement will show that both in respect of quality as well as quantity the performance of the so-called aided schools is considerably in excess of those which the Government schools can possibly show. As regards the expenditure incurred, you will be pleased to note that the expenditure per head in the Government institutions is Rs. 35.50 per child per month, whereas in the case of the so-called aided schools it is less than Rs. 17. Both from the point of view of economy and from the point of view of quality and the results, you will find that there can be no comparison between the schools maintained by the Government and the schools maintained by private charities.

Mr. Chairman: We are not trying to close all the private schools by this legislation. Let us come to the relevant provisions of the Bill so that you can point out on what issues you want to say something and on what points you want clarification, what you want to stress and what are the points not necessarily to be included in the provisions of the Bill. That will be more relevant to our discussions here and that will also save time.

Shri Labh Singh: Let us take subsection (f) of Section 3(1) which reads as follows:

> "it is named after a sect or caste".

In Delhi you will find that most of the schools are named after communities. There is the Jain School, Salwan School and so on and so forth. What is the real intention of the Government at the back of this sub-section?

Mr. Chairman: What do you want to suggest?

Shri Labh Singh: We want this thing to be omitted altogether, as it does not really signify much.

Mr. Chairman: We will consider that point. Let us go to the next point. Paragraph 5 of your Memorandum.

Shri Labh Singh: That is Sub-section 6(1). It is the question of appointing the Manager subject to the approval of the Director. This is something which is most extraordinary. The Managing Committee appoints the Manager and it is assumed in this

Section that this appointment will take effect only subject to the approval of the Director. Now, I ask, can any respectable Managing Committee or any respectable Manager would agree to this clause? Most of the Managers or possible Managers are people of status perhaps superior in education to the Director or the possible Director which this small State can possibly afford to appoint. I place before you the Board of Trustees of the Salwan School. There is not a single gentleman in this list who would agree to serve as Manager on this condition.

Mr. Chairman: It is not the appointment of the Manager, but it deals only with the approval part of it.

Shri Labh Singh: It comes to the same thing, not much distinction. If the appointment has got to be approved by the Director, it means that the appointment rests at his discretion.

Shri M. C. Chagla: Would you be satisfied if we lay down qualifications for the Manager?

Mr. Chairman: According to you, what should be the minimum educational qualification, experience and standing of the person to be appointed as Manager?

Shri Labh Singh: You may lay down anything and we will discuss it. He must have some educational experience. He should at least have the experience of managing institutions of educational type.

Shri M. C. Chagla: Probably it would be better to lay down these qualifications.

Shri Labh Singh: That would be something. Then the question of approval of the Director will not arise. It is for the Managing Committee to appoint the Manager and he is responsible to the Managing Committee. If the Director does not approve of the appointment, well, that would be a blot on the Managing Committee itself.

Mr. Chairman: Your view is that if we lay down the minimum educational qualifications, experience and standing in this clause, then you would agree to that, but not to the approval of the appointment by the Director.

Shri Labh Singh: We are definitely against the approval by the Director. I will just give an illustration. Before the partition, the Directors were called as Directors of Public Instruction and they were on the grade of Secretary to the Governor, whereas now in this small territory of Delhi you have got a person as Director of the rank only of an officiating Deputy Secretary.

Then there is the question of his removal in Clause 8 which reads as follows:

> Any Manager who fails to comply with the provisions of clause (b) or clause (c) of sub-section (4) of section 6 or wilfully-maintains a false statement of accounts, shall, without prejudice to any other action that may be taken against him, be liable to be removed from managership:

There is also a proviso to this. Well, there is the provision of the Penal Code under which he can be convicted for any of the offences which you describe in this section. It is only after conviction that his removal should be provided for, not otherwise.

Shri N. C. Mullick: If I may add a few words to what Mr. Labh Singh has said, the position is that the managing committees in Delhi are at the moment formed on the basis of an agreement reached between the various institutions and our late Chief Minister of Delhi Shri Gurumukh Nihal Singh. Managing committees are formed on the basis of representatives of the trusts, then there are representatives of teachers who are duly elected, then there are representatives of parents of the students who read in the schools. Then there is a nominee of the Director from amongst the principals of various government

schools, and the principal is an ex-officio member of the committee. It is this committee which appoints a manager, and the manager usually is from amongst the trustees of the institution. And, as you will see for instance from the list of trustees which we have submitted to you, none of those trustees would agree to work as manager in an honorary capacity if he has to work merely at the whims and caprices of a director. I have been manager of these schools for the last seven years or so and I know from experience and I can tell you that the treatment which we have often received is such that we have had to fight very often with the Directorate of Education, particularly because direct control over the institutions is by the inspector of schools. And what is the status of an inspector of schools? Just about that of the principal. If the manager has to take all these responsibilities in an honorary capacity, without remuneration—and he does not want any remuneration, he is working for a good cause—he does not want to be under the thumb of the director and, if I may be permitted to submit—I would not like to say anything because we are not making a confidential sub-mission, but if I were permitted to mention names which can remain confidential—we have had directors here who for their personal gains have been putting so much pressure on the managements; and if those papers are confidentially handed over to you or to anybody in the Department it will indicate to you the character and the way these directors are working. Now, the result will be that only third-class people who have no principles might agree to work as managers. No respectable person, at least none from our trust, would agree to do so.

Shri M. C. Chagla: We will consider the point about approval. Now we are concerned with removal. You don't suggest that if he does not carry out the instructions contained in sub-clauses (b) and (c) of clause 6(4) he should not be removed? Just see (b) and (c)—"maintain such records and accounts and furnish such statements and returns" etc. He is not under the thumb of the director. He has got to submit the accounts. What is wrong about it?

Shri N. C. Mullick: The system of maintaining accounts is that a bursar is appointed in the school from amongst the teachers, and he has to be approved by the director.

Shri M. C. Chagla: Approval is another matter, we will consider that.

Shri N. C. Mullick: I am hundred per cent agreed that if you give the manager all the authority and power to control the school and to manage it, I certainly as a manager agree to be responsible for any falsification of accounts, subject of course to what I would like to submit.

Shri M. C. Chagla: You used the expression for which I find no authority, that the manager will be under the thumb of the director. Where do you find it in this Bill? Which section puts him under the thumb of the director? If there is any one section I will remove that.

Shri N. C. Mullick: My submission is that this appoint has to be approved.

Shri M. C. Chagla: I have said we will consider that. Suppose that goes. How is he under the thumb of the director?

Shri N. C. Mullick: Recently we had received a new direction that when a principal has to be appointed, if he is to be appointed by a board. . .

Shri M. C. Chagla: We are not talking of what was happening, we are talking about the Bill. Where do you find the proposition which you are advocating, that the manager will be under the thumb of the director? Can you point out any section? Where is it?

Shri N. C. Mullick: Section 8 reads like this:

> "Any manager who fails to comply with the provisions of clause (b) or clause (c) of sub-section (4) of section 6 or wilfully maintains a false statement of accounts, shall, without prejudice to any other action that may be taken against him, be liable to be removed from managership".

Shri M. C. Chagla: What is wrong with that?

Shri N. C. Mullick: Here I would submit that the system of maintaining accounts is that there is a bursar . . .

Shri M. C. Chagla: He is responsible for the accounts, that is all. He does not personally write the accounts.

Shri N. C. Mullick: The bursar has to get his accounts checked by the principal, and the principal has to put them up to the manager. In our case we also have an honorary treasurer, but usually people do not have them. If no responsibility is placed on the bursar or the principal in the Act, why should it be on the manager alone?

Shri M. C. Chagla: It is just as the minister is responsible in Parliament for any misdeeds of his officers. He cannot take protection behind the officers. Surely the manager is responsible. That is all. It does not say that he should personally keep the accounts.

Shri N. C. Mullick: That is not clear.

Mr. Chairman: Let us go to the next point.

Shri N. C. Mullick: The next is clause 11. We have no objection to sub-clause (1). But coming to sub-clause (2) I submit that at least to my knowledge we have not come across any substantive legislative enactment which provides for such a condition as this that a person "will not be dismissed, removed, reduced in rank or suspended, nor shall his services be otherwise terminated without the previous sanction in writing of the Director." We have no objection that the employees of aided schools may be given the same protection and governed by the same or similar rules as govern government servants or the fundamental and supplementary rules, leave and appeal rules. But my first submission is that it is not necessary or even advisable that a provision in this behalf should be made in the main Act. And principally our objection is to suspension being included here. If necessary, I can give cases where teachers and even principals had to be suspended on the spot because of certain irregularities, and if they had been allowed to remain in office even for one day more they would have been able to do away with the records and destroy all evidence.

Mr. Chairman: But how will the teachers come in possession of records? Their business is only teaching.

Shri N. C. Mullick: That is where probably there is a misunderstanding. The accounts are with the bursar who is one of the teachers. The records about leave accounts and other things are with the principal or with one of his clerks. The manager does not have that.

Shri Rama Chandra Mallick: On a point of clarification. I know that at present in Delhi in some of the schools, the headmaster or the Headmistress or the Principal of the school keeps the accounts and the manager supervises it.

Mr. Chairman: We shall consider that matter when we take up the clauses. But now, let us hear their views. Suppose the business of keeping accounts is kept away from the Bursar who is a teacher, then what do you think will happen?

Shri N. C. Mullick: It will mean additional expenditure. Apart from additional expenditure, the teachers may feel disgruntled that we are not giving them this opportunity to get a little extra money which they get as Bursar, by way of a special allowance.

Mr. Chairman: But you cannot argue both ways and say that on the one hand the teachers have access to the accounts because the Bursar is keeping the accounts, and on the other again say that the teachers will have a grievance if this part of the work is taken away from them.

Shri N. C. Mullick: That is no grievance of mine. I am talking only from the purely administrative point of view.

Mr. Chairman: What suggestion do you want to make in this regard?

Shri G. G. Swell: Is the Bursar's job a part-time job?

Shri N. C. Mullick: Yes, it is a part-time job. My first submission is that this provision in sub-clause (2) should be completely removed. We have no objection, as has happened at present, if these matters of detail such as appointments, service rules etc. are governed by a separate set of rules. As it is, the fundamental and supplementary rules apply to them. In the case of the teachers alone, why should provision be made in this regard in a substantive legislation like this? In any case, if this provision were to remain, at least 'suspension' should be removed. The person who is responsible for administration must have the right to suspend a person. Of course, it may be laid down that within 24 hours he has to report the matter and give full details to the director or whatever authority is laid down for this purpose. But as regards suspension, I would submit that even under law it is not treated as punishment; there is no reason why suspension should be prohibited in such types of circumstances as are mentioned.

Shri Labh Singh: Then in regard to clause 18, we would submit that if this clause were to remain, then instead of five years, a period of two years may be prescribed during which the management may rest with the Department. Apparently, this clause is of an expropriatory nature and, therefore, in a sense, illegal. It is very doubtful if a clause of this type would stand the test of judicial examination; I do not think that it could. This is our humble submission in this reference.

In any case if this sub-clause is to remain and the administrator or director is given the right to assume possession of the school, then there must be some independent tribunal to which an appeal may be made, consisting say of a High Court judge or a Member of Parliament and some persons of recognised educational experience, and a representative of the management. This is very important and this should be introduced in the provision.

In regard to clause 20, I would submit that it is a rather curious thing. The advisory committee has to function to advise the director in the exercise of his executive powers, whereas it is laid down that it will assist the director only in formulating major policies and not in the exercise of his executive powers, which so far as this Bill is concerned are so vast and extensive and arbitrary. The director should have the advice of some independent person before any action is taken, and in fact, he should have the advice of really an education committee, or, say, the vice-chancellor of a local university.

Mr. Chairman: We shall consider that point.

Shri Labh Singh: The provision in clause 25 relating to bar of jurisdiction of courts appears to us to be extremely arbitrary.

Shri M. C. Chagla: Every one of the measures has a clause like this. This provision does not bar a person

from going to court on a writ. So, there is nothing unusual in this bar of jurisdiction. We have got a similar provision in the Banaras Hindu University Bill, the Aligarh Muslim University Bill and the Jawaharlal Nehru University Bill.

Mr. Chairman: What do you want to suggest? Is it your suggestion that we should delete the whole clause or any part of it?

Shri Labh Singh: If the entire clause is deleted, it would leave it open to the aggrieved party to take it to court....

Shri M. C. Chagla: And you can have as much litigation as you like!

Mr. Chairman: We have followed the argument. Now, you may go on to the next point.

Shri Labh Singh: This clause is much too arbitrary and drastic.

Shri N. C. Mullick: All these things are complementary. Suppose you agree to a tribunal. Then if recourse to civil courts is prohibited, we won't mind it. Similarly, if our suggestion of a high power committee is accepted, to which things can be referred, again that covers the grievances to some extent. But taken clause by clause, we naturally have to say that we do not know whether that will be agreed to and so we have to take up this position. We have submitted that at least the court should be there.

Shri Labh Singh: More especially cl. 24 is really reminiscent of the Rowlatt Act.

Mr. Chairman: That is the usual provision in every Bill for actions taken in good faith, for *mala fides* you can certainly go to a court of law.

Shri Labh Singh: There is the question of grants given by the department. They say that they give 95 per cent of the total expenditure, whereas the fact remains that they do not give more than 84 per cent. Fees realised from the lower classes are deducted from the total grant which is available to school from the department every three months.

Shri N. C. Mullick: I would make a general observation. The idea apparently of Government is that after all they are giving 95 per cent of the recurring expenditure and 60 per cent of the non-recurring; so they must have full control or greater say than the management. The entire capital expenditure, which in our case, for instance, runs to over a crore of rupees is met by us....

Shri M. C. Chagla: I may cut it short by saying that that is not the intention of Government; the intention is to put down maladministration.

Shri N. C. Mullick: We agree 100 per cent.

So far as recurring expenditure is concerned, up to the 8th standard, education is free and that is normally Government's responsibility. If we are permitted to charge fees, we will probably not need any aid....

Mr. Chairman: These considerations are beyond the scope of the Bill.

Shri S. N. Chaturvedi: Your impression seems to be that Government is greedy after power and that is why it wants this Bill. But you yourself say that there is some sort of clamour. If everything is well-managed, what is this clamour for? There must be some sort of maladministration going on. After all, we are all engaged in trying to give best education to our boys and efficient administration to the schools. Where do you think is the lacuna?

Shri N. C. Mullick: Actually, too much rope has been given to the teachers. I am saying this as an administrator. People have been so much in close touch with the department. We have had a lot of trouble in our

school, even strikes. Why? They have been encouraged by the education department staff, 'You do this and that, the school will be nationalised'. We had to fight it out.

Shri S. N. Chaturvedi: But the teachers can take better care of their interests. They are intelligent enough. If in government schools conditions are not better, why should they go from the frying pan into the fire?

Shri N. C. Mullick: In government schools, it is mainly the pensionary consideration. We have ourselves suggested that we are prepared to pay our share; let pension be introduced in aided schools also.

Shri S. N. Chaturvedi: Then the clamour will die down?

Shri N. C. Mullick: To a very large extent.

Shri Rama Chandra Mullick: Which arrangement is better—the present one whereby the principal or headmaster or headmistress, as the case may be, keeps accounts or the proposed one whereby the manager will keep accounts?

Shri N. C. Mullick: The present arrangement is very good. The bursar keeps accounts. We have laid down that the principal should sign the cash book every day and it should be put up to the treasurer or manager every week.

Shri Rama Chandra Mullick: On p. 5 of your memorandum under sec. 6(3) you say:

> "We have already discussed that the Director has no hand in the appointment of a manager and as such notice of resignation of the manager need not be intimated".

Shri N. C. Mullick: He will definitely be informed. Actually, the manager will report his resignation to the managing committee. It is only notice of resignation, not that the resignation has not to be intimated.

Shri Rama Chandra Mullick: Have any facilities been given to teachers/students belonging to the scheduled castes and scheduled tribes in the matter of appointments/admissions?

Shri N. C. Mullick: We are governed completely by the rules laid down by the department.

Shri Rama Chandra Mullick: Have any facilities or preferences been given to teachers belonging to scheduled castes or scheduled tribes during appointment? I have visited a school. There are more than 2000 students, but only one of them is a scheduled caste student. My point is: is there any bar on students belonging to scheduled castes or scheduled tribes or are there any facilities or preferences given to them in the matter of admission in schools?

Shri N. C. Mullick: In our schools, the position is, so far as the scheduled caste students are concerned, they are given free education. No fees are charged; but so far as the appointment of teachers and staff is concerned, we have to be governed by the regulations laid down by the department.

Mr. Chairman: What is the strength of pupils in your school and what is the number of pupils who belong to Scheduled Castes and Scheduled Tribes, that study in your school?

Shri N. C. Mullick: There are about 200 Scheduled Caste students out of a total of 3,000 pupils.

Shri Rama Chandra Mullick: Out of the total number of teachers, how many belong to the Scheduled Castes and Scheduled Tribes?

Shri N. C. Mullick, 10 to 15 per cent. belong to the Scheduled Castes.

Shri Jairamdas Daulatram: After listening to a number of objections raised by your group, what strikes me is that the object of the Bill has not been properly appreciated. The Bill deals with the administration of

schools in Delhi. The objective is to improve the administration or to prevent the maladministration. There is a provision in the Bill which gives a certain amount of elasticity to the abdication of various provisions of the Bill to various schools. There is clause 23. All schools which are well-administered normally have nothing to fear so far as the main provisions of the Bill are concerned. The real danger is for the maladministered schools and the real objection could very well come from the ill-managed schools. I therefore suggest that the type of opposition which has been manifested today has no real basis so far as clause 23 is concerned, because it gives a certain amount of elasticity. Certain provisions may or may not apply to certain schools which are well-administered or well-established.

Shri N. C. Mullick: Who is to decide about applying the provisions of section 23 to a particular school? Is it the Inspector or the Director?

Shri Jairamdas Daulatram: That is another matter. I suggest that the working of the Bill, when it becomes an Act, will be carefully supervised and considered from time to time, because we are living in an age where public opinion expresses itself and asserts itself, and we have got a representative organisation in Parliament, and a number of members from Delhi also are represented in Parliament. If there is any serious lapse on the part of any authority, the thing cannot be kept back for long. So, unless these powers giving authority to the Government to oversee these matters are conferred on the Government, to check any maladministration in the schools, we cannot carry on.

Shri N. C. Mullick: We are hundred per cent in agreement with the proposition that if any school is maladministered, the authorities must take action against that school. But because we have been asked to give our views on the provisions of the Bill, we respectfully submit that the provisions contained in these clauses, which we have referred to, will not facilitate that action. After all authority should be given to a person who is capable of handling it. Our experience of these inspectors and the Directors unfortunately has not been very happy.

Shri Jairamdas Daulatram: Anticipating the objections, I might point out that there is a special provision, which is a change from the existing system, and that provision contains a clause to appoint an Advisory Committee. There would not be just one particular person to be entirely in charge of the subject. There is to be an Advisory Committee whose composition has to be discussed and whose powers and functions have further to be discussed. There is an arrangement by which punishment could be inflicted for misuse of power, which you seem to apprehend. I do not want to go into individual experience.

Shri N. C. Mullick: I suggest that the committee should be a high-power committee.

Shri Jairamdas Daulatram: You have mentioned that.

Mr. Chairman: I think they agree with the proposition.

Shri Deokinandan Narayan: It is found that the expenditure per boy in a government school is Rs. 35, while in the aided schools the expenditure per boy comes to Rs. 17 only. What are the reasons for the expenditure in the aided schools being 50 per cent less—one half of the expenditure that is incurred in the Government schools? Is it because that the aided schools pay less to their teachers or spend less on other things?

Shri Labh Singh: In government schools, generally, they have just 20 to 25 students in a class, whereas we

have the maximum number. If we have a class with less than 40 students, the department comes down upon us and says, "make it full"; that is, it must have the full complement of 40 students. So, on 20 to 25 students, they spend at the rate of Rs. 35, while in a class of 40 students we spend naturally at a lower rate.

Shri Deokinandan Narayan: We have seen more than 40 pupils in a class in government schools also.

Shri Labh Singh: That happens very rarely.

Shri Deokinandan Narayan: Even in Delhi, we have seen more than 40 pupils in one class.

Shri N. C. Mullick: There is no question of our paying lower salaries to the teachers than what they pay in the government schools, because the scales of pay are laid down by Government and we have to pay them. More students want to go to private schools because they get better education than in the government schools, on an average. We can give you figures; we have already given you a statement from which you can see the position.

Shri Deokinandan Narayan: I would like to know the percentage of temporary teachers who are appointed from year to year, say, for 10 to 11 months, in the aided schools.

Shri N. C. Mullick: There are no temporary teachers as such; there is a leave reserve. So far as salaries are concerned, we cannot pay them less.

Shri P. C. Mitra: Your suggestions and objections which you have raised in your memorandum and the deductions made by you are actually the same as those furnished by the Bharatiya Jan Sangh and the Delhi Association.

Mr. Chairman: The hon. Member points out that your objections etc., are the same as those mentioned in the other memoranda, and so, we would like to know whether you had any consultation, prior to this, with the other spokesmen.

Shri N. C. Mullick: We had a meeting with the Managers' Association.

Shri P. C. Mitra: In his letter—the letter of Shri D. P. Bhatia, Advocate, Supreme Court, and ex-Asstt. Secretary of the Salwan Education Trust—he says that the profiteering motives of the management and malpractices obtaining in some of the schools are too well-known to need any mention and that anyhow the Bill is moderate in character, though more drastic measures were called for. Will you please explain this?

Shri N. C. Mullick: We never had any Bhatia as manager of our schools.

Shri P. C. Mitra: He was the Secretary.

Shri N. C. Mullick: He was never Secretary. He was just a small man in the Trust. He appeared in some minor cases on our behalf in the court. He had nothing to do with the administration.

Shri P. C. Mitra: An Advocate of the Supreme Court is not a small man!

Shri K. Damodaran: What percentage of your teachers have served for 10 years and more without break?

Shri N. C. Mullick: At least 90 per cent of them have served us for more than ten years.

Shri P. K. Vasudevan Nair: You took objection to clause 11(2) and you wanted powers for suspending the teachers. Can you assert that there were practically no cases of arbitrary suspension or disciplinary action by the management against the teachers based on some prejudice or vindictiveness?

Shri N. C. Mullick: None I can think of during the last 7 years I have been manager.

Shri Yamuna Prasad Mandal: How many teachers do you employ?

Shri N. C. Mullick: About 300.

Shri Yamuna Prasad Mandal: Your Trust began this school after partition?

Shri N. C. Mullick: It was actually started in Peshawar and it was rehabilitated here at the end of 1948.

Shri Yamuna Prasad Mandal: How many teachers have you arbitrarily dismissed during this period?

Shri N. C. Mullick: Not one. There is no question of arbitrarily doing it. There are rules of discipline laid down. If any person has to be disciplinary dealt with, we have to refer to the Director who appoints his nominee on the board of enquiry.

Shri Yamuna Prasad Mandal: On grounds of indiscipline how many were turned out?

Shri N. C. Mullick: 4 or 5 in the last 7 years.

Shri Shiv Charan Gupta: You took objection to clause 3(f) regarding naming after sect or caste. Will you be satisfied if this does not apply to the existing institutions, but only to institutions coming up in future?

Shri N. C. Mullick: We can selfishly say it is all right. But in the interests of education as such, this is not a good clause even for the future. Why should that source be dried up?

Kumari Shanta Vasisht: You said that education is given free to Harijans up to the higher secondary stage. But it is supposed to be free for all students all over the territory according to the government rules.

Shri N. C. Mullick: I am not claiming any special point in my favour. The hon. member asked me about the facilities given to Harijan students and I mentioned it.

Kumari Shanta Vasisht: You have mentioned about certain malpractices or other things committed by the Education Department. Would you give some idea about it?

Shri N. C. Mullick: We have at the very beginning agreed that our evidence will be treated as open. So, we would not like to give the details here. We can confidentially give them to any officer.

Kumari Shanta Vasisht: Do you believe that the Education Department would behave arbitrarily if such powers are given to it?

Shri N. C. Mullick: You give powers to anybody which his status does not deserve and they are likely to be misused. There is nothing particular about any individual. In the government hierarchy there is a certain limit of power for Under Secretaries, Deputy Secretaries, Joint Secretaries, etc.

Shri Diwan Chand Sharma: What is the capital of Salwan Trust interms of liquid cash, property, etc? You say it is over a crore. Why do you say that if one of these schools is taken over by the Government, it will be expropriatory?

Shri N. C. Mullick: We said our assets are over a crore, by which we mean land, building, furniture, fittings, etc. We have got a tubewell, 17 acres of land, 60,000 square feet of built accommodation, etc.

Shri Diwan Chand Sharma: What is your idea about the advisory committee to assist the Director?

Shri N. C. Mullick: The status of the advisory committee should be higher than what it is proposed. It should be a high-powered committee.

That is, the Director must refer these things to the committee before taking action. The committee should consist of say Member of Parliament, a recognised educationist—may be the Vice-Chancellor the Delhi University—or the Mayor of Delhi.

Mr. Chairman: You do not want members of the teaching staff to be on the Advisory Committee?

Shri N. C. Mullick: Then we will have managers' representatives also.

Shri Diwan Chand Sharma: You can have teachers, Vice-Chancellors, Members of the Metropolitan Council and some Members of Parliament.

Mr. Chairman: Will you please tell us whether there were any cases of misappropriation or defalcation in your Trust by anybody connected with the schools?

Shri N. C. Mullick: I am glad that you have raised this issue so that we can vindicate our position.

Mr. Chairman: We want the fact.

Shri N. C. Mullick: The fact is this: If you like, I can confidentially hand over to you certain papers.

Mr. Chairman: If you do not want to answer it under Direction 58 of the Speaker, you need not.

Shri N. C. Mullick: Openly I can say that one, two, three cases were started by the Department on certain technical grounds.

Mr. Chairman: What were those technical grounds?

Shri N. C. Mullick: The technical ground is like this: A cheque is received today and payment is made a day earlier, or, the Government has given a grant of Rs. 50,000 for one purpose and another grant for another purpose. But that was spent on this purpose and this was spent on that purpose. How it was tried to make out was that one grant was made on 1st January and the other on 1st February. A special court was instituted and ultimately the High Court completely acquitted us honourably. The Delhi Administration then desired to have an injunction against the running of the school and it was finally vacated on the orders of the Chief Commissioner. The records are there. Finally the matter was referred to Justice Mehr Chand Mahajan.

Shri Diwan Chand Sharma: In which year?

Shri N. C. Mullick: In 1956.

Mr. Chairman: This Mr. Bhatia styles himself as Secretary of the Trust. In what capacity was he serving?

Shri N. C. Mullick: He was never the Secretary.

Mr. Chairman: What was his capacity? Was he the Manager or bursar?

Shri N. C. Mullick: He was neither the manager nor the bursar. He was one of our Counsels in one case. Then we have appointed him as an Enquiry Officer in one case against a teacher.

Mr. Chairman: I will read out just one portion of his memorandum. I do not know whether you would like to say anything on that. He says:

> "Anyhow the Bill is moderate in character though more drastic measures were called for".

Shri N. C. Mullick: If that is his view, what can I say on that?

Mr. Chairman: Is there anything more to add on any other matter?

Shri N. C. Mullick: Nothing.

Mr. Chairman: Thank you very much for your valuable evidence.

Shri N. C. Mullick: We hope that you will take into consideration whatever we have said. We are at one with you in the matter of education. We can give you every assistance.

(*The witnesses then withdrew*)

VI. Ramjas College Society, Daryaganj, Delhi.

Spokesmen:

1. Shri Hanuman Pershad Gupta.
2. Shri Satya Narain Gupta.
3. Shri Ram Kanwar.

VII. Indraprastha Hindu Girls' Higher Secondary School, Delhi.

Spokesman:

Shri Jagan Nath.

(*Witnesses were called in and they took their seats*).

Mr. Chairman: Your memoranda are before us. We have read them; we have considered them in detail. Now the Committee would like to have any additional points that you may like to place before them for their consideration. That would avoid repetition and would also save time. Therefore I would like to say that you may emphasise only those controversial points which according to you should be specially mentioned. In the end if any Members want to put questions you will please answer them also. I think this Ramjas College Society, Daryanganj is governed by a Trust.

Shri Satya Naraian Gupta: The schools are governed by Ramjas College Society.

Mr. Chairman: It is a trust.

Shri Satya Narain Gupta: Yes.

Mr. Chairman: The same is the case with Indraprastha Hindu Girls Higher Secondary School.

Shri Hanuman Pershad Gupta: Yes, This is also a Trust.

Mr. Chairman: Your memoranda, suggestions, modifications and amendments are identical. Please proceed on those lines.

Shri Satya Narain Gupta: I will not touch all the points. I will only emphasise important points.

Section 2—Sub-clause (k) deals with Manager. The Manager is an honorary officer. The Manager is elected by the Managing Committee and it will be derogatory to the rights and powers of the Managing Committee. Besides, it will be difficult to attract good and respectable persons. However, if the intention is to lay down certain qualifications, it should be clearly stated. In fact the Management is the sole and the final authority to elect Manager.

Mr. Chairman: Once again I would like to say that you emphasise only important controversial points, because we have had many witnesses before and they have also covered many points.

Shri Satya Narain Gupta: Clause 9 affects mainly the Ramjas College Society. In fact from our experience of running 8 Higher Secondary Schools by one Managing Committee having full representation from all schools we find that the tone of education and discipline is very much better. These societies may face administrative inconvenience lack of uniformity and inefficiency in their schools, besides avoidable waste of valuable time. The results and efficiency of Ramjas Schools are self-explanatory having about 12,000 students and about 400 teachers. It is feared that the retention of this clause may hamper in opening new schools.

It may also be worth mentioning that the society is going to open two more Higher Secondary Schools.

Mr. Chairman: You do not want separate Committees.

Shri Satya Narain Gupta: We are at present running 8 Higher Secondary Schools and we have got one Managing Committee for all schools and in that there are representantions from teachers and principals and also 5 nominees of the Trust.

Shri M. C. Chagla: Each School has its own problems, own teaching staff, etc. Would it not be more convenient to have separate committees? You may have common members.

Shri Satya Narain Gupta: Our expreience is that one Managing Committee is doing that very successfully. All the Principals are represented on this Committee.

Shri M. C. Chagla: I will try to understand your difficulty. What is your difficulty in setting up separate committees? You may have common members on this.

Shri Satya Narain Gupta: There will be a lot of wastage and duplicity of work, besides causing administrative inconvenience.

Shri Ram Kanwar: There will be waste of time also. Though you may have common members, they have to attend all the meetings of these separate committees.

Mr. Chairman: We will consider this point. Next point.

Shri Satya Narain Gupta: Sub-section 3 of Section 6: The Manager is responsible to the Managing Committee and so it is not necessary to send the intimation to the Director. sub-clause 4(a) and (b) should be changed so as to incorporate that:

> "Get maintained through the head of the institution or the Bursar who are paid employees. The Manager will only supervise and control."

Shri G. G. Swell: He is to be responsible for the maintenance of accounts.

Shri Satya Narain Gupta: His functions are supervisory.

Shri G. G. Swell: Do you want the Managing Committee to be responsible for this?

Shri Satya Narain Gupta: My point is that the Principal gets the accounts maintained by the Accountant. Then there is the Bursar who checks the accounts. The Manager does only the supervision and exercises general control.

Shri G. G. Swell: You mean that the responsibility will lie on the Principal.

Shri Viyaysinhrao Ramrao Dafle: Will the Managing Committee as a whole be responsible for it?

Shri Satya Narain Gupta: I don't say so.

Mr. Chairman: What is your suggestion?

Shri Satya Narain Gupta: The Principal may be held responsible. If necessary, an explanation may be called from the Managing Committee; but the ultimate responsibility is that of the Principal.

Mr. Chairman: Your institution has a Manager.

Shri Satya Narain Gupta: We have got separate Managers for all the schools.

Mr. Chairman: What are his principal duties?

Shri Satya Narain Gupta: General supervision and control.

Mr. Chairman: That includes the maintenance of accounts also.

Shri Satya Narain Gupta: In the provisions it is stated that he will maintain accounts. He does not maintain accounts.

Mr. Chairman: He maintains or causes to be maintained. It need not be that he actually writes the accounts in his own hand.

Shri Satya Narain Gupta: His function is that of a supervisory nature. Then, I will refer to Section 10. The school property should mean only that property which has earned grant-in-aid.

Mr. Chairman: We have had discussion over this point also in detail with other witnesses. What argument you have in support for this point?

Shri Satya Narain Gupta: Will regard to property which has not attracted a grant, our submission is that it should not be termed 'school property' as defined in the Act.

Mr. Chairman: It is mostly for the remuneration of the staff and for other purposes.

Shri Satya Narain Gupta: We get recurring and non-recurring grant for school property also, and only that property should be school property under the Act.

Mr. Chairman: What is the next point?

Shri Satya Narain Gupta: My next reference is to clause 18. In case Government have taken over the school and the management does not want to take it back, the matter should be referred to a judicial tribunal who may fix a reasonable compensation on the basis of the market value, and the compensation after deduction of the amount of grant received may be paid to the management.

Mr. Chairman: If the institution does not want to take back the school and manage it, then you want compensation etc. to be paid?

Shri Satya Narain Gupta: Compensation for the school property may be given.

Mr. Chairman: And Government should manage the school?

Shri Satya Narain Gupta: Of course. If the trust is not in a position to manage the school, then the only alternative is to give it a fair compensation.

Shri M. C. Chagla: That is provided in sub-clause (4) that the rent will be paid. What compensation do you want? You are running at a loss. You get 95 per cent from us.

Shri Satya Narain Gupta: The question is about compensation for the school property.

Mr. Chairman: As the management commits certain acts, the Government takes over the institution. Then when the Government is prepared to hand it over back to the management and if the management does not want it, then Government should pay also for all the debts etc. of the school which was mismanaged, and all that liability will have to be taken over by the Government. And then you also want compensation?

Shri Satya Narain Gupta: I am not defending mismanagement. I am only submitting . . .

Mr. Chairman: In that case there would be no ground for taking it over.

Shri Satya Narain Gupta: I am not pleading or defending mismanagement. I am only submitting this. Suppose the trust finds itself not in a position to run the school. Then it is very reasonable and fair that for the property so taken over by

the Government a fair and reasonable compensation should be given to the trust.

Shri M. C. Chagla: Compensation for what?

Shri Satya Narain Gupta; For the immovable property.

Shri M. C. Chagla: They are going to pay you rent. It is said there. Apart from that, when you suffer a loss you get 95 per cent from us.

Shri Ram Kanwar: What about the immovable property acquired by our own investments on which we have taken no grants?

Dr. (Mrs.) T. S. Soundaram Ramachandran: The purpose of the trust is to run the school. Now the Government is to run the school and it will pay the rent. Even afterwards, if the trust is not wanting to take over the school the Government will run the school.

Mr. Chairman: The trust got the land etc. Your noble idea was to run the school. Now the school is not run by you and the Government takes it over along with the liabilities etc. And again the trust wants compensation? The reasonable thing would be you get the rent, the trust gets the rent.

Shri Ram Kanwar: But there is no provision in the Bill for paying rent.

Shri M. C. Chagla: There is.

Shri Satya Narain Gupta: Please tell us the caluse.

Shri M. C. Chagla: Sub-clause (4) of clause 18 is there.

Shri Satya Narain Gupta: I will bring to your notice one more point. That is about clause 11(2). This is about suspension. Our submission is that it is a purely disciplinary action which the management takes, and it is not a punishment. Therefore the provision about suspension should be deleted.

Mr. Chairman: We have heard it. Next point.

Shri Satya Narain Gupta: With regard to section 16, clause 1(c), our comment is that the contribution, endowments, subscriptions, property not purchased with the amount of grant should not form part of the school fund. The management should have exclusive control over them.

Mr. Chairman: It would have been better if you had been with the other representatives whom we examined, because it is the same point. We have heard all these arguments. The reasonable things will be incorporated and other suggestions will be considered.

Shri M. C. Chagla: I suggest you had joint consultations with the others.

Shri Satya Narain Gupta: I do not think so, Sir.

Mr. Chairman: There is so much of identity of views. Anyhow, it is not a bad thing to have consultations.

What is the last point?

Shri Satya Narain Gupta: I have concluded, Sir.

Shri Hanuman Pershad Gupta: Sir, I also wanted to stress the same points. The first point was that the manager would be removed. If you ask for the manager to be removed, we would not like it. The other point is about property. You have taken the school over. If you want it for ever we should get some compensation. If it is only for five years or so rent is to be paid. Nothing more.

Mr. Chairman: Does any Member want to ask any questions?

श्री नवल प्रभाकर : क्या आप बतला सकते हैं कि रामज़स सोसायटी में कितने सदस्य हैं ?

Shri Hanuman Pershad Gupta: About 50 persons.

श्री नवल प्रभाकर : जो आठ स्कूल हैं, इन पचास में से ही उनके आठ मैनेजर हैं, क्या यह सही है ?

श्री सत्य नारायण गुप्त : जी हां !

श्री नवल प्रभाकर: उन को सोसायटी ही उन पचास में से चुनती है ?

श्री सत्य नारायण गुप्त : जी हां ।

श्री नवल प्रभाकर : इन पचास में से कौन कौन से लोग हैं ?

Shri Hanuman Pershad Gupta: They are persons who have contributed a lot for the society. Some of them are honorary trustees. Some are donors.

श्री नवल प्रभाकर : जब राय साहब जिन्दा थे तब वह काफी प्रापर्टी स्कूलों के लिये छोड़ गये थे, क्या यह सही है ?

श्री सत्य नारायण गुप्त : यह सही है ।

श्री नवल प्रभाकर : क्या यह भी सही है कि राय केदार नाथ जो प्रापर्टी छोड़ गये थे यह सोसायटी उस से काफी आमदनी लेती है ?

श्री सत्य नारायण गुप्त : जी हां, यह सही है ।

श्री नवल प्रभाकर : जब जब परेशानी पैदा होती है तब तब डोनर्स से पैसा लिया जाता है । चूंकि इतनी प्रापर्टी है इस लिये सोसायटी को ही इस पर खर्च करना चाहिये ।

Shri Hanuman Pershad Gupta: It was in the initial stages when the property was hardly giving any return.

श्री नवल प्रभाकर : जहां तक मेरी जानकारी है, रामजस सोसायटी के पास जितनी प्रापर्टी है उस से कई लाख रुपये आमदनी होती है और उन स्कूलों पर खर्च करने के बाद भी बहुत रुपया बच जाता है ।

Shri Satya Narain Gupta: But we are starting other schools also. We have already a project for starting two schools in the near future; we are going to have one new school in Ramakrishnapuram, for example.

श्री नवल प्रभाकर : क्या यह बात भी सही समझते हैं कि राय साहब ने जो स्कूल चलाये थे वह शिक्षा की उन्नति के विचार से चलाये थे ?

Shri Satya Narain Gupta: Yes.

श्री नवल प्रभाकर : और वह यह चाहते थे कि यहां पर दिल्ली में शिक्षा काफी उन्नत हो ?

Shri Satya Narain Gupta: Yes.

श्री नवल प्रभाकर : फिर आप ने यह कैसे कहा कि अगर उन स्कूलों को मिस-मैनेजमैंट की वजह से ले लिया जाय तो हमें कम्पेंसेशन दिया जाय ?

श्री सत्य नारायण गुप्त : उनका उद्देश्य यह था कि मैं जो स्कूल चला रहा हुं या मैंने जो स्कूल छोड़ कर जा रहा हूं उन में बराबर शिक्षा लोगों को मिलती रहे दिल्ली के लोगों को और आप की जो सोसाइटी है जो उन्हीं की प्रापर्टी पर आधारित है ।

श्री नवल प्रभाकर : तो वह कैसे कह सकते हैं कि अगर उन स्कूलों में मिसमैनेजमैंट होता है और उनको ले लिया जाता है तो फिर उसका उन्हें कम्पेंसेशन दिया जाय ?

Shri Satya Narain Gupta: On this point, I may say that we were not contemplating our institution, but we were thinking of it in general terms.

Shri S. N. Chaturvedi: May I know whether teachers from your schools prefer to go to Government schools on the same scale of pay in the same capacity?

Shri Satya Narain Gupta: We do not think so. My submission is that it is to the contrary.

Shri S. N. Chaturvedi: Do you get some teachers from Government schools on the same salary?

Shri Satya Narain Gupta: Occasionally we get.

Shri S. N. Chaturvedi: There is no migration in the reverse direction?

Shri Satya Narain Gupta: I do not think so.

Shri Rama Chandra Mallick: In regard to clause 17(1), at page 5 of your memorandum you have stated that every recognised school should be inspected at least every third year in accordance with the prescribed rules, whereas according to the clause it should be done at least once during each year. Why should that be done only once in every three years and not once every year?

Shri Jagan Nath: This is not our suggestion.

Shri Satya Narain Gupta: We are representing the Ramjas College Society.

Shri Jairamdas Daulatram: I want to understand your point of view with regard to one particular clause. Clause 5(9) says:

> "Where any person maintains more than one recognised school, there shall be a separate managing committee for each such school."

You had objection to this from the point of view of your special circumstances? Is it that the society controls and finances all the schools?

Shri Satya Narain Gupta: Yes, that is true. The schools have no independent financing.

Shri Jairamdas Daulatram: The control is also from the society?

Shri Satya Narain Gupta: Yes.

Shri Jairamdas Daulatram: You have eight schools?

Shri Satya Narain Gupta: But the society hardly interferes in the academic matters of the school; it only contributes. It is the managing committee which controls . . .

Shri Jairamdas Daulatram: I am coming to that. Your society finances and in a way indirectly controls all these schools; therefore, you find it better to have one central managing committee to deal with all the schools, because common types of questions arise and many other things need coordination, adjustment etc.; all that arrangement is possible if there is one committee? Is that your reason?

Shri Satya Narain Gupta: That is true.

Shri Deokinandan Narayan: In the Indraprastha Hindu Girls Higher Secondary School, only Hindu girls are admitted?

Shri Hanuman Pershad Gupta: That was the old name given. There is no bar to others coming in; for instance, there are Muslim girls reading there already.

Shri Deokinandan Narayan: What is the percentage of non-Hindu girls reading there?

Shri Hanuman Pershad Gupta: Their number is very small because they do not come in large numbers.

Shri Deokinandan Narayan: Why do they not come in large numbers?

Shri Hanuman Pershad Gupta: Because they do not live near about. It is because they are not in the vicinity of the school that they do not come.

Shri Deokinandan Narayan: Is there a separate managing committee for it?

Shri Hanuman Pershad Gupta: Yes.

Shri Deokinandan Narayan: Is there any non-Hindu member on the managing committee? Or are they all Hindus only?

Shri Hanuman Pershad Gupta: All are Hindus.

Shri Deokinandan Narayan: Why should a Mohammedan or a non-Hindu not be taken on it?

Shri Jagan Nath: This was the old constitution.

Shri Deokinandan Narayan: Does the old constitution provide for Hindu members only?

Shri Jagan Nath: That is not so; but the members are continuing one after another. There is no question of any bar to others.

Shri Deokinandan Narayan: Then some non-Hindu member can be taken. Is there any non-Hindu member on the managing committee now?

Shri Hanuman Pershad Gupta: At present, there is none.

Shri Deokinandan Narayan: But is there any restriction in the constitution that there should be no non-Hindu members?

Shri Hanuman Pershad Gupta: There is no such restriction.

Shri Deokinandan Narayan: Then would you not like to have some non-Hindu man on the managing committee?

Shri Hanuman Pershad Gupta: Certainly we would like to have.

Shri Deokinandan Narayan: Then, have one non-Hindu member.

Shri Jagan Nath: We shall have one such in the future.

Shri Deokinandan Narayan: Are there any Harijan girls in your school? If so, how many of them are there?

Shri Hanuman Pershad Gupta: I think about 30 to 40 such girls are there.

Shri Deokinandan Narayan: Do you give them any special benefit or advantage?

Shri Hanuman Pershad Gupta: If she has secured good marks then she will be taken and otherwise not.

Col. B. H. Zaidi: There has been a good deal of talk about compensation. Do you find any clause in this Bill which contemplates Government taking over a school permanently? The maximum period laid down is only five years and so the period cannot be more than that. So, why should so much have been said regarding payment of due compensation?

Shri Satya Narain Gupta: We have not emphasised the point on compensation actually. When this point was brought to our notice, we did not emphasise this point.

If, however, the intention is to take over the schools and the school buildings permanently, then, of course, a certain compensation will be necessary.

Col. B. H. Zaidi: That is not contemplated at all in this Bill.

Shri P. C. Mitra: In regard to clause 11(1) you have stated that the words 'including conditions regulating recruitment' should be deleted. Why do you insist on this? After all, Government must give some indication in regard to the methods of recruitment? The recruitment should be made by advertisement or by other methods. Under those circumstances, why do you insist that the pharase 'including conditions regulating recruitment' should be deleted?

Shri Satya Narain Gupta: We only wanted a clarification.

Shri K. Damodaran: How much was donated by the 50 persons on the managing committee, how much by others and how much was added to it by government grant and aid? Secondly, out of these amounts, the total annual income, how much is spent on these schools and how much remains every year? Thirdly, do you use this income for any other purpose?

Shri Satya Narain Gupta: We do not use the income of the society except for educational purposes. Suppose we have to construct a building for another school. Of course, we shall avail of the funds of the society. We are running a college also and we are contributing to it also occasionally.

As regards the proportion of donations given by the 50 members of the trust and others, it is a very difficult question to answer. Actually, this property might have been purchased from the donations received—part of it—and they are utilised for the construction of school buildings and properties.

Shri K. Damodaran: You just now said that 50 members were taken in the managing committee because of big donations. How much was donated by them and how much by others?

Shri Satya Narain Gupta: I have not got the information with me now.

Mr. Chairman: Broadly what is the percentage?

Shri Satya Narain Gupta: Even the present properties have been acquired by the donations.

श्रीमती अनीस किदवई : यह लड़कों और लड़कियां के जितने भी स्कूल हैं ये सब सोसाइटी की अपनी बिल्डिगों में चल रहे हैं ?

Shri Satya Narain Gupta: Most of them are in our property, except two which are in rented buildings.

Shri Yamuna Prasad Mandal: What benefits do teachers get from the society by way of provident fund etc.?

Shri Satya Narain Gupta: Whatever the department allows; the terms of appointment are in accordance with the rules of the directorate.

Shri Yamuna Preshad Mandal: Have you any benefit schemes for the teachers?

Shri Satya Narain Gupta: Full details of the scheme have not yet reached our management.

Shri Yamuna Prasad Mandal: What is the annual cost of pupil?

Shri Satya Narain Gupta: Rs. 20.

Shri Shiv Charan Gupta: The managers are honorary?

Shri Satya Narain Gupta: Yes.

Shri Shiv Charan Gupta: Has every school a separate account?

Shri Satya Narain Gupta: Yes.

Shri Shiv Charan Gupta: What is your objection to cl. 16—regarding contributions and endowments forming part of the school fund?

Shri Satya Narain Gupta: Our contention is that the school property should be only such as attract aid.

Shri Shiv Charan Gupta: 95 per cent grant is paid by the department and 5 per cent met by the management. In addition, some expenditure on maintenance and other expenditure incidental to education is met. What is the objection to include that much amount, contribution or endowment, in the school fund?

Shri Satya Narain Gupta: The school fund and the society's fund are two different things.

Shri Shiv Charan Gupta: You are again confusing. From the society's fund, you are contributing to every school. It is proposed in the Bill that the aid from Government and the grant should be credited to the school fund. In addition, any contributions/ endowments should be credited to that. What is the objection?

Shri Satya Narain Gupta: Endowment is something which is different.

Shri Shiv Charan Gupta: Look at (c).. Kindly explain in detail.

Shri Satya Narain Gupta: Our objection is this. It should not be school property. On the other hand, that fund should belong to the society. If we are able to attract some endowments or some gifts etc. they should belong to the society and not to the school—to meet the deficit of the school.

Mr. Chairman: What other activities are conducted by the society?

Shri Satya Narain Gupta: Nothing but education.

Mr. Chairman: Why do you keep your school fund and the society's fund separate?

Shri Satya Narayan Gupta: Our intention is to spread education as much as we can.

Shri Diwan Chand Sharma: You have 50 members of the Ramjas society. How many members of the society are there who do not belong to the costs group to which Rai Sahib Kadar Nath belongs?

Shri Satya Narayan Gupta: We have no restriction regarding caste.

Shri Diwan Chand Sharma: I know that. How many are there in that society who do not belong to the caste represented by that great person Lal Singh Das or Rai Sahib Kadar Nath?

Shri Satya Narain Gupta: I will only submit that we have no restriction with regard to caste, creed or colour. Secondly, I will plead ignorance even of the fact, I do not know the case of Rai Sahib Kadar Nath.

Shri Diwan Chand Sharma: I believe all the members of the society belong to the same caste group.

Shri Satya Narain Gupta: No.

Shri Diwan Chand Sharma: Then how many are there?

Mr. Chairman: How many members are there in your society who do not belong to the Rai Saheb's caste.

Shri Satya Narayan Gupta: I do not know to what caste Rai Saheb belong. None of us here knows it.

Shri Diwan Chand Sharma: Is it not a fact that there are lots of restrictions put in the Ramjas schools so far as the admission of students is concerned?

Shri Satya Narayan Gupta: I repudiate this statement emphatically. We have no restriction, except that we hold examinations and admit the students on merit.

Shri Diwan Chand Sharma: How?

Shri Satya Narain Gupta: We hold examinations for the purpose of admission and give admission on merit.

Shri Diwan Chand Sharma: Is it the universal practice in Delhi schools that they hold examinations for admitting students in the 9th or the 6th class, or is it the practice only in your school?

Shri Satya Narayan Gupta: The point is not clear to me.

Shri Diwan Chand Sharma: Do all the schools in Delhi hold examinations before they admit students to the sixth or the ninth class, or, do

the Ramjas school alone hold examinations to admit students in the ninth or the sixth class?

Shri Satya Narain Gupta: I have no information in regard to other schools; since our institution shows very good results, pupils crave admission into them and so we have to introduce a system of examination to find out good students.

Shri Diwan Chand Sharma: Who examines the papers?

Shri Satya Narain Gupta: The Principal and the teachers of our institution.

Shrimati Devaki Gopidas: Are separate lists of accounts maintained for each school?

Shri Satya Narain Gupta: Yes.

Shrimati Devaki Gopidas: Are you having one single seniority list for all the schools, especially for the purposes of transfer from one school to the other?

Shri Satya Narain Gupta: There is one list.

Shrimati Devaki Gopidas: Do you keep one seniority list for all the schools together and are you effecting transfers from one school to the other?

Shri Satya Narain Gupta: We do effect transfers occasionally when they are necessary.

Shri Rama Chandra Mallick: In regard to clause 8, you have said that action should be taken against the managing committee and not against the manager. Suppose, a manager takes away money and goes away. Should not action be taken against the manager? But you said that action should be taken against the managing committee and not against the manager. What is the difference?

Shri Satya Narain Gupta: I have already referred to this point. If the manager takes money, I think the Indian Penal Code will come into operation.

Shri Rama Chandra Mallick: Suppose, action is taken against the manager, what is the position?

Shri Satya Narain Gupta: If a person takes away money from the school, probably he will be punished under the Indian Penal Code. There is hardly any necessity for any special provision in this Bill.

Shri Rama Chandra Mallick: Your comment says: "action should be taken against the managing committee and not against the manager."

Shri Satya Narain Gupta: I was trying to emphasize that the manager is appointed by the managing committee, and he is responsible to the managing committee. The question of control by or approval of the Directorate does not arise.

Shrimati Devaki Gopidas: Do you mean to say that the managing committee is collectively responsible?

Shri Ram Kanwar: Yes.

Mr. Chairman: Thank you very much. We might call now the next group of witnesses.

(*The Witnesses then withdrew*)

Kumari Shanta Vasisht: I think we may now adjourn because the examination of other witnesses may take at least two hours.

Mr. Chairman: We have agreed upon and decided to come here and sit till the examination of witnesses for the day is concluded. We cannot say one thing at one time and another thing at another time. I request hon. Members to co-operate.

Shri S. N. Chaturvedi: They should have been called earlier, the first item after lunch. Now, at the fag-end of the day, the teachers' representatives are called in, and we will be rushing through the evidence. I made the suggestion at the very beginning.

Mr. Chairman: Let us work for at least some more time. We cannot have it both ways.

VIII. All India Secondary Teachers' Federation, Delhi

Spokesmen.

1. Shri R. S. Bhardwaj
2. Shri Ram Prakash Gupta
3. Shri P. N. Drabu.

IX. Delhi School Teachers' Association Delhi.

Spokesmen.

1. Shri Harish Chandra
2. Shri Lakhpat Rai Sharma.

(*Witnesses were called in and they took their seats*)

Shri S. N. Chaturvedi: We have gone through the memorandum of this Association, and if you allow us to put questions straightway, probably some time may be saved. We can seek clarifications only, since we have already gone through the memorandum.

Mr. Chairman: Now, gentlemen, we had evidence from other witnesses and we have fairly covered most of the ground. As school teachers' association's representatives, we would like you to emphasize those points in which you are vitally interested and then, some Members will ask questions and thus we will complete the evidence. Your memorandum is before us and we have gone through it. If you want to add anything to it, you can do so. Otherwise, let the Members ask questions on your memorandum and then we can complete the evidence.

Shri Harish Chandra: As you like. The memorandum that has been submitted is rather isolated, and if it is desired to be correlated with the clauses of the Bill, then I am prepared to go one by one of the clauses.

It depends on your convenience and desire.

Mr. Chairman: You may emphasise the important clauses.

Shri Harish Chandra: In clause 3(a) after the words "financial stability" the words "on a permanent basis" should be added. Sometimes it so happens the school may be all right now, but after sometime the financial stability may not be there.

Shri M. C. Chagla: If it ceases to have financial stability, we have the power to take it over in public interest.

Shri Harish Chandra: The scheme of management set out in clause 5 is all right so far as it goes. But we feel that no office-bearer of the managing committee should hold office for more than three consecutive years. This should be added.

Mr. Chairman: Suppose they are doing good work?

Shri Harish Chandra: They can be re-elected.

In clause 7, we find there is some inconsistency in the clause use (2). The proviso says:

> "Provided that no additional liability shall fall on the Government in respect of the school or class during the period in which the Director so arranges to manage the school or class."

If the government does not bear the additional liability, who will pay the teachers for the unexpired portion? We suggest that the government should bear the whole responsibility, because the teachers have to be paid

fully. Moreover, there may be arrears also and they also should be paid by the government. Then, suppose the manager writes that he is unable to maintain the school and the school is abolished. There must be some provision to absorb the qualified teachers in government schools or other schools.

Shri M. C. Chagla: The grant is given for a particular period. Before the period expires if the manager says he cannot run it, the first charge is the teachers' salary.

Shri Harish Chandra: Then, clause 11(1) says:

> "The terms and conditions of service (including conditions regulation to recruitment) of teachers and other employees of an aided school shall be such as may be prescribed."

We want that after "aided" the words "as well as recognised school" should be added, because there are some schools which are recognised, but not aided. Then instead of "shall be such as may be prescribed" we want that the terms and conditions should be identical with those of the employees of the government schools. At present they are identical in all respects except gratuity and pension.

Clause 18: Taking over aided Schools. Here there is no provision as to what would happen after five years. Suppose the conditions continue to be bad even after 5 years, what is going to happen?

Mr. Chairman: We will consider that.

Shri Harish Chandra: In clause 20, we feel that the advisory committee should have one representative of the teachers' association. Just as there should be one representative of the managers' association.

Clause 25—Bar of jurisdiction. We want that every teacher should have a right of appeal. There should be a judicial appellate tribunal to hear appeals from teachers against the decisions of the Central Government or of any other authority.

Shri G. G. Swell: In clause 11(3) you have been given that right:

> "Any teacher of an aided school aggrieved by any order under sub-section (2) may appeal to the prescribed authority who shall dispose of the appeal in such manner as may be prescribed."

Mr. Chairman: Do you want the civil court to dispose of the appeals?

Shri Harish Chandra: Points 12 and 13 in our memorandum should be suitably incorporated in the Bill. There should be a provision in the Bill to empower the Director of Education to make inter-school transfers of teachers in aided schools.

Mr. Chairman: You want a new clause to be put in for transfers. I think this could not be in the Bill. That is outside the purview of the Bill because the Bill lays down only policies and principles. It is a matter of detail.

Shri Harish Chandra: Then, the principal should be a Government servent so that he may not be forced to become a tool in the hands of managements to perpetuate their malpractices.

Mr. Chairman: You want the teacher to be a public servant?

Shri G. G. Swell: He wants that the Government should appoint the Principal.

Shri M. C. Chagla: You want that the management should not have the right to appoint the Principal but the Government should appoint him.

Shri Harish Chandra: The Principal should be treated as a Govt. servant.

Shri M. C. Chagla: Then why not make all schools as Government schools?

Shri Vijayasinhrao Ramro Dafle: After five years if the schools continue to be managed by the Government as badly as they were before, you wanted to know what would happen. Do you mean to say that it may not be possible for the Govt. to run it efficiently?

Shri Harish Chandra: What we said was that the Bill actually envisages a situation where the Government undertake to run the schools for five years. It is the maximum period for which the Government will manage the school. Supposing the school remains as mismanaged as it was before.....

One hon. Member: By Government?

Shri Harish Chandra: What I mean is: when the financial conditions do not improve.

Shri Vijayasinhrao Ramro Dafle: How do you envisage that the financial conditions do not improve.

Mr. Chairman: The witness wants to know that if the school after five years is not transferred to the original institute, and what happens if the Government wants to transfer the school.

Shri M. C. Chagla: The Government should not manage it for more than five years. It should retransfer. The Government does not want to take the responsibility. That is the scheme of things in the Bill.

श्री नवल प्रभाकर : क्या आप बतला सकते हैं कि जो ऐडेड स्कूल हैं उन को 95 फीसदी मदद दी जाती है और वह 5 फीसदी अपनी तरफ से करते हैं ऐसा आमतोर पर सुना जाता है कि उस 5 परसेंट को भी वह उसी में से मीट कर लेते हैं तो इस के बारे में आपकी क्या राय है?

श्री हरिश्चन्द्र : मैं ज्यादा तो क्या कहूं लेकिन असली बात तो यह है कि मैलप्रैक्टिसैस मौजूद हैं। बड़े क्वैस्चनेबूल तरीके अखत्यार किये जाते हैं 5 परसैंट को मीट करने के लिये। सब मैनेजमेंट्स ऐसा नहीं करते। कुछ मैनेजमेंट हैं जिनके कि पास फंड्स मौजूद हैं और वह स्कूलों को अच्छे तरीके से चला रहे हैं लेकिन ऐसे भी मैनेजमेंट हैं जिनकी तादाद ज्यादा है जिनके कि पास पूरी तरह से फंड्स नहीं हैं और वह ऐसे तरीके अखत्यार करते हैं जोकि नहीं करने चाहियें और वे इस 5 परसैंट को मीट करने के लिये और इकट्ठा करने के लिये करते हैं।

श्री नवल प्रभाकर : क्या इस तरीके से 5 परसैंट से ज्यादा भी इकट्ठा कर लेते हैं?

श्री हरिश्चन्द्र : इस तरीके से ज्यादा भी कर सकते हैं। वैसे मैं मैनेजमेंट के खिलाफ कोई खास नहीं कहना चाहता लेकिन अगर आप जोर देते हैं तो मैं आप से वह दो, चार चीजें अर्ज कर दूं जोकि वह अख्त्यार करते हैं।

श्री नवल प्रभाकर : जरूर।

श्री हरिश्चन्द्र : पहली बात यह है कि आम तौर पर एक तरीका होता है कि नाम ले लिया जाय कि हम बिल्डिंग फंड लेना चाहते हैं बच्चों से, कहा यह जाता है जबकि फैक्ट यह होता है कि न तो उन के पास उस वक्त कोई जमीन होती है और न ही उन के पास बिल्डिंग बनाने के वास्ते फंड्स होते हैं। बिल्डिंग फंड का नाम लेकर बच्चों से पैसे इकठ्ठे किये जाते हैं। 8 आने महीने फी बच्चे से ले लिया, 10 आने या 12 आने फी बच्चा प्रति मास ले लिया या इकठ्ठा एक दम से 5, 5 रुपये फी बच्चे से ले लिया या दो दफे अपील कर के दो, दो और

चार, चार रुपये फी बच्चा इस तरीके से उनसे वसूल करके मैनेजमेंट के पास रुपया इकठ्ठा हो जाता है। दूसरे यह कि पेरैंट्स टीचर्स असोसियेशन उन्होंने बनाई हुई है और इस तारीके से भी वह पैरैंट्स से पैसा वसूल कर लेते हैं। तीसरा तरीका यह है कि जिस वक्त एडमिट करते हैं बच्चों को तो उस वक्त उनसे डोनेशन के रूप में चंदा ले लेते हैं और चूंकि बच्चों के मां बाप उन स्कूलों में दाखिल कराने को इच्छुक होते हैं और अपने वच्चों को वहां भेजना चाहते हैं इसलिये वे उन डोनेशंस को देने के लिये बाध्य हो जाते हैं और इस तरीके से मैंनेजमेंट बच्चों के पेरैंट्स से पैसा वसूल कर लेते हैं। उस बहाने उनसे पैसा वसूल कर लेते हैं। इस के बाद फिर उन लोगों ने अपने प्राइमरी सैक्शन को अनऐडैड फीस वाला बनाया है जहां पर कि उन्होंने बहुत ज्यादा फीसें रक्खी हुई हैं। एक एक बच्चे से 12, 12 14, 14 रुपये बतौर फीस के लेते हैं। एक इंस्टीट्यूशन के बारे में मैं जानता हूं कि जहां कि जो उनका प्राइमरी स्कूल है उसका 20,000 रुपया साल का उन का बचता है जोकि उन को मिलता है वहां से। इस के बाद फिर यह ब्याज फंड से लोन ले लेते हैं बिलकुल इल्लीगल तरीके से टीचर्स की तनरख्याहों में डिडक्शंनस कर देते हैं, देते कुछ हैं लिखते कुछ हैं। इस तारीके से पांच छै चीजें उनके द्वारा की जाती हैं।

श्री एल० आर० शर्मा : एक, दो प्वाएंट में चेयमैरन साहब की इजाज़त से अर्ज करना चहता हूं। इस संबंध में जो बुकसेलर्ज़ होते हैं तो जब यह किताबें लगाई जाती हैं उन हैल्प बुक्स के लगाने के सिलसिले में मैनजमेंट द्वारा पैसा ले लिया जाता है तब वह हैल्प बुक्स लगाई जाती हैं। आर्डिनरी ट्रान्सलेशन है या ग्रामर है अगर वह बोर्ड ने प्रस्क्राइब नहीं भी कर रक्खी हैं तब भी यह बुकसेलर्ज़ मैनेजमेंट से उन्हें लगवाने में काययाब हो जातें हैं और इसके लिये वह बुकसैलर्स अपनी गरज को मैनेजमेंट को साल में हजार डेढ़ हजार रुपया आसानी से किताबों के ऊपर दे डालते हैं। इस के साथ कभी कभी चैरिटी शोज जो होते हैं उनके टिकट लेने के लिये पेरेंट्स के साथ जबरदस्ती की जाती है और इसके लिये बच्चों के मां बाप को खास तौर से एप्रोच किया जाता है कि वे जरूर इन चैरिटी शोज के टिकट लेवें और बिचारे मां, बाप परेशान हो कर पांच रुपये के या दस रुपये के टिकट जरूर लेते हैं। इसकी शिकायतें पहुंचती तो जरूर हैं लेकिन डिपाटमेंट...

श्री नवल प्रभाकर : इसको छोड़िये बाकी एक सवाल और बता दीजिये कि इसमें मैनेजर का कितना हाथ होता है ?

श्री हरिश्चन्द्र : मैनेजर का कहना चाहिये कि चुपचाप हाथ होता है। जाहिरा हाथ नहीं होता और वह हाथ इस तरीके से होता है कि जब वही मैनेजर कोई उन के पास फंड नहीं होता तो वह कहता है कि हम कुछ नहीं कर सकते अपने आप चलाइये तो फिर यह तरीके मैनेजर्स की इच्छा से मर्जी, से और प्रेरणा से काम में लाये जाते हैं।

श्री नवल प्रभाकर : एक सवाल और है। यह जो मैनेजिंग कमेटी है स्कूलों की उनका कहना यह है कि टीचर्स लोग प्राइवेट ट्यूशन भी पढ़ाते हैं और वह भी मालप्रैक्टिस करते हैं तो यह कहां तक ठीक है ?

श्री हरिश्चन्द्र : बात यह है कि इस के मुताल्लिक जब तक वह कोई डैफनिट इलजाम न लगावें कि कौन करता

है और कौन नहीं करता है तब तक हम कुछ नहीं कह सकते। मेरे सवाल से टीचर्स जो हैं वह अगर ट्यूशन करते हैं तो किताबों में लिख देते हैं। वहां पर वाकायदा तौर पर रजिस्टर होता है उस में वह लिख देते हैं कि हम ने ट्यूशन की है।

Shri S. N. Chaturvedi: I want to know whether the private managments utilise these funds for the benefit of the institution or they have become a sort of commercial shops yielding profits to the managements. Are the entire funds utilised for the good of the institution?

Shri Harish Chandra: So far as I know whether the private managed into two or three categories—managements which are actually good managements and managements which had initially material sources to run the schools, but they are now being given material assistance, because previously before Partition they were in better circumstances. So far as the private institutions are concerned, they were given donations. Now, of course, they do not get donations and they are forced to some extent to resort to these practices. But there are certain managements who have actually started institutions for the sake of some benefit.

Shri S. N. Chaturvedi: What is the percentage of such institutions?

Shri Harish Chandra: That has to be assessed. Of course, if you give me this work, I can assess them. But that will take some time.

Shri S. N. Chaturvedi: You must have some sort of an idea as to what is the percentage of such institutions.

Shri Harish Chandra: I would not say that the proportion is very much, but it may be 10% or 15%.

Shri S. N. Chaturvedi: What is the difference in the conditions of service between private managed schools, aided schools and the Government schools?

Shri Harish Chandra: As I submitted before, barring pension and gratuity benefits, the conditions are practically the same. So far as Government is concerned, they have made the conditions the same.

Shri Jairamdas Daulatram: I am referring to the memorandum submitted by the Delhi School Teachers' Association, page 2. In the para with the heading "The Snail-paced Government of India *vis-a-vis* a Popular State set-up, there is this statement. During the last seven years, the powerlessness of the Education Department of the Delhi Administration has rolled down to pusillanimity. The Department appears to be afraid of the machinations and pressures of a few powerful managements and has failed to do justice to victimised teachers . . ." Do you mean to say that the Directorate is afraid of any managements of these schools? You have repeated this also on page 3. " . . .During the last 40 years, teachers have been crushed under the upper millstone of the tyranny of the managements and the nether millstone of the helplessness and indifference of the Directorate of Education. These are serious statements.

Shri Lakhpat Rai Sharma: We have been trying to get a legislative enactment for the last eight or nine years and we have all along failed in it. And whenever appeals go to the Director of Education, generally what happens is that the teacher remains in suspension for a very very long time, and if at all the teacher is reinstated, circumstances are brought about in such a way that the teacher is forced to leave the job and apply somewhere else. This will be corraborated by the number of resignations and by the number of terminations that have happened during the last 36 months.

Shri Jairamdas Daulatram: You need not elaborate this point. I just wanted to understand—to understand it a little more fully. In this context, I understand a suggestion was made by you that on the advisory committee, there should be a representative of the Teachers' Association. I want to know what exactly is the position of the Delhi School Teachers' Association. How many members are there on this association?

Shri Lakhpat Rai Sharma: There are 18,000 members, belonging to the aided schools and the local body schools.

Shri Jairamdas Daulatram: The general body meets annually?

Shri Lakhpat Rai Sharma: Yes, Sir.

Shri Jairamdas Daulatram: What is the average attendance at your general body meetings, when there is no big controversy?

Shri Lakhpat Rai Sharma: 600.

Mr. Chairman: What is the quorum?

Shri Lakhpat Rai Sharma: 100.

Shrimati Devaki Gopidas: I want to know whether the teachers in the aided schools are allowed to take active part in politics?

Shri Lakhpat Rai Sharma: Yes, there is no ban on that.

Shrimati Devaki Gopidas: I would like to know your opinion on this; if the Government invites applications of all the qualified and eligible teachers and keeps a list of such people and if the private schools are asked to choose from such a list, so that all the teachers wil be equally qualified; what is your reaction to that?

Shri Ram Prakash Gupta: Definitely the managements will oppose it.

Shrimati Devaki Gopidas: What is your opinion?

Shri Ram Prakash Gupta: The selection of the teachers should be left to the managements. The federation is of the view that the selection should not be done by the Government and the Government could maintain a list or register of qualified teachers and from that list, like an employment exchange, the managements may choose the candidates.

Shrimati Devaki Gopidas: Are there any untrained teachers entertained by the managements?

Shri Ram Prakash Gupta: No, at present in Delhi there are no untrained teachers except for language and drawing because we have no training classes for language and drawing. We don't have trained teachers in languages—Hindi, Sanskrit and other Oriental languages—and trained drawing teachers. Otherwise, we have 99% trained teachers.

Shrimati Devaki Gopidas: In Sec. 17, you have stated that every recognised school should be inspected once in three years. Is it not necessary that the schools should be inspected by the Education authorities at least once a year?

Shri Ram Prakash Gupta: It is provided in the Bill that it should be once a year, but it will be very difficult for the Directorate with its present staff to inspect all the aided schools once a year. Therefore, we have requested you to consider that it should be once in three years. At present. the Central Board of Secondary Education which provides recognition to the schools, inspects the schools every three years.

Mr. Chairman: When the responsibility is taken by the Government to inspect, why should you object to it?

Shri Ram Prakash Gupta: We do not want to object to that. It will raise the financial burden on the

Delhi Administration; and taking into consideration the national economy, we are suggesting that it should be once in three years. We do not object to it. However, those schools which are receiving Rs. 1 lakh or more are being inspected annually by the A.G.C.R. So we don't have objection from that side.

Shrimati Devaki Gopidas: As it is, all the recognised schools are not inspected at least once a year by the Education authorities?

Shri Ram Prakash Gupta: No, at present they inspect after a lapse of two years. But there is no bar. Schools which are not in a good position are inspected every year.

Shri Deokinandan Narayan: Are there teachers who are appointed on the basis of 11 months every year?

Shri Ram Prakash Gupta: Yes. In certain posts which are Plan posts teachers are appointed for ten months. In permanent posts teachers are not appointed for ten months. Only in case of Plan posts which are carried over from year to year, the appointments are made for ten months and we are opposed to that. Temporary teachers should be appointed only when there is a leave vacancy or when a teacher has gone for training.

Shri Deokinandan Narayan: What is the number of those teachers who are appointed for ten months in Delhi? As soon as summer vacation starts their services are dispensed with. When the new session starts, they are again appointed. Is this not done to save money?

Shri Ram Prakash Gupta: Plan posts are not carried to the next year's budget. Therefore, the managements do not take the risk of appointing these teachers beyond the Plan period.

Shri Deokinandan Narayan: Now books are prescribed for every subject. For Tenth and Eleventh Classes there are Boards. Below those classes, books are ordinarily prescribed by the Principals or the managements. And books are changed every year.

Shri Ram Prakash Gupta: That is not the practice in Delhi. For classes I to VIII books have not been changed for the last five years. For the Ninth, the Tenth and the Eleventh Classes text books are coming from the National Council of Research and Training. These books are, I think, permanent books and will continue for years.

Shri Deokinandan Narayan: What is the present position?

Shri Ram Prakash Gupta: There are some subjects like Mathematics, Economics or History where the Principals have a choice to select books.

Shri Deokinandan Narayan: Every year?

Shri Ram Prakash Gupta: Maybe. We should not teach Indian Economics on the basis of a book which is obsolete and not up-to-date.

Shri Deokinandan Narayan: This is all done to make money.

Shri Ram Prakash Gupta: This has been pointed out previously by my friend here. He emphasized that the Principals are made to enter into bargain for the managements.

Shri Yamuna Prasad Mandal: In both the memoranda you have pressed that the Bill should apply to aided as well as recognised schools, that is clause 13. Do you press that it should apply to unaided and public schools also?

Shri Ram Prakash Gupta: There is a tendency in fact for unaided institutions coming up in larger numbers. Whenever there is a grievance or there is a complaint against an

aided institution, that institution refuses its grant and then it becomes an unaided institution so that it escapes from the clutches of the Department. Therefore, we feel that this Bill should do more good if it is made applicable to unaided institutions, too. If we look at the figures on an all India basis, there are 12,500 unaided institutions and about 15 lakhs of students are going to unaided institutions. This is not a small number. We feel that the teachers in these schools are very insecure.

Shri Yamuna Prasad Mandal: You said that out of 18,000 members the quorum is 100 or so. I think it is not the quorum. These hundreds are delegates selected or elected from among the total number of members.

Shri Ram Prakash Gupta: Hundred members are representatives from different institutions. We have 147 higher secondary schools and about 1,000 primary and middle schools. One delegate from each school is invited and it is not as if 100 individual members are invited.

Shri Yamuna Prasad Mandal: Have you passed any resolution regarding the insecurity of teachers in your annual gatherings?

Shri Ram Prakash Gupta: The Sucheta Kripalani Committee was appointed by the Delhi Administration on a resolution passed by the Delhi Teachers' Association. Similarly the All India Secondary Teachers' Federation at its annual session in Cuttack considered this question of insecurity of teachers. Dr. Sampurnanand Committee and Mudaliar Commission also dealt with this problem and recommended uniform service conditions for the teachers. Throughout the country, if you look at the figures, 83 per cent of secondary education is in the hands of private management and it is rather unfortunate that after independence though there were so many Acts passed for other workers, yet teachers have been neglected on this score. This Bill is a very good gesture from the Ministry of Education, but we feel there are certain clauses which need certain amendments.

Shri K. Damodaran: Can you give us some idea as to how many primary schools are collecting fees in Delhi?

Shri Ram Prakash Gupta: I know that there are about 85 private aided schools under the Corporation. Out of 85, 67 schools are feeder schools. They collect fees from the children.

Shri Shiv Charan Gupta: Principal Harish Chandra stated that about 10 to 15 per cent of aided schools resort to objectionable ways to raise funds. I want to know in what manner the members of the managing committee take benefit out of this money.

Shri Harish Chandra: I would not say that they take benefit out of it. They spend most of the money on the school itself. But there are some managements about whom I would say that they try to get something out of that money.

Shri Shiv Charan Gupta: In what manner do they use that money? For their personal benefits? Or, do they use it for the welfare of the schools?

Shri Harish Chandra: I have no personal knowledge as to how they make use of this money. That is my guess only.

Mr. Chairman: You have to substantiate before you make a statement. Guess work is no evidence.

Shri Shiv Charan Gupta: Mr. R. P. Gupta of the All India Teachers Federation has said on page 2, last paragraph, of his memorandum that action should be taken against teachers for professional misconduct. Does he consider continuous inefficiency also as one of the causes on which action should be taken against teachers?

Shri Ram Prakash Gupta: Yes. We have also suggested this on page 2 that once these rules and regulations are introduced the representatives from the Teachers' Association and the Government representatives in equal number should sit down and form a code of conduct and the violation of that code of conduct will be declared as a professional misconduct; on that kind of professional misconduct we will recommend that the certificate of the concerned teacher should be forfeited.

Shri Shiv Charan Gupta: My question is a specific one. Inefficiency is not included in professional misconduct. I want to know whether you would like that some kind of action should be taken against those teachers who are continuously inefficient and are not giving good result.

Shri Ram Prakash Gupta: We regard continuous negligence on his part or continuous inefficiency as professional misconduct.

Shri Shiv Charan Gupta: So you Include it there.

Shri Ram Prakash Gupta: We have formulated our own code of ethics at our Annual Conference and we have provided that continuous negligence on the part of a teacher wil be treated as professional misconduct.

Shri Lakhpat Rai Sharma: Those who remain continuously inefficient are punished by the Rules of the Department everywhere.

Shri S. N. Chaturvedi: Has any teacher been dismissed for such professional misconduct?

Shri Ram Prakash Gupta: Yes.

Kumari Shanta Vasisht: You have stated that the managements take money for introducing text books, etc. in the private schools. I would like to know whether you think that in the Government Schools also the teachers and the officers take money for approving text books.

Shri Ram Prakash Gupta: There is a Text Book Committee now. It is a representative body of the Department, the local body and other interested persons in education and the text books are prescribed by them. Now the national text books are coming up. We have a national text book for Class II, Class III, Class IV and Class IX and Class X. Therefore, we do not think that now such malpractice exists. As I have already pointed out that in the selection of certain help books, for which a certain latitude is given, there may exist certain malpractices both in the Government and the Corporation Schools and also in private aided schools.

Mr. Chairman: 'May be' is not enough for the deliberations of this Committee. You must be sure of what you say.

Shri Ram Prakash Gupta: We have not collected this information.

Mr. Chairman: The Committee is to be enlightened by your evidence. We are not interested in the guess work.

Shri Ram Prakash Gupta: In aided schools we have definitely seen this.

Mr. Chairman: We are talking about Government schools.

Shri Ram Prakash Gupta: We have not come across such instances.

Kumari Shanta Vasisht: Are you aware that some members of the Text Book Committee may be involved in taking money and approving the text books and also the Principals of private schools used to take the same attitude in approving the text books? I am talking of past instances.

Shri Ram Prakash Gupta: There used to be such complaints before. When there was popular Government here, they used to take up this matter with the authorities concerned.

Kumari Shanta Vasisht: Is that the reason why the nationalisation of text books came up?

Shri Ram Prakash Gupta: The nationalisation of text books is not due to these malpractices. It was intended mainly for the betterment of education and educational standards. We needed certain guidelines for this purpose.

Kumari Shanta Vasisht: Another question I want to put. The teachers are appointed only for 10 months. Can you explain that sometimes 17 teachers or so are missing in one single Government school at a time and you know that there are so many Government schools here?

Shri Ram Prakash Gupta: The teachers of Government schools are not members of the Delhi School Teachers Association. Therefore all this information is not coming to us. But we find that in Delhi in Corporation Schools, in Government Schools and even in aided schools the teachers are not appointed for some time and other teachers have to do their work.

Mr. Chairman: Are we to understand that the membership of your Federation extends to the teachers of Government schools, Corporation schools and aided private schools?

Shri Ram Prakash Gupta: In the All India Secondary School Teachers Federation, we have State Organisations also affiliated to it. The State organisations would be having representation from the Government school teachers, teachers of the local body schools and also aided private schools.

Mr. Chairman: We are speaking about Delhi. In Delhi are the teachers of the Government schools and the Corporation schools members of your Federation?

Shri Ram Prakash Gupta: Upto 1958 all the teachers of recognised schools were eligible for membership of Delhi Secondary School Teachers Association. In 1958 the Director of Education issued an order banning the Government School teachers from becoming members of Delhi Association. From then there is the Government School Teachers Association. The Delhi School Teachers Association represent recognised aided private schools and local body institutions.

Kumari Shanta Vasisht: I think the pay scales of Delhi School teachers are the best in the whole of India. I would like to know what steps you have taken or how you would make them more efficient and more devoted to their work.

Shri Ram Prakash Gupta: This is not a fact that the Delhi scales of pay are the best in the whole of the country. Assam teachers and the Hyderabad teachers are better off than the teachers of Delhi. The performance of Delhi teachers as compared to their pay scales is in no way inferior to that of the teachers in other parts of the country.

Shri Diwan Chand Sharma: Principal Harish Chandra, is it not a fact that some of the teachers in these private schools, whether they are aided or not—mostly they are aided—run coaching classes at home and also have coaching academies? If they do so, does it not constitute continuous professional inefficiency to which Mr. Gupta referred to? If that is the case, what has the Association done to curb this tendency among the teachers?

Shri Harish Chandra: What we have done is we have actually framed a code of conduct. The best that we can do is to make them conscious of the fact that this is something bad. If they do this sort of thing, that, of course, would constitute professional inefficiency.

Shri Diwan Chand Sharma: I would like to ask another question. It was stated on the floor of this House that the Government school teachers went

out of this body which you represent. Why did they go out? Did they go out because you are frequently resorting to pen-down strikes, chalk-down strikes, demonstrations, etc. or for some other reasons?

Shri Harish Chandra: They went as a result of the order from the Director of Education.

Shri Diwan Chand Sharma: Is it not for this very reason, which I stated just now this order was issued in 1958 by the Director of Education?

Shri Harish Chandra: If you would permit, I would like to ask Mr. R. P. Gupta to reply because he was the General Secretary of the Association then.

Shri Diwan Chand Sharma: I want you to reply to this question because you are the spokesman.

Shri Harish Chandra: I was not there. I was simply a Principal.

Mr. Chairman: He is concentrating on you.

Shri Diwan Chand Sharma: He is the spokesman. You have been in this educational line, I think, for a very very long time and you have now retired. I want to ask you why you have made the statement without verifying it or without getting definite facts about it that 15 per cent of the private school managements are indulging in malpractices? Have you any solid basis on which you are making that statement?

Shri Harish Chandra: May I point out that we are receiving even now complaints from teachers? We just go through the complaints that we receive to see where the discrepancies are and where the malpractices are. This is our intention.

Mr. Chairman: Do you verify those comp'aints by your officials about their authenticity?

Shri Harish Chandra: When we receive the complaints, we approach the authorities and try our best to set things right. But, it is not always possible.

Shri Diwan Chand Sharma: In your memorandum, you have referred to an M.P. who has been exploiting the name of Gandhiji. I think this is a very drastic statement to make. What is the basis on which you have dragged the name of an M.P. or whoever he may be who is exploiting the name of Gandhiji? Who drafted this memorandum? Can you name the M.P. or at least can you name that school?

Shri Harish Chandra: We can name the school.

Shri Diwan Chand Sharma: I want to submit very respectfully that either the name of the M.P. should be mentioned here so that we can get the facts verified or the name of the school should be mentioned. That fact should also be verified.

Shri Harish Chandra: You may kindly permit me to mention the name of the school. Its name is Gandhi Harijan Vidyalaya.

Shri Diwan Chand Sharma: Is it under the Directorate of Education?

Shri Harish Chandra: It does not look nice if we name the gentleman here. You can find out the facts. We were talking about Gandhi Harijan Vidyalaya.

Shri Diwan Chand Sharma: You have been talking about that. I may tell you that that is not correct.

Kumari Shanta Vasisht: Let us know whether your Association has passed any Resolution urging upon the teachers that they should be more efficient in their work?

Shri Ram Prakash Gupta: Yes, Madam. We had an annual conference at Varanasi last year. The growth of Professional Efficiency was the

main theme of that Conference. A resolution that has been passed at the Varanasi Conference was implemented by the States' Organisations in their own spheres. Delhi Association is affiliated to All-India Secondary Teachers' Federation and they are taking steps to implement those decisions taken at the Varanasi Conference regarding the growth of professional efficiency.

Kumari Shanta Vasisht: What are those decisions?

Shri Ram Prakash Gupta: We have adopted a Code of Ethics for the teachers. We have asked the States' Organizations to conduct research work; we have asked them to conduct seminars and symposiums as also to have these teachers trained who are not trained upto this time. We have also asked the States' organisations to conduct evening classes for their teachers so that they may know the latest information. Gandhi Harijan Vidyalaya was previously under the Directorate of Education. Now they have shifted that school to Madangir which is now under the Municipal Corporation limit.

Mr. Chairman: In the Delhi School Teachers' Association's Memorandum under (b) Managements, there are wild allegations against another defaulting management. An M.P. exploits the name of Gandhiji. You have also given the address of that school. This points certainly to an individual M.P. So, in your own interest I think it will be better to substantiate that or else you withdraw that and make an apology. This is a definite pointer to an individual M.P.

Shri Lakhpat Rai Sharma: We shall keep your advice in mind. But, if you just look to the file that is lying in the Department about the Gandhi Harijan Vidyalaya, you will come to know of these facts.

Mr. Chairman: Would you like to withdraw that allegation mentioned under (b) Managements of your Memorandum?

Shri Harish Chandra: We apologise for this and withdraw that allegation from our memorandum.

Mr. Chairman: Thank you very much for pleading the cause of the teachers. We shall consider whatever suggestions are given by you.

(The witnesses then withdrew)

X. Shri Nand Lal Gupta, Ex-Commerce Teacher, L. N. Girdhari Lal School, Bagh Diwar, Delhi.

(Witness was called in and he look his seat)

श्री नंद लाल गुप्त : जनाब चैअरमैन साहिब, मैं आप का बहुत धन्यवाद करता हूं कि आपने मुझे यहां अपनी बात सुनाने का मौका दिया ।

Mr. Chairman: Now I shall read out the Direction No. 58 of the Directions by the Hon. Speaker.

"Where witnesses appear before the Committee to give evidence, the Chairman shall make it clear to them that their evidence shall be treated as public and is liable to be published unless they specifically desire that all or any part of the evidence tendered by them is to be treated as confidential. It shall, however, be explained to the witnesses that even though they might desire their evidence to be treated as confidential, such evidence is liable to be made available to the Members of Parliament."

Now, you have submitted the memorandum. We have read your memorandum and the copies are already before the Members of this Committee. We would like you to enlighten us on the point of your case that was in the court and the previous history of it and what happened to that.

Mr. Chairman: Have you got a copy of that judgment?

Shri Nand Lal Gupta: I can tender 3-4 copies of that judgment.

Mr. Chairman: You can send us one copy.

Shri Nand Lal Gupta: I was appointed in L. N. Girdhari Lal K. U. Higher Secondary School, Bagh Diwar, Delhi in 1947 to a permanent post of teacher in the grade of Rs. 80—220. This grade was raised to Rs. 200—400 in 1950 by an order of the Ministry of Education.

Mr. Chairman: Did you take your case to the Court?

Shri Nand Lal Gupta: Yes, Sir. In 953 I was demoted all of a sudden without showing any cause and without giving any chance of defence to me. The result was that I lost my senior grade. I was liable to lose Rs. 40,000 and my chances of becoming a Principal were being impaired and also my future career as teacher and Principal was marred. By the time I was working as Commerce teacher I have served 20 years in different schools and in that very school I have served 12 years. I have shown 100 per cent results. The Inspection remarks were excellent and I was considered to be the best teacher.

Mr. Chairman: We want to benefit by your experience. So, let us not go into the whole history. What we want to know is: what was the grievance that was in the court and what did the court say?

Shri Nand Lal Gupta: My grievances were two-fold: firstly unjustified and uncalled for demotion and secondly termination of my services abruptly without giving me any chance of defence. This is a clear violation of the Rule and Regulations framed by the education authorities. The management took shelter under the doctrine of will, under the doctrine of Crown pleasure. The Court said that violation of the Rules did not amount to violation of an Act because the Rules were not supported by an Act of Parliament and, therefore, the Court was helpless in giving me any relief. The Management admitted that the Rules were violated by them grossly.

Mr. Chairman: Which is that court?

Shri Nand Lal Gupta: That is the Sub-Judge's court.

Mr. Chairman: Have you read the Bill?

Shri Nand Lal Gupta: I have read two clauses—specially clauses 11 and 18. Cl. 11. relates to illegal termination of services in which I have been a victim and this should be passed as early as possible in all its full force. Secondly in clause 18 there is some provision relating to taking over of mismanaged schools. They should be made stringent and the management should be held responsible to pay the teachers the arrears of salary if they close the institution. I am making a dying man's last wish. I may expire any time; my five daughters will remain unmarried for want of finances. I wish that any of you should take up my case not individually but as a policy matter because this is a test case because I am a poor teacher who has spent 30 years of his life in the teaching service. I have been teaching since 1935 and I am a poor teacher drawing Rs. 425 per mensem. I suggest that this Bill should be made applicable from the date—31st December 1957 the date on which the Government of India committed itself to inquire into cases like that. I have got documents to support my statement.

Mr. Chairman: You please give us a copy of that judgement.

(The witness then withdrew)

(The Committee then adjourned)

JOINT COMMITTEE ON THE DELHI SECONDARY EDUCATION BILL, 1964.

MINUTES OF EVIDENCE GIVEN BEFORE THE COMMITTEE

Monday, the 7th February, 1966, *at* 14.30 *hours.*

PRESENT

Shri T. H. Sonavane—*Chairman.*

MEMBERS

Lok Sabha

2. Shri A.E.T. Barrow
3. Shri Parashottamdas Haribhai Bheel
4. Shri S. N. Chaturvedi

Shri M. C. Chawla—*Deputy Secretary.*

WITNESSES EXAMINED

I. Delhi Parents' Teachers Council, Shakti Nagar, Delhi.
   1. Shri Bal Krishna, Secretary of the Council.
   2. Shri Himmat Ram, Convenor of the Council.
   3. Shri K. K. Loyal, Secretary, Aggrieved Teachers' Association.
   4. Shri Tej Kiran Jain, Editor, "Aggrieved Teacher".
   5. Shri M. S. Rathi, Member of the Executive, Parents' Teachers' Council.
   6. Shrimati Manjeet Kaur, Teacher, Sarojini Nagar.

II. Delhi State Parents' Association, Model Basti, New Delhi.
   1. Shri Ganga Lal Casewa, President of the Association.
   2. Shri Rajeshwar Dayal, General Secretary of the Association.
   3. Shri Bishan Lal, In-charge: City zone of the Association.
   4. Shri G. C. Asnani, In-charge West zone of the Association.
   5. Shri O. N. Zadoo, In-charge South zone of the Association.

III. Government School Teachers Association (Regd.) Laxmibai Nagar, New Delhi.
   1. Shri D. D. Uniyal, Officiating President of the Association.
   2. Shri S. N. Bhanot, General Secretary of the Association.
   3. Shri P. D Sachdev, Treasurer of the Association
   4. Shri J. D. Gupta, Joint Secretary of the Association.

J. Delhi Parents' Teachers' Council, Shakti Nagar, Delhi.
   1. Shri Bal Krishna, Secretary of the Council.
   2. Shri Himmat Ram, Convenor of the Council.
   3. Shri K. K. Loyal, Secretary, Aggrieved Teachers' Association.
   4. Shri Tej Kiran Jain, Editor, "Aggrieved Teacher".
   5. Shri M. S. Rathi, Member of the Executive, Parents' Teachers' Council.
   6. Shrimati Manjeet Kaur, Teacher, Sarojini Nagar.

(*Witnesses were called in and they took their seats*).

Mr. Chairman: Before the evidence is taken I shall read out Direction No. 58 of the Speaker for your information. The Direction says that where witnesses appear before the Committee to give evidence, the Chairman shall make it clear to the witnesses that their evidence shall be treated as public and is liable to be published unless they specifically desire that all or any part of the evidence tendered by them has to be treated as confidential. It shall further be explained to the witnesses that even though they might desire their evidence to be treated as confidential, such evidence is liable to be made available to Members of Parliament.

The Memorandum which you have submitted has been made available to the Members of the Committee. Your suggestions are before us. If you want to make any other point not contained in the Memorandum or emphasize or stress any particular point, you may now do so. As there are some more witnesses to be examined today, please be brief and to the point.

Shri Bal Krishna: In the Bill there is no provision for the reinstatement of persons working in aided schools. According to the Specific Relief Act there cannot be reinstatement in private services or in personal services. There is a decision of the Supreme Court which says that under the common law the court will not ordinarily force the employer to retain the services of the employee whom he no longer wishes to employ, but this rule is subject to certain well-recognised exceptions. It is open to the court in an appropriate case to declare that a public servant who is dismissed from service in contravention of article 311 continues to remain in service even though by so doing he is compelled to continue in service a person whom he does not desire to continue in service. Similarly, under the industrial law the jurisidiction of the labour and industrial tribunals to compel an employer to employ an employee whom he does not wish to employ is also recognised. The court is also invested with the power of declaring invalid the act of a statutory body if by so doing the body has acted in breach of the mandatory obligation imposed by statute, even if by making the declaration the body is compelled to do something which it does not desire to do. So, according to this decision of the Supreme Court in the case of *S. R. Tiwari* Vs. *District Board, Agra,* (AIR 1964) there can be reinstatement only in three cases—either it should be a statutory body, or it should be a Government servant or it should come under the Industrial Disputes Act. Now, the private aided schools are not covered by any of these categories. So, there should be a specific provision in the Bill for the reinstatement of employees working in aided schools. At present, there is no such provision in the Bill.

Mr. Chairman: May I draw your attention to clause 11(3)? That clause gives the aggieved party the right to appeal, not to the court but to the prescribed authority. Is it your point that it should be to a judicial court?

Shri Bal Krishna: Yes, the court should have the power to issue an order of reinstatement.

Mr. Chairman: Are you not satisfied with this provision?

Shri Bal Krishna: No, we are not satisfied because even after the passing of this Bill the court will not be able to issue an order for reinstatement. It can only issue an order for damages. Because, even after the passing of this Bill the body of management which run the schools will not become statutory bodies; they will continue to be private bodies. So, the court cannot intervene.

Mr. Chairman: The aggrieved teacher can always appeal to the prescribed authority.

Shri Bal Krishna: He can appeal to the departmental authorities but he cannot go to the court to seek reinstatement.

Shri M. C. Chagla: Why do you want to go to the Court? If he can get relief why should he go to the court?

Shri Bal Krishna: Supposing he does not get justice from the administration. Then he should have the right to go to a court.

Shri M. C. Chagla: We want to avoid litigation. You know what is happening now. People rush to court for every imaginable grievance.

Shri Bal Krishna: There have been a number of cases in the past where the teachers have not been able to get justice from the administration. Naturally, they want to go to the court to seek justice.

Shri M. C. Chagla: They can go to a court by a writ. Under the Constitution any citizen can go to the court on a writ.

Shri Bal Krishna: They can go on a writ. But there the court can only order damages.

Shri M. C. Chagla: In a writ there is no question of damages.

Shri Bal Krishna: The Supreme Court decision applies only to statutory bodies.

Mr. Chairman: We want to avoid the cost of litigation to poor teachers. Therefore, we think this provision is beneficial to teachers.

Shri Bal Krishna: This provision is not beneficial. Generally, it is our experience that we do not get justice from the Delhi Administration. That is the difficulty.

Mr. Chairman: That is the reason why we are enacting this statute.

Shri Bal Krishna: This statute will not be sufficient unless there is proper provision in the statute for reinstatement.

Then I come to the expenditure of the Students Fund. The Education Minister, in the course of the debate in the Rajya Sabha on the 10th December, 1965 on his motion to refer the Delhi Secondary Education Bill to Joint Select Committee of Parliament admitted that a lot of complaints have been received against irregular levy and misuse of students funds and compulsory levy for maintenance expenditure by private managed schools. Dr. K. L. Shrimali, the then Education Minister, on 14th April, 1960 stated in Parliament that complaints were received against 21 schools and these schools were penalised by deducting the total amount of the unauthorised collection from the grant-in-aid admissible to the institutions.

Actually, deductions were not made from the grant-in-aid of all the schools as stated by the Education Minister and the Education Minister was wrongly informed by the Delhi Administration about that. Privately aided schools today exert great influence upon the Delhi Administration which many times has gone out of the way to help aided schools. Ramrup Vidya Mandir Multipurpose Higher Secondary School alone has collected money to the tune of Rs. 7 lakhs through un-authorised fees but no deduction has been made from the grant-in-aid. Though education has been made free up to the middle class, the cost of education of children has increased because of the backdoor fees levied by schools and there is no adequate provision in the Bill to check this malady. So, we have suggested some amendment to clause 16 to the effect that there should be a committee consisting of the Principal, as head of the institution, one representative of the parents and one representative of the teachers, which should control the students' funds.

Shri S. N Chaturvedi: No representative of the management.

Shri Bal Krishna: The head of the institution will be there. He represents the management also.

Shri S. N. Chaturvedi: He represents the teachers also.

Shri Bal Krishna: He represents both sides.

Shri S. N. Chaturvedi: But you want a teacher to be there in addition to the Principal.

Shri Bal Krishna: There can also be a representative of the management. We do not mind that.

Mr. Chairman: You want this supervisory authority to be set up under the rulemaking power conferred by sub-clause (2) of clause 16.

Shri Bal Krishna: Yes, Sir.

Shri M. C. Chagla: The object of the clause is to prevent misappropriation; so, where is the scope for misappropriation?

Shri Bal Krishna: We want that this provision should be made in the Bill itself. There are a number of unauthorised fees and in this Bill there is no check on those fees.

Shri M. C. Chagla: There will be no unauthorised payments if there are rules. The payments have to be accounted for.

Mr. Chairman: You want that actual expenditure of the fund for whatever head of account should be done with the advice of this committee.

Shri Bal Krishna: Yes, Sir.

Shri S. N. Chaturvedi: Who is going to operate the account?

Shri Bal Krishna: It will be done by the head of the institution as is being done at present.

Shri S. N. Chaturvedi: Then, what is the idea? Is it that the sanction will be given by this committee?

Shri Bal Krishna: They will lay down the principles as to how the money is to be used and keep a check over that.

Shri S. N. Chaturvedi: There is already a check. Even now the account is operated by the Principal.

Shri Bal Krishna: At present it is operated by the Principal but there is no check over it. There should be somebody to check the Principal.

Shri S. N. Chaturvedi: Is this account not checked by the managing committee which has got the representatives of the teachers and of the department on it?

Shri Bal Krishna: Sometimes the head of the institution and the management are in league and they misappropriate the students' money.

Shri S. N. Chaturvedi: The other committee can also be in league, namely, the one that you are suggesting.

Shri Bal Krishna: There will be the parents' representative on it who will watch the interest of parents. If the committee is larger, there will be control.

Shri Sudhansu Bhushan Das: What is wrong with the managing committee? The managing committee can check it.

Shri Bal Krishna: They will themselves misappropriate money. There have been a number of cases of this type.

Shri Sudhansu Bhushan Das: Then what is the safeguard?

Shri Bal Krishna: There will be representatives of parents and teachers and they will keep a watch.

Shri A. E. T. Barrow: The clause here says that rules will be prescribed. Would not those rules be a greater deterrent than having a committee of parents, because they will have to walk within those rules?

Shri Bal Krishna: We do not hope that such rules will be framed by the Delhi Administration.

Shri Jairamdas Daulatram: What is the membership of your Council?

Shri Bal Krishna: About 300.

Shri Jairamdas Daulatram: Are these paying members?

Shri Bal Krishna: Yes, Sir.

Shri Jairamdas Daulatram: What is the fee paid?

Shri Bal Krishna: Re. 1 is the membership fee.

Shri Jairamdas Daulatram: How often does the general body meet?

Shri Bal Krishna: Thrice or four times a month.

Shri Jairamdas Daulatram: How often does the managing committee meet?

Shri Bal Krishna: Generally, once a month. The general house meets thrice or four times a year.

Shri Jairamdas Daulatram: Are there joint parents and teachers associations associated with all the private aided schools in Delhi?

Shri Bal Krishna: Yes, Sir.

Shri Jairamdas Daulatram: You have made a suggestion that the rules of procedure for inquiry in case of action against teachers should be laid down in the Bill; but, apart from the question of laying them down in the Bill, what is the type of rules of procedure that you visualise will be satisfactory?

Shri Bal Krishna: We will like them to be the same rules as are there for Government servants.

Mr. Chairman: How many parent members are there on your Council?

Shri Bal Krishna: About 200 are parents and about 100 are teachers.

Mr. Chairman: How long has your Council been in existence?

Shri Bal Krishna: It has been functioning for the last one year.

Mr. Chairman: So, your experience is very fresh.

Shri Bal Krishna: Our experience is not fresh because we made a survey of the schools recently and our experience is based on that. During that survey a number of cases of irregularities, misuse of funds, misappropriation etc. were revealed.

Shri M. C. Chagla: Is it only fresh or is it also very limited?

Shri Bal Krishna: We have also seen cases which were very late.

Mr. Chairman Who is representing here the parents?

Shri Bal Krishna: I am representing parents. The whole of the Council is representative of both the parents and the teachers.

Mr. Chairman: Are you also a teacher?

Shri Bal Krishna: I am not a teacher.

Mr. Chairman: From the point of view of parents let us have how the students behave in the class and what is their discipline etc. From that point of view, what do you think the Bill should include? Have you any suggestion to make in that respect because we find so much of indiscipline in the student world?

Shri Bal Krishna: In this regard, we feel that more powers should be given to the head of the institution for controlling students.

Mr. Chairman: What powers?

Shri Bal Krishna: They should be given to the head of the institution or to rusticate students in the case of

indiscipline. At present, they have got no such powers. These powers vest in the Director of Education. Many times they are not able to take action.

Mr. Chairman: What is the purpose of your Association having both parents and teachers on its body?

Shri Bal Krishna: Our objective is to make education better through the cooperation of parents and teachers.

Mr. Chairman: What about discipline?

Shri Bal Krishna: That is also one of its objectives.

Mr. Chairman: Have you got your constitution?

Shri Bal Krishna: We have got the constitution. But we have not brought it here.

Mr. Chairman: You may kindly send a copy of that to us.

Shri Bal Krishna: Yes.

Shri Sudhansu Bhushan Das: Is it a registered one?

Shri Bal Krishna: It is not a registered association.

Shri Shiv Charan Gupta: Are ou satisfied with the performance of the teachers, whether they are in Government schools or in recognised schools or in aided schools, with regard to the teaching of students?

Shri Bal Krishna: We are satisfied to a great extent but not fully.

Shri M. C. Chagla: I can understand the parents' body which looks after the interests of children. But the combination of the parents and the teachers is rather unusual.

Shri Bal Krishna: We feel if the parents and teachers cooperate, the cause of education can be served better.

Shri A. E. T. Barrow: Have you left out the word 'aggrieved'? It should be: Parents and Aggrieved Teachers' Association.

Shri Bal Krishna: It is: Parents and Teachers' Association.

Shri Diwan Chand Sharma: I think one of the gentlemen here said that he represents some aggrieved teachers' association. Is it not so? May I know what is the need of having the aggrieved teachers' association? Why have you formed such an association?

Shri Bal Krishna: There are a number of aggrieved teachers. They are not getting any justice from the Delhi Administration. They have formed themselves into an association.

Shri Diwan Chand Sharma: What are their grievances?

Shri Bal Krishna: Their grievance is that their services are terminated on flimsy grounds and no justice is done to them.

Shri Diwan Chand Sharma: What are other grievances?

Shri Himmat Ram: The service of a teacher in aided schools and Government schools is not secure because the management of aided schools and the Director of Education are in league in black-mailing teachers and they cannot get justice. The teacher is compelled to teach the children of the members of the management which runs the school. If he refuses to teach their children, he is penalised and his services are terminated on flimsy grounds.

Shri A. E. T. Barrow: Teachers' job is to teach.

Shri Himmat Ram: The teachers are compelled to teach the children of the members of the management at their residences. That is one of their grievances. The service of the teacher is insecure in any of the schools. The private aided schools are getting 95 per cent grant and some schools

are getting cent per cent grant. Even then, there is no justice from any corner to the teacher.

Shri S. N. Chaturvedi: Are you satisfied with the conditions obtaining in Government schools?

Shri Himmat Ram: No; not at all.

Shri S. N. Chaturvedi: There is no private management there.

Shri Himmat Ram: The service of the teacher is insecure. Even if a teacher has got 25 years service, his service can be terminated on flimsy grounds. If he appeals to the Delhi Administration, he gets no voice from them. He cannot get any justice unless he goes to the court and that will take two or three years. The Director of Education does not give any reply for months together. So many appeals are lying and the Director of Education is keeping their files for months together. Reminders after reminders are sent to him but he does not do anything.

Shri Diwan Chand Sharma: What should be the authority for deciding these cases?

Shri Himmat Ram: The post of the Secretary of Education and the post of the Director of Education must be separated. At present, the Director of Education is the Secretary of Education and he is the Deputy Director of the Central Board, the Deputy Director of Television and the Secretary of the Teachers Welfare Fund. He is holding so many portfolios and he is an undisputed monarch. How can we seek any justice from any quarter? These posts must be separated.

Shri Diwan Chand Sharma: Let us not talk in terms of this Director or that Director. Suppose somebody's services have been terminated. What should be the authority to consider that appeal? Should that authority be nominated by the Ministry of Education?

Shri Himmat Ram: There must be a tribunal. The Chairman of that tribunal must be a retired judge or a magistrate and a specific period must be prescribed for deciding the case.

Shri Diwan Chand Sharma: Who should be the members of that tribunal?

Shri Himmat Ram: There should be a representative of the aggrieved party, a representative of the management and a representative of the Government Department. Its Chairman must be a retired judge or a magistrate.

Mr. Chairman: Are you aware of another organisation called the Parents Association, Model Basti, New Delhi?

Shri Bal Krishna: We know that organisation.

Mr. Chairman: Have you got any liaison with that organisation?

Shri Bal Krishna: We have no liaison with that organisation.

Shri Deokinandan Narayan: You have stated that the membership of this Council is 300 out of which 100 are teachers and 200 are parents. May I know from how many schools are these 100 teachers?

Shri Bal Krishna: They are from different schools.

Shri Deokinandan Narayan: And these parents?

Shri Bal Krishna: They also represent different schools.

Shri Deokinandan Narayan: I would like to know further as to how many complaints have been received by you from the parents, what sort of complaints they are and what have you done with those complaints?

Shri Bal Krishna: We refer these complaints to the Ministry of Education and the Delhi Administration.

Shri Deokinandan Narayan: Did you get any solution for those complaints? How did you manage those complaints?

Shri Bal Krishna: We have not received any solution from the Government. We have referred these complaints to the Delhi Administration and the Ministry of Education. There was also some question in Parliament during the last session about the complaints of the Delhi Parent's Council.

Shri Deokinandan Narayan: With what results?

Shri Bal Krishna: With no result.

Shri S. N. Chaturvedi: Do you first take it up with the persons who are in-charge of the institution?

Shri Bal Krishna: Yes; we first take up these things with the persons who are in-charge of the institution. If these are not solved, then we refer them to the Director of Education and all that.

Shri S. N. Chaturvedi: You have not succeeded in getting any redress from anywhere?

Shri Bal Krishna: We have not got any redress from anywhere.

Shri S. N. Chaturvedi: In no case?

Shri Bal Krishna: Sometimes we get very little response.

Shri A. E. T. Barrow: How many cases have you referred so far? Is it 3 or 14 or 20? What is the number approximately?

Shri Bal Krishna: About 20 or 30 cases.

Shrimati Devaki Gopidas: You have said that you want the services of private school teachers to be on par with those of government school teachers.

Shri Bal Krishna: Of course.

Shrimati Devaki Gopidas: In that case, are you prepared to give up the extra privileges enjoyed by private school teachers such as taking part in politics, etc.?

Shri Bal Krishna: We do not want that teachers should take part in politics; they should be connected only with academic work.

Shrimati Devaki Gopidas: Yours is an Association of Parents and Teachers. May I know what are the positive steps that you have taken or contemplate taking to maintain the standard of education and the discipline of the students?

Shri Bal Krishna: We hold seminars where we discuss such problems.

Shrimati Devaki Gopidas: Have you taken any positive steps?

Shri Bal Krishna: We can only discuss; we cannot take any positive step.

Shrimati Devaki Gopidas: Regarding appointments, if the Government keeps a list of qualified candidates to be appointed as teachers and the Management is asked to select the teachers from that list, would it be allright? What is your opinion on this?

Shri Bal Krishna: I feel that there should be a list maintained in the Education Department and the private management should appoint teachers only from that list. This will check untrained teachers being appointed in aided schools. That is why we want this clause.

Shrimati Devaki Gopidas: Are the teachers in private schools forced to give donations for getting the appointment?

Shri Bal Krishna: Sometimes they are forced to give donations.

Shri Naval Prabhakar (*in Hindi*): Are there any restrictions under the code of conduct in regard to teachers and parents?

Shri Bal Krishna (*in Hindi*): We have no code of conduct; we go according to the Constitution.

Shri Naval Prabhakar (*in Hindi*): Do you have any restrictions under the code of conduct to ensure that they do not work outside? Have you made any regulation in this regard?

Shri Bal Krishna (*in Hindi*): We want to discourage private tuition. We have already passed a resolution to that effect.

Shri Naval Prabhakar (*in Hindi*): When did you pass that resolution?

Shri Bal Krishna (*in Hindi*): We passed it about a month back.

Shri Naval Prabhakar (*in Hindi*): Are there only government school teachers in your Association or are there aided school teachers also in your Association?

Shri Bal Krishna (*in Hindi*): Some are government school teachers, some are Corporation teachers and some are aided school teachers. Our membership goes on increasing.

Shri Shiv Charan Gupta (*in Hindi*): Are there any cases which have come to your notice in which the Director has functioned as a monarch and acted according to his whims without following any rules, etc.? Secondly, you have stated that the appointment of teachers in private institutions is governed by donations. Can you give any such instances and let this Committee know as to what action you took on those cases?

Shri Himmat Ram (*in Hindi*): We can give you hundreds of cases; we can give you concrete examples. We complained to the Vigilance Director, Delhi Administration, and there the matter ended. First we wrote to the Home Ministry and the Education Ministry. The Education Ministry replied that the Delhi Administration should be approached. We then approached the Delhi Administration but we have not heard anything from them. We can send you a list of those cases which we referred to the Education Ministry and the Delhi Administration.

Shri Bal Krishna (*in Hindi*): Smt. Manjeet Kaur is here. Her own case is an example in point. If you want, you can get the details from her.

Shri P. C. Mitra: On page 3 you have suggested that the posts of aided private school teachers should be transferable, but you have not suggested the authority that will issue the transfer order.

Shri Bal Krishna (*in Hindi*): The Director of Education will give the permission if both the management and the teacher agree.

Shri P. C. Mitra (*in Hindi*): If there is no such agreement between the management and the teacher, what will happen?

Shri Bal Krishna (*in Hindi*): There will be conflict between the management and the teacher. We do not want that there should be any such friction.

श्री पी० सी० मित्रा : दूसरी बात यह कही गई कि हेडमास्टर जो हैं वह गवर्नमेंट के आदमी नहीं हैं । तो क्या आप समझते हैं कि एडेड स्कूल के हेडमास्टर जो हैं वह ठीक से काम नहीं करते हैं और मैनेजमेंट की ज्यादा हिमायत करते हैं ?

श्री बाल कृष्ण : इस समय गवर्नमेंट 95 परसेंट एड देती है । लेकिन मैं समझता हूं कि वह गवर्नमेंट के इंटरेस्ट को वाच नहीं करते और गवर्नमेंट ग्रान्ट का मिसयूज होता है । अगर वह लोग गवर्नमेंट के नामिनी होंगे तो मिसयूज नहीं होगा । आज कल पैसा बहुत खर्च होता है लेकिन उसक ठीक से इस्तेमाल नहीं होता । जरूरत इस बात की है कि उस पैसे का इस्तेमाल ठीक से हो ।

श्री पी० सी० मित्रा : क्या आप को यह विश्वास है कि जो सरकारी अफसर होते हैं वह ठीक से पैसे का इस्तेमाल करते हैं ?

श्री बाल कृष्ण : जो एडेड स्कूल हैं उनके मुकाबले में गवर्नमेंट स्कूलों में ज्यादा अच्छी तरह पैसा खर्च होता है ।

Shri A. E. T. Barrow: You have mentioned some cases against private managements and against Government institutions. Would it help you if the inspecting was done by officers who are directly under the Ministry?

Shri Bal Krishna: Of course, that is a better suggestion.

Shri A. E. T. Barrow: Suppose the inspecting officers are directly under the Ministry, and they inspect all the schools, whether they are Government schools or aided schools, and suppose they are not under the Delhi Administration? Would that help you?

Shri Bal Krishna: We welcome that suggestion.

Shri Himmat Ram: That will be much better in the interests of education.

Shri Sudhansu Bhushan Das: You have stated in your memorandum at page 4 that all unauthorised levies, if made by the schools, shall constitute Government money and shall be credited to the school fund. What do you mean by 'unauthorised levies'?

श्री बाल कृष्ण : बहुत से स्कूल ऐसे होते हैं जो कि फीस तो एजूकेशन कोड के मुतांबिक लेते हैं लेकिन काफी स्टडेंट्स फ्रैंडस ऐसे ले लेते हैं जो कि एजूकेशन कोड के मुताबिक नहीं लिये जा सकते औरउन फडं्स को मिसयूज करते हैं । मैं चाहता हूं कि जो भी फण्ड्स वगैरह लिये जाते हैं वह सब के सब गवर्नमेंट के पास क्रेडिट होने चाहियें ।

Shri Sudhansu Bhushan Das: Are they under different heads?

श्री बाल कृष्ण : जैसा मैंने कहा डोनेशन्स वगैरह ले लिये जाते हैं जिन का मिसयज होता है । मैं तो चाहता हूं कि वह गवर्नमेंट के पास क्रेडिट हो जायें ।

Shri Sudhansu Bhushan Das: Which are the unauthorised levies to which you are referring specifically?

श्री बाल कृष्ण : कहीं बिल्डिगं फंडस के नाम से लिये जाते हैं, कहीं स्कूल के लिये डोनेशन्स के नाम से लिये जाते हैं । मुझे कई स्कलों के नाम भी मालूम हैं जहां इस तरह से होता है । रामरूप विद्या मंदिर मल्टीपरपज हायर सेकेन्डरी स्कल है जहां स्टूडेन्ट्स से पैसा लिया जाता है .....

Shri Sudhansu Bhushan Das: Donation from parents or students is not prohibited, I suppose?

श्री बाल कृष्ण : वह प्राहिबिटेड जरूर है लेकिन किसी न किसी बहाने से वह फंड्स ले लिये जाते हैं । रामरूप विद्या मंदिर मल्टीपरपज हायर सेकेन्डरी स्कल है, खालसा स्कूल है, इसी तरह से और भी जगह हैं जहां इस तरह से होता है ।

Shri Sudhansu Bhushan Das: Your point is that unauthorised levies should be stopped?

Shri Bal Krishna: They should be stopped; if they are not stopped but they are levied, then that amount should be credited to Government.

Shri Sudhansu Bhushan Das: How could Government take the unauthorised levies?

Shri Bal Krishna: That amount could be deducted from the grant-in-aid.

Shri Sudhansu Bhushan Das: Your main point is that such unauthorised levies should be stopped.

Shri Bal Krishna: But if somebody realises such levies, then if they are not stopped, the amount should be credited to Government.

Shri S. N. Chaturvedi: There are no unauthorised levies in Government schools?

Shri Bal Krishna: No.

Shri S. N. Chaturvedi: The representatives of the managers' association claim that they are spending per student about half the amount that the Government schools are spending and that their results are still far superior to those of the Government schools. Do you dispute that statement or claim?

Shri Bal Krishna: Yes, we dispute it, because that is a wrong conclusion. जो भी एडेड स्कूल होते हैं उन में डमिशन बहुत रेस्ट्रिक्टेड होता है । लेकिन जो गवर्नमेंट् स्कूल्स होते हैं उन में ऐसा नहीं हो सकता है । उन को तो सभी स्टूडेन्ट्स को एडमिट करना होता है ।

Shri S. N. Chaturvedi: They say that 70 per cent of the students are being educated through aided schools.

Shri Bal Krishna: No, that is wrong.

Shri S. N. Chaturvedi: Have you got any figures of your own in this regard?

Shri Bal Krishna: Naturally, the number of students in Government schools is large.... गवनमेंट स्कूल ज्यादा हैं इस लिये उन में स्टूडेन्ट्स भी ज्यादा होंगे । प्राईवेट स्कूल कम हैं इसलिये उनमें स्टूडेन्ट्स की संख्या तो कम होगी ही ।

Shri S. N. Chaturvedi: Have you got any figures?

Shri Bal Krishna: We have not got any figures.

Shri S. N. Chaturvedi: Do you dispute the claim that the results of the aided schools are better than those of Government schools?

Shri Bal Krishna: The results are not better in aided schools.

Shri S. N. Chaturvedi: Do you mean to say that in Government schools they are spending less per student?

Shri Bal Krishna: Actually, in the aided schools, they are spending much less, because 95 per cent of the money is paid by Government.

Shri S. N. Chaturvedi: What is the cost per student? Have you got any figures?

Shri Bal Krishna: We have got no figures.

Shri S. N. Chaturvedi: You have stated that you are not fully satisfied with the performance of the teachers. What remedies would you suggest in this Bill for making the performance of teachers better than what it is? Or are you referring only to the security of tenure of the teachers?

Shri Bal Krishna: We would like that the system of private tuitions should be abolished.

Shri S. N. Chaturvedi: Have you any suggestions in that regard? In your memorandum you have merely stated that they leave the schools during the academic session for the sake of Rs. 10 or Rs. 15 extra.

श्री बाल कृष्ण : मेरा ख्याल है कि बिल में ऐसा कोई सजेशन नहीं आ सकता ।

श्री एस० एन० चतुर्वेदी : आप ने अपने मैमोरेन्डम में तो सजेशन दिया हुआ है ।

श्री बाल कृष्ण : बिल में तो उस का इनक्लुजन नहीं हो सकता । अगर उस को वहां रखा जायेगा तो वह कांस्टिटयूशन के खिलाफ होगा ।

Mr. Chairman: You are talking of levy by schools. Clause 14 says that no aided school shall levy any fee or any other charge at a rate exceeding the prescribed rate and such fees and other charges have to be collected and accounted for in the prescribed manner.

Shri Bal Krishna: But that clause is not sufficient. For, if even after this Bill comes into effect, somebody realises unauthorised fees, then there is no penalty on that person.

Shri M. C. Chagla: The whole burden of your song is that dishonest administrators and people who do not observe the law should not be there. You cannot legislate against dishonesty, as such. Unless the persons are honest, you cannot administer it. So, your complaint is against dishonest administration and not against the law.

Shri Bal Krishna: We want that there should be some check.

Shri M. C. Chagla: How can any law check dishonesty?

Shri Bal Krishna: If there are some penalties provided then there will be some check.

Shri D. C. Sharma: So far as I know, the principals of the higher secondary schools in Delhi are selected by the UPSC in regard to Government schools. Am I right?

Shri Bal Krishna: Yes.

Shri D. C. Sharma: So far as aided and private schools are concerned, the principals are selected by the management?

Shri Bal Krishna: Yes.

Shri D. C. Sharma: You would like all of them to be selected by the UPSC?

Shri Bal Krishna: They should be selected by a selection board.

Shri D. C. Sharma: Should there be one and the same selection board for teachers and principals, or should there be separate selection boards for them?

श्री बाल कृष्ण : मैं चाहूंगा कि जो टीचर्स हों वह तो सेलेक्शन बोर्ड्स से हों और प्रिंसिपल की पोस्ट गेजेटेड होती है इस लिये वह यू० पी० एस० सी० के जरिये लिये जा सकते हैं ।

Shri D. C. Sharma: What kind of selection board would you like to have for the teachers?

श्री बाल कृष्ण : गवर्नमेंट दो या तीन आदिमयों का बोर्ड बना दे या फिर मिनिस्ट्री आफ एजुकेशन ऐसा बोर्ड बना सकती है । वह लोग टीचर्स का सेलेक्शन कर सकते हैं ।

They should consist of educationists.

Shri Jairamdas Daulatram: From the point of view of the parents, what is your view with regard to the suggestion that all education up to the higher secondary stage in Delhi should be under one authority?

Shri Bal Krishna: We feel that at present education is under different authorities such as the DMC, the Director of Education, private management and so on. We want that there should be one unified authority which will control education so that there may be uniform standards of education in the whole of Delhi. At present, there is disparity in standards of education; there are different types of education imparted in different schools; there are public schools, then there are some schools which are controlled by a Central Board, and

there is an all-India scheme; so, different kinds of schemes are there; then there are minority schools. We want that there should be a uniform standard of education in the whole of Delhi at least, if not in the whole country. In Delhi at least there should be a uniform standard of education.

श्री शिवचरण गुप्त :आपने अभी बतलाया कि एक साल के दौरान में आपके पास 20 शिकायतें पेरेन्टस की आईं । आप जरा यह भी बतलाइये कि आप के पास टीचर्स की कितनी शिकायतें आई हैं और उन में से कितनों का निपटारा हो गया है और कितनी पेंडिग हैं ।

श्री बाल कृष्ण : टीचर्स की दो सौ कम्प्लेन्ट्स आई हैं । कुछ में तो कहा गया है कि उन के इन्क्रीमेन्ट्स रोक दिये गये हैं और कुछ में कहा गया है कि उन का विक्टिमाईजेशन किया गया है ।

कुमारी शान्ता वशिष्ठ : क्या आप बतला सकेंगे कि आपका टीचिंग एक्सपीरिएंस कितना है ?

श्री बाल कृष्ण: मेरा प्रोफेशन टीचिंग नहीं हैं लेकिन डिफरेन्ट टीचर्स का डिफरेन्ट तजुर्बा होता है ।

कुमारी शान्ता वशिष्ठ : क्या आप का यह विचार है कि यह जो कोड आफ एजूकेशन में सेलेक्शन वोर्ड बनाया जायेगा उस के सदस्य भी उअपने रिश्तेदारो का चुन कर भेज सकते हैं ।

श्री बाल कृष्ण : यह प्राइवेट मैनेजमेंट के मुकाबले बेहतर रहेगा । क्योंकि गवर्नमेंट से यह उम्मीद नहीं की जाती कि वह बेईमानी करेगी ।

कुमारी शान्ता वशिष्ठ : आपने कहा कि मैनेजिंग कमेटी अपने काम को नैगलेक्ट करती है । लेकिन टीचर्स भी तो कर सकते हैं । उस की आप ने कोई चर्चा नहीं की ।

श्री बाल कृष्ण : इस के लिय रूल्स एण्ड रेगुलेशन्स बने हुए हैं । डायरेक्टोरेट इस की रोक थाम कर सकती है ।

कुमारी शान्ता वशिष्ठ : लेकिन अगर डायरेक्टोरेट अपना काम ठीक से न करे तो ?

श्री बाल कृष्ण : इस को गवर्नमेंट सुपरवाईज करे । मेरे पास इस का कोई हल नहीं है । गवर्नमेंट ही कोई हल निकाल सकती है ।

कुमारी शान्ता वशिष्ठ : यहां पर सैकड़ों स्कूल्स हैं सारे स्कूलों को कैसे देखा जा सकता है ।

श्री बाल कृष्ण : हम यह महसूस करते हैं कि दिल्ली के अन्दर पापुलर गवर्नमेंट होनी चाहिये वही इस को देख सकेगी ।

कुमारी शान्ता वशिष्ठ : क्या टीचर्स के अपने परफार्मेंस के सवाल को भी आप टेक अप करते हैं ?

श्री बाल कृष्ण : हम लोग अपने सेमिनार में टेक अप करते हैं । लेकिन हम कोई ऐक्शन तो नहीं ले सकते । केवल सजेशन दे सकते हैं ।

कुमारी शान्ता वशिष्ठ : क्या टीचर्स में ऐसा एहसास नहीं पैदा कर सकते कि वह अपनी डयूटीज को अच्छी तरह से परफार्म करें ?

श्री बाल कृष्ण : ऐसी कोशिश करते हैं ।

कुमारी शान्ता वशिष्ठ : क्या आपने कभी ऐसा सर्वे किया कि हमारे टीचर्स कैसा काम करते हैं, क्लास अच्छी तरह लेते हैं या बैठे रहते हैं ? अगर किया तो उसमें क्या मालूम हुआ?

श्री बाल कृष्ण : सर्वे किया । उसमें यह मालूम हुआ कि कुछ टीचर्स ऐसे हैं जो क्लास कम लेते हैं लेकिन ऐसी तादाद कम है ।

कुमारी शान्ता वशिष्ठ : शिकायतों को टेक अप किया है ?

श्री बाल कृष्ण : जी हां, कुछ टेक अप किया है ।

Shri Deokinandan Narayan: Do you want that there should be a provision in this Bill that every school should have a parents' council attached to it?

Shri Bal Krishna: We want that there should be a parents' council in every school. There is already provision for it in the Delhi Education Code.

मेरे साथी मिस्टर राठी आपके सामने कुछ बातें रखना चाहते हैं ।

श्री राठी : मेरा सुझाव है कि दिल्ली के अन्दर 200 से ज्यादा टीचर्स विक्टिमाईज हो रहे हैं । डाईरेक्टर को बार बार लिखते हैं, लेकिन उनको कोई जवाब नहीं मिलता । मैनेजमेंट डाईरेक्टर से मिल जाता है । एम्प्लायी निकाल दिया जाता है । चीफ कमिश्नर को लिखते हैं, वह सुनते ही नहीं । कई केसेज एजूकेशन मिनिस्टर को लिखे गए । वहां से जवाब आता है कि तुम्हारा केस चीफ सेक्रेटरी को रेफर कर दिया गया है । इस तरह से 200 से ज्यादा टीचर्स अफेक्टेड हैं । तो इसमें हमारा निवेदन है कि 1957 से प्राविजन लागू कर दिया जाये ताकि यह शिकायतें दूर हो जायें ।

मिस्टर चेयरमैन : आपके ममोरेंडम में यह सब चीज़ हैं ।

श्री राठी : मैं जरा इसको एक्सप्लेन करना चाहता था ।

मस्टर चेयरमैन : हमारे पास आपका मैमोरेंडम जो आया है उसमें यह चीज आ गई है, और आपका एविडेंस भी आ गया है, अब और कोई जरूरत नहीं है ।

(The witnesses then withdrew)

II. Delhi State Parents' Association, Model Basti, New Delhi

Spokesmen:

1. Shri Ganga Lal Casewa.
2. Shri Rajeshwar Dayal.
3. Shri Bishan Lal.
4. Shri G. S. Asnani.
5. Shri O. N. Zadoo.

The witnesses were called in and they took their seats

Mr. Chairman: You have submitted a memorandum and we have circulated it to the Members of the Committee. The memorandum is before us and we shall consider it. The points you have mentioned in it are there. If there is any additional point that you want to place before the Committee you may do so, or you may emphasise any particular points for the elucidation of the Committee.

I think you have read the Bill thoroughly.

Shri Ganga Lal Casewa: Yes, Sir.

Mr. Chairman: And particularly, you are a parents' association. So we expect some good suggestions from you. Those suggestions, I think, will be from a disinterested party, not being either teachers or managers. So with this object in view I hope your evidence will be brief and to the point.

Shri Ganga Lal Casewa: Thank you very much, Sir. We actually wanted to begin our evidence today with exactly the same point to which you have referred, namely, that we

are not really interested in any type of benefits either to ourselves individually or for the institution that we represent. But we have a lot to say, because our stakes are very high in respect of the education of our children.

One of the first observations which we would like to submit is that we do not feel quite satisfied with the performance at present in Delhi of all the three parties which are managing the educational system in the capital, and by that I mean the teachers as well as the managers and the managements, and also, I might respectfully submit, the Directorate and the management on the Government side.

There is much to be desired and much to be done in respect of these three agencies, and we would wish that the Bill took care of these important aspects.

It appeared to us that by prescribing a minimum salary for the teachers, perhaps the Bill seeks to solve all the problems. While we are supporting the need to give a good salary to the teachers,—we have always been of that view—we feel that there is some sort of weakness in the drafting of the Bill because it does not specifically prescribe the exacting standards of education we need.

There is a passing reference in the Minister's forwarding letter to the quality of education being maintained. While that is all very well, how that is to be maintained is something about which we could not get much light by reading the Bill. The authorities have retained the power to prescribe the syllabus, textbooks and also elsewhere they have said that they will inspect each school once a year. I feel that this inspection once a year is not adequate. In practice, it does not lead to much useful result; the inspection of the schools should be made more rigidly and more frequently.

Mr. Chairman: At what interval?

Shri Ganga Lal Casewa: I would say that at least quarterly inspections are indicated, instead of once a year. That would mean strengthening the staff in the Directorate of Education. But, that to our mind is very important, because while we give all the facilities to the teachers and while we are liberally subscribing to the cost of management of institutions, we should not feel shy of spending a little more for strengthening the inspection system.

Shri M. C. Chagla: If you have proper inspection, would not once a year be enough? If it is superficial or cursory, then there is a case for the other thing. What we want is that the inspection should be good.

Shri Ganga Lal Casewa: It is quite true that the inspection should be good, but it should also be frequent. If it is once a year, it gives the impression that probably somebody comes once a year, so we should tidy up the college. They do everything at that time and than everybody forgets about it. In fact, not only should there be frequent inspections, but there should be surprise inspections.

Shri A. E. T. Barrow: Your suggestion is that the inspection report should be implemented. If they only tidy up once and then nothing is done, then the implementation of the recommendations which the inspector makes is more imporant. You must give them some time to implement them.

Shri Ganga Lal Casewa: I would say that development and maintenance of improvement in standards of teaching would be the result of more frequent inspections; the more the inspection, the more the people would work to implement the recommendations within the time available to them.

In this very continuation, we felt that while there may be limitations in respect of bringing about the necessary number of inspections or the way we want them to be, there should be some sort of an in-built system by which the defects in an institution and get reflected and rectified automatically by themselves.

Shri M. C. Chagla: C. 17 says there should be at least once a year inspection. It does not prevent frequent inspections.

Shri Ganga Lal Casewa: In practice, it would mean probably not even one.

Mr. Chairman: No, no.

Shri Ganga Lal Casewa: The more the better.

How do we rectify these institutions' inherent flaws without developing an elaborate system of inspection which might be too costly. One suggestion was for increasing public participation and keeping the institution in the focus of public attention about what is going on there, how things are being managed, whether the teacher-management relationship is cordial and other things. The more people become alive and aware of these things, the better.

Mr. Chairman: How do you bring that about?

Shri Ganga Lal Casewa: The most important way, probably, is through the parents. If the parents could assert themselves without being prejudiced or biased in any way by any particular interest, they could exercise a lot of corrective influence in righting wrong practices from wherever quarter they emanate, whether teachers or managers or from anywhere else. On these aspects, we have also made our submission in our memorandum, and suggested that it would be a good thing if an organisation like ours is associated with the managing committees. This is for your consideration.

Apart from that, how do we bring about these things? How do we bring to surface what is happening in these institutions? The point was that most of the higher secondary schools cater to certain adjoining areas and the territory they serve is compact, the people living in those areas are a sort of compact, well-knit unit forming a well-organised sort of people who can be easily approached and are accessible. If that line of argument is accepted, that the parents have a very important stake, and their interest in the institutions should be fostered, then perhaps the logical corollary would be that parents residing in those areas which are easily capable of being formed into a group or can be easily developed into some sort of organisation, should themselves be made responsible for developing this trend. I think this will be a very healthy development because then many of the things that remain under the table or do not see the light of day could be properly spotted and brought to notice of the authorities or even moral pressure of the local people could be exercised to set right whichever house is not in order.

Shri Shiv Charan Gupta: Have you something to say about the Parent-Teachers' Association in Delhi? What is your experience about them?

Shri Ganga Lal Casewa: We would not like to comment directly on an organisation which is more or less a sister organisation for us. But there is one point we have submitted in our memorandum too, that the parent-teacher associations are more directed towards meeting the requirements of the individual students, watching the progress of their sons or daughters, seeing how they are progressing in their studies. But the common problems which cut across individual needs are not taken up by these parent-teacher associations; they are not designed to take them up. The very objective of the parent-teacher association is a sort of familiarity and contact that is intended to be built up

round the individual child—which is all very good; I think it is a very laudable objective.

Mr. Chairman: Have you got your constitution, objects and reasons, the purposes for which it was founded and so on? If so, can we have a copy?

Shri Ganga Lal Casewa: We are a registered organisation formed in 1957. After the meeting, I will submit a copy of our constitution.

Our organisation has been functioning since 1957. But I might also frankly admit that we do not work under any official or political patronage. Naturally, therefore, our performance, the impact we make etc., are all limited, but I suppose we serve a very valuable purpose inasmuch we reflect an independent viewpoint and we consider that we are in a position to deliver certain goods if we are called upon to.

Shri K. Damodaran: Are you connected with the management of schools?

Shri Ganga Lal Casewa: I happen to be a member of the governing body of a college which is affiliated to the university. I do not think any of our members are members of the management of schools, but if they are not, their cousins are there or somebody who is known to them, and we know all that goes on.

Shri S. N. Chaturvedi: Are you speaking in the capacity of a teacher or a parent?

Shri Ganga Lal Casewa: Everybody has talent that way. Everybody is a parent, but the interests of parents are different from the interests of teachers, and when we come here as representatives of parents, we represent only those interests and not our professional interests elsewhere. The teacher is also a parent, but in the school he is more concerned with his pay packet.

Shri K. Damodaran: As a parent, how do you suggest that even schools in insanitary conditions without literaries and laboratories should also be recognised?

Shri Ganga Lal Casewa: Conditions in Delhi especially in certain areas, are such and the population is so heavy that either the children have to go to schools in insanitary conditions or have to go without school. We are therefore, as representatives of Parents, choosing the lesser evil. We do not say better conditions, better schools are not welcome.

श्री देवी सिंह : वर्तमान टीचिंग स्टाफ के प्रति आपकी क्या धारणा है ? क्या वह अपनी जिम्मेवारी को अच्छी तरह निभा रहा है ?

श्री गंगा लाल कासेवा : मैं इसके बारे में यहीं कह सकता हूं कि हम लोग सभी अपनी जिम्मेवारी को अच्छी तरह से नहीं निभा रहे हैं । किसी पर्टिकुलर कम्युनिटी को सिंगल आउट करना उचित नहीं होगा ।

श्री देवी सिंह : आप पेरेंट्स हैं, इस वास्ते मैं आपसे यह सवाल पूछ रहा हूं ।

श्री गंगा लाल कासेवा : इससे अधिक मुझे और कुछ नहीं कहना है ।

Shri Hem Barua: The general criticism from the side of the teacher is that each class being only for 45 minutes and the class being overcrowded with 50 to 60 students, he cannot devote even a single minute to each individual student, and it is not possible for him inculcate a sense of discipline in the students. Here the parent comes in. The criticism of the teacher is that the partent, instead of helping boys and girls to grow, create such an atmosphere in

their home, that their ideas get vitiated. For instance, parents criticise teachers, Ministers and other leaders of the country in the presence of their children who get wrong ideas. In this respect, may I know what this association is doing to see that the home atmosphere is also changed, so that the children grow into distinctive personalities?

Shri Ganga Lal Casewa: This association believes in doing rather than preaching. There is awareness of the point raised. We feel that life in the Capital is moving fast at a hectic pace and people under economic distress are not able to give their children the attention that was possible a generation or two ago. Very often a parent leaves house when the children are asleep and comes home when they have gone to bed, and they meet only on Sundays. So, they do not have time for exercising the right type of influence on their children.

Shri Hem Barua: What about parents who are economically advanced, enlightened, educated, who often put wrong ideas into the heads of their children?

Shri Ganga Lal Casewa: I cannot agree with you. No parent wants his child to be brought up the wrong way.

Then, in our memorandum we have opposed this idea of not recognising institutions named after a caste or sect. The reason is that there is no philosophy of education spelt out in the preamble to the Bill. What is education, what are we trying to achieve? If we are clear about these fundamentals while drafting this Bill, these conclusions that have been incorporated would not have been arrived at. If education represents even a fraction of the culture of the people, if there is freedom to individuals to educate their children in the manner they want, if there is religious freedom....

Mr. Chairman: Institutions are not forbidden to impart religious education. It is the naming of the institution that is barred.

Shri Ganga Lal Casewa: Then you are mistaking the shell for the kernel. It is out of public charity that these institutions have to be built up, and charity is entirely subjectively motivated. What imples a man to be charitable is his own business, and he may name the institution after an individual or a community, and then after all, what is there in a name.

Shri Hem Barua: There is much in the name.

Mr. Chairman: We will consider that point. Let us go to another point. We will have to complete the evidence by 4.30.

Shri Ganga Lal Casewa: We feel that the question of financial aid should be related to the performance of the institutions. Merely because they have a certain number of students and the other parapharnalia, they become eligible for some aid. That is the rule of the thumb approach. We may take the average results of the annual examination for the higher secondary for the past three years or some other formula can be worked out and on that basis financial aid in succeeding years should be given.

Shri A. E. T. Baroow: Is it your point that only examinations should be the criterion? This idea of payment by results was abandoned many years ago. Paying institutions by results is going to lead to more cramming than goes on at present and if that is the criterion you are raising a very dangerous question.

Shri Ganga Lal Casewa: I have myself said that an acceptable formula could be worked out. Examinations must be one of the criteria. It should also be related to the students on roll in the 9, 10 and 11th classes, how many were enrolled, what was the

output and so on. The inspection reports could also be the basis with of all the other intangibles in this formula.

Mr. Chairman: Clause 9 says: aid sums of money as the Central Government may consider necessary; there is no formula. Let us go to the next point.

Shri Ganga Lal Casewa: In the Bill it is not prescribed but in practice certain formula is applied and I feel that the Committee should look into this question.

Shri S. N. Chaturvedi: Certain basic minimum shou'd be provided to every school; whatever addition is to be made may be given as a reward for efficient working of that school—not that you start the vicious circle that the result is bad and so aid will be reduced and because aid is reduced so the result will be bad.

Shri Ganga Lal Casewa: That is our view.

The other point is that wherever new s'um clearance is going on in Delhi first priority should be given to providing space for the schools before allowing any more construction of the housing or reconstruction of the old colony.

Mr. Chairman: The masterplanners must be taking that fact into consideration.

Shri Ganga Lal Casewa: I am not in touch with them and so I submit this point so that the Committee may take it up.

We have provided in the Bill for derecognition and then the director or somebody will take over the records, accounts and books and so on. It does not say anything about taking over of concessions made in the past before derecognition came into force. In some institutions the tendency is to get concessions from the government by way of land at concessional rates, etc. and after building up their furniture, library and buildings, they go slow purposely because they had got everything they wanted. While derecognising a school, account should be taken of how much money had been granted and this should be recovered. Or, the institution should be taken over and run by the department or the corporation or parents' co-operative societies which we shall elaborate later.

Shri M. C. Chagla: Which parent will send his child to a derecognised school?

Mr. Chairman: Every school has to be recognised.

Shri S. N. Chaturvedi: Have you any particular case in mind? Could you give details without mentioning the institution by name?

Shri Ganga Lal Casewa: In one case some land was taken at concessional rates and there was a lot of trouble; there is perennially an atmosphere of trouble and it suits the management Sometimes I have a feeling that they purposely foster this indiscipline so that the Director may in disgust say: to hell with this institution. It has not yet been done.

Our next point is that institutions should be managed by parents themselves. In fact this association had once drafted by-laws for such a society and sent them to the registrar of co-operative societies for examination. A lot of money is coming from the exchequer, that means indirectly the taxpayer pays. Not only do we pay the fees but a major part of the expenditure—of these institutions through the exchequer. For small portions, we have to look towards charitably disposed persons or trusts who do not always use their position for the best purposes. A group of people whose boys are studying in a particular school could be organised into co-operative societies so that they can contribute the small fraction of the costs that is needed to balance

the expenditure. This would rid our educational system of a number of defects and maladies, with which it is afflicted now. I believe that the teacher-management relationship also would improve, the relationship which has been a bane of this city.

Mr. Chairman: Nobody is preventing you from starting or running a model school.

Shri Ganga Lal Casewa: It was not done probably due to lack of official patronage and support, which is one reason.

Mr. Chairman: How can you say that, when you have not tried it?

Shri Ganga Lal Casewa: I would not plead guilty because we have drafted the constitution and it has been lying with the authorities; we have been sending reminders, and the latest reply came about a fortnight back.

Shri M. C. Chagla: You start a school and make it a model school by a co-operative society. We will help you.

Shri Ganga Lal Casewa: Now, there are two more points. One is about moral education and religious education. This has become some sort of a dangerous ground to tread, because when we talk about this, the people start feeling differently. We have mentioned that there are certain common, fundamentals of religion, and there should be no hesitation to develop them and to emphasise them in the minds of the younger generation, for, that is the only way in which salvation of our future generations could be attained. I would like to repeat it with your permission.

The other point is about moral education in respect of the text-books. There must be some provision for inclusion of moral education in the text-books, and suitable text-books should be prescribed.

Shri A. E. T. Barrow: In your preamble, you have made mention of the shortcomings, sins of omission, mainly in respect of the teachers, management and the Directorate, and later on, you talked about the performance and inspection reports. Certain schools are managed by Government; how would you propose to deal with them. I am putting this suggestion: suppose your inspecting officers were directly under the Ministry of Education and not under the Directorate, and their reports were reports on all schools, would that help in improving the Government schools?

Shri Ganga Lal Casewa: This, to my mind, is an attempt probably in the right direction, but it may not lead to the objective that you have in mind in the ultimate analysis. We are interested not so much in the mechanics of the inspection—how you would like to inspect—but, as I mentioned earlier, we are interested in creating an atmosphere in which the schools could function effectively and well. Inspection is important whether the Directorate of Education does it, or the Board does it or the Central Ministry conducts the inspection. There is definitely an advantage in the Central Government inspecting the schools.

श्रीमती जयाबेन शाह : मैं यह जानना चाहती हूं कि इस बिल से क्या परिस्थिति में कुछ सुधार होगा ? बिल इम्प्लीमेंट हो जाय तो कैसा रहेगा ?

श्री कसेवा : हम लोगों का ख्याल ऐसा है कि जो इसमें संशोधन हम लोगों ने बतलाये हैं, उनको अगर मान लिया जाय तो बिल काफी आगे ले जायगा हालात को मगर फिर भी ऐसा लगता है कि जितनी जरूरत है काम करने की उतना इसमें नहीं हो सकेगा ।

श्रीमती जयाबेन शाह : क्या बात ऐसी है जो नहीं हो कसती ? आपने जो जो प्वाइंट रक्खे हैं वे जनरल बातें हैं, वह कोई ऐसी नहीं

हैं कि इस बिल में आतीं । तो ऐसी कौन सी और बातें हैं जिनकी वजह से यह बिल अच्छा नहीं रहेगा ?

श्री कसेवा : बिल तो अच्छा ही है । लेकिन इससे और आगे जाने की गुंजाइश हमारे दिमाग में थी । मगर वह हालात और मजबुरियां कुछ ऐसी हैं जिन पर कि हमारा और आपका कंट्रोल नहीं है । जैसे मैंने कहा कि इसमें फिलास्फी आफ एजूकेशन नहीं है। जब तक कि बुनियाद पर ध्यान देकर बिल्कुल अपना माईडं क्लिअर न कर लें कि हम अल्टीमेटली क्या बनाना चाहते हैं तब तक इसके अन्दर कहीं न कहीं कुछ न कुछ वीकनेस दिखाई पड़ती रहेगी ।

श्रीमती जयाबेन शाह : वह फंडामेंटल्स के बारे में तो एजूकेशन कमिशन सोचेगा । यह अलग चीज है, लेकिन जितना इसमें इन्टैन्शन है उसके बारे में आपकी क्या राय है ? यह जो आपने कहा वह तो अलग बात है ।

श्री कसेवा : हां, वैसे तो बिल अच्छा है । आगे बढ़ाता है और जो संशोधन इससे हमारी समझ में आये वह हमने आपके सामने रखे हैं ।

श्री देवी सिंह: पेरेन्ट्स की दृष्टि से सरकारी स्कूलों और प्राईवेट स्कूलों में क्या अन्तर आप समझते हैं, कि किनका रिजल्ट अच्छा चल रहा है ?

श्री कसेवा : बात यह है कि रिजल्ट और पढ़ाई का जहां तक ताल्लुक है हमारा ख्याल है कि प्राईवेट इंस्टिट्यूशंज का काफी अच्छा काम रहा है गवर्नमेंट स्कूल्स के मुकाबिले में । मैनेजमेंट की बात जहां आ जाती है वहां कुछ ऐसा लगता है कि गवर्नमेंट स्कूल्स के मुकाबिले में प्राईवेट स्कूल उतने अच्छे नहीं हैं ।

श्री देवी सिंह : प्राईवेट स्कूलों का मैनेजमेंट अच्छा नहीं है तो पढ़ाई अच्छी कैसे हो सकती है ?

श्री कसेवा : इसके कई रीजन्स हो सकते हैं । हम लोग आम तौर पर तो रिजल्ट्स से जज करते हैं । मैनेजमेंट्स भी पढ़ाई का जहां तक ताल्लुक है अच्छे लेकचरर्स रखते हैं जो पढ़ाते अच्छा हैं । लेकिन और बातों में शिकायतें आती हैं । कहीं कुछ फेवरिटिज्म वगैरह की शिकायत आ जाती है । इस तरह की बातें चलती हैं । मगर पढ़ाई में तो अच्छा रिजल्ट होता ही है ।

Shri Diwan Chand Sharma: You were talking about Government schools, as well as private and aided schools. Do you know that in Delhi, there are a large number of coaching academies whose number is perhaps as large as the number of Government, private and other aided schools? May I know if your association has done anything to discourage students from attending these coaching academies which are definitely bringing down the standard of education in this country?

Shri Ganga Lal Casewa: By coaching academies, you mean the private institutions which are a sort of teaching shops?

Shri Diwan Chand Sharma: Yes; I did not want to use that term.

Shri Ganga Lal Casewa: Our approach is the same which was reflected in the earlier part of the discussion.

Shri Diwan Chand Sharma: What have you done?

Shri Ganga Lal Casewa: We do not feel that they have to be discouraged.

Shri Diwan Chand Sharma: I understand your noble intention and your good approach. But may I

know—you have been the residents of this city for the last so many years—what you have done so far to discourage the students from going to those institutions, which are called teaching shops?

Shri Ganga Lal Casewa: Most respectfully, let me submit that we do not agree with the need to discourage them.

Shri Diwan Chand Sharma: What have you done?

Shri Ganga Lal Casewa: I said we do not agree; so, we have done nothing. I do not agree that they should be discouraged.

Shri Diwan Chand Sharma: You want that government schools and the private schools and the aided schools and also the coaching academies should go on. Then, how are you going to have the philosophy of education to which you referred in the opening part of your speech? What kind of philosophy are you going to have when you want the teaching shops to continue?

Shri Ganga Lal Casewa: I feel that these teaching shops still fulfil a felt need of the people, because the Government and the municipal resources are not adequate to meet the needs of the people. They have to send their children to whatever places are available, and it will be, I think not a step in the right direction if those teaching shops, as they are called, are exterminated.

Shri Diwan Chand Sharma: Do you know that they give bogus degrees and certificates?

Shri Ganga Lal Casewa: These are the ills which you refer to. I do not think that they fall within the purview of an association like ours.

Shri Diwan Chand Sharma: You talked about aid being related to performance. Do you want that the aid should be given only by the directorate or you would like a committee of the Central Government ministry to distribute this aid?

Shri Ganga Lal Casewa: We have no particular preferences; we want aid should be judiciously given.

Shri Diwan Chand Sharma: You mean it is not given judiciously now?

Shri Ganga Lal Casewa: I do not say that.

Shri Diwan Chand Sharma: Has any case come to your notice where the aid has not been given in a judicious way?

Shri Ganga Lal Caswa: I would not say that.

Shri Diwan Chand Sharma: Why are you non-committal in everything?

Shri Ganga Lal Casewa: There have been instances where aid has been injudiciously continued; I am not able to say that it has been injudiciously given in the first instance.

Shri S. N. Chaturvedi: You say between Government schools and private schools, the performance of private schools is better. But there are a lot of complaints about the private aided schools. How do you explain this paradox?

Shri Ganga Lal Casewa: There are some private schools which are outstandingly good.

Shri S. N. Chaturvedi: I am talking as a whole. It has been claimed that they definitely spend less and their performance is better.

Shri Ganga Lal Casewa: I have not gone into the figures of expenditure of either side. Generally my reaction is the performance of private schools is better.

Shri S. N. Chaturvedi: Would you send your children to private school or Government school?

Shri Ganga Lal Casewa: One of my children is reading in a private school and another in a government school.

Shri Jairamdas Daulatram: I feel it is very desirable that there should be a broad-based active association of parents motivated only by the academic interest of the boys. When was your institution started? What is the membership? What is the fee, if any?

Shri Ganga Lal Casewa: Our association was started in 1957. The membership is about 400. We do not charge any fees.

Shri Jairamdas Daulatram: How many meetings do you hold?

Shri Ganga Lal Casewa: Annual meetings are held once a year. But there is a regular managing committee—a group of people who are actively interested—who meet very frequently.

Shri Jairamdas Daulatram: How many meetings of the managing committee were held last year?

Shri Ganga Lal Casewa: Not less than 10 or 12.

Shri Jairamdas Daulatram: What is the attendance at these meetings?

Shri Ganga Lal Casewa: Attendance is perhaps not very high, but not poor either. I do not feel discouraged.

Shri Jairamdas Daulatram: Are any steps contempleted to strengthen your association so that its opinions and activities can have some impact on education in Delhi?

Shri Ganga Lal Casewa: We were contemplating to develop a Parents' Cooperative Society which would manage some schools, otherwise, we have not gone in for large-scale membership, because our work is limited. Whenever we have any problems in certain areas, we discuss them. If we have any common problem like admissions or text-books, we meet and discuss. This enlargement or broad-basing of the parents' association would depend on the assistance or work with which we may be charged in the total educational system.

Shri Jairamdas Daulatram: The Bill has got a very important provision relating to advisory committee. Can you give any detailed opinion with regard to the composition and functions of this advisory committee?

Shri Ganga Lal Casewa: As we have said in the memorandum, if it is possible to provide our association with one representative on the committee, it might help not only in developing the association and its contribution but also in improving the affairs of the institutions concerned. Otherwise, the constitution of this advisory committee is satisfactory.

Shri Jairamdas Daulatram: Anything with regard to its functions?

Mr. Chairman: In the beginning he has narrated all that.

Shri Jairamdas Daulatram: There is a suggestion that in Delhi there should be one central authority for dealing with education upto the higher secondary stage. What is your view?

Shri Ganga Lal Casewa: I support it; it is necessary not only for Delhi but for the whole country.

Shri Jairamdas Daulatram: Is it not a fact that if aid is given according to performance, schols which are not upto the mark will not get adequate aid from government, with the result there will be heavy deficits and the schools would have to be closed; which again means less availability of facilities for education? One has to strike a balance between the need for quality and the need for providing adequate number of seats in schools.

Mr. Chairman: He says a minimum aid should be specified.

Shri Ganga Lal Casewa: Yes; after the minimum is given, the rest of it should certainly be related to the performance. A little twisting of the arm would improve the performance of the schools.

Shri Jairamdas Daulatram: At the risk of the schools being closed?

Shri Ganga Lal Casewa: Not necessarily, because a minimum is provided.

Shri Jairamdas Daulatram: The minimum may not be sufficient to maintain the school.

Shri Ganga Lal Casewa: Then the minimum limit should be increased.

Shri Shiv Charan Gupta: Regarding the parents' teachers' association you said these associations are not effective because the parents take care of their individual children. I want to know if there is any difficulty if they take up school improvement schemes as is being done in Madras, without interfering in the administration of schools? Then will not educational standard improve?

Shri Ganga Lal Casewa: I have no idea of what is being done in Madras.

Shri Shiv Charan Gupta: Regarding the cooperative societies scheme, what sort of relationship do you envisage between teachers and the management in that scheme?

Shri Ganga Lal Casewa: The very principle of cooperation is workers are part of management. So, it would improve the relationship.

Shri Shiv Charan Gupta: Not necessarily, because the question of performance of the teachers will arise. Naturally the managing committee will have to take into account the performance of the teachers so as to build up the standard of the institution.

Shri Ganga Lal Casewa: That really is the Achilles 'heel for a parents' co-operative society, because on that point a parents' organisation will never compromise and it will insist on the most exacting and meticulous teaching standards. The rest of it, as far as service conditions are concerned, as far as security is concerned, as far as other points are concerned, it is more or less like public bodies.

श्री नवल प्रभाकर : आपने बताया है कि आपकी पेरेंटस एसोसिएशन की चार सौ सदस्य संख्या है । क्या इसमें जो सदस्य हैं वे सारी दिल्ली के हैं ।

श्री कासेवा : सारी दिल्ली से हैं । मैं शक्ति गनर से हूं । यह माडल बस्ती से आते हैं । ये चांदनी चौक से हैं । यह ग्रेटर कैलास से हैं । यह रजौरी गार्डन से हैं ।

श्री नवल प्रभाकर : एग्जामिनेशन के बाद जब एडमिनेशन का मामला आता है तो आपको कितनी कठिनाई का सामना करना पड़ता है ? 1957 से ले कर अब तक क्या कोई कठिनाई हुई है ?

श्री बिशन लाल : एडमिशन के बारे में हर साल कठिनाई का सामना करना पड़ता है । जिस समय एडमिशन होती है उस समय हमारा सारा समय इसी बात में लगता है । पिछले साल हमने डायरेक्टोरेट में एक स्कीम इंट्रोडयूस कराने की कोशिश की है कि बच्चे के घर के सब से ज्यादा नजदीक जो जो स्कूल हो उस में उसका दाखिला हो जाना चाहिये । यह स्कीम नई दिल्ली के अन्दर सफल भी रही है । पुरानी दिल्ली के बारे में ऐसा नहीं कहा जा सकता है । नई दिल्ली में सभी स्कलों के बच्चों के पास एडमिशन फार्म पहुंच गए और उन का दाखिला सुचारू रूप से हो गया उन स्कूलों में जो उन के नज़दीक के स्कूल थे । हमने एक सुझाव यह भी रखा था कि एक बच्चे का भाई किसी दूसरे स्कूल में पढ़ता हो और मान लीजिये कि वह स्कूल

उसके घर के नज़दीक नहीं हैं तो दोनों भाई या बहनें जिन्हें एक साथ जाने में सहूलियत होगी और पेरेंटस को भी होगी और उनकी फीस भी आधी लग जाती है, उनको एक में ही दाखिल कर दिया जाए, दूसरे को वहां से ट्रांसफर नजदीक वाले स्कूल में कर दिया जाए ।

एक और भी डिफिकल्टी होती है । बहुत से स्कूलों में एग्जामिनेशन लेने का रिवाज है और वे जिस को चाहें पास कर देते हैं और जिस को चाहें फेल कर देते हैं । मेरे पास इस किस्म की एक नहीं सैंकड़ों कम्प्लेंट्स हर साल आती हैं । बच्चे ने पांचवीं क्लास बड़े हाई मार्क्स के साथ पास की होती है लेकिन टैस्ट में उसको फेल कर दिया गया । फेल करने के बाद अगर किसी वजह से उसका उस स्कूल में एडमिशन हो गया तो बाद के इम्तहानों में वह टाप पर रहा है । और भी इस तरह की डिफिकल्टीज़ होती हैं.....

सभापति महोदय : आप डिफिकल्टीज तो बता र हैं लेकिन इलाज आपने कोई नहीं बताया है ।

श्री बिशन लाल : तमाम स्कूलों में चौथी या पांचवीं क्लास के बाद हायर सेकेंडरी में जब एडमिशन होता है तो इम्तिहान होने के पहले एक लिस्ट बना दी जानी चाहिये और एडमिशन फार्म पेरेंटस के घर पहुंचा दिये जाने चाहिये कि उनके बच्चे का अमुक स्कूल में एडशिमन हो गया है । स्कूल बोर्ड के ऊपर लिख कर यह लगा दिया जाना चाहिये कि उनका बच्चा उस स्कूल में दाखिल हो गया है । गरीब पेरेंट्स के आज कल दो दो हफ्ते एडमिशन कराने के चक्कर में गुज़र जाते हैं । उनका बच्चा दाखिल नहीं हो पाता है । इसलिए उनको प्राईवेट स्कूल्स का सहारा लेना पडता है ।

श्री नवल प्रभाकर : क्या आपके पास इस तरह की कोई शिकायतें भी आई हैं कि प्राईवेट स्कूल कुछ दान ले कर बच्चों को भरती करते हैं ।

श्री बिशन लाल : इस किस्म की कुछ कम्प्लेन्टस हैं ।

श्री नवल प्रभाकर : मैनेजमेंट के अन्दर जो लोग हैं उनकी सिफारिशों से भी उनको लिया जाता है ?

श्री बिशन लाल : मैं इस बात को नहीं कह सकता हूं । लेकिन मेरा ख्याल है कि कुछ सीटें मैनेजमेंट्स के लिए रिजर्व हो जाएं तो कोई हर्ज़ की बात नहीं है ।

श्री नवल प्रभाकर : क्या यह भी सही है कि नीचे की क्लासिस में ज्यादा बच्चों को फेल कर दिया जाता है ताकि ऊपर की क्लासिस में उनके रिजल्टस अच्छे आयें ?

श्री कासेवा : अगर ऐसा होता है तो मैं इसको बुरा नहीं समझता हूं ।

श्री नवल प्रभाकर : जो एडेड स्कूल हैं वहां क्या यह सच है कि कुछ ऐसी किताबें भी लगा दी जाती हैं जो कि सिलेबस में नहीं होती हैं बच्चों से पैसा लेने की गर्ज़ से या ज्यादा कमिशन लेने की गर्ज़ से ?

श्री कासेवा : इस किस्म की हमारे पास कोई शिकायतें नहीं आई हैं ।

Shri S. N. Chaturvedi May I ask the witness whether there is any complaint of this nature about the Government schools also or whether his complaints are only in respect of the aided schools?

Shri Ganga Lal Casewa: I think it is also equally applicable to Government school. Admission problems are common.

Shri S. N. Chaturvedi: Do they aso take a test before admission?

Shri Ganga Lal Casewa: Government schools do not.

Shri S. N. Chaturvedi: Then what is the problem?

Shri Ganga Lal Casewa: Paucity of accommodation.

Shri S. N. Chaturvedi: The question is that somebody is given preference over others. Is that complaint only against the aided schools?

Shri Ganga Lal Casewa: The modus operandi is probably different in different cases. In Government schools a test may not be taken, and yet it may be possible to get my son admitted and his son may not be admitted.

Shrimati Devaki Gopidas: In the event of a school management being unable to run the school and the Government or the Corporation takes it over, you have not mentioned anything about paying compensation to them.

Shri Ganga Lal Casewa: We have not mentioned giving compensation, because we felt that really it was the public which deserves to be compensated for so many concessions already enjoyed by the institution.

Shrimati Devaki Gopidas: If the school is managed by a Hindu organisation and there are students who are Muslims and Christians, if those students are also there, how do you propose to have religious instruction imparted to them?

Shri Ganga Lal Casewa: Our concept of religion is as wide as the ocean and Hinduism particularly, I consider, is a liberal religion. So the question you have posed would probably not arise; there would not be any difficulty.

Shri K. Damodaran: What is your opinion about schoolchildren taking part in politics?

Shri Ganga Lal Casewa: They should be prevented and locked up.

Shri D. Damodaran: What action would your association suggest?

Shri Ganga Lal Casewa: Our association is aware of the problem and in various discussion and letters we have emphasised it, and in a number of public statements we have pointed out this that students should never be allowed participate in politics.

Shri Rama Chandra Mallick: There are four hundred members in your association, I find. I want to know how many members are there belonging to the scheduled castes and scheduled classes.

Mr. Chairman: Are there parents in your association belonging to the backward classes?

Shri Ganga Lal Casewa: Yes, there are.

Shri Rama Chandra Mallick: Are there any difficulties or any complaints made or brought to the notice of your association by the students, of the parents or guadians, belonging to the scheduled castes and scheduled tribes in regard to their education in schools or any difficulties in the hostels, if so, what are they?

Shri Ganga Lal Casewa: We have not had any complaints specifically as from members of the scheduled castes, but there are general problems. We have had complaints from all types of people.

Shri Rama Chandra Mallick: Are they getting their stipends and scholarships from the Government at the proper time?

Shri Ganga Lal Casewa: We have had no complaints on that point.

प्रो० मुकुट बिहारी लाल : जब हम नई दिल्ली के स्कूलों में इन्स्पेक्शन के लिये गये तो गवर्नमेंट स्कूल्स के टीचर्स ने हम से कहा कि प्राइवेट स्कूलों के एग्जामिनेशन रेजल्ट्स इसलिये अच्छे होते हैं कि वहां पर टेस्ट ले कर अच्छे अच्छे स्टूडेन्ट्स ले लिये जाते हैं जब कि आप की स्कीम के मुताबिक उस एरिया के जितने स्टूडेन्ट्स होते हैं गवर्नमेंट स्कूलों को उन को लेना पड़ता है, चाहे वह किसी भी स्टेन्डर्ड के क्यों न हों, जिसकी वजह से उन के रिजल्ट प्राइवेट स्कूलों से कभी कभी बुरे हो जाते हैं। इस से आप कहां तक एग्री करते हैं ?

श्री कासेवा : मैं समझता हूं कि इसके अन्दर कुछ सच्चाई जरूर है। लेकिन कुछ गवर्नमेंट स्कूल भी अच्छे रेजल्ट्स देते हैं। लेकिन इस में कई फेक्टर्स आते हैं। एक तो यह कि मनेजमेंट कितना इंटरेस्ट लेता है दूसरी बात यह है कि जब किसी इन्स्टिट्यूशन की रेपुटेशन अच्छी बन जाती है तो वहां अच्छे लड़के जाते हैं।

प्रो० मुकट बिहारी लाल : आप ने कहा कि गवर्नमेंट स्कूल में एरिया के जो भी लड़के जाते हैं उन को उन्हें लेना पड़ता है लेकिन यह रूल तो नई दिल्ली का एडमिनिस्ट्रेशन गवर्नमेंट स्कूलों पर लागू करता है। यह प्राइवेट स्कूलों पर लागू नहीं होता। लेकिन आप की शिकायत ज्यादातर प्राइवेट स्कूलों के सम्बन्ध में है और आप ने कहा है कि गवर्नमेंट उन स्कूलों को ले ले। अगर गवर्नमेंट प्राइवेट स्कूलों के प्रबन्ध को अपने हाथ में ले तो उस को कुछ प्रतिबन्ध लगाने पड़ेंगे ताकि गवर्नमेंट स्कूलों में आज कल जो बुराइयां हैं वह प्राइवेट इन्स्टिट्यूशन्स से दूर हो सकें।

श्री बिशन लाल : इस के लिये मेरा सुझाव यह है, और मैं डायरेक्टर आफ एजुकेशन से इस मामले में बातचीत कर चुका हूं, कि मैनेजमेंट के लिये कुछ सीट्स रिजर्व कर दी जायें और वह जिस को चाहें वह दें, जैसे कि अगर 100 सीटें हैं तो उन में से दस, पन्द्रह परसेन्ट सीटें मैनेजमेंट के लिये रिजर्व कर दी जायें। बाकी सीट्स के लिये जो गवर्नमेंट स्कूलों के रूल्स हैं वही लागू किये जायें। दूसरी बात आप ने यह कही कि प्राइवेट स्कूलों का रिजल्ट इसलिये अच्छा होता है कि वह टस्ट लेते हैं। इसके अलावा भी एक और कारण है कि स्कूल टाइम के अलावा भी वे बच्चों को अपना रिजल्ट ठीक करने के लिये शिक्षा देते हैं।

प्रो० मुकुट बिहारी लाल : जो कुछ आप ने कहा उस के कारण हो सकते हैं। लेकिन गवर्नमेंट पहले कारण को अपना सकती है लेकिन जो दूसरा कारण है उस के ऊपर गवर्नमेंट कुछ नहीं कर सकती। गवर्नमेंट चाहे भी तो भी वह स्कूल के टीचर्स को मजबूर नहीं कर सकती कि वह स्कूल के घंटों के बाद भी लड़कों को पढ़ायें।

श्री बिशन लाल : प्राइवेट स्कूलों में एडमिशन के सम्बन्ध में इस बात का ध्यान आप रखते हैं लेकिन टीचर्स के अप्वाइंटमेन्ट्स के समय गवर्नमेंट स्कूलों में स्टेन्डर्ड का ध्यान नहीं रखा जाता। उस में बहुत काफी ढील रहती है।

Prof. Mukut Behari Lal: This is a very important question and I feel that we should be very clear about it. Do you mean to say that the Government is indifferent about the quality of the person when they appoint a teacher, and the private institutions are more careful about the quality of the person at the time of appointment of the teacher? If this is your statement then it is really a very serious matter for this Committee to consider, for Parliament to consider, and for Government to consider.

श्री बिशन लाल : मेरे कहने का तात्पर्य यह था कि गवर्नमेंट स्कूल्स में जो टीचर्स रखे जाते हैं उन को आप एक कानून के जरिये

से रखते हैं और उन में जो आवश्यक नियम होते हैं अप्वाइंटमैंट्स के सिर्फ उन का ध्यान रखा जाता है, लेकिन जो प्राइवेट स्कूल काफी पुराने हो गये हैं, जैसे कि रामजस सोसायटी के हैं, उन में काम करने वाले टीचर्स काफी पुराने हो जाते हैं और उनका एक्स्पीरिएंस काफी हो जाता है । नये स्कूल कोई खुलेंगे तो उन में नये टीचर्स आयेंगे । जो स्कूल दस या पन्द्रह साल पुराने हैं उन में पढ़ाई का तरीका एक्स्पोरिएंस के आधार पर होता है और वहां ज्यादा अच्छी एजुकेशन मिल सकती है ।

Prof. Mukut Behari Lal: Is it or is it not a fact that at the time of appointment private institutions are moved by the consideration of caste and community because somehow those institutions are associated with the name of a particular caste or community?

Shri Ganga Lal Casewa: I would say, even if they are moved by that, we would not object to it.

Shri Santokh Singh: Is it a fact that during the last one or two years the general standard of education and health in aided schools has gone down?

Shri Ganga Lal Casewa: Yes, we agree with this assumption, although perhaps we would not be able to say that it has gone down in all institutions equally or very much. However, there is an impression that the standards have lowered.

Shri Santokh Singh: Apart from the fact that there are no proper laboratories in the various schools as a result of which science education goes down, and if there are no playgrounds standard of health will go down, then there is discontentment and the second shift is the cause of deterioration in schools, apart from these what are the other factors that are bringing down the standard of education and health?

Shri Ganga Lal Casewa: I suppose, apart from what you have said, I could only add that the general economic distress which the common man is feeling is responsible for so many things in different ways. The teacher is so much preoccupied with his own problems; his salaries are so poor; he does not know what to do and probably he looks for a tuition and devote as much time to it as he could. Then, the pressure of the number of students is so much.

Shri Santokh Singh: Is this health problem there because there are no play-grounds and because of the general atmosphere in schools which have no finances at their back? In one school in New Delhi I found that the general environment was such that it was almost chocking for us to stay there even for one or two hours and I wonder about the health of students who have to stay there for longer periods, specially the second shift students. What steps do you propose to take to ameliorate the conditions in those schools?

Shri Ganga Lal Casewa: Playgrounds are important; open air is necessary. Medical facilities are essential. But all these things cannot be made available to the people and they have to do their best with whatever is available to them. Even these schools to which you referred are serving some purpose in that area because without them the boys there would not be able to get any education at all.

Shri Santokh Singh: Regarding relations between the management and the staff, if the relations are not good, naturally, they have an effect upon the career of the students. How are the relations in these aided schools generally?

Shri Ganga Lal Casewa: Our general impression is that they are not cordial. One is always out to exploit the other and there is need to make considerable improvement in this sphere.

Shri Santokh Singh: One of the teachers remarked that society is very, very cruel to teachers as far as pay, behaviour and other things are concerned. Is it a fact?

Shri Ganga Lal Casewa: I would not say that it is a universal rule, but there are instances where one is aggrieved, probably justifiably. Sometimes it is the teacher, sometimes it is the management.

Shri P. C. Mitra: You have suggested that parents' associations should be represented in managing committees. Do you mean by that that the parents of boys in a particular school should be represented in the managing committee or is it that only the representatives of parents' association will be represented on those committees?

Shri Ganga Lal Casewa: It is for you to consider which organisation should be represented, but I feel that a central organisation is better because then it has a better perspective and a wider canvas before it when it tackles a particular local problem of an institution. There is an additional factor also. If you nominate an individual parents, unrelated to and unsupported by the central organisation, on the managing body he may just lose his identity and may have all the while paramount in his mind the feeling that he should protect the interest of his boy so that he may not say anything against the management at all. So, from the point of view of toning up the general atmosphere in all the institutions, it is much better that a central organisation is represented and it is for the organisation to choose the right man. If there is a strong, stubborn and public-spirited person among the members, he may be chosen; otherwise, an outsider may also be considered equally good.

Shri P. C. Mitra: In aided schools in New Delhi parents are represented on the managing committees. Are they not representing properly students' welfare?

Shri Ganga Lal Casewa: I would not cast any reflection on their performance, but I would say that they are incapacitated from acting fully for the simple reason that they represent an individual and do not have the backing of an organisation behind them.

Shri P. C. Mitra: Every school has got a parents' association. What is the harm if they send a representative?

Shri Ganga Lal Casewa: What you have in mind is not a parents' organisation but the parents-teachers' organisation, about which you have referred already.

Shri Deokinandan Narayan: You have a parents' association which is the Delhi States Parents' Association. Besides it, there are other parents' associations in Delhi. Have you tried to amalgamate all these parents' associations? What have you done up to now to bring all of them together?

Shri Ganga Lal Casewa: We have not felt the need for it and anyway we have been ploughing a lonely furrow. We do not think that the objective that we have before us will be shared by all the associations; so, we do not feel the need for it. However, we have not done anything about it.

Shri Deokinandan Narayan: On the 10th of last month we had been to some schools and we found that some schools are held in huts and tents; there are no buildings or anything of that kind. How do those schools work in those huts and tents during the rainy season and what your association has done up to now to see that those tents are removed and proper buildings are constructed?

Shri Ganga Lal Casewa: We had made representations to the authorities from time to time on that subject.

Shri Deokinandan Narayan: With what result?

Shri Ganga Lal Casewa: I would not be able to tell pou the results; but in some cases buildings have been constructed.

Shri Deokinandan Narayan: But do you not think that students studying in those schools suffer from so many things—hot sun, rain and so many other difficulties?

Shri Ganga Lal Casewa: Suffering is the lot of common mankind and it is only a question of degrees.

Shri Deokinandan Narayan: Your association might be receiving complaints now and then. I would like to know whether you receive complaints from parents against teachers, from teachers against the management or about the discipline of the students from their parents. What sorts of complaints do you receive? Have you received complaints from teachers against the management? What did you do in those cases?

Shri Ganga Lal Casewa: We have tried to exercise some salutary influence in such cases as were brought to our notice not with any tangible results.

Shri Deokinandan Narayan: Would you elaborate upon your idea of having co-operative societies for conducting schools? There are co-operative societies in Maharashtra which conduct schools at some places. On what basis you want co-operative societies to be established? Do you want every parent to be required to be a member of that society or do you want them to be formed as they are formed elsewhere?

Shri Ganga Lal Casewa: This is rather a complicated question of organisation which would raise several issues. I feel all parents should be represented but there should also be a continuity in management so that certain groups should be represented more or less for a length of time.

Shri Deokinandan Narayan: About appointments, you stated that better teachers are appointed by aided schools. That is not our experience. When we visited the schools in Delhi or elsewhere, we did not have that experience. You referred to the Ramjas Society. That might be doing justice to their teachers. But on the whole, the Government teachers are better paid. They have got better security and they have got so many other facilities. On the other hand, the aided school teachers are not paid properly and all that. How do you say that the aided schools have got better teachers?

Shri Ganga Lal Casewa: I suppose your question answers itself. This is something which has to be examined.

Shri Deokinandan Narayan: I want it to know from you. We have in Delhi as well as elsewhere found that the Government school teachers are better paid and that they have got better security and so many other facilities. Do you deny all this? The aided school teachers suffer from so many difficulties from the management. They have to serve to the whims and fancies of the management. They do not get their pay properly. How do you say that the aided school teachers are better off?

Shri Ganga Lal Casewa: There must be something wrong with the assumptions. That is all I can say. But this is a fact.

Shri Deokinandan Narayan: It is not a question of assumption.

Mr. Chairman: Let us not enter into arguments.

श्रीमती अनीस किदवई : जिन स्कूलों के पास कोई जमीन नहीं है, बिल्डिंग नहीं है, कोई और सहूलियत नहीं है, क्या एसे स्कूलों

को गवर्नमेंट ले ले या वें वहां से हट जायें, बच्चों के लिए क्या ठीक रहेगा ?

श्री कासेवा : मैं ने पहले भी इस बारे में अपने विचार आप के सामने रखे हैं । अगर कोई मैनेजमेंट पैसा नहीं लगा सकता है, प्रबन्ध नहीं कर सकता है, तो सरकार को उस स्कूल को ले लेना चाहिए । अगर उस एरिया के बच्चों को ज्यादा सहूलियत मिल सकती है, तो सरकार को उस स्कूल को ले लेना चाहिए । लेकिन अगर सरकार के वह स्कूल ले लेने से वह स्कूल दूर चला जाये और बच्चों को कोई पढ़ाई न मिले, तो फिर उस को उसी हालत में रहने दिया जाये ।

Mr. Chairman: Thank you very much.

Shri Ganga Lal Casewa: Thank you.

(The witnesses then withdrew)

III. Government School Teachers' Association (Regd.) Laxmibai Nagar, New Delhi

1. Shri D. D. Uniyal.
2. Shri S. N. Bhanot.
3. Shri P. D. Sachdev.
4. Shri J. D. Gupta.

Mr. Chairman: I may read out Direction 58 for your information:

"Where witnesses appear before a Committee to give evidence, the Chairman shall make it clear to the witnesses that their evidence shall be treated as public and is liable to be published, unless they specifically desire that all or any part of the evidence tendered by them is to be treated as confidential. It shall, however, be explained to the witnesses that even though they might desire their evidence to be treated as confidential such evidence is liable to be made available to the members of Parliament."

We have received your Memorandum. If you want to say anything in addition to that, you may do so. Then the Members will ask questions and you may reply to them.

Mr. Bhanot, your Association is composed of Government School Teachers.

Shri S. N. Bhanot: I am its General Secretary.

Mr. Chairman: As a spokesman of the Government School Teachers, a great responsibility rests on you. Your evidence should not be based merely on hearsay. Whatever you say has got to be substantiated. So, you should be careful in giving evidence.

Shri S. N. Bhanot: I want to put the case of the Government school teachers in relation to this proposed Bill. Neither the benefits of Government servants nor the benefits of private teachers are being enjoyed by them. They are having the worst of both sides. I may give you a few points in that connection for your consideration.

The private school teachers retire at the age of 60 whereas we, being Government teachers, are required to retire at the age of 58. Now, as to whether this Bill will apply to us or to the private school teachers also is not so clear to us. Being Government school teachers, we are governed by the Government servants' conduct rules.

Then, private school teachers can stand up for any election but we being Government school teachers cannot indulge in such activities.

Shri M. C. Chagla: You must realise that this has nothing to do with the Bill. These are matters which are

not related to this Bill. We are not dealing with the conduct of Government servants in this Bill.

Shri S. N. Bhanot: This is the Secondary Education Bill. So, it also applies to the secondary school teachers and they are not being treated fairly. The private school teachers get permission to appear in the examinations after one year of service. But in Government schools, we do not get permission unless and until we are permanent employees and one may be permanent even after 14 years of service.

An Hon. Member: 14 years of service?

Shri S. N. Bhanot: Yes. I have put in 14 years of service and I am still not permanent. I can substantiate so many other cases.

Shri S. N. Chaturvedi: You think you are worse off as compared to private aided school teachers?

Shri S. N. Bhanot: You can form your own opinion.

I have given you some of the benefits which private school teachers enjoy. Let me give you now the benefits which Government servants other than Government school teachers enjoy. They have got Whitlay Councils. We have got a proposed Council in the Delhi Education Code in which we have got five members as officials and four members as teachers. It has not yet come into being.

The government servants other than teachers have got Whitley Councils, but we do not have any such thing.

Shri A. E. T. Barrow: Will you repeat the last point?

Shri S. N. Bhanot: We should get the same facilities which are given to other secondary school teachers. Also we are government servants and naturally we should get the benefits which are given to other government servants. We are not having any of these things.

Prof. Mukut Behari Lal: If, after 14 years of service, he has not been made permanent, it is a serious thing. Is it in respect of any particular individual or it is a general rule? If it is a general rule, then it is a very serious problem.

Shri S. N. Bhanot: If you want, I can give other examples also. Service entries are not being made even after eight years. I have got 12 to 13 years' arrears.

Shrimati Jayaben Shah: Is it a solitary case?

Shri S. N. Bhanot: I can give other examples also. I took up some cases with the Department being the General Secretary. Here the General Secretaries go on changing, but the cases remain as they were.

Shrimati Jayaben Shah: If you are not confirmed, you do not get increments and other benefits?

Shri S. N. Bhanot: I have not so far got my arrears for the last 13 years.

Shri Deokinandan Narayan: What sort of arrears?

Shri S. N. Bhanot: My increment fell due in 1953 and I have yet to get its arrear.

Shri Deokinandan Narayan: Are there many such cases?

Shri S. N. Bhanot: Yes.

Mr. Chairman: The Minister in charge is here. He will look into these. You may go to the next point.

Shri S. N. Chaturvedi: Have you received any order debarring you from getting further increments?

Shri S. N. Bhanot: I have not received anything. They cannot debar me. No charge sheet was given to me. My work has been quite satisfactory. I have even got a letter of appreciation.

Shri S. N. Chaturvedi: There has been no order debarring you from getting further increments nor is any departmental proceedings pending against you?

Shri S. N. Bhanot: Nothing of that sort.

Shri M. C. Chagla: Have you made any representation to the Government at any time?

Shri S. N. Bhanot: I referred my case to the Assistant Director (Welfare) in 1958 and then I went on representing. I had even personal interviews, but nothing has been done as yet.

Shri S. N. Chaturvedi: You said, you have not been confirmed.

Shri S. N. Bhanot: I got my quasi-permanency in 1956.

Prof. Mukut Behari Lal: The Education Minister should look into this.

Shri M. C. Chagla: I am not aware of this.

Mr. Chairman: You may go to the next point.

Shri S. N. Bhanot: I would like to bring to your notice that there should be some Wage Board just on the lines of the recommendation of the Burnham Committee of England. In England there is a Wage Board, which was created in 1944 under an Act of Parliament. We should have a statutory body like that to look into the cases of pay, etc. This was recommended by Dr. V. K. R. V. Rao (as mentioned in the papers supplied to the participants in the National Seminar, 1965). I happened to represent my Union there. So there should be a Wage Board, as created in England under Section 89 of the Education Act of 1944. In Maharashtra this was created and this fact was mentioned by Shri J. P. Naik in the National Seminar; (convened by the Education Commission) he is also the Member-Secretary of the Education Commission even.

I would also like to say that you should include something in this Bill regarding recognition of the Union. Our Union has been in existence since 1954 and elections are being held under the supervision of the Accounts Officer of the Directorate of Education. But even after ten years, we have not been able to get the recognition though we got the grants.

Mr. Chairman: What is the total membership of your Association?

Shri S. N. Bhanot: At present it is something like 4,000 out of the total strength of about 10,000 teachers.

Mr. Chairman: You have got your Memorandum of Association?

Shri S. N. Bhanot: Yes.

Mr. Chairman: Can you give us a copy of that?

Shri S. N. Bhanot: We have already supplied it.

Mr. Chairman: What is the fee that you charge?

Shri S. N. Bhanot: 8 annas annually. We are poor teachers.

Mr. Chairman: You may go to the next point.

Shri S. N. Bhanot: I would like to say something about security of service. But before I do that, I want to bring to your notice that we have not got even the security of life. There was a case in Shahdara—a teacher was murdered in broad day-light in a (B. R. Govt. Hr. Secdy.) school there. I gave a memorandum to the

hon. Home Minister and we also saw him personally in his office, but nothing has been done till now.

Shri A. E. T. Barrow: Was he murdered in the school?

Shri S. N. Bhanot: While on duty (on his way home).

Mr. Chairman: What, according to you, should be done?

Shri S. N. Bhanot: It is up to you to suggest as to what should be done for security of life.

Shri Deokinandan Narayan: How many teachers have been murdered during the last ten years?

Shri A. E. T. Barrow: May I observe here that teachers are spiritually murdered; that does not matter!

Shri S. N. Bhanot: I can give other instances also.

Shrimati Jayaben Shah: ....of murder?

Shri S. N. Bhanot: Not of murder. There have been instances when teachers have been knocked down in the school premises. I can give hundreds of such instances.

Mr. Chairman: We have noted this point.

Shri S. N. Chaturvedi: Do you say that the life of the teachers is more insecure than that of general public?

Shri S. N. Bhanot: Yes; because securing of their jobs is linked with examination. The teachers have to correct answer books. The students want to pass by fair means or foul so that they get jobs and become earning hands.

Shri S. N. Chaturvedi: Did this murder, which you referred now, take place during examination time?

Shri S. N. Bhanot: It was linked with that.

Mr. Chairman: Do you suspect that the ill-treatment of the teachers is mostly due to students or due to their parents?

Shri S. N. Bhanot: This is a socio-economic question. Because of the educational system, because of the examination system, and because of the sociological conditions, these things are happening. I cannot give you a single factor for this.

Mr. Chairman: Now what have you got to say about security of service?

Shri S. N. Bhanot: Most of the posts created in the field of education are on *ad hoc* basis. When the posts themselves are on *ad hoc* basis, how can I say that the jobs are secure?

Mr. Chairman: What do you mean by saying that they are on *ad hoc* basis?

Shri S. N. Bhanot: There are permanent posts and against those people are appointed permanently. They also make budget provision for that. Then, posts are created on purely *ad hoc* basis, temporary posts. They go on for years. If one is appointed against an *ad hoc* temporary vacancy for years, it affects his seniority also. Suppose I am working in an *ad hoc* post, even though I am there for a number of years, a person with lesser number of years of service but working in a permanent post gets seniority over me merely because I am working in an *ad hoc* post.

Prof. Mukut Behari Lal: Are the temporary posts not made permanent after a number of years?

Shri S. N. Bhanot: I would like to give you the history of that. Because of the rapid expansion of education in Delhi, a number of posts of teachers were created. They could not make such posts permanent. Therefore,

they are continuing as an *ad hoc* temporary posts from year to year and the people holding such posts are also treated as temporary employees.

Then, Government gives 95 per cent grant to private schools. But there are certain schools where the medium of teaching is English. Those schools give preference to English. We would suggest that Government money should not be given to such schools as they do not give preference to the national language.

Shri M. C. Chagla: What is your grievance in that respect?

Shri S. N. Bhanot: You are giving 95 per cent grant to them.

Shri M. C. Chagla: But how are you affected?

Shri S. N. Bhanot: Government should not give money to such institutions which have medium of instruction in English. They should give grants only to such institutions which have medium of instruction in Hindi and adhere to rules.

Mr. Chairman: In other words, you want the medium of instruction to be Hindi.

Shri S. N. Bhanot: Of course, as also the regional languages.

Shri A. E. T. Barrow: What has it to do with the Bill?

Shri S. N. Bhanot: It has something to do with the Bill. Because you give 95 per cent grant to these schools, money thus saved should be spent on the welfare of teachers.

Shri M. C. Chagla: You are not called to comment on private schools; you are called to comment on the Bill.

Shri S. N. Bhanot: I am referring to the Bill.

Mr. Chairman: According to you those schools which give education through a medium other than Hindi should not be given grant to the extent of 95 per cent.

Shri S. N. Bhanot: Yes.

Shrimati Jayaben Shah: They should be given less grants or they should not be given anything at all?

Shri S. N. Bhanot: If they do not teach through Hindi, they should not be given anything. They should be self-sufficient to propagate their own views.

Coming to promotion, we do not know the rules which govern promotion. I would suggest that the promotion rules should be made known to teachers so that there will be no corruption.

Mr. Chairman: Your suggestion relates to Government, Corporation and aided schools?

Shri S. N. Bhanot: I am chiefly concerned with Government schools. Nobody, except perhaps the promoting authority, knows the promotion rules now.

Shrimati Jayaben Shah: There will be some procedure and rules governing promotion. It is unbelievable that there are no such rules.

Shri S. N. Bhanot: In spite of my best efforts, and those of my predecessor in office, we have not been able to get the rules. Sometimes they are based on merit, sometimes on seniority and sometimes on certain other considerations which I may not mention here.

Shri S. N. Chaturvedi: May I know whether your reference to promotion is ony in repect of *ad hoc* posts or permanent posts also?

Shri S. N. Bhanot: Both.

Then, if the Bill, when it becomes an Act, is to be administered efficiently and impartially, the posts of Director of Education and Secretary, Education Department in the Delhi Administration, should not be given to one official, however eminent, popular and distinguished he might be.

Shri A. E. T. Barrow: Could you clarify that?

Shri S. N. Bhanot: Just as there is separation of the judiciary from the executive, the Education Secretary and the Director of Education should be two separate officials, not one and the same person.

Shri S. N. Chaturvedi: How do you hope to benefit by that?

Shri S. N. Bhanot: We can appeal against the decision of the Director of Education to the Education Secretary. But now in a democratic republic we are having dictatorship under the present regime in the field of education.

श्री उनियाल : जहां तक इस बिल का ताल्लुक है, मैं इस का स्वागत करता हूं । इस बात को मैं इसलिये बड़ी संजीदगी से मानता हूं कि यह बिल बहुत पहले आना चाहिये था वह इस समय आया है । इसका हम पूर्ण रूप से स्वागत इसलिये करते हैं कि कम से कम राजकीय विद्यालयों में और प्राइवेट विद्यालयों में काम करने वाले जो अध्यापक हैं उन की स्थिति को कुछ सुन्दर करने के लिये यह पहला कदम है ।

जहां तक बिल की धाराओं का सम्बन्ध है मैं ऐसोसिएशन की कुछ बातें सामने रखना चाहूंगा । हमारे देश ने समाजवादी व्यवस्था की ओर रुझान किया है और हम रे प्रयत्न उस ओर हैं इसलिये क्लाज नं० 3 का (एफ) भाग हमारे संविधान की तीसरी धारा के विरुद्ध है उस में हम देखते हैं कि जो अल्पसंख्यक जाति के लोग हैं उन्हें कुछ सुविधायें मिली हैं । वे अपनी संस्कृति और शिक्षा को प्रोत्साहन देने के लिये इस प्रकार के स्कूल्स खोल सकते हैं । प्रश्न उठता है कि अगर आप इस प्रकार की जातियों को इस प्रकार की छूट दे सकते हैं तो हमारे बिल का क्लाज 3 (1)(एफ) उस पर कारगर सिद्ध नहीं होगा । केवल बहुसंख्यक लोगों पर यह धारा लागू होती है, माइनारिटीज़ पर लागू नहीं होती है । ऐसोसिएशन यह समझता है कि जब तक संविधान की इस धारा का संशोधन नहीं किया जाता तब तक या तो इस को स्थगित कर दिया जाये, या फिर माइनारिटीज़ को जो इस प्रकार की सुविधा मिली हुई है उन को भी इस से वंचित कर दिया जाये ।

Mr. Chairman: This point has already been covered. Whatever your friend has suggested already need not be repeated by you. You may stress only the important points.

Prof. Mukut Behari Lal: Let us see if he has any new viewpoint to put forward.

श्री उनियाल : अध्यक्ष महोदय और सम्मानित सदस्यगण, मैं आप लोगों का ध्यान इस ओर भी खींचना चाहूंगा कि जो वरिष्ठता सूची है, सीनियारिटी लिस्ट, वह अभी तक बनी नहीं है । मैं एक इंसटांस आप की सेवा में रखता हूं जो कि सीनियारिटी के सम्बन्ध में बरते जाने वाले जो कुछ दोष हैं उनको स्पष्ट कर देगा । वह इस प्रकार है कि एक अध्यापका 1956 में अप्वाइंट होता है और दूसरा अध्यापक 1950 से काम कर रहा है । पहल अध्यापक जो कि सन् 1956 में अप्वाइंट हुआ वह एम० ए० मैथ्स है और दूसरा जो 1950 से काम कर रहा है वह इकोनामिक्स में या हिस्ट्री में एम० ए० है । अब हम देखते हैं कि 1957 में जब कि और अधिक हायर सेकेंड्री स्कूल्स कुछ खुले तो 1956 वाले को तो क्रमशः दो प्रोमोशन मिल गए हैं और

जो 1950 से काम कर रहा है वह अध्यापक सीनियारिटी के लाभ से वंचित रह गया है। इसका नतीजा यह है कि जो सन् 1952 से काम करने वाले हैं वह पी० जी० टी० नहीं हो पाये हैं जबकि 1957 में प्रोमोशन पाने वाले प्रिंसिपल हो गये हैं। इस प्रकार थोड़ी सी गलती के कारण अध्यापकों को काफी नुकसान हो जाता है। प्रोमोशंस के केसेज में मुझे यही कहना है कि उसके लिए नियम बनाये जाने चाहिएं।

दूसरा सुझाव मेरा है कि जितने टीचर्स क्वालीफाइड हों उनकी एक कामन लिस्ट बन जाय और स्टेट उसको तैयार करे, वहीं से जितने भी अध्यापकों का अप्वाइंटमेंट होना है वह लिये जायें चाहे वह गवर्नमेंट स्कूल में अप्वाइंट हों, चाहे प्राइवेट स्कूलों में। इस से बहुत सारा जो फेवरिटिज्म होता है, वह समाप्त हो सकता है। जैसे एम्प्लायमेंट एक्सचेंज में होता है वैसे ही उनका नाम एम्प्लायमेंट एक्सचेंज में या गवर्नमेंट की कोई ऐसी शाखा हो वहां लिस्ट कर लिया जाय और उनकी क्वालीफिकेशन के आधार पर सर्विसेज उनको दे दी जाये। उसमें किसी प्रकार के करप्शन की गुंजाइश नहीं रहेगी।

इसके पश्चात् यह मेरी धारणा है और अधिकांश एसोशियेशंस के लोग भी इस बात को मानते हैं कि जहां तक गवर्नमेंट स्कूल और प्राइवेट स्कूल्स का सम्बन्ध है, प्राइवेट स्कूलों में इस प्रकार का बजट चलता है कि उनको दी जाने वाली 95 परसेंट ग्रान्ट 105 परसेंट तक में बदल जाती है और इस प्रकार मैनेजमेंट के फायदे में चली जाती है। इसलिए मेरा यह कहना है कि स्टेट अगर एजूकेशन को अपने ही हाथ में ले ले तो प्राइवेट स्कूलों में चलने वाली शिकायतें हमेशा के लिए दूर हो सकती हैं।

Mr. Chairman: How do you say that 95 per cent grant to private or aided institutions goes even up to 105 or 115 per cent? What are those techniques?

श्री उनियाल : इस सम्बन्ध में यह हो सकता है कि मेरी बात ज्यादा प्रामाणिक यहां पर न लगे। मेरी यह रिपोर्ट्स ऐसी हैं जो निजी स्कूलों में काम करने वाले प्रिंसिपल्स के कहने पर हैं। उनके कथन या स्टेटमेंट को मुझे सत्य मानना पड़ता है और मेरी बात का आधार केवल वह रिपोर्ट्स हैं जो कि प्राइवेट स्कूलों में काम करने वाले प्राध्यापक या प्रिंसिपल्स ने दिये हैं। यह कोई ऐसी बात नहीं हो सकती कि मैं कोई एग्जाम्पिल सैट कर सकूं कि यह बिलकुल ठीक ही है। पर यह बातें ऐसी हैं जिनके बारे में बहुत सारे लोगों ने मुझ से बात की है।

Shri A. E. T. Barrow: This is all hearsay? You have got no definite proof?

श्री उनियाल : यह मेरी बातचीत के आधार पर है।

मिस्टर चेयरमैन : नेक्स्ट प्वाइंट।

श्री उनियाल : अन्त में मैं यही कहना चाहता हूं कि यह जो कि हमारे मेमोरेंडम में प्वाइंट्स रखे गये हैं इनको अगर इनकारपोरेट कर दिया जाय तो यह बिल काफी सुन्दर हो सकता है और बिल का हम स्वागत करते हैं।

Shri P. D. Sachdev: May I elaborate this point in regard to the extra collection of fees and funds?

Mr. Chairman: It is not necessary. That point has already been mentioned.

श्री उनियाल : हमारे स्पोक्समैन ने हो सकता है कुछ ऐसी बातें भी कही हों जो उनकी परसनल हो सकती हैं, उनको तमाम एसोशियेशन की तरफ से नहीं लिया जा सकता स्पेशली जहां तक कि विभागीय आलोचना यानी क्रिटिसिज्म का सवाल है।

Shri P. D. Sachdev: I would like to add that there should be one advisory committee, so far as the mode of punishment, mode of promotion and all those things are concerned, for, we have seen that there have been so many out-of-turn promotions based purely on regional considerations and certain other things, which or even the feeling of which bring a shame on our profession.

Secondly, there should be separation of the posts of Director of Education and the Secretary to the Education Department. The combination of these two posts is the most undemocratic thing that has been existing in our Directorate of Education under the Delhi Administration. If I remember aright, there was a serious criticism about it in *The Statesman* of 7th October, 1965, by the staff reporter of that paper. First of all, this change had been proposed by the Delhi Administration itself, but the Director of Education had been opposed to it. The Staff reporter had written that the fact that the Delhi Administration could treat its own decision in such a casual manner shows that it had agreed to keep the two posts separate, not out of any other consideration but simply to ensure the smooth and democratic functioning of the Directorate; for, if the Director of Education takes one step, then we should have the right to appeal to the Secretary to the Education Department, who should be a different person.

Mr. Chairman: That point has been made now. You may go on to the next point.

Shri P. D. Sachdev: I would submit also that there should be no clash between the Delhi Education Code and this Secondary Education Bill. There are certain facilities which are enjoyed by the private school teachers which are being denied to the Government school teachers. Since this Bill relates to secondary education in Delhi, I would submit that there should be a thorough study of the Delhi Education Code as well. Articles 235, 236 and 237 of the Delhi Education Code prohibit Government school teachers from taking any examination while in private schools they get the permission after one year's service. This is one facility which is denied to the Government school teachers. You will recall that this point had been raised when some Members of this Committee had visited our schools. Our Assistant Director of Education who happened to be there remarked that private school teachers have confirmed after one year; then it was pointed out that this was another facility given to the private school teachers that they were confirmed after one year whereas in Government schools the teachers remained unconfirmed for years together. So there should be no clash between the two codes, the Delhi Education Code and the Secondary Education Bill.

Shri S. N. Chaturvedi: On a clarifiaction. At the moment, both the government schools and the private aided schools are governed by the education code which is current.

Shri P. D. Sachdev: Yes, Sir.

Another point is regarding the collection of fees. I should not like to mention the name, because the person concerned is not here. But there was one school the affairs of which I had to present as a birthday gift to my late Prime Minister, Shri Jawaharlal Nehru. He was kind enough to remove that person from the presidentship of the school. There was a fraud of Rs. 86,000 Of course, I had to suffer in that private institution. But I had to detail all these things in an anonymous letter. It was an express letter dated 13 Nov. 1957. I wrote a letter to our present Prime Minister, Shrimati Indira Gandhi, saying 'will you kindly bring the contents of this letter to the notice of your daddy while he is on a stroll with you or at any other time so that he could look into it and take action?

I had specifically mentioned that the head of the institution was a big gun in your Ministry'! As a result, that President was removed and I was happy that action was taken, and all those teachers who were being removed just before the summer vacation they were regularised, and the 9th, 10th and 11th standards were withdrawn. As I said, there was a fraud of Rs. 86,000. This was in the form of extra collection of fees from the boys while grant was being realised from Government. The boys were charged Rs. 26 per month, as if the school was being maintained on European lines. That is why these are what we call 'exclusive schools'. There was another article in the press also, to which Shri Bhanot could not refer, concerning the grant of the so-called 95 per cent in regard to these exclusive schools. Why should Government finance and divert funds to such schools when they charge extra fees? There were boys who were being charged Rs. 26 in the first standard, second standard and so on; all the time, they were getting grant from Government. Of course, this stopped after I addressed that letter to our Prime Minister. I got an alternative job, of course, But this was the state of affairs.

Then again, I can give another example of malpractice. For a cork borer (set of three) used in the chemistry section, the price entered was Rs. 12.50 whereas anyone who enquires in the market knows that the price is only Rs. 2 or Rs. 3.50 for a cork borer set of six (price entered Rs. 22.50). But this is how they manipulate accounts and realise that money from Government. In this way, the grants amount to not 95 per cent even beyond 100 per cent.

Shri S. N. Chaturvedi: I want to know whether the institutions which are charging fees much above the scale prescribed by the department are also receiving aid from Government.

Shri P. D. Sachdev: Yes, Sir. They were receiving grant. The Assistant Directors along with a team of supervisors visited the school. In her presence, I scratched my own signature on the register. The point is this. In the register is written the amounts of fees realised, the usual amount stipulated under the rules. But the actual amount received by the authorities is much more. And I had to sign the register which showed the amount which was not the exact amount supposed to have been received. This is the sort of thing going on. I tried to show and explain all this to her. She still remains an Assistant Director. While the amount received per student is supposed to be Rs. 2 or so, actually they take Rs. 26 or Rs. 27. No uniform rates are observed. This is how they make millions. Millions can be made in this way.

Shri Hem Barua: We have been told by several witnesses appearing before us that the examination results of the private schools are much better than those of government schools? If so, have you tried to find out the reasons for this deterioration so far as government schools are concerned?

Shri S. N. Bhanot: We get all sorts of stuff in government schools whereas in the private schools they get the cream of students. In spite of this handicap, our results are better than theirs. That shows that we are far superior to private schools.

Shri Hem Barua: But that is not the contention of those witnesses, who spoke on behalf of the parent/teacher association.

Shri S. N. Bhanot: You can have the results from the Central Board and compare them. But I may say this. We made an objective study this year in the zone II schools. Our results were better than theirs. They included even the best schools, IAF schools and certain other schools.

Shri Shiv Charan Gupta: Shri Bhanot said that on the question of promotions, in addition to rules some other considerations come into play. What are those?

Mr. Chairman: He declined to give them.

Shri S. N. Bhanot: Mr. Sachdev tried to elaborate them, regional and other considerations. I wanted to avoid that because I do not believe in regionalism.

Shri Yamuna Prasad Mandal: I think from amongst you there are many teachers who have been promoted as inspectors and education officers.

Shri S. N. Bhanot: That is my complaint, that the promotion rules are not made known to us. The result is that PGTs within 8 years are promoted zonal education advisers and they may become even deputy directors.

Shri Diwan Chand Sharma: From what you have said I gather that among the government school teachers, there are four categories: permanent, quasi-permanent, *ad hoc and* temporary. Is that so?

Shri S. N. Bhanot: A person can be temporary and *ad hoc;* a person can be permanent and *ad hoc.* He is permanent, but the post is *ad hoc.*

Shri Diwan Chand Sharma: What would you suggest to remedy this state of affairs?

Shri S. N. Bhanot: Because education is expanding and still we have to cover much ground, may we suggest to you as good planners that at least 80 per cent of the posts which are temporary or *ad hoc* now should be made permanent? I say this because there is no going back; we are expanding education and there is a lot of ground to cover.

Shri S. N. Chaturvedi: What is the percentage of *ad hoc* posts at present?

Shri S. N. Bhanot: At present, it is about 50 per cent *ad hoc* and 50 per cent permanent.

Shri Diwan Chand Sharma: How are these appointments made particularly in the Directorate? Is there any committee or is there any external body which makes these appointments?

Shri S. N. Bhanot: This is an internal affair of the Directorate, but I think that there should be a subordinate services Selection Board on the lines of Punjab, and there should be selection grades as in Himachal Pradesh, Assam and Punjab for different categories of teachers.

Shri Diwan Chand Sharma: How are teachers recruited here?

Shri S. N. Bhanot: I cannot elaborate that. They apply through the employment exchange.

Shri Diwan Chand Sharma: How do you say that conditions in private schools are much better than in Government schools?

Shri S. N. Bhanot: The conditions are not on all fours. In some respects, they are better as they get permission for appearing at examinations, while we do not unless we are permanent, and we may not be permanent even after 14 years. They can stand for elections. I have already elaborated all these points, and I do not want to repeat them.

Shri J. D. Gupta: I would like to add one thing. There are certain posts in the Directorate of Education to which direct recruitment is made, while other posts are filled by promotion. I would suggest that certain posts may be reserved for being filled up only by promotion.

Shri A. E. T. Barrow: That is not within the terms of the Bill. You are considering conditions of service.

Mr. Chairman: Thank you very much.

(The witness then withdrew)

(The Committee then adjourned.)

JOINT COMMITTEE ON THE DELHI SECONDARY EDUCATION BILL, 1964

MINUTES OF EVIDENCE GIVEN BEFORE THE COMMITTEE

Tuesday, the 8th February, 1966, *at* 14.00 *hours.*

PRESENT

Shri T. H. Sonavane—*Chairman.*

MEMBERS

Lok Sabha

2. Shri A.E.T. Barrow
3. Shri Parashottamdas Haribhai Bheel
4. Shri S. N. Chaturvedi
5. Shri Sudhansu Bhushan Das
6. Shri Gokaran Prasad
7. Shri Shiv Charan Gupta
8. Shri Hem Barua
9. Shri Krishnan Manoharan
10. Shri Rama Chandra Mallick
11. Shri Yamuna Prasad Mandal
12. Shri Mali Mariyappa
13. Shri Naval Prabhakar
14. Shri Shivram Rango Rane
15. Shri Ratan Lal
16. Shrimati Jayaben Shah
17. Shri Diwan Chand Sharma
18. Dr. (Mrs.) T. S. Soundaram Ramachandran
19. Shri Tula Ram

Rajya Sabha

20. Shri P. Abraham
21. Shrimati Anis Kidwai
22. Shri K. Damodaran
23. Shri Jairamdas Daulatram
24. Shrimati Devaki Gopidas

25. Prof. Mukut Behari Lal
26. Shri P. C. Mitra
27. Shri B. C. Nanjundaiya
28. Shri Deokinandan Narayan
29. Shri Santokh Singh
30. Shri Devi Singh
31. Kumari Shanta Visisht
62. Col. B. H. Zaidi
33. Shri M. C. Chagla

DRAFTSMAN

1. Shri K. K. Sundaram, *Joint Secretary and Draftsman, Ministry of Law.*
2. Shri A. K. Srinivasamurthy, *Deputy Draftsman, Ministry of Law.*

REPRESENTATIVES OF THE MINISTRY

1. Shri L. O. Joshi, *Joint Secretary, Ministry of Education.*
2. Shrimati L. W. Dhume, *Deputy Secretary, Ministry of Educoation.*
3. Shri B. S. Verma, *Under Secretary, Ministry of Education.*

SECRETARIAT

Shri M. C. Chawla—*Deputy Secretary.*

WITNESSES EXAMINED

I. (1) Shri B. D. Bhatt, Director of Education, Delhi.
(2) Dr. (Miss) A. Nanda, Assistant Director of Education, Delhi.
(3) Shri B. N. Chaturvedi, Zonal Officer, Education, Delhi.

II. Shri Frank Anthony. M.P.

I. (1) Shri B. D. Bhatt, Director of Education, Delhi.
(2) Dr. (Miss) A. Nanda, Assistant Director of Education, Delhi.
(3) Shri B. N. Chaturvedi, Zonal Officer, Education, Delhi.

(The witnesses were called in and they took their seats)

Mr. Chairman: I think we can start now. We have a lot of questions to be put to the witnesses. The hon. Minister will start and then whatever questions Members have in mind, they can jot them down and later on they will get a chance to put their questions.

Shri M. C. Chagla: We have had witnesses here who have said that teachers in private schools are much better off than teachers in government schools. Do you agree with that?

Shri B. D. Bhatt: No, Sir, I do not agree with that. If it were so hundreds of teachers from aided schools would not flock to government service. Every year I am recruiting about 100 to 150 teachers and a fairly large number of teachers is from aided schools.

Shri M. C. Chagla: Without going into details, will you tell the Members of the committee what are the advantages that a teacher in a government school gets which teachers in private schools do not have?

Shri B. D. Bhatt: The distinct advantages are that he has security of service because he is governed by government service conduct and service rules and that he gets his pay regularly. He has a number of channels to go up. If he is aggrieved there are constitutional provisions under which he could approach the highest authority.

Shri M. C. Chagla: What is the mode of recruitment of teachers to government schools? Certain allegations were made yesterday about the mode of recruitment.

Shri B. D. Bhatt: The present recruitment rules were introduced in 1960. Now, there are selection committees for recruitment. Gazetted officers are selected by the Union Public Service Commission or the DPC; 50 per cent through the direct method and fifty per cent through selection in the department. Selection is done by the DPC and a member of the UPSC is chairman of the DPC. Coming to the next category, i.e. the Post Graduate Teacher carrying a salary of 250-470 the selection is made, through direct recruitment of 50 per cent of vacancies by the Chief Secretary who is the chairman of the Selection Board and the Director of education is one of the members of the Board with the Development Commission of Delhi. Vacancies are reported to the employment exchanges and only such persons as are sponsored by the employment exchange or apply directly according to advertisement, are considered for selection and they are called for interview by this Board of which the Chief Secretary is the Chairman.

Shri M. C. Chagla: It would not be true to say that the recruitment is entirely a matter of your own personal whim or patronage or nepotism?

Shri B. D. Bhatt: There is no reason for this myth to grow because trained graduates (scale 170-380) is the only cadre which the Director recruits. In this case also the Administration has appointed a committee of which the Director of education is the chairman. There is an under secretary representing the administration by the committee. In the case of science teachers we call an expert. So this charge has no basis. We have got a foolproof system of recruitment and out of 100 marks allotted to the candidates, only 20 marks are kept for the *viva voce*, that is putting questions and assessing up of the physical appearance; the rest 80 per cent is allotted to their academic achievements. But it may happen a candidate has got first division with sociology and music as subjects and yet he may not suit the needs of the Department; on the contrary a second divisioner who has history and economics or such other subjects as are taught at schools may be selected. The question of any patronage does not arise.

Shri M. C. Chagla: May I take it that every selection is made through a selection committee?

Shri B. D. Bhatt: That is wholly correct. There are certain ad hoc. appointments of, for instance, science teachers. That is unavoidable because after three months of the starting of the school, their number dwindles. For that purpose, sometimes we have to go and persuade people to take up teaching jobs in science, especially women.

Shri M. C. Chagla: What is the reason for the science teachers not continuing? Not satisfied with their salaries?

Shri B. D. Bhatt: They have many openings in Research Projects, Public Undertakings, etc., they do not stick to teaching jobs.

Shri M. C. Chagla: It was mentioned here and I was shocked to hear that teachers holding temporary posts for 14 years have not been made permanent.

Shri B. D. Bhatt: I looked into that; I find there was only one case and that case has been misrepresented. It was Shri Bhanot's case. He was taken in 1952 as an assistant teacher in the scale of 68-170 and in that scale in 1956 he was made quasi-permanent. He was subsequently promoted as post graduate teacher. In Delhi before 1957-58 records were not properly maintained and that he created a great problem for us. What we do is that we send out circulars to principals in order to find out whether there were cases in which they and each individual teacher had been left out from being considered for permanency. There have been no other cases. I have only six cases of long standing in which we have not been able to make them permanent because they are under-qualified. Since they have put in sufficient number of years with us, and I owe it to them to get their qualifications relaxed. The case is under correspondence. Otherwise, our position is satisfactory.

Shri M. C. Chagla: After how many years is a teacher made permanent?

Shri B. D. Bhatt: He becomes quasi-permanent after three years. In the June of that year, if he has been appointed, in the fourth year he must be given a certificate of quasi-permanency. But, to become permanent, there are certain limitations: one is that the number of permanent posts should exist. The Ministry's orders are that 100 per cent of the posts should be made permanent and the Delhi Administration has been making about 80 per cent permanent. As soon as a school has existed for three years, the staff appointed in it becomes entitled to a certificate of quasi-permanency, but we have to wait for the posts to become permanent, and it takes some time sometimes.

Shri M. C. Chagla: How many teachers are there today and how many permanent posts are there today?

Shri B. D. Bhatt: The total number of teachers serving in the Government schools is about 6,500; out of them, a little more than 2,000 teachers were taken during the last three or four years. Out of the 6,500, and out of those who were eligible for permanency, we were able to make permanent about 1,200 teachers, and to another 1,800 we have given quasi-permanency certificates.

Shri M. C. Chagla: 1,200 are permanent?

Shri B. D. Bhatt: Let me refer to the papers and give you the exact figures.

Shri M. C. Chagla: Please give us exact figures.

Shri B. D. Bhatt: So far, 1,194 men and 794 women teachers have been made permanent. At that time, the strength was 4,728.

Shri M. C. Chagla: What is the position today?

Shri B. D. Bhatt: There will be two positions: one is the total, and the other is the number of those who are eligible and have not been made permanent. In that lot, there are 516 in all: 275 men and 241 women who would be made permanent as soon as the posts are made permanent.

Shri A. E. T. Barrow: How many are now permanent? You may then give us the number of those who are quasi-permanent.

Shri M. C. Chagla: Tell us what is the position today. I asked you how many permanent posts are there and how many teachers are there.

Shri B. D. Bhatt: I have mentioned the figures.

Mr. Chairman: He said that 1,194 men and 794 women teachers are permanent.

Shri B. D. Bhatt: I shall inform the Minister.

Mr. Chairman: You inform the Committee; not the Minister.

Shri B. D. Bhatt: The total number of teachers working in the government schools at present is 6,500.

Shri M. C. Chagla: Out of them, how many are permanent?

Shri B. D. Bhatt: Out of them, only one-third are permanent.

Shri M. C. Chagla: The remaining 4,000 are not permanent, what is the reason?

Shri B. D. Bhatt: The reason is, permanent posts come after three years of service, and so, about . . .

Shri M. C. Chagla: Out of the 4,000, how many have served for three years?

Shri B. D. Bhatt: The number that was eligible was 4,728, that is, the number which was eligible for permanency.

Shri M. C. Chagla: They have not been made permanent?

Shri B. D. Bhatt: Out of these, 2,000 have been made permanent.

Shri Jairamdas Daulatram: Before we enter upon a discussion of these figures, I would like a copy of the statement which has been prepared by him be filed, so that we can later on study it properly.

Mr. Chairman: You might ask one of your assistants to prepare a statement on this and pass it on to us.

Shri S. N. Chaturvedi: More than half the number of persons who are eligible for permanency are not permanent. Is that the position?

Shri B. D. Bhatt: Yes; but then, we have made, out of them, a large number as quasi-permanent.

Mr. Chairman: What is the meaning of quasi-permanent?

Shri B. D. Bhatt: For one reason or another, posts do not become permanent for some time. So, in order to give the teachers security, they are given a certificate of quasi-permanency. A quasi-permanent teacher is as good as a permanent teacher; he receives all the benefits of permanency.

Shri M. C. Chagla: He waits for the post to become permanent. Now, how many quasi-permanent people are there out of the 6,000?

Shri B. D. Bhatt: Out of those eligible, 1,310 have been declared quasi-permanent.

Shri M. C. Chagla: What is the balance left?

Shri B. D. Bhatt: About 2,000.

Shri M. C. Chagla: They have not served for three years yet?

Shri B. D. Bhatt: No; they have not served for three years. The figures will look all right if I give a statement.

Shri M. C. Chagla: Let us get the figures clearly; first, what is the total number of teachers?

Shrimati Jayaben Shah: Yesterday it was stated here by some of the witnesses that there are 10,000 teachers, permanent or not-permanent. But just now, Shri Bhatt says that there are only 6,000 teachers. How is it?

Mr. Chairman: Let us have the figures first.

Shri B. D. Bhatt: These are official figures.

Mr. Chairman: Do you have any other copy of it?

Shri B. D. Bhatt: I have only one copy. So far, 1,988 posts have been made permanent, out of a strength of 4,728 teachers.

Shri M. C. Chagla: What is the total number of teachers?

Shri B. D. Bhatt: 6,500. 516 teachers could not be confirmed for the following reasons . . .

Shri S. N. Chaturvedi: The total number of teachers is 6,500. The total number who are qualified for becoming permanent is 4,728, or 4,719?

Shri B. D. Bhatt: 4,728.

Shri S. N. Chaturvedi: Out of them, how many have been confirmed?

Shri B. D. Bhatt: 1,472 have been made permanent.

Shri M. C. Chagla: How many have been made quasi-permanent?

Shri B. D. Bhatt: 1,310.

Shri M. C. Chagla: That leaves a balance of . . .

Shri B. D. Bhatt: 1,946.

Shri M. C. Chagla: Out of these 1,946, are there any who have served for more than three years?

Shri B. D. Bhatt: All of them have served for more than three years.

Shri M. C. Chagla: What is the reason for not making them quasi-permanent?

Shri B. D. Bhatt: 146 drawing teachers could not be confirmed because they were under-qualified. We are in correspondence. 150 teachers could not be confirmed because the seniority of the post-graduate teachers has not been declared. We are waiting for this. Then, a certain proportion of these posts is kept as a precautionary measure in reserve. This is the position.

Shri A. E. T. Barrow: What is meant by precautionary measure here?

Shri B. D. Bhatt: Shortage of attendance is one thing; then, some posts have to be given up; private schools may close.

Shri M. C. Chagla: The next question is, have you framed any promotion rules?

Shri B. D. Bhatt: Yes, Sir. They were framed in the year 1960. They have been in operation since then. A teacher is selected for promotion on the basis of his roll of work for 4 or 5 years. All those who are eligible are considered. If there is one vacancy in the post-graduate side, five names are sent to the administration. The Chief Secretary and the committee consider the promotion.

Shri M. C. Chagla: Have the rules been published and are not secret?

Shri B. D. Bhatt: They were published as early as 1960 and we are following them.

Shri Deokinandan Narayan: Are the teachers supplied with these rules?

Shri B. D. Bhatt: The teachers are recruited every year and every teacher is not supplied with the rules.

But the Principal is supposed to know and tell them that these rules exist. The teachers know the rules.

Shri S. N. Chaturvedi: Are all the institutions supplied with these rules?

Shri B. D. Bhatt: Yes; they were supplied once in 1960 and we are now again giving them a compendium.

Shri M. C. Chagla: Do you follow these rules?

Shri B. D. Bhatt: Yes; meticulously.

Shri M. C. Chagla: Is every promotion made by the committee?

Shri B. D. Bhatt: Yes.

Shri M. C. Chagla: Do you maintain a seniority list?

Shri B. D. Bhatt: Yes; we send that list round to the institutions to invite objections at two stages—at the preliminary stage and before finalisation. We give them three months to file their objections.

Prof. Mukut Behari Lal: Is there any difficulty in supplying one copy of these promotion rules to every institution, so that any teacher who wants to see them may get them from the principal?

Shri B. D. Bhatt: There is no difficulty. We supplied it in 1960. There has been no demand so far and if there is a demand, we shall certainly meet that.

Prof. Mukut Behari Lal: Is the promotion according to seniority? If not, in what way the merit is judged?

Shri B. D. Bhatt: These are selection posts. Seniority counts, but merit predominates. We see the character roll for 4 to 5 years. This evaluation is done by the principal in the case of teachers and in the case of the principal, it is done by the Inspector of Schools and seen by the Director of Education. In the case of gazetted officers, the Chief Secretary is the appointing authority.

Prof. Mukut Behari Lal: Do you give an opportunity to those persons whose claims are ignored to make representations? How many representations have you received?

Shri B. D. Bhatt: Opportunity is given. Every person who is overlooked makes a representation.

Shri M. C. Chagla: A complaint was made that private school teachers are allowed to appear for examinations after one year but government servants cannot do so.

Shri B. D. Bhatt: In the code there is a provision that every teacher who has put in three years' service is eligible. It applies to the aided institutions also. We thought that a teacher who is new to his craft must apply himself at least for three years to teaching so that he develops an interest in teaching and then he may enhance his qualifications. There is no discrimination; the same rule applies to all.

Shri M. C. Chagla: It has been said that the performance of private schools on the whole is better than government schools. Why?

Shri B. D. Bhatt: It is true that aided schools have given better results in the public examinations. For instance, this time it was about 80 per cent as against 73 per cent given by government schools. Out of these aided schools, 30 schools select students only on merit. In government schools, every child need be provided. Aided schools are generally single shift schools, but out of 240 government schools, 141 are double-shift schools. Single shift schools are mostly in the rural areas. This is another handicap.

Shri M. C. Chagla: When you have double shift, you have different teachers?

Shri B. D. Bhatt: Yes, but the time is 45 minutes less.

Shri Devi Singh: Some private schools also have double shifts.

Shri B. D. Bhatt: Their number is small.

Prof. Mukut Behari Lal: So far as government schools are concerned, do you find any difference between double shift and single shift schools in the results?

Shri B. D. Bhatt: I am afraid I have not made that study.

Prof. Mukut Behari Lal: Only if you make that study it will be possible for you to say that the results of government schools are not so good because there is a double shift system.

Shri B. D. Bhatt: The other reasons are most of the government schools are new schools; they have hardly been there for 5 or 6 years. Most of them have passed through a stage of tented accommodation. That also hinders the progress to some extent.

Shri M. C. Chagla: Is it correct that gradually the percentage of students passing from government schools has been going up?

Shri B. D. Bhatt: Yes. Basing ourselves on 1957-58 figures, the improvement in results in government schools has been 19 per cent, whereas in the case of aided schools it has been 8 per cent only.

Prof. Mukut Behari Lal: Will you give a statement about this?

Shri B. D. Bhatt: Yes, Sir, I shall.

Shri A. E. T. Barrow: Has there been an improvement in the overall results and this is due to that?

Shri B. D. Bhatt: No, Sir; the overall result has been almost constant, varying only by 1 or 2 per cent. It was 72 per cent in 1959, 75 per cent in 1960, 72 per cent in 1961, 72·9 per cent in 1962, 70·2 per cent in 1963 and 74·8 per cent in 1964.

Shri Jairamdas Daulatram: You said out of 240 government schools, 141 are being run on double shifts, and the remaining are single shift schools. Will you give the results of these two categories?

Shri B. D. Bhatt: Yes. Almost all the rural schools are government schools and their results are poorer. They tilt the result down.

Dr. (Mrs.) T. S. Soundaram Ramachandran: Will you give the separate result for the rural areas? That would be revealing.

Shri B. D. Bhatt: In the rural areas, it is less than 40 per cent.

Shri M. C. Chagla: How many rural area schools are there?

Shri B. D. Bhatt: 43.

Shri Shiv Charan Gupta: In government schools also, there are some extraordinary schools and at the time of admission, there is great rush in them. What is the procedure, to regulate admissions there?

Shri B. D. Bhatt: The general practice is first come, first served, except in the primary classes. We have now a system of regional planning. In the case of government schools, we allot primary schools and middle schools to each higher secondary school. That is one of the reasons why I said that some of the aided schools were not discharging their responsibilities. For instance, in the Devnagar area, Ramjas School No. 5 was having 2,000 students on roll in 1958-59 and now they have reduced the number to 1,800 and the number of sections have been brought down in spite of the fact that enrolment at the higher secondary stage has substantially increased in the area. This means that some of the students are crowded in some tents somewhere.

Prof. Mukut Behari Lal: Why have they reduced the number?

Shri Bhatt: They want to focus their attention on quality. They feel that without keeping down the number or converting it into a double-shift school the quality will deteriorate.

Prof. Mukut Behari Lal: What is your experience; has the quality really improved by the reduction in number?

Shri Bhatt: It is not to improve the quality that they have done this. Because they are good schools they want to maintain their standards. In spite of personal discussions they were not agreeable to my suggestion that they should reserve seats at least for one-third of the new entrants from the locality.

Shri A. E. T. Barrow: What is the number that you have fixed per class, and is it a fact that you want them to take more than this number?

Shri Bhatt: We want them to raise the number of sections.

Shri A. E. T. Barrow: Then they will have to recruit more teachers and they are not getting suitable teachers.

Shri Bhatt: The question of finding suitable teachers will always be there. In any case Ramjas will have to recruit new teachers in place of their old teachers who will be retiring.

Shri A. E. T. Barrow: If with their present teachers they do not want to increase the number of sections, can you blame them for that?

Shri Bhatt: It is in the public interest that more children should be provided with schooling facilities.

Shri M. C. Chagla: The duty of the Government, I take it, is to see that every child who wants primary education finds admission in a school. The Government has to plan accordingly and also see that the quality is improved. In primary education, expansion has got to be attended to and, therefore, you have to find accommodation for every student in primary schools.

Shri Bhatt: That is true. In the secondary stage you are committed to giving educational facilities to all students seeking admission. We have only 47 per cent of the total number of children of the school-going age in the age group of 14—17. Suppose the percentage goes up to 75 per cent, say, after ten years, we will have to provide school. In the perspective plan for Delhi it is envisaged that by 1981 we will have to have 800 schools.

Shri M. C. Chagla: How many of the schools are in tents at present?

Shri Bhatt: 31 out of a total of 241 are in tents.

Shri M. C. Chagla: Have you got plans, for constructing *pucca* buildings for them?

Shri Bhatt: We have a crash programme for school buildings. We planned for 94 buildings in the Third Plan but for various reasons we were not able to give that tempo to our building construction programme as was needed. Even then we feel that by the end of this year we may be able to very nearly finish 72 buildings.

Shri Shiv Charan Gupta: Is it not a fact that the overall percentage of results of government schools is affected by large-scale lower percentages of pass students in rural areas?

Shri Bhatt: Yes.

Shri Shiv Charan Gupta: Is it also not a fact that aided schools are virtually nil as far as rural areas are concerned?

Shri Bhatt: Yes.

Shri Shiv Charan Gupta: May I know whether any assessment has

been made with regard to pass percentage in first division and second division of the government schools and aided schools?

Shri Bhatt: This assessment is there in a statement. I will pass on that statement.

Shri Naval Prabhakar: Is it true that during the last five years or so the results of schools in the rural areas have been as low as 3 per cent?

Shri Bhatt: In some cases it has even been zero per cent.

Shri Naval Prabhakar: What is the reason?

Shri Bhatt: In Delhi up to the middle school English was not taught. When we converted them into higher secondary schools one syllabus was prescribed and for some years the rural schools had this in a handicap. Again, we are not able to send good teachers to rural areas. Those who are already there, try to get out of those areas.

Shri Naval Prabhakar: Is it true that those teachers whom you want to punish you send to rural areas?

Shri Bhatt: No. We decided some four years ago that the best teachers should be sent to rural areas. Some of the good teachers are already there. I may also tell you that because of the work done by a Principal at Dhamsa and the teachers of a school, the village itself has improved.

Shri Shiv Charan Gupta: Is it true that virtually no facilities exist in rural areas compared to urban areas?

Shri Bhatt: We give them all facilities. At five places we have built quarters for teachers. In the remotest places where bus facilities are not there, private buses are now plying. If a teacher works for three years in a rural area school and his work has been satisfactory, we generally give him the choice to get himself transferred.

Shri Shiv Charan Gupta: That does not help the rural areas.

Shri Bhatt: But the good work done will help the schools, and once a tradition has been built up they will be able to maintain it.

Dr. (Mrs.) T. S. Soundaram Ramachandran: Do you give any rural allowance, house rent allowance or things like that?

Shri Bhatt: No. In Delhi proper they are given that allowance and that is why they want to stay in Delhi and do not want to go to rural areas.

Dr. (Mrs.) T. S. Soundaram Ramachandran: If they live in Delhi they are given this allowance and if they live in rural areas they are not given this house rent allowance. Is it not very strange that they are denied this house rent allowance if they go and live in rural areas and improve the education there? Has any proposal been made to give them a rural allowance, as is done in many States?

Shri Bhatt: We tried; we were not successful because it was felt that the concession will affect the other services also and there was hesitation. We will again take up this matter.

Mr. Chairman: Is there any rotational transfer of teachers or principals?

Shri Bhatt: We want to transfer teachers as little as possible—teachers are transferred either on the request of teachers themselves or in public interest.

Mr. Chairman: What steps do you contemplate to take to obviate the difficulty of teachers not wanting to be in rural areas?

Shri Bhatt: We send new teachers there for a period of 3 to 4

years. The rural schools are improving faster than urban schools. In 10 years, probably they will be equally good.

Mr. Chairman: Have you thought of any idea of having accommodation for rural school teachers to stay there?

Shri Bhatt: Yes; we have a plan. So far we have been able to provide accommodation at 5 schools which are the most remote. But we have other means also. For instance, in rural areas, we have an improvised hostel. All the 11th class students come and stay there with the teachers for 3 months. Sometimes we hold study camps where the best teachers are called and special instructions are given to 11th and 8th class students.

Prof. Mukut Behari Lal: There are many problems about government schools which need to be considered. This committee is to look into the Bill. It will be much better if the Education Minister appoints a committee to look into the problems of government schools.

Mr. Chairman: That is a suggestion. These questions arose because yesterday witnesses made some statements and we had to clear some doubts. Your suggestion has been noted by the minister. We are aware that the Bill is before us and we will come to that.

Shri K. Damodaran: Yesterday it was said that about 50 per cent of the posts are *ad hoc* and never made permanent. Is it so?

Mr. Chairman: He has promised to give statistics about that.

Shri K. Damodaran: It was said that a man who began his service in 1950 could not be promoted whereas another man who joined in 1956 was promoted on grounds of merit. How can the man whose claim is ignored know that the other man has been promoted on merits?

Shri Bhatt: Every teacher knows when he enters the service how promotions are made. Our intention now is that when we have our induction programmes for new teachers, we will supply them some literature which will contain the rules for promotion also. About the past, the very fact that whosoever is overlooked makes a representation quoting rules proves they know the rules. If something otherwise was said before this committee, perhaps it was done purposely.

Shri A. E. T. Barrow: What is promotion and what is selection? How many are selection posts? Is there any efficiency bar?

Shri Bhatt: For posts in the higher cadre, 50 per cent selected from fresh blood by combing the whole area. The rest are filled by promotion. But in practice 75 per cent of the posts get filled by departmental people, because many of them get in through the direct recruitment.

Mr. Chairman: Is it true that a trained teacher in government schools teaching classes 6 to 8 is given a grade of Rs. 170 p.m. whereas trained graduate with the same qualification and teaching classes 6 to 8 in the DMC schools is given a grade of Rs. 100 only?

Shri Bhatt: That is correct. In the case of a trained teacher in a higher secondary school, his teaching is not limited to classes 6 to 8, but he has also to teach class 9; he has certain prescribed qualifications. I am not allowed to consider a teacher for a Higher Secondary School if he has attained less than 45 per cent marks at the B.A. examination. The quality of the teacher for Higher Secondary is better.

Shri S. N. Chaturvedi: You said there is a balance of 1946 teachers who have not been confirmed as some of them are under-qualified. How did they remain there for such a long time and become eligible?

Shri Bhatt: Most of them are drawing teachers. Teachers with the prescribed qualifications are not available. So, for technical drawing or mechanical drawing, we had to get some under-qualified people in 53 or 54. They have been going on for a long time and in view of their long experience, we want to give them relaxation.

Shri S. N. Chaturvedi: Relaxation was not given before they qualified for permanency?

Shri Bhatt: It was felt that qualified people would be available. Even now there is shortage of drawing teachers.

Shri A. E. T. Barrow: Who is the authority to give exemption?

Shri Bhatt: Till now it was given by the Ministry. Now it has been decided that the Chief Commissioner or the Administrator should give these exemptions by making provision rules.

Shri A. E. T. Barrow: It means the Secretary or the Director will give the exemptions. It comes to that.

Shri Bhatt: For relaxation of rules or making changes in the rules, the Delhi Administration comes in. The Education Secretary has no other function other than processing the financial matters. All appeals lie to the Chief Secretary. Appeals from class II officers lie to the Administrator.

Shri S. N. Chaturvedi: What is the number of appeals pending with the government and for how long?

Shri Bhatt: I can give you a statement on that.

Shri Diwan Chand Sharma: The witness said that this selection committee consists of the Director and the Chief Secretary. May I know how many times the Chief Secretary has been present at the meetings, how many times the committee met during 1964-65 and at how many meetings the Chief Secretary was present?

Shri Bhatt: The Chief Secretary is present at almost every meeting and if he is not there the Development Commissioner presides. The records are maintained by the Chief Secretary's Branch; if necessary, I shall approach them and get the exact details.

Shri Diwan Chand Sharma: He mentioned about another Committee where the Director of Education and the Under Secretary are there. May I know how many meetings were attended by the Under Secretary?

Shri Bhatt: Every time he has been there. We never hold any selection without the Under Secretary.

Shri Diwan Chand Sharma: These selections are made for which category of teachers?

Shri Bhatt: Trained graduate teachers and teachers who get salaries below Rs. 300.

Shri Diwan Chand Sharma: What do you think, Mr. Chairman, of an administration where 50 per cent of the people who are eligible for being made permanent are still temporary?

Mr. Chairman: That is a point of argument. I want to put another question. It has been stated that the triple benefit scheme of gratuity, insurance and pension is not there for the DMC teachers and they get only provident fund while those teachers whose services are transferred get pension as well. What are the grounds for this sort of discrimination?

Shri Bhatt: When the government teachers were transferred consequent on the creation of the corporation, they were transferred on the condition that their terms of service shall be maintained except in the matter of promotion in the directorate. So they are eligible for pension.

Shri Diwan Chand Sharma: How many principals of schools have been provided with a copy of the promotion rules published in 1960.

Shri Bhatt: I will have to enquire.

Shir Diwan Chand Sharma: Is it not a fact that they have not been brought to the notice of the teachers?

Shri Bhatt: The rules were published in 1960 but, as I said, no individual teacher has been supplied with any copy.

Shri Diwan Chand Sharma: How many representations did you receive in 1964-65 with regard to promotions and how many representations have been disposed of during these two years?

Shri Bhatt: I require some time to collect this information.

Shri Diwan Chand Sharma: You may also supply the information as to how many persons applied for appearing in examinations during 1964-65, how many were given permission, how many were refused permission and on what grounds they were refused permission? Is there any rule about transfers? How do you account for transfers of persons from one place to another place 15 or 20 miles away?

Shri Bhatt: The reason is, there is a large concentration of teachers in Shakti Nagar. About 3000 to 4000 teachers live there. If there is a specific case I can give you the reasons.

Shri Diwan Chand Sharma: How many representations have been received about these transfers and how many have been disposed of?

Shri Bhatt: I will have to collect that information.

Shri K. Damodaran: How the posts of Secretary of Education and Director are held by the same person?

Shri Bhatt: Yes.

Shri K. Damodaran: A suggestion was made that these two posts should be separated and they should not be held by the same person. What is your opinion?

Shri Bhatt: These were combined as a result of the recommendations of the Kripalani Committee, because when the Kripalani Committee looked into the matter they found the Director's office in a mess and so they suggested this change. As I told you earlier, there is no need for a Secretary in a scheme of arrangement in which the Secretary has no powers. The arrangement is that all appeals lie to the Chief Secretary, who is a much higher officer, and the policy is made by the Ministry. All gazetted officers are controlled by the Chief Secretary and the Director has no hand in that matter.

Shri Hem Barua: This Bill has been drawn up with a definite purpose. One of the reasons is that the working and management of a number of private higher secondary schools is unsatisfactory. Since the jurisdiction of the Director extends to the private institutions and since out of the total expenditure incurred by the private institutions 95 per cent is met out of the Government exchequer, what steps do you take to see that funds are not mismanaged, that funds are not misappropriated? Secondly, after we have heard so many witnesses we have the impression that teaching standards or educational standards in both the schools, whether private or government, are deteriorating. In that context, may I know what steps do you visualise or you have taken to see that the standards do not deteriorate as they are deteriorating today?

Shri Bhatt: We have a system of internal audit of these aided institutions. Every alternate year or on a special request or complaint an audit party goes and looks into the accounts of all these institutions. Therefore, the possibility of misappropriation is minimised.

Shri Hem Barua: The audit reports also pinpoint certain deficiencies in the handling of the finances. They also point out certain other deficiencies in the management. What steps do Government take to see that these things are avoided?

Shri Bhatt: This is one of the reasons why this Bill has come before you. Because, we have been finding—I will not name institutions—that several types of irregularities, financial and otherwise, are committed by the management. We cannot force the management to comply with Departmental Orders. The only way in which we can force them is to stop the grant in aid. But that hits the teachers more than the management.

Shri Hem Barua: Do you think that this Bill will help to check these irregularities?

Shri Bhatt: To a great extent.

Shri Hem Barua: Not fully?

Shri Bhatt: No, not fully.

Shri Hem Barua: Shri Chagla should take note of this remark.

Shri Yamuna Prasad Mandal: In this huge army of teachers how many are the relations of the members of Selection Committee?

Shri Bhatt: It will always remain a matter for guess. I am not associated with the selection of teachers. There is a vague complaint in this matter but there is no provision in the Code prohibiting the management from appointing a relation of a member of the Managing Committee as a teacher. So, there is no remedy. We have not made any enquiries in this respect.

Shri Yamuna Prasad Mandal: Your own article 186 clearly lays down that when a relation of a member of the Selection Committee applies for a post that member does not sit in that committee. So, you should have got this information.

Shri Bhatt: My fear is that this rule is observed more in its breach than in observance.

Shri P. C. Mitra: You have stated that sometimes transfers are made on public interest. Will you clarify what you mean by "public interest"?

Shri Bhatt: Suppose one aided school requires a drawing teacher and one teacher is available at a distance of 10 miles. No doubt, that teacher has to cover that distance which is very inconvenient for him. But that cannot be helped. That is one reason. Then, when a promotion is made in a hierarchy and a post is vacant, some teacher will have to come to fill that post in the interest of the school, even though he may be living far away.

श्री देवकी नंदन नारायण : दिल्ली में जो एडिड स्कूल, प्राइवेट स्कूल और गवर्नमेंट स्कूल हैं, उन में आपस में अच्छे नाते और सम्बन्ध हैं या उन में काम्पीटीशन चलता है, झगड़े चलते हैं ? इनके पारस्परिक रिलेशन्ज़ अच्छे बने रहें और वे एक दूसरे की मदद करें, इसके लिए आप क्या करते हैं ?

श्री भट्ट : दिल्ली में प्राइवेट और गवर्नमेंट स्कूलों में कोई फ़र्क नहीं है । डायरेक्टर आफ़ एजूकेशन का ज्यादा कन्टेक्ट प्राइवेट स्कूलों से है इसलिए कि गवर्नमेंट स्कूलों में एडमिनिस्ट्रेशन और फ़िनांसिज़ वग़ैरह बहुत सी चीज़ें रहती हैं । पोस्ट फ़िक्सेशन डायरेक्टर नहीं करता है, बल्कि वे एडमिनिस्ट्रेशन के पास जाती हैं । हम लोग सर्विस, ट्रेनिंग और इंस्पैक्शन के लिए काम करते हैं और यहां के टीचर्ज़ में आपस में कोई इलविल नहीं है और वे बहुत हारमोनियसली काम करते हैं । सब इन्टर-स्कूल टूर्नामेंटस में हिस्सा लेते हैं ।

श्री नवल प्रभाकर : आप ने कहा है कि यहां पर 6500 टीचर्ज़ हैं । उन में से शिडयूल्ड कास्टस के कितने हैं ?

श्री भट्ट : कुल 63 टीचर्ज़ हैं ।

श्री नवल प्रभाकर : क्या आप जानते हैं कि दिल्ली में शिडयूल्ड कास्टस की संख्या साढ़े बारह परसेंट होनी चाहिए ?

श्री भट्ट : पिछले पांच छः साल का हमारा तजुर्बा यह है कि शिडयूल्ड कास्टस के किसी भी टीचर को, चाहे वह एम्पलायमेंट एक्सचेंज से आया है या कहीं से आया है, हम ने रैफ़यूज़ नहीं किया है ।

श्री नवल प्रभाकर : मेरी जानकारी में शिडयूल्ड कास्टस के कुछ टीचर्ज़ के केस हैं, जिन को आप ने निकाल दिया है ।

श्री भट्ट : निकालने के बारे में मैं इस वक्त नहीं कह सकता हूं । उन को किसी वजह से ही निकाला गया होगा, जो कि मैं इस वक्त नहीं बता सकूंगा ।

श्री नवल प्रभाकर : वजह यह थी कि पहले आप ने इजाज़त दे दी कि वह एग्ज़ामिनेशन दे दें, लेकिन जब एग्ज़ामिनेशन का टाइम आ गया, तो आप ने उस को रोक लिया । आप को अच्छी तरह मालूम है ।

श्री भट्ट : एक ड्राइंग टीचर का केस था । प्रिंसिपल साहब ने शिकायत की थी कि वह काम नहीं करते हैं । ज़ोनल आफ़िसर ने देखा था । ऐसा शायद हुआ होगा । मुझे ठीक स्मरण नहीं है ।

Mr. Chairman: What steps do you take to see that backward class students are admitted to all the aided schools and other schools?

Shri Bhatt: I was going to make a comment on this when I come to the Bill. This has been one of my difficulties. I made a sample survey in one of the localities. I found that in that locality out of an enrolment of 7,000 only about 70 students were admitted. On the contrary, in the Government schools the number was 780 on the same enrolment. So, the percentages are 1 and 11 at adult Girls Schools in the same locality. So far as aided schools are concerned, not that they make a distinction—I do not know—but somehow the test for admission probably precludes them from admission.

श्री नवल प्रभाकर : क्या आप ने एडिड स्कूलों को, जिन को आप सहायता देते हैं, इस तरह का आदेश या निर्देश दिया है कि वे भी अपने यहां शिडयूल्ड कास्टस टीचर्ज़ को रखें ?

श्री भट्ट : कोड में इस की व्यवस्था कर दी गई है, लेकिन जैसा कि मैं ने निवेदन किया है, कोड की बहुत सी व्यवस्थाओं को पूरी तरह से नहीं माना जाता है और इस बारे में हम कभी कभी असहाय हो जाते हैं । हम पर्सनल पर्सवेशन से इस बात की कोशिश करते हैं कि उन को ज़रूर रखना चाहिए ।

श्री नवल प्रभाकर : बिल में क्लाज़ 14 फ़ीस के बारे में है । गवर्नमेंट स्कूलों में बच्चों से जो फ़ीस ली जाती है, क्या एडिड स्कूलों में भी वही फ़ीस ली जाती है, जिन को आप रेकगनाइज़ करते हैं ?

श्री भट्ट : सहायता-प्राप्त स्कूलों में सभी की फ़ीस एक सी है, लेकिन जो स्कूल सहायता नहीं लेते हैं, उनकी फ़ीस बढ़ी हुई होती है ।

श्री नवल प्रभाकर : क्या इस बारे में कोई अंकुश लगाने का इरादा है ?

श्री भट्ट : इसी की तो व्यवस्था हो रही है ।

श्री नवल प्रभाकर : आप का क्या विचार है ?

श्री भट्ट : यहां पर कुछ लोग अच्छी तन्ख़्वाहें देते हैं, अच्छी व्यवस्था करते हैं, सरकार से सहायता नहीं लेते हैं, यह देखते हुए शायद उन पर अंकुश लगाना ठीक नहीं होगा । लकिन जो लोग फ़ीस लेते हैं और उसके अनुपात में, उस के अनुकूल बच्चों को शिक्षा नहीं देते हैं या अच्छी फ़ैसिलिटीज़ नहीं देते हैं, उन पर कोई अंकुश ज़रूर होना चाहिए ।

श्री नवल प्रभाकर : जब आप किसी स्कूल को मान्यता देते हैं, तो उस समय उस की सब बातों को देख लेते हैं—उसकी आर्थिक स्थिति को, उसकी जगह वग़ैरह को देख लेते हैं । लेकिन कई केसिज़ में ऐसा देखा गया है कि स्कूल के पास जगह नहीं है, टीचर्ज़ नहीं हैं और फिर भी आप ने उस को खुशी से मान्यता दे दी है । इस का क्या कारण है ?

श्री भट्ट : इस का कारण यह है कि हम लोग कभी कभी भीख मांगने जाते हैं । मान लीजिये किसी लोकैलिटी में बच्चों के लिए शिक्षा की व्यवस्था नहीं होती है, तो जो थोड़ा सा कमज़ोर मैनेजमेंट होता है, बोर्ड इस आशा से उस को रेकगनीशन दे देता है कि आगे चल कर उस में सुधार हो जायेगा और वह बच्चों के लिए ज्यादा अच्छी व्यवस्था कर सकेगा । बोर्ड की एक टीम जाती है । वह देखती है कि यहां पर स्कूल की आवश्यकता है । तो स्कूल को आवश्यकता का सर्टिफ़िकेट डायरेक्टर देता है । उस के बाद व्यवस्था को बोर्ड देखता है । पिछले पांच सात वर्षों में ऐसे स्कूल ज़रूर कायम हुए हैं, जो बहुत ख़राब हैं । उन के बन्द करने की व्यवस्था कर दी गई है और कुछ बन्द हो गये हैं ।

Shri Shiv Charan Gupta: How many complaints have been received by the Directorate regarding charging of unauthorised fees, objectionable donations and payment of less pay than prescribed? What is the number of genuine complaints about these three types?

Shri Bhatt: For one year?

Shri Shiv Charan Gupta: For two years or three years. You can fix the time yourself. You will collect that information.

Shri Bhatt: Yes.

Shri Shiv Charan Gupta: Yesterday there was an association here, called the Aggrieved Teachers' Association. They said that they have referred about 200 cases to the Delhi Administration. Has any action been taken? Have the representations been disposed of? What is the position?

Shri Bhatt: The difficulty is that the Aggrieved Teachers' Association or the Council of Parents is not a recognised body; it consists of all the terminated teachers. One of them is being prosecuted for criminal breach of trust in a court of law. I have a system which is that we have a committee in which management is represented and the teachers' association is also represented. Every third month we meet and instead of looking for the cases to come to us, we try to forest all those ourselves. Therefore, if there is any ill will breiving somewhere we manage to pacify the parties. Then, there is a welfare officer who meets these teachers every month. In this way we try to minimise the coming evil.

Shri Shiv Charan Gupta: In your scheme of things you have provided that if any teacher's services are terminated, that teachers has a right of appeal, probably to the administrator, and the Administrator or the Chief Secretary looks into that appeal. How many appeals are panding at present?

Shri Bhatt: With the tribunal or with the Director?

Shri Shiv Charan Gupta: With the Delhi Administration, whatever be the agency that you have created.

Mr. Chairman: If you do not have the figures, you can submit them in a note later on.

श्रीमती जयाबेन शाह: एक तो एजुकेशन कोड है, फिर रिकगनिशन के रूल हैं, फिर बोर्ड के कुछ रूल हैं। इनके होते हुए क्या आप इस काबिल नहीं हैं कि एडिड स्कूल जो चलाते हैं उन में जो खराबियां हैं, उनको आप कंट्रोल कर सकें?

श्री भट्ट : कुछ फैक्टर्स मैं आपके सामने रखना चाहता हूं जिनकी वजह से यह बिल जरूरी हो गया है और इस में इस तरह की प्राविजंज रखना जरूरी हो गया है।

सभापति महोदय: इस सवाल को हम बाद में लेते हैं।

कुमारी शान्ता वशिष्ठ : इस विल के तहत आपको बड़ी वाइड पावर्ज मिलेंगी डायरक्टोरेट में हर आदमी अच्छा होना चाहिये आपके अलावा। आप चाहे अच्छे हों लेकिन बांकी सब भी तो अच्छे होने चाहिये ताकि टीचर्स को, मेनजमेंट वगैरह को जस्टिस मिल सके और फैयर डील मिल सके। आप परसनली अच्छे हों लेकिन बाकी अगर अच्छे न हों तो इतनी वाइड पावज देने से कोई फायदा नहीं है। कुछ समय पहले तक डायरेक्टोरेट में प्रामोशन के लिये, ट्रांस्फर के लिये या स्कूल की रिकगनिशिन के लिये हर किसी को पैसे देने पड़ते थे। यहां तक यह चीज़ थी कि किसी को अपनी एप्लीकेशन भी देनी हो तो उसकों पैसा भी साथ देना पड़ता था। मैं जानना चाहतीं हूं कि क्या यह सिस्टम इस हद तक ओवरहाल हो चुका है कि अब अगर इतनी वाइड पावर्ज दे दो जायें तो उससे फायदा होगा?

श्री भट्ट : मैं यह कहना चाहता हूं कि जिस आदमी को आप कोई काम सोंपें उसको इतनी ताकत जरूर दें कि वह उस काम को पूरा कर सके। उससे ज्यादा पावर्ज देने कीं आवश्यकता नहीं होनी चाहिये। जो समझदार डायरेक्टर होगा या उसके जो दूसरे अफसर होंगे वे यही चाहेंगे कि उसके लिये कोई उलझन पैदा न हो और वे भी प्रोटक्टिड रहें। इस वास्ते थोड़ा सा प्रोटेकशन आफिसर्स को भी चाहिये।

जहां तक आपको दूसरी बात का ताल्लुक है मैं कहना चाहूंगा इस तरह की आप के पास कोई चीजें हों तो मैं अपने को थोड़ा बहुत उत्तरदायी जरूर समझूंगा। मेरा ख्याल है कि काफी हमने इम्प्रूवमेंटस की हैं। अब कोई रूपये पैसे की चर्चा नहीं करता है।

कुमारी शान्ता वशिष्ठ : किस हद तक इस सिस्टम में ओवरहालिंग हुआ है? आप परसनली अच्छा कर देंगे वह सवाल नहीं है। एक इंडिविजुअल पर कोई चीज डिपेंड नहीं करती है। सवाल यह है कि क्या आपकी मशीनरी इतनी फूल प्रूफ है इस काम के लिये कि इतनी ताकत अगर उसको दे दें तो वह इस ताकत का मिसयूज नहीं करेंगी?

श्री भट्ट : अगर कोई मशीनरी है जिस के ऊपर खास तौर से चौकसी रहती है तो वह यही डायरेक्टोरेट है। इसको एडमिनिस्ट्रेटर देखता है, मिनिस्ट्री देखती है और इसके अलावा होम मिनिस्ट्री भी है। टीचर्स एसोसियेशन जिस को हम एनकरेज करते हैं उसको भी कोई शिकायत होती है तो उन से भी कह दिया गया है कि वे फोरन शिकायत करे, चाहे सरकारी हों या एडिड हों। मैं नहीं कह सकता हूं कि इस मशीनरी में कितनी फ्लैक्सेबिलटी होगी। लेकिन इतनी ताकत दी जानी चाहिये जिससे काम पूरा हो सके।

कुमारी शान्ता वशिष्ठ : कई मैनेजमेंट्स ने मुझे चेक्स दिखाये हैं जो उन्होंने इशू किये थे। कई इस तरह के चेक्स मैंने देखे हैं। अगर ऐसी हालत हो जाय तो फिर ज्यादा ताकत देना बड़ा डेंजरस हो जाता है।

श्री भट्ट : मेरा विचार यह है कि डायरेक्टोरेट में ऐसे अदमी बहुत कम होंगे जो इस तरह की बात करेंगे। बहुत पुरानी बात मालूम होती है। मुझे तो ऐसा शुवहा होता है कि मेनजमेंटस जो आप से जो ऐसी बात कहती हैं उन में भी कोई दोष है।

कुमारी शान्ता वशिष्ठ : हो सकता है। लेकिन अगर डायरक्टोरेट भी इस तरह से मेनजमेंट से पैसे ले और टीचर्स से भी ले ले तो?

श्री भट्ट : पीनल कोड बना हुआ है और उसका इस्तेमाल किया जा सकता है आफिसर्स के खिलाफ।

कुमारी शान्ता वशिष्ठ : बहुत कम पर लगता है। डाइरेक्टोरेट के अंदर भी अगर आप के टीचर्स के साथ कोई बे इन्साफी हो तो आप क्या करेंगे?

श्री भट्ट : इनजस्टिस को दूर करने के लिये बड़ी भारी मशीनरी है। जो टीचर अपने को एग्रीव्ड समझते हैं उन के लिये फेअरेस्ट ट्रीटमेंट दिया जाता है। अगर कोई ऐसा केस आता है तो हमें पूरे डिटेल्स उसके मिनिस्ट्री को देने पड़ते हैं।

Shrimati Jayaben Shah: I want to ask some general questions. My first question is as to whether the present Director or the Directorate has got enough powers to control the present-day aided schools and, if not, whether they have asked for more powers to control the institutions which are not going on well. My another question is: Does the Ministry think that with all these rules and the code, the Directorate is not competent to control these aided schools and, if so, whether some new provisions should be made in the Bill. I want to know this from the Ministry as well as from the Directorate.

Shri Bhatt: The code is not statutory and it is always easy for the managements to violate the rules of the code. The only penalty that we can impose is the stoppage of grant-in-aid. It is an unholy weapon and we do not want to utilise it for the simple reason that it hurts both the teachers and the pupils. If I enumerate the types of irregularities, you will yourself feel that some kind of a legislation is absolutely necessary in that regard apart from keeping the teaching community satisfied.

Shri A. E. T. Barrow: You may give us the list of some of the irregularities.

Shri Bhatt: I have here a statement showing the names of institutions which have delayed the payments of salaries. Out of 36 times, that is, 3 years, the Vaish Higher Secondary School delayed the payments of salaries 29 times. So, only 7 times they paid the salaries regularly. Then, there is the Salwan Trust which claim to have assets worth Rs. 1 crore. It is guilty of so many irregularities and it holds the second place in the list of defaulters. It delayed the payments of salaries 28 times.

Mr. Chairman: We now go to the clauses. Shrimati Jayaben Shah may start.

Shrimati Jayaben Shah: What steps have you taken in that regard? Have you stopped giving them the grants?

Shri Bhatt: The stopping of grants creates difficulties for innocents.

Shri A. E. T. Barrow: What powers will this Bill give you to deal with such cases?

Shri S. N. Chaturvedi: Apart from taking them over, what other powers will you exercise under this Bill to deal with such cases?

Shri Bhatt: This Bill affects only the bad managements; only the guilty conscience is afraid of it. It should have a preventive effect.

Shri A. E. T. Barrow: The Bill is a legal document. It is not going to deal with conscience. Will this Bill give you extra powers apart from the power of taking over the management?

Shri S. N. Chaturvedi: Apart from the taking over of the management, what other powers will this Bill give you which you do not have at present?

Shri M. C. Chagla: You can de-recognise the school. It has a very tremendous power.

Shri S. N. Chaturvedi: That power is there in the code already, Mr. Bhatt You have stated that your connection with the private aided schools is your connection with the private aided schools is very close and, perhaps, closer than with the Government schools. You have also stated that you have got ample powers, that is, under the code, you have representives on the management committee and that without your sanction no appointment can be made and that without your sanction nobody can be dismissed or removed from service. You have also the power of withdrawing recognition to these schools. You have the power of reducing the grant or even stopping the grant. Now, what are the other powers, apart from the power of taking over the management of the institution, which you are taking under this Bill which will enable you to exercise greater supervision? My second question is this: Why could you not make an example of one single institution? Did the Government or the Administration not have the resources to suspend the working of a particular bad sheep among these private institutions and to set up another in its place? What prevented you from doing that?

Shri Bhatt: About closing on institution and setting up another one, I may point out that in Delhi the problem of school sites is very acute This is one of the reasons why we are not able to do it. Where will the children go till we are able to provide an alternative arrangement?

Shri S. N. Chaturvedi: In that case, the only power that you will now be exercising to correct these institutions will be the actual taking over of their managements by the Government. May I know how many institutions are ripe for it in your opinion?

Shri Bhatt: This Bill is meant only for bad schools and bad schools are not many in number. But those few institutions which are there create such a bad blood in the whole society that they should be taken over.

Shri S. N. Chaturvedi: That is exactly what I am asking you. We wish to know how many institutions are ripe for it? Do these powers remain only on paper? How many institutions in your view, are now ripe for being taken over by the Government immediately?

Shri Bhatt: At least two or three institutions are there. I am quite certain that the passage of this Bill will certainly have a corrective effect.

Mr. Chairman: Mr. Bhatt, let us stop here. We have got another witness now. We will call you again after sometime.

Shri Bhatt: It is all right, Sir.

(The witnesses then withdrew)

II. SHRI FRANK ANTHONY, M.P.

Witness was Called in and he took his Seat).

Mr. Chairman: You may be knowing Direction 58. I shall, however, read it out for your information.

> "Where witnesses appear before a Committee to give evidence, the Chairman shall make it clear to the witness that their evidence shall be treated as public and is liable to be published, unless they specifically desire that all or any part of the evidence tendered by them is to be treated as confidential. It shall, however, be explained to the witnesses that, even though they might desire their evidence to be treated as confidential, such evidence is liable to be made available to the members of Parliament."

You were good enough to give us the material, but you will agree with us that we have had no time to go through it. Therefore, we will trouble you. You will please be good enough to enlighten us on the points that you want to stress. Then the Committee members might ask questions.

Shri Frank Anthony: Mr. Chairman, I have submitted three separate notes: one is a note regarding the Delhi Secondary Education Bill; then there is a summary, from the head note, of the opinion of the Supreme Court; and the third is the Kerala Education Bill.

(Copies of the notes were then circulated among the members).

Shri Frank Anthony: If you go through the note, you will find that, in the first paragraph, I have said that, in my respectful opinion, the Bill is more draconian in many ways than the Kerala Education Bill which created a storm of protest and after being specially referred by the President for opinion by the Supreme Court, was considered by the Supreme Court to be *ultra vires* in many of its provisions.

The next paragraph is important. I have said that no distinction has been drawn in the Delhi Bill, which should have been done in view of the Supreme Court opinion in the Kerala Education Bill Reference, between minority-run schools and other schools and, above all, between minority-run aided and unaided but recognised schools. I have referred to Article 30 which gives a fundamental right to all minorities, based on religion or language, to establish and administer educational institutions of their choice, I have added that this, unlike Article 19 which gives fundamental rights, is an absolute right and is not subject to reasonable restrictions. I may just read out Article 30. Most of the members would be conversant with this. Actually Article 30(1) was considered by the Supreme Court; 30(2) was not a subject of Reference. Art. 30(1) reads as follows:—

> "All minorities, whether based on religion or language, shall have the right to establish and administer educational institutions of their choice."

When this matter came up, there were very long discussions before the Supreme Court. I was one of the counsels arguing on behalf of a set of minority schools.

I have set out in paragraph 3....

Mr. Chairman: May I intervene for a moment? Are you driving at a point to refer to Clause 3(1)(f) which relates to naming of a school after a sect or caste?

Shri Frank Anthony: I am not dealing with that particularly.

I have said in paragraph 3 that, in the Kerala Education Bill Reference, the Supreme Court held that clause 8(3) and clauses 9 to 13 were *ultra vires* vis-a-vis the Anglo-Indian schools as they offended their fundamental right under Article 30(1), *i.e.*, the right to establish and administer institutions of their choice. Then I went on explaining that the Anglo-Indian schools were distinguished from the other aided schools because the former, namely, the Anglo-Indian schools, were then receiving aid under Article 337 of the Constitution. The Supreme Court, therefore, held that this aid was not aid in the normal sense and to the extent that they were receiving aid under the Constitutional guarantee, Anglo-Indian schools must be treated as unaided schools. The principle, therefore,—this is very important—enunciated with regard to Anglo-Indian schools will apply to unaided minority-run schools because, as I have said, Anglo-Indian schools were treated, in law, as not being aided.

Shri M. C. Chagla: Article 337 is no longer inoperation. That was the whole basis of the judgment. You were entitled to a statutory aid which you are not getting now.

Shri Frank Anthony: The principle will be: where minority-run schools are recognised but not aided, they will be on a par with Anglo-Indian schools that were aided.

Shri M. C. Chagla: The Supreme Court has relied, for its judgment, on Article 337, which gave you a Constitutional right to receive aid for ten years. You are no longer entitled to that aid under the Constitution. Whatever observations were made by the Supreme Court were with reference to Article 337.

Shri Frank Anthony: They were with reference to Article 337 read with Art. 30(1) which drew a distinction between ex-gratia and aid under the Constitution. They said that, since it was a right, they would not be deemed to be aided in the normal way. That means, whatever opinion was expressed with regard to Anglo-Indian schools will apply now to all minority-run, unaided schools because they were deemed, in law, to be non-aided. That is how they were distinguished from the other schools aided in the normal way. You will see this in the summary where I have made it abundantly clear. Whatever the Supreme Court said with regard to Anglo-Indian schools will now apply completely to non-aided minority-run, but recognised, schools.

Shri M. C. Chagla: I have great respect for your legal acumen. Before you elaborate that point, may I make one point clear to you?

We had the Bill referred to the Law Ministry of the Government of India and I gave special instructions that they should scrutinise every clause in the light of the judgment of the Supreme Court. I would not depend on my own legal knowledge which is outdated. The only clause which was suggested to be *ultra vires* was clause 18, and I immediately gave notice of an amendment that that shall not apply to minority schools. Apart from that, the opinion that I have received, emphatic and unequivocal, from the Law Ministry is that every other clause is *intra vires* of the Constitution. Am I to rely on the Law Ministry or on your opinion?

Shri Frank Anthony: I will give my opinion for what it is worth. I would ask you to look at this one-page cyclostyled note giving the head-notes word for word from the AIR Report. You will see that three points were referred by the President.

(1) Does sub-clause (5) of clause 3 of the Kerala Education Bill offend article 14 of the Constitution?

That is not relevant because they held that article 14 was not attracted.

It is this reference that is important:

(2) Do sub-clause (5) of clause 3, sub-clause (3) of clause 8 and clauses 9 to 13 of the Kerala Education Bill, or any provisions thereof, offend clause (1) of article 30 of the Constitution in any particulars or to any extent?

To that this is what the Supreme Court Said:

Regarding Q.2: (Permajority: Venkatarama Aiyar J. *Contra*) (i) cl. 3(5), cl.8(3) and cls. 9 to 13 offend Art. 30(1) of the Constitution, so far as Anglo-Indian educational institutions entitled to grant under Art. 337 are concerned. (ii) As regards other minorities not entitled to grant as of right under any express provision of the Constitution, but are in receipt of aid or desire such aid and also as regards Anglo-Indian educational institutions in so far as they are receiving aid in excess of what are due to them under Art. 337, cls. 8(3) and 9 to 13 do not offend—

That means it is very clear, the language is clear, that because Anglo-Indian schools were treated in law as not receiving aid, although they were receiving aid under article 337, they were distinguished from the other aid-receiving institutions; and all these clause were held to tbe *ultra vires* in the opinion of the Supreme Court.

Shri M. C. Chagla: Just the opposite. Let me elaborate it. What the Supreme Ccurt says is that these clauses are *ultra vires* so far as the Anglo-Indian community which was getting aid under article 337 is concerned. No other minority has the right to receive aid. Today the Anglo-Indian community has no right to receive aid. So these are not *ultra vires.*

Shri Frank Anthony: My whole thesis is that the Supreme Court opinion drew the distinction between aid-receiving schools and non-aid-receiving schools. They treated the Anglo-Indain schools as non-aid-receiving schools, and that is why they struck it down.

Therefore, on a parity of reasoning, any minority school which is recognised but not receiving aid will be treated legally as the Anglo-Indian schools were treated although they were receiving aid. That is the principle. The Anglo-Indian schools, if they are receiving aid today will then be "aided" in the normal way. They will come on parity. But minority-run schools recognised but not aided have to be distinguished from minority schools receiving aid.

Shri Jairamdas Daulatram: May I request, since the note has been circulated only now and we have not got a complete picture, that Mr. Anthony may give us the entire picture of his argument and at the end we will be in a better position to discuss it?

Shri Frank Anthony: It was only discussing Mr. Changla's point.

I thought the head-note made a clear distinction between aided and non-aided schools, and the Supreme Court has made it very clear that even Anglo-Indian schools receiving aid in excess of what was due to them under article 337—any Anglo-Indian school receiving such aid—will be the same as any aid-receiving school.

What I am contending for now is that if a minority-run school is recognised but not receiving aid, it will be in the same position legally as the Anglo-Indian schools that were receiving aid under article 337. Anything that was held ultra vires vis-a-vis the Anglo-Indian schools will now be *ultra vires vis-a-vis* any minority-run school, because of article 30(1). If it does not receive aid, you cannot interfere with its choice of administration and management.

Shri M. C. Chagla: That is not disputed. But you will also agree that the Supreme Court has said that article 30(1) does not permit a school to maladminister.

Shri Frank Anthony: What is a reasonable regulation they have spelt out.

Shri M. C. Chagla: What clauses in the Bill, do you say, offened against this?

Shri Frank Anthony: Take paragraph 4 of my Note. This gives a summary of what clauses offend, in the Kerala Bill.

Shri M. C. Chagla: I am referring to our Bill here.

Shri Frank Anthony: Let me go through that, and I will apply it by way of a parallel. In paragraph 4 I have summarised it:

The Supreme Court opinion was that under clause 8(3) Government could not ask the Anglo-Indian schools to hand over their fees.

Shri M. C. Chagla: That you are not asked to do.

Shri Frank Anthony: Under clause 9 the Government could not undertake to pay the salaries of teachers. Under clause 11 the Government or any agency of the Government could not appoint or direct the appointment of teachers. Under clause 12 the Government could not prescribe the conditions of service of the teachers nor interfere with their dismissal, removal or suspension by the school management.

I will go briefly through the other paragraphs of my note also:

5. The Supreme Court also made it clear that clause 7(1) under which aided schools may appoint a manager subject to the approval of the Government, could not be applied to unaided recognised schools; so also with regard to clause 7(3).

6. Only clause 10, which gave Government power to prescribe the qualifications of teachers, was considered valid with regard to unaided but recognised schools.

7. So far as clauses 14 and 15 were concerned, the Supreme Court considered these to be void and *ultra vires* with regard to all schools including aided schools. Under clause 14 the Government sought power to take over the management of aided schools and in an emergency of any school. This was, in the opinion of the Supreme Court, *ultra vires*—taking over the management of any school. Under clause 15 the Government sought power to acquire the property of any category of school. This was also in the opinion of the Supreme Court *ultra vires*. And this is my sub-note to that: the important ratio that emerges is that Government may withdraw aid and it may even derecognise but it cannot take over the property or the management of minority-run schools, not even of aided schools.

Shri M. C. Chagla: We have accepted that.

Shri Frank Anthony: May I run through these clauses of the Kerala Bill so that Members will have a clearer picture of the clauses? Clause 7(1) of the Kerala Education Bill says:

> "Any Educational Agency may appoint any person to be the manager of an aided school under this Act, subject to the approval of such officer as may be authorised by the Government in this behalf."

Only with regard to aided schools they may appoint a manager, the management will have the power subject to the approval of a Government agency. Clause 7(3) of that Bill read:

> "The properties of the school shall be in the possession and control of the Manager who shall be responsible to maintain them in proper and good condition".

The Supreme Court held that that clause could not be applied also to unaided recognised schools,

Then, clause 8(3) of that Bill read:

"All fees and other dues other than special fees, collected from the students in an aided school after the commencement of this section shall, notwithstanding anything contained in any agreement scheme or arrangement, be made over to the Government in such manner as may be prescribed".

The Supreme Court held that that clause could not be applied to unaided minority-run recognised schools.

Clause 9 of that Bill related to salary of teachers etc. and grants to aided schools, and read thus:

(1) The Government shall pay the salary of all teachers in aided schools direct or through the Headmaster of the school.

(2) The Government shall pay the salary of the non-teaching staff of the aided schools . . . . It shall be competent for the Government to prescribe the number of persons to be appointed in the non-teaching establishment of aided schools their salaries, qualifications and other conditions of service.

This also was held to be *ultra vires* with regard to unaided schools.

Then, clause 10 of that Bill related to qualifications for appointment as teachers and it read thus:

"The Government shall prescribe the qualifications to be possessed by persons for appointment as teachers in Government and private schools".

This was the only clause that was held *intra vires* with regard to all schools, namely the clause prescribing the qualifications.

Clause 11 of that Bill read:

"The Public Service Commission shall as empowered by the Act select candidates for appointment as teachers in Government and aided schools . . . Teachers of aided schools shall be appointed by the manager only from the candidates so selected for the district in which the school is located . . . .

Then, they go on to make some provision for Scheduled Castes and Scheduled Tribes. In sub-clause (2) of clause 11, it was provided:

"In selecting candidates under sub-section (1) the Public Service Commission shall have regard to the provisions made by the Government under clause (4) of article 16 of the Constitution."

This they said, was *ultra vies* with regard to non-aided schools, and they said that you could not prescribe a list from which the non-aided schools could appoint their teachers.

Then, clause 12 also was held *ultra vires* with regard to non-aided schools. This clause related to conditions of service of aided school teachers.

Mr. Chairman: I would like to ask one question, not on the opinion of the Supreme Court but on something else. Under the Constitution, the backward classes, Scheduled Castes and Scheduled Tribes have been given certain guarantees in regard to recruitment, promotions, reservation in legislatures, appointments etc. Do you not think that these classes in order that they may come up to the level of the other sections of the community deserve to be encouraged by your institutions? If they are recruited in the same proportion as in Government in your institutions, how far do you think it would hamper the education in your institutions?

Shri Frank Anthony: There, the Supreme Court has held very categorically that this provision in clause 11

could be applied to aided minority-run schools. But equally they have held that you cannot say so to the non-aided minority-run schools.

Mr. Chairman: That is true, but I am not asking on the opinion of the Supreme Court; I am not challenging the opinion of the Supreme Court. As a social worker, do you not think that the students and the teachers coming from these classes should get encouragement to come up to the level of the other communities in your institutions which are considered to be the best?

Shri Frank Anthony: So far as the students are concerned, certainly we give bursaries, and we have a number of backward classes and Scheduled Castes pupils in our schools. So far as teachers are concerned, the position would be different. I shall be quite frank. We do not advertise on any community basis, but we give preference to teachers trained in certain types of training colleges; we give preference to teachers who have had experience in certain types of schools because that training and that experience helps them to maintain the kind of standards that we expect in our schools. That is why it will be difficult for a teacher from a Scheduled Caste or a backward class or for anyone who has not been trained in these institutions or who has not had experience in these institutions to be recruited.

Of course, the position would be different so far as the language teachers are concerned. So far as language teachers are concerned, we have the Frank Anthony Public School here where Hindi is the second language and Sanskrit is the third language: in the public school in Calcutta, Bengali is the second language and Hindi is the third language. So, in the case of the language teachers, that restriction would not apply; if they are qualified to teach Hindi or Sanskrit or Bengali as the case may be, irrespective of the community they come from, we would take them. But so far as the others are concerned, particularly the English language teachers, we may have some restrictions.

Shri K. Damodaran: Why could you not take some Scheduled Castes people and train them in your institutions?

Shri Frank Anthony: That is a wider problem altogether. They have very few seats. Then, the average cost is Rs. 150 per month. Who will subsidise that?

Mr. Chairman: It is because of that very reason that they are unable to meet that high cost, I was putting that question whether you could encourage the students and teachers from those communities in your institutions?

Shri Frank Anthony: So far as the students are concerned, we certainly encourage them, because it is our policy to assist the less fortunate children. We have bursaries for the less fortunate children, irrespective of their community, and we have in our school Scheduled Caste children and children from the backward classes to whom we give bursaries. That is a different proposition altogether and that would be easier.

Mr. Chairman: The privileges that you are claiming under the Constitution have also been provided under the Constitution to these people. Therefore, I was appealing to you whether you would consider those points.

Shri Frank Anthony: Of course, we do; so far as the students are concerned, we do, though so far as the teachers are concerned, we may not.

Then, clause 12 of the Kerala Education Bill provided that the conditions of service relating to scales of pay, pension, provident fund, insurance, age of retirement etc. applicable to teachers of Government schools

shall apply to teachers of aided schools. Then, in sub-clause (3) of that clause it was provided:

> "The Government shall extend to the teachers of aided schools . . . the conditions of service relating to pension . . . . applicable to teachers of Government schools . . . .

Then, sub-clause (4) is there which is very important. It provides that:

> "No teacher of an aided school shall be dismissed, removed, reduced in rank or suspended by the manager without the previous sanction of the officer authorised by the Government in this behalf.".

The Supreme Court said that you might apply this to aided schools but you cannot apply this to non-aided schools. You cannot even prescribe, whether good or bad. They further held that to do so would be an interference with the choice of the non-aided minority-run schools. In return for aid you can prescribe the conditions of service and you can say that they shall not be reduced in rank. removed or dismissed without previous sanction, but so far as the unaided schools are concerned, categorically they have said that it would be an interference with their choice.

In regard to clause 13, relating to absorption of teachers on retrenchment they have held that that was *ultra vires* with regard to non-aided minority-run schools. This is not too important.

Then I come to clauses 14 and 15 of that Bill which are very important. They held these *ultra vires* with regard to minority schools.

Shri M. C. Chagla: We are excluding them. So, you need not emphasise that. That provision would not apply to them at all.

Shri Frank Anthony: The provision in regard to the management and the taking over of the management or the property?

Shri M. C. Chagla: The whole of that clause.

Shri Frank Anthony: At page 2 of my note, in paragraph, 8, I have compared these clauses with the clauses in the Kerala Education Bill. Then I refer to para 8 of my memorandum. About the list of properties, I do not think the schools would have bothered even if they had to submit it.

With great respect I say that Clauses 5(3), (4) and (6) cannot be applied to unaided minority schools; they can be applied to aided schools and of course to Government schools.

We have our own scheme of management. I am prepared to concede this that you may insist that we have schemes of management. We submit our schemes of management.

Shri M. C. Chagla: But it has been said here "so far as practicable".

Shri Frank Anthony: That will be *ex gratia*. I am contending for a right. It may not be practicable at all. My own scheme may be better than the model scheme. I do not know what scheme you have in view.

Shri M. C. Chagla: We look at the trust deed. We are not going to interfere it is not necessary. It is not as if this scheme will apply with all its rigour to unaided schools. We are conscious of this difference.

Shri Frank Anthony: I go much further. I say that if private schools have a scheme of management, you cannot tell them that they should have a different scheme.

Shri M. C. Chagla: We may not. Why are you assuming?

Shri Frank Anthony: But you are arrogating the powers to Government. I can understand if you say that with regard to aided schools and Government schools. Certainly you have the power, the Supreme Court has held so. But for the non-aided school, if we have a scheme of management . . . .

Mr. Chairman: Supposing your scheme is a better one and you submit it, Government will think of improving their own.

Shri Frank Anthony: We can submit it, but why should the Director approve of this scheme under clause 5(4)?

Shri M. C. Chagla: Because you are seeking recognition.

Shri Frank Anthony: In return for recognition, you cannot do it; in return for aid, you can.

Shri M. C. Chagla: But I want to make it perfectly clear that the Bill does not intend to interfere with trust deeds or any schemes which make it possible for the schools to function properly, but if we look at your trust deed and find that there is something which is not proper, we can ask you to make a change.

Shri Frank Anthony: The difficulty is this. Is it a right that these schools have. What is the quantum and extent of the right?

Shri M. C. Chagla: The quantum and extent of the right is this. If we find that under your scheme, there is a possibility of mismanagement, the Supreme Court has said that even in the case of minority schools, we have a right to interfere?

Shri Frank Anthony: To what extent?

Shri M. C. Chagla: You must look at the scheme.

Shri Frank Anthony: Let me look at the scheme.

Clause 5(7). The Supreme Court has held categorically that you cannot appoint teachers, not even prescribe their conditions of service. When you cannot appoint teachers or even prescribe their conditions of service, how will you appoint the Board of Governors. You may not recognise, but you cannot arrogate to yourself the power to appoint members on my Board of Governors. You cannot ask me to have two of my senior most teachers who may not be able to run my schools. You cannot have this principle of rotation. I am completely against any junior member of the staff being there. The Principal and the Headmistress can be there. I do not know whether you cater even for co-educational institutions where we have a woman as the head of one section of the school.

You say that greater flexibility will be permitted, but it is a matter of grace. I say it is a matter of right. So far as Boards of Management are concerned, if they have no Board of Management, you will not recognise, but if they have good Boards of Management, how can you say that they should have two of their most incompetent junior teachers on their Board. I will say, "No, I will not be able to maintain discipline."

Shri M. C. Chagla: This is not final, this is only a model.

Shri Frank Anthony: Why should you tell a minority unaided school how its Board of Governors should be constituted, who should be the Principal? I say, "No, I am the best judge. That is part of my choice." You may think two junior teachers are all right. I say I will not have them under any circumstances. I will never be able to maintain discipline, never be able to discuss administrative details, the capacity of my heads of department or indeed the Principal's short comings. We may feel that the discipline is bad or there has been some discrimination against some teacher. How can we discuss all that in the presence of two teachers by rotation. They will go and laugh outside with the rest of the staff. How can we maintain discipline?

Shri M. C. Chagla: What is your contention? Clause 5 should not apply to minority schools at all?

Shri Frank Anthony: You can apply it to all aided schools and all government schools. So far as unaided schools are concerned certain things

can be there. Some schools have no management committees; you can insist that they have management committees and give you a scheme.

Shri M. C. Chagla: That is exactly what it comes to in substance.

Shri Frank Anthony: You can insist that the schools have reasonably competent management committees; you can say that your schools should have the accounts audited by firms of chartered accountants and that sort of thing even in respect of unaided schools.

Shri M. C. Chagla: When you submit your scheme to us and we find it is perfectly all right, we will not interfere. It is a matter of rules.

Shri Frank Anthony: Now, let us go to 5(9). Why do you want to insist on two managing committees?

Mr. Chairman: This is a model scheme. We have yet to consider it. Whatever point you want to make about it, we will consider it.

Shri Frank Anthony: In this model scheme (A) (3) says that two people will be nominated by the director etc. You cannot do this. We will not in the unaided schools accept the nominees of the director.

Shri M. C. Chagla: We will not apply it to your schools when you submit your scheme.

Shri Frank Anthony: That is a matter of right.

Shri M. C. Chagla: You are assuming that this scheme will be imposed on you. That is not the scheme of clause 5. I can understand if clause 5 says that it shall apply to all schools. It is not so.

Shri Frank Anthony: You leave it to the discretion of the director. He may not like one school. Part II of this scheme is so vague that in its execution it may become oppressive.

Shri M. C. Chagla: I see the force of what you say if it concerns clause 7 because that is mandatory. Here the scheme could be adjusted.

Shri Frank Anthony: We can accept the head of the school in sub-clause (7). How can we accept two other teachers by rotation?

Shri S. N. Chaturvedi: Is it your point that these powers should not be taken by the government in this Bill so far as the minority schools are concerned?

Shri Frank Anthony: Minority unaided schools. Could I go through this scheme? Clause 4 refers to the secretary of the parents teachers association of the school and where such association does not exist a parents/guardian nominated by the director. Why should the director nominate? How could he know that he is a better parent? He may be a friend of his and a notorious agitator and the director may put him in. We could of course short-circuit that immediately by removing his child from the school and disqualify him as a parent. Why should the director appoint the parent?

Shri M. C. Chagla: Only when there is no association.

Shri Frank Anthony: If you say the school will appoint a parent, I can understand that.

Shri A. E. T. Barrow: On page 2, they say that the proceedings of the meetings of the managing committee shall be sent to all members and the Director within 15 days of the meeting.

Shri Frank Anthony: Why should we do that? We will not do that. The unaided schools will not do that.

I shall come to my note again; I am practically finishing the ground. I refer to age 4, top para. If there are two schools and there are 8 or 9 really competent people in that place, why should we go in for different committees. We may find it very difficult.

Para 9 of my note deals with clause 6. How can it be done with regard to unaided schools.

Shri M. C. Chagla: If you look at the scheme and read it, you will see that the approval of the director is with regard to certain disqualifications about the manager being of a certain age, not being an insolvent, not being insane and so on.

Shri Frank Anthony: You can still have it for aided schools. The difficulty here is that no distinction has been drawn between aided and unaided schools. If you draw that distinction you can take all the powers with regard to aided schools and government schools.

Shri M. C. Chagla: If a member of the managing committee or the manager suffers from any of the disqualifications mentioned, then he ceases to hold that office.

Shri Frank Anthony: I have in para 9 of my note gone into this point.

Shri M. C. Chagla: The rules may be *ultra vires.*

Shri Frank Anthony: I agree with you. It has to be scrutinised. Then, I take clause 7(2) of the Bill; I refer to paragraph 10 of my note. It would be illegal to take over the management of a minority-run school, in view of the opinion of the Supreme Court. I do not know whether clauses 7(2) and 7(3) are still being retained.

Shri M. C. Chagla: It is not taking over.

Shri Frank Anthony: The Director may arrange for the schools to be closed.

Shri M. C. Chagla: Only if the manager informs the Director that he cannot carry on. What can be done? Then there is no interference.

Shri Frank Anthony: If the management says, "I want you to take it over," then, it is a different matter. But the Director cannot say, "you cannot close down the school". That is exactly where the Supreme Court said it was illegal. The Supreme Court has said that under no circumstances you can take over the management of a school.

Dr. (Mrs.) T. S. Soundaram Ramachandran: Then, what can be done when they cannot run the school?

Shri Frank Anthony: Sell the property. You cannot acquire it.

Shri M. C. Chagla: I do not think the Supreme Court considered this case.

Shri Frank Anthony: What they considered was clause 14 of the Kerala Education Bill. I refer to paragraph 10 of my note. Clause 14 of the Kerala Education Bill said:

> "Whenever it appears to the Government that the Manager of any aided school has neglected to perform any of the duties imposed by or under this Act or the rules made thereunder, and that in the public interest it is necessary to take over the management of the school . . ."

Shri M. C. Chagla: This corresponds to clause 18 of the Bill.

Shri Frank Anthony: Yes; this is not at the request of the management; it is when the Government thinks so. In this Bill, there is no suggestion that the management is requesting you to take it over.

Shri M. C. Chagla: The clause says:—I am referring to clause 7 of the Bill—"If at any time after notice has been given under sub-section (1), the manager of the school informs the Director that he is unable or unwilling to carry on the management of the school or class till the expiry of the period . . ."

Shri Frank Anthony: Clause 7 will not be applicable so far as the unaided schools are concerned. Clause 7(2) says:

> "If at any time notice has been given . . . the manager of the school informs the Director that

he is unable or unwilling to carry on the management of the school or class . . . the Director may arrange to manage the school or class during the whole or any part of the unexpired portion of such period:"

Shri M. C. Chagla: Only when the manager says he cannot carry on.

Shri Frank Anthony: He may say, "I do not want to manage the class; I am rationalising the school."

Shri M. C. Chagla: "that he is unable or unwilling to carry on . . ."

Shri Frank Anthony: You are again purporting to take over the management.

Dr. (Mrs.) T. S. Soundaram Ramachandran: What is the alternative?

Shri Frank Anthony: The Supreme Court said that the school cannot be ordered to be closed down; that it cannot be taken over.

Take clause 14(2) of the Kerala Education Bill—cases of emergency.

Shri M. C. Chagla: This is not an emergency.

Shri Frank Anthony: Clause 14(2) says:

"In cases of emergency, where the Government are satisfied that such a course is necessary in the interests of the pupils of the school they may, without any notice under sub-section (1) to the Manager or the Educational Agency, take over the management of any school . . .".

Shri M. C. Chagla: In one case, the Government decides it; in the other case, the Manager says it. There is a difference.

Shri Frank Anthony: They may say that without any notice the management can be taken over.

Mr. Chairman: There is a distinction between the Government taking it over and the manager requesting the Government to take it over.

Shri Frank Anthony: If you say, "request", put it beyond any question. If you arrogate to yourself the power to take over, then it becomes illegal. There are two sides to the picture: that he shall not open a fresh class or he shall not close down.

Mr. Chairman: Clause 7(2) says: "If at any time after notice has been given under sub-section (1), the manager of the school informs the Director . . ." That means it is a request.

Shri A. E. T. Barrow: It is merely saying that "I am not going to run the class". Supposing, I run a school and have, under the higher secondary pattern, a science scheme or a humanity scheme or a fine arts scheme, and I have just two pupils or,—I am having an unaided school—just one pupil in my fine arts scheme, and I say, "I am not going to continue this", I may inform the Director likewise. Then, how can the Director come and say I cannot do that?

Shri M. C. Chagla: This clause will not apply. It is not a case of inability or unwillingness. It is a change in the curriculum.

Shri A. E. T. Barrow: My submission is, I am unable to run the school.

Mr. Chairman: The witness is before us and we will first have his views. We will discuss with him and have the matters elucidated. Then, when we come to clause-by-clause discussion, we will have the hon. Members to put him questions.

Shri A. E. T. Barrow: Then you are denying the Members their right; I say it most respectfully. The Minister and the Deputy Minister—without any reflection I am saying this—are asking questions. When a Member asks a question for the purpose of clarification, you are denying him that opportunity.

Mr. Chairman: You are perfectly entitled to ask questions and get an elucidation.

Shri A. E. T. Barrow: You stopped me just now.

Mr. Chairman: I only suggested that he might put his questions afterwards.

Col. B. H. Zaidi: As I see it, clause 7(2) of this Bill hinges on the words "If at any time after notice..". That is, notice is given that he should do this, that or the other. In the light of the notice, the manager says he is unable to carry on. It is not that the manager *suo motu* says he cannot carry on the school. After notice, which says "carry out such and such things", then, he says he cannot carry on the management. So, it should be read in the light of the words "If at any time after notice . . ." That means he cannot carry out the instructions given to him in the notice.

Shri M. C. Chagla: Notice to the Director. The manager gives the notice.

Col. B. H. Zaidi: Not independently; because of the notice he says he cannot carry on, etc.

Shri Frank Anthony: Then take clause 7(3) of the Bill: "In the event of the school being discontinued or down-graded or taken over; or its recognition being withdrawn, the Manager shall make over to the Director or any authority authorised by him in this behalf all the records and accounts of the school . . ." How can the authority come in here? The management may choose to discontinue.

Shri M. C. Chagla: What is wrong about this?

Shri Frank Anthony: The whole scheme, to my mind. when read together, contemplates the taking over of the management of the school. You may say that you seek to rationalise it. Because I open a fresh class or close down a class for very good reasons, you may say, "we do recognise you." It cannot be done. You are purporting to take over the management. In fact, in principle, in law, it would be the same as clause 14 of the Kerala Education Bill—clause 14(2) which refers to emergency—in respect of which the Supreme Court said you cannot do it. If you take over the management like that, it amounts to expropriation.

Shri M. C. Chagla: You might say clause 18 is expropriation! It may be temporary.

Shri Frank Anthony: If it is permanent, it is illegal and expropriatory, but then, because it is temporary, it would not change the basic illegal character. You cannot even take it over temroparily.

Shri Frank Anthony: Para 11. Clause 8 is ex-facie illegal. Government has no power even to approve the appointment of a Manager in an unaided minority-run school. Ex-facie it can have no power to remove the manager of an un-aided minority-run school whatever other penalities it may seek to impose. You may fine him or send him to jail. But the appointment and removal of the manager, if any, is solely within the competence of the Board of Governors or the Managing Committee.

Shri M. C. Chagla: Even if he fails to comply with the provisions of clause (b) or (c) of sub-section (4) of section 6 or wilfuly maintains a false statement of accounts? Only in those cases clause 8 is attracted.

Shri Frank Anthony: Even then, when you have no powers of appointment or even the power to approve his appointment, how can you remove him? The manager must be answerable to the Board of Governors. If he thinks he can be removed by the Director, he will not pay attention to us. You can penalise him, fine him or send him to jail. But if you cannot even approve his appointment, you cannot a *fortiori* remove him. We are the only people who can say, "we will remove you".

Para 12. Clause 17(4)(c) is also ex-facie illegal as Government can in

no circumstances take over minority-run schools whether aided or unaided.

Shri M. C. Chagla: We accept it. That goes.

Shri Frank Anthony: That means clauses 18 and 19 also go too.

Para 15. Clause 21(2) is also in my respectful view illegal. Most of the Anglo-Indian schools take the Indian School Certificate Examination whose syllabus is of a very high order. The syllabus is prescribed by the Council. This examination and syllabus are approved by an overwhelming majority of the Universities in the country. These schools would not be able to accept dictation from Government about the text-books and other reading material which might very well lead to a lowering of their standards. The schools might be prepared to consider advice, but the Council, which prescribes the text books and the reading material, is for these schools the competent authority.

After all, you are legislating for the whole country. You know in some States there is a racket in text books —badly printed, ungrammatical books.

Shri M. C. Chagla: It is a permissive provision. It does not say "shall", but only "shall be lawful".

Shri Frank Anthony: You will emphasise "shall" and you may impose shoddy text books.

Shri M. C. Chagla: Why do you assume that the Central Government will act so arbitrarily?

Shri Frank Anthony: This is going to be a piece of model legislation and it will be followed by all the States with all the consequences.

Shri M. C. Chagla: If you have shoddy, incorrect, un-Indian text-books, we reserve the power to give directions. If you have good text-books, we will not interfere.

Shri Frank Anthony: If you do not like our examination or syllabus, you may dictate to us. In any case, we do not prescribe generally a single book in any subject. We prescribe a whole range of books. You may take the powers to recommend and leave it to the Board of Governors.

Para 16. Clause 21(3) is also ex-facie illegal. The Supreme Court opined that clause 12 of the Kerala Education Bill was illegal *vis-a-vis* unaided schools, namely, Anglo-Indian schools: Government could not prescribe conditions of service of the teachers in these unaided minority-run schools.

Shri M. C. Chagla: This is again permissive; it is not obligatory. Clauses (i) and (iv) are not objected to?

Shri Frank Anthony: Obviously you would not tell us to take the syllabus of the Higher Secondary Examination. In all progressive democratic societies, for recognition, government requires certain things. You require a good building, sanitary facilities, etc. We are taking a first class examination and we prescribe a whole range of text books.

Shri M. C. Chagla: Then we would not interfere.

Shri Frank Anthony: That is permissive. I say, you cannot take the power to tell us that you will have this text-book or that. We will say, "we are sorry; we consider them inferior text-books". You will say, "No; we have the power to say that you will have only this text book".

Mr. Chairman: Anything else?

Shri Frank Anthony: That is all.

Shri Santosh Singh: You said under article 337, you are not getting any aid now. Will you explain it?

Shri Frank Anthony: The provision was for 10 years from the commencement of the Constitution, these schools will be getting the aid they were getting previously. That has ceased now.

Shri Santokh Singh. For these unaided schools, where is the money coming from?

Shri Frank Anthony: We have our trusts. We charge a certain amount of fees also.

Shri Santokh Singh: If there are malpractices in these schools, how can the government or anybody else tell you that such and such malpractices are there?

Shri Frank Anthony: You have your inspections. You can look at our books or accounts. You can always withdraw the recognition.

Shri K. Damodaran: You have said in para 4 of your note—if I have understood you correctly—that the manager should have the freedom not to give pay to the teacher, to dismiss the teacher at his own will and to punish him ever if the teacher is not guilty and still government should not interfere. It may be *ultra vires* or *intra vires*, I do not know. Please do not talk as a Supreme Court lawyer in legal language, but as a person interested in the welfare of the teachers and the children who study under them. Suppose I send my boy to your school and the teacher is dismissed or some injustice is done. According to law, it may be justice, but according to humanity, it may be injustice. What is the remedy?

Shri M. C. Chagla: You are not objecting to clause 11?

Shri Frank Anthony: No.

Shri K. Damodaran: On page 2 of his note he has said:

"....under clause 9 the Government could not undertake to pay the salaries of teachers: under clause 11 the Government or any agency of the Government could not appoint or direct the appointment of teachers: under clause 12 the Government could not prescribe the conditions of service of the teachers nor interfere with their dismissal, removal or suspension by the school management."

Does he mean to say that the Government should not have anything to do with the service conditions etc., of the teachers in unaided schools?

Shri Frank Anthony: There is the Supreme Court judgment.

Shri K. Damodaran: The Supreme Court also decides according to law. The Constitution may be amended.

Shri Frank Anthony: If you amend the Constitution and take away article 30, it will solve all the problems.

Shri K. Damodaran: But what does human justice require? Should the manager of an unaided school be given the freedom not to pay salaries to the teachers?

Shri M. C. Chagla: The Bill only refers to aided schools.

Shri S. N. Chaturvedi: What do you think should be the attitude of the Bill in respect of those institutions which are not minority schools but are majority unaided schools? Should they also be excluded from the purview of this Bill because they are not aided by Government?

Shri Frank Anthony: In fairness I would exclude all unaided schools. I would not specify whether they should be minority or majority schools. You have got some very good majority run schools. If they are not aided and they are badly run, they will soon have to close down.

Shri Diwan Chand Sharma: What do you mean by religious minorities and linguistic minorities? For instance, I come from a constituency where the Hindus are in a minority, the Sikhs are in a minority, the Harijans are in a minority and so on. Therefore, the conception of 'minority' changes from place to place, from district to district and from time to time. There are Sikhs, Hindus, Araya Samajists, Sanatana Dharma, Jains and so on. If they are to be treated as minorities, I think most of the schools run by them which are put under the purview of this Bill will opt out of it.

and this Bill will have no validity. If you accept the contention of Shri Anthony, that this Bill should not apply to religious and linguistic minority schools which are unaided, I think most of the schools will opt out of it. Most of them can go without aid because they have enough funds. How do you get over this difficulty?

Shri Frank Anthony: This matter was canvassed to some extent in the Kerala affair. The Government counsel there argued that the Christians were in fact not in a minority in Kerala because in many areas they formed a majority. The Supreme Court said that they were satisfied that on the whole they were in a minority in Kerala. On the basis of language, the Sikhs would always be accepted. The Tamils and Telugus in Delhi would always be a minority.

Shri Hem Barua: In the matter of malpractices and financial irregularities in unaided schools the step that you suggest is that Government should de-recognise the school. So far as these unaided schools are concerned, the question of Government recognising them or not or de-recognising them does not arise because it is the Board of Examination or the University that gives recognition to these institutions. I want a clarification on that point. Secondly, what do you suggest to ensure uniformity in the standard as also in the management of the different schools in the city of Delhi? The Government have a responsibility in that respect to ensure the uniformity of standards and also uniformity of management for the working of these institutions. What do you suggest so far as that is concerned?

Shri Frank Anthony: With regard to the second question, I read an article a long time back about Delhi. There are about six reputable non-aided schools. There are 360 government and aided schools. You arrogate to yourself all the power you want and if you can introduce uniformity you can do so. Non-aided schools are, at any rate, in Delhi, in a hopeless minority although they are the schools most sought after.

Shri Hem Barua: Because they are in a hopeless minority should they be left to their own state of affairs?

Shri Frank Anthony: No. You have the right to inspect, you have the right to ask for their schemes of management and so on.

Shri Hem Barua: When you agree to that, why is it that you do not support the idea adumbrated in this Bill, that the Government should have some further rights with regard to the appointment of manager and all that?

Shri Frank Anthony: The control of the school must vest with the management.

Shri M. C. Chagla: When you are not getting any aid, what do you mean by de-recognising?

Shri Frank Anthony: Our teachers will lose the railway concession, our children will lose the railway concession and all that which they would not care to lose.

Shri Jairamdas Daulatram: You said that with regard to the aided schools, which are 360 in number, the Government may do what it likes. All that is subject again to the decision of the Supreme Court which also protects certain aided minority schools.

Shri Frank Anthony: It is only a reasonable regulation. The Supreme Court were very doubtful about even aided schools. They said that all these clauses, clauses 8 to 13, come perilously near invading the fundamental rights of minorities. Even then they said that in return for the aid they felt that this was a reasonable regulation.

Shri Frank Anthony: In a recent case, the Gujarat case, in a sense they have reiterated 'reasonable restriction'. They have gone further and said "please note that article 30 gives an absolute right; it is not like article 19, which is subject to reasonable res-

trictions". In that case I think the University or the State Government was seeking to reserve a certain number of seats in a Christian training college. The Supreme Court said "you cannot do that". Then they said "you cannot even withdraw aid from this institution, because in return for aid you cannot tell them that they must reserve a certain number of seats for you".

Shri M. C. Chagla: The Gujarat case was, I think, about the teaching of English.

Shri Frank Anthony: No, this case was about reservation. The Court has given a decision in favour of the schools. Here is a recognised aided school. Government said "we will reserve a certain number of seats for us". The Court said "no, you cannot do that in return for the aid you give".

Prof. Mukut Behari Lal: It seems to me that the learned jurist discussed in great detail the constitutionality of certain provisions of the Bill. We are much obliged to him for that. But from his talks I gather that so far as aided minority schools are concerned, we can pass this law, excepting the clauses concerning taking over the school and taking over of the property of the school but so far as the unaided minority schools are concerned, certain other clauses of the Bill are also invalid. There is a feeling in the majority community—I represent India as a whole; so, I represent the feelings of both the majority community as well as the minority community that this clause though meant to protect the minorities against discrimination, is being used by the minorities for privileges. That is to say, that laws can be passed against a majority community but similar laws cannot be passed, or regulations cannot be imposed, with regard to minority schools. That feeling, I am sure the learned jurist would agree with me, is not a very healthy feeling for India as a whole. So, perhaps he would like that the concessions that he feels must be given to unaided minority schools on constitutional basis, must be extended to unaided majority schools also

Shri Frank Anthony: Yes, though my saying it would not matter. I do not think any majority school has gone to the Supreme Court. If one goes, the Supreme Court will certainly say "well, if you are unaided you will also enjoy freedom from interference".

Prof. Mukut Behari Lal: I am not asking this question strictly from the legal point of view. Besides being a learned jurist, he is a public man and holds himself responsible for the welfare of the entire nation, not only of the minority community or the community to which he belongs. From that point of view I wish to know whether he thinks that to avoid that feeling that protection granted against discrimination is being used as privilege by the minority communities, such protection may be extended to unaided majority institutions also.

Shri Frank Anthony: I think it would be fair, because my own experience has been that your unaided schools are, by and large, good schools. I am thinking of the schools run by a body with which Shri Munshi is associated.

Shri M. C. Chagla: Please understand that this Bill is not aimed against good schools.

Shri Frank Anthony: The question is this: would the schools run by Shri Munshi get the same protection as recognised minority schools? I say, I certainly think that although it is run by the majority community it should get the same protection.

Prof. Mukut Behari Lal: In any case, I beg to submit that, if not today perhaps after a few years, it may be difficult to recognise a minority school or majority school or school run by a particular community because the management or trust will be composed of members belonging to not only one community but a

number of communities. Therefore, the distinction between a minority school and majority school will be very difficult then. You have referred to Munshi's school. Munshi happens to belong to the majority community but you cannot say the schools run by that trust are majority schools. The trust that may be running that school may consist of Hindus, Muslims, Sikhs and Christians. So, after some years it may be very difficult to say whether it is a minority school or majority school.

Shri Diwan Chand Sharma: What you think is Utopian.

Prof. Mukut Behari Lal: I beg to submit that though it may look Utopian to the learned professor, it has to be a reality in future if India has to subsist as a nation.

Shri Yamuna Prasad Mandal: The learned witness, a very active Member of Parliament, has perhaps some scare and imaginary fears about this Bill. May I invite his attention to clause 23 which says:

"If the Central Government is of opinion that it would not be expedient to make the provisions of this Act applicable to any school having regard to its financial resources, character, location or other relevant considerations, it may, by notification in the Official Gazette, exempt such school, either generally or subject to such conditions, if any, or for any period to be specified in the notification, from all or any of the provisions of this Act."

So, there is no cause for any fear.

Shri Frank Anthony: But, then again, why do you have to give it *ex-gratia*? I was referring to the strict legal point of view. One is a right whereas the other is a matter of grace.

Shri M. C. Chagla: Was there such a provision in the Kerala Bill?

Shri Frank Anthony: Kerala Bill referred to aided schools.

Shri M. C. Chagla: No exemption clauses?

Shri Frank Anthony: I do not think so.

Mr. Chairman: Clause 38 of the Kerala Bill says:

"Nothing in this Act shall apply to any school which is not a Government school or a private school."

Shri Yamuna Prasad Mandal: So, perhaps the learned Member of Parliament is convinced that there is no cause for scare or imaginary grievance.

Then, on paragraph 7 of his note he says:

"The important ratio that emerges is that Government may withdraw aid and it may even derecognise but it cannot take over the property or the management of minority-run schools, not even of aided schools."

May I request him to clarify this point?

Shri Frank Anthony: That is the decision of the Supreme Court. They have struck down clauses 14 and 15 not only with regard to Anglo-Indian schools but with regard to all schools —clause 14 regarding taking over the management and clause 15 regarding acquiring the property.

Shri Yamuna Prasad Mandal: Because the learned Member has been insistently pressing the point of Anglo-Indian schools, may I know how far this country can move towards secularism if he presses again and again this point?

Shri Frank Anthony: It is a misconception of secularism. Article 30 was incorporated in the Constitution because it was felt that some special safeguards may be necessary so that their cherished educational institutions may not be over-run. It was a concession to secularism.

Shri Rama Chandra Mallick: Does the hon. Member want that there should be no control by the Education Department or the Government over unaided schools and that the management can do whatever it wants to do?

Shri Frank Anthony: I have said "No". In the Kerala matter, you will see that you have prescribed the qualifications of teachers as a precondition to recognition and the Supreme Court have held that you can do that. You can do certain things, for example, you can lay down conditions for buildings, examinations, equipment, playing fields etc. for recognition. Then, the whole of clause 7 of the Kerala Bill, except 7(1) and 7(3) which they struck down, you can apply to unaided schools. You can ask them to maintain the records and accounts of the school in a prescribed manner. No manager shall close down any school unless one year's notice is given. The Manager shall be bound to afford all assistance and facilities for the inspection of the school and its records and accounts. In the event of the school being closed down or discontinued or its recognition being withdrawn the Manager shall hand over all records and accounts of the school, but you cannot take over the management. If a manager contravenes the provisions or wilfully contravenes, he shall on conviction be liable to fine which may extend to two hundred rupees. You cannot remove him. They have given all these powers even with regard to unaided schools. It is not as if you are without powers.

Shri Rama Chandra Mallick: If a manager or a teacher or an employee is dismissed or discharged by the management, will he get a chance to appeal to the Director or the Education Department or the Government?

Shri Frank Anthony: So far as unaided schools are concerned, we made it clear that you cannot prescribe the conditions of service.

Shri Deokinandan Narayan: I have not yet understood what the hon. Member meant by minority schools. Does he mean by that schools managed by the minority or schools having majority students of the minority?

Shri Frank Anthony: The latter does not apply. Even if you had 15 per cent, the schools were established and administered by the minority. Then, as a precondition to our grants we had to take in 40 per cent of the other pupils and the Supreme Court says that it is a good thing. That does not alter it, if you have majority of other children, so long as it is established and administered by the minority. They are under an obligation to admit other children.

Shri Deokinandan Narayan: You may admit other children; but is it your contention that a minority school is one which is managed by a minority?

Shri Frank Anthony: Yes.

Shri Deokinandan Narayan: You have attacked so many clauses and the powers given in those clauses, but you have not suggested any alternatives. You admit that certain powers must vest in Government as regards unaided schools. I would like you to give us an idea of the powers that you would like to vest in Government.

Shri Frank Anthony: I have already said that under clause 10 you prescribe the qualifications of teachers. Then, you take those powers that are there in clause 7 of the Kerala Bill, except 7(1) and 7(3), that is, the manager has to submit the books and accounts etc. and all that. You can even say that every school shall have a scheme of management. You can do so many things in return for recognition.

Shri Deokinandan Narayan: Will you please give it in writing?

Shri Frank Anthony: Yes.

Mr. Chairman: Will you be good enough to do it within a week?

Shri Frank Anthony: Yes.

Shri Santokh Singh: Who supervises the control on admissions?

Shri Frank Anthony: That was under the constitutional guarantee. We could not get aid unless at least 40 per cent students were of other communities.

Mr. Chairman: According to your suggestions there would not be any control in so many respects over institutions who do not want aid but who want to conduct schools. In that case what would happen to the fleecing of students by charging extra fees, deposits, donations and such like things? In the case of teachers, you have said that they can go to the court; but what remedy would be there for students who would be applying to you for admission?

Shri Frank Anthony: You can ask the school for its fee range. If they start mal-administering and getting donations, you can always come down upon them. You tell the manager that the whole thing is illegal and you would derecognise the school. I know, some schools do it but no reputable school will do that kind of thing.

Shri P. C. Mitra: Shri Anthony said that schools established and managed by minorities are minority schools; but so far as I understand the constitutional protection is only for those institutions that are run by the minority for their own children only. If a minority establishes a school and the students are of the majority community, that cannot be a minority school.

Shri Frank Anthony: This was canvassed by Mr. Pritt in the Kerala matter. The Supreme Court said, "Not at all; as a pre-condition to grant it is important that these minority schools' children mix with children of other communities and it is important that at least 40 per cent of them belong to other communtities before you can get aid."

Shri K. Damodaran: If the Government prescribes the conditions of service of teachers as a condition for recognition, will it be *ultra vires.*

Shri Frank Anthony: It would be.

Shri K. Damodaran: How?

Shri Frank Anthony: Because they would say that it is unwarranted interference with their internal management.

Shri K. Damodaran: You said that the Government can prescribe the syllabus, play-ground etc.

Shri Frank Anthony: Those were reasonable regulations.

Shri K. Damodaran: Just like regulation of laboratories, sanitary conditions etc. can be done, conditions of service of teachers also can be done.

Shri Frank Anthony: The Supreme Court have already held that you cannot do that.

Shri K. Damodaran: Only such schools should be recognised. Have you any objection to that?

Shri Frank Anthony: Our condition are more liberal than those obtaining in most Government schools. Our grades are higher and we give them the provident fund and other amenities. But the principle is that you will not be able to prescribe conditions because the Supreme Court has already, rightly or wrongly, held that you cannot do it in the case of unaided schools.

Shri Santokh Singh: You have got something like an autonomy and nobody is to interfere in the affairs of an institution. Suppose there is some mal-practice in an institution. To whom should the parents go?

Shri Frank Anthony: They should go to the Director. But that happens even in your best schools. In my schools, I may tell you we have a clause in the contract that no teacher

can take private tuition. They will be dismissed if they take private tuition. In other schools, the teachers earn twice as much as their salaries by way of private tuition. That applies to Government teachers too. But we enforce it. We had only one case and we got rid of the teacher. As a part of the contract, we do not allow our teachers to take private tuition. If you do not pay your teachers properly, you will never be able to stop them from taking private tuition.

Shri Santokh Singh: My another question is this. Suppose a student fails and his parent wants to have a talk with the management. Now, the management is very strict and it does not want any interference. Who is to look to that?

Shri Frank Anthony: You cannot compel them to talk to because sometimes the parents are vey difficult.

It is upto the management, whether they be polite or be inaccessible.

Shri Santokh Singh: During the talk the hon. learned ujrist said that we can circumvent the parent and turn out the students so that they have not to bother the teachers again. But that is no solution. That is not desirable.

Shri Frank Anthony: It is not only that. If one resorts to a bad practice, you too resort to an equally bad practice.

Prof. Mukut Behari Lal: You say that certain things can be done and certain things cannot be done. I am not able to understand why you say this cannot be done, that is, the conditions cannot be prescribed.

Shri Frank Anthony: Much more perhaps can be done or much less. It depends on what the Supreme Court has held. For instance, you cannot prescribe conditions for unaided schools and you cannot approve of the manager. All these things have been already adjudicated upon.

Shri M. C. Chagla: In one sentence, the Supreme Court judgment comes to this. Under article 30, minorities, whether based on religion or language, have the right to administer their own institutions. You cannot interfere in their administration. But there is no right to mal-administration and it is open to Government to frame rules and regulations to prevent mal-administration.

Shri Frank Anthony: Reasonable regulations.

Shrimati Devaki Gopidas: Who is to prescribe these reasonable regulations?

Shri Frank Anthony: That will be the court.

Shri Deokinandan Narayan: In answer to my question a little while ago, you stated that a minority school is that school which is managed by the minority community. But there is a possibility of there being students from majority communities in a majority as compared to the minority community students.

Shri Frank Anthony: That is possible.

Shri Deokinandan Narayan: I would like to know whether the majority students' parents would be represented on your management.

Shri Frank Anthony: We don't do it.

Shri Deokinandan Narayan: Why should you not do it?

Shri Frank Anthony: We find that sometimes there is a tendency for parents to be not only difficult but to ask the administration to do all kinds of things that are not good. They want their children to be promoted when they are unfit. If the child has failed, well, the parent says, "The

teacher did not like my child because my child was cheeky." We have a lot of difficulties with the parents sometimes.

Shri Deokinandan Narayan: That is done even by the parents of the minority community.

Shri Frank Anthony: Yes.

Shri Deokinandan Narayan: Why should there not be men on your management from the other communities when they have got a majority of students?

Shri Frank Anthony: The parent-teacher association for the purpose of consultation is a different thing. We have it in some form. But we don't have them on the management.

Mr. Chairman: So, we have finished. Thank you very much, Mr. Anthony.

Shri Frank Anthony: Thank you.

(The witnesses then withdrew)

(The Committee then adjourned.)

JOINT COMMITTEE ON THE DELHI SECONDARY EDUCATION BILL, 1964

MINUTES OF THE EVIDENCE GIVEN BEFORE THE COMMITTEE.

Wednesday, the 9th February, 1966 *at* 10.00 *hours.*

PRESENT

Shri T. H. Sonavane—*Chairman.*

MEMBERS

Lok Sabha

2. Shri A. E. T. Barrow
3. Shri Parashottamdas Haribhai Bheel
4. Shri S. N. Chaturvedi
5. Shri Sudhansu Bhusan Das
6. Shri Gokaran Prasad
7. Shri Shiv Charan Gupta
8. Shri Hem Barua

DRAFTSMAN

1. Shri K. K. Sundaram, *Joint Secretary & Draftsman, Ministry of Law*
2. Shri A. K. Srinivasamurthy, *Deputy Draftsman, Ministry of Law.*

REPRESENTATIVES OF THE MINISTRY

1. Shri L. O. Joshi, *Joint Secretary, Ministry of Eduaction.*
2. Shrimati L. W. Dhume, *Deputy Secretary, Ministry of Education.*
3. Shri B. S. Verma, *Under Secretary, Ministry of Education.*

SECRETARIAT

Shri M. C. Chawla—*Deputy Secretary.*

WITNESSES EXAMINED

1. Shri B. D. Bhatt, *Director of Education, Delhi.*
2. Dr. (Miss.) A. Nanda, *Assistant Director of Education, Delhi.*
3. Shri B. N. Chaturvedi, *Zonal Officer—Education, Delhi.*

(Witnesses were called in and they took their seats)

Mr. Chairman: The witnesses are here. Today we will mainly concentrate upon the Bill. itself. In the initial stage I will put some questions to the witnesses, and then Members may ask any questions, if they feel like asking, for clarification.

Shri B. D. Bhatt: Sir, here are three statements. The statements I have not been able to prepare overnight. I will send them.

Mr. Chairman: Mr. Bhatt, I have to impress upon you one fact, that you are a witness before the Committee to give guidance, information, suggestions to the Committee to improve upon the Bill in the interests of education and not to justify before your superiors the steps and actions taken by you or your Department. The Committee has got to be enlightened on matters before it only. You might be here today, but someone else might be occupying your post afterwards. Therefore, in the interest of education you have got to enlighten the Committee, and in that light please answer the questions.

First of all, how long have you been occupying this position as Director?

Shri B. D. Bhatt: Sir, I have been on this post for seven years nine months.

Mr. Chairman: What are your educational qualifications?

Shri B. D. Bhatt: I am a Master of Arts, M.A., and Licentiate of Teaching.

Mr. Chairman: Will you please explain the set-up of your Directorate organisation and its functions in relation to the Central Secondary Education Board and the Administrator of Delhi, under article 239 of the Constitution?

Shri B. D. Bhatt: Sir, the Union Territory of Delhi functions under the administration of the Chief Commissioner, and the Director of Education is also ex-officio Secretary and to that extent responsible to the Chief commissioner, to the Administrator.

The powers of the Directorate of Education are defined in the Code. The Director at present is assisted by a number of headquarters officers and certain zonal officers.

There is a Joint Director of Education who is looking after the administration side of the government schools, that is, transfers, postings, promotions of teachers. That is his main job, both for men and women.

Then there are three Deputy Directors. One is looking after produc-

tion of text-books. The second is looking after cases relating to aided schools, for which the Director of Education is directly responsible And the third is looking after our building programmes which are of a very large size.

There are seven other officers, Assistant Directors. One is looking after training. Another is looking after capital works programme. A third is looking after text-books. Two are looking after administration, one for women (Dr. Nanda) and the other for the men's side. There is an Assistant Director for Social Education as well. Then one officer, Assistant Director, is for planning. Planning is also the direct charge of the Director of Education. In other charges he is getting his papers through other officers.

Then there are four zones, and these zones are controlled by zonal officers who are primarily responsible for the supervision, inspection and direction of schools. They have one each a Deputy Inspector of Schools to assist them in their supervisory work. While supervising and inspecting the schools we create a panel; that is, some specialists and other principals are included. If it is of a big size there are four or five members of the panel visiting the school; if it is smaller two or three may do. At present a zonal officer has a charge of 55 to 35 schools. In the case of women the number of schools is smaller; in the case of men it is larger.

There are other specialised officers. We have, for instance, a Deputy-Inspectress—an Inspectress—for Domestic Science for schools; two Deputy Inspectors for Physical Education, which is a specialised subject. Then we have Science Consultants, three of them, at one science centre. The Consultants help in improving and reorganising scientific studies in schools, allocating science courses and helping in many other ways in the instruction of science in schools.

This is broadly the set-up.

Shri A. E. T. Barrow: May we ask for clarification on that?

What is the total number of officers working under the Department?

Shri B. D. Bhatt: The total number of officers?

Shri A. E. T. Barrow: All that you have enumerated just now.

Shri B. D. Bhatt: It comes to 26 officers.

Mr. Chairman: Officers of first grade?

Shri B. D. Bhatt: There are three Class I officers; the Deputy Directors; the Joint Director is a cadre officer from the civil service; and the third is the Director of Education. The remaining are junior officers in Class II.

We have also—I forgot to mention—one officer for the N.C.C.; we call him Administrative Officer. He is also working under me. He controls the civilian staff of the National Cadet Corps.

Mr. Chairman: Is there any under the National Discipline Scheme?

Shri B. D. Bhatt: We have a number of schools which were having the National Discipline Scheme in Delhi. But now that scheme is being merged into the National Fitness Corps. We are nowadays reorganising the set-up, and I think by the next academic year it will be possible for us to have this new scheme.

Shri Diwan Chand Sharma: Is a set-up like that operative in any other State? There is one officer, whether Class I or Class II, for almost fourteen schools. I do not think there is this kind of top-heavy administration in any other State.

Shri B. D. Bhatt: Once we worked out the *per capita* expenditure on administration and direction in Delhi, and we compared it with the all-India figure and the figures of other States. Delhi at that time was the lowest, because we have 392 schools and a number of other responsibilities. And

that way, against a total budget of Rs. 7 crores the number is not much. For instance, Social Education must have two officers. Building programme in Delhi is of a special nature. The third thing to be considered is that in no other State probably—probably now there is in Punjab—there is such a large number of government schools. So there is a direct responsibility.

Shri Diwan Chand Sharma: What is the percentage of the revenue accruing from the Delhi Union Territory which is spent on this Directorate of Education?

Shri Bhatt: I will be able to give you are figures. Generally they give it that on administration you could spend about 3 to 5 per cent. And at that time when we worked it out three years ago it was less than 2 per cent.

Shri Diwan Chand Sharma: You are talking about the position three years ago. During this period, there has been so much of expansion.

Shri Bhatt: It is gradually expanding. All the expansion has not taken place during the past three years. It has been gradually expanding and norms are there. These proposals are seen not only by the Delhi Administration but also by the Ministry and they take care that staff is given only for the essential needs of administration.

Shri P. C. Mitra: What is the total number of clerical and other staff?

Shri Bhatt: I cannot tell you offhand. All that I can say is that we have not been given any extra clerical staff because there is a ban.

Shri P. C. Mitra: You may not give the exact figure, but you can give a rough idea about it.

Shri Bhatt: It is about 220 so far as I know. I may correct this figure.

Mr. Chairman: May I know whether the Code which you referred, namely, the Delhi Education Code, 1965, derives its authority from any statute of Parliament or authority under Article 239 of the Constitution and whether circulars issued by you to the aided schools could be enforced in a court of law?

Shri Bhatt: No. This Code is only a compilation of the executive orders; it does not carry any statutory authority. Normally, if the Code is long in practice, its provisions are carried out more due to convention. I cannot, except in the case of criminal breach of trust, go to a court of law.

Mr. Chairman: Are you aware of the case of Nandlal Gupta—he went to the Court; there was an agreement between him and the Manager; one of your circulars was involved and the court was unable to give him relief? If this is so, what will happen to this Code and how its provisions will be incorporated in the Bill?

Shri Bhatt: This Code has been operating for many years. First it was the Punjab Education Code which applied to Delhi. Recently we have formed our own Code. Many of the salutary provisions of this Code should naturally go into the Bill.

Mr. Chairman: In what form?

Shri M. C. Chagla: The rule-making power is there.

Shri Bhatt: The rule-making power is there. That is why we are expecting you to include these provisions. These are good provisions.

Shri S. N. Chaturvedi: In view of the contract that is entered into by the teachers, at the time of appointment, with the Management, is the contract not enforceable by law?

Shri Bhatt: That contract is enforceable by the Management.

Shri S. N. Chaturvedi: The teacher can also enforce compliance.

Shri M. C. Chagla: The master-servant contract can always be enforced.

Mr. Chairman: It was contended that it was a personal service. Therefore, this Code was unable to give relief to the aggrieved party; hence, the necessity for this Bill.

Shri Bhatt: The necessity for this Bill arises out of many reasons.

Prof. Mukut Behari Lal: What led you to request the Ministry to approach Parliament for the enactment of the law?

Mr. Chairman: Let him complete his reply.

Shri Bhatt: There are several reasons. I will first go into the details about irregularities in the Management. Why were the teachers discontented? It was because they were not paid in time, short payments were made to them and they were forced to resign....

Mr. Chairman: All those facts are now before the Committee. The point is this. This Code *ipso facto* would not be binding on any party, either the Management or the teachers, unless it derives its authority from any Act of Parliament. This is the Notification No. so and so.

> "The Chief Commissioner, Delhi, is pleased to prescribe the following Education Code for the Union Territory of Delhi and to direct that the said Code shall come into force on the 15th February, from which the Punjab Education Code shall cease to apply."

It does not say, under what Section of the Act.

Prof. Mukut Behari Lal: That is the only problem. Only a single clause Bill was necessary. The question is: what led you—I am asking the Director of Education; I hope the Bill has been framed at the request of the Director also—to request the Ministry that there should be a Bill of so many clauses and not of many other clauses because, if the whole Code is to be there, why is the Code not in the form of law and why only a few clauses are in the form of a Bill? If legal validity is to be given to the Code, then a single clause Bill would have been sufficient.

Shri Bhatt: To that my reply is this. The Code has been in existence for a number of years. In spite of our best efforts, we have not been able to bring about improvement in some of the worst schools which continue to remain in existence. As you have already said, Mr. Chairman, you have all these facts before you. But the types of irregularities are very serious. If I were to re-consider the matter, there will be 12 institutions which will have to be considered for being taken over or close. The irregularities there are of a very serious nature. May I give you an indication of the nature of irregularities?

Shri Diwan Chand Sharma: What prevents you from closing down the schools?

Shri Bhatt: Under the Code, they will have to be de-recognised.

Mr. Chairman: Why do you want this legislative power? In order to enforce your executive order?

Shri Bhatt: I have not been able to enforce this. I cannot close them under the Code.

Prof. Mukut Behari Lal: You can withdraw or withhold your aid.

Shri Bhatt: In the rules, parallel facilities are created. Derecognition may hit the teachers and the pupils.

Shri M. C. Chagla: Do I take it that there is no power under the Code....

Shri Bhatt: Yes; there is no power.

Mr. Chairman: You have said that convention enables you to enforce it.

Shri Bhatt: Convention is only for good institutions.

Shri M. C. Chagla: I take it that at every stage you have, what is known

as, grant-in-aid which has got no statutory authority and that the only power you have is that you can say that you will give grants provided the conditions are carried out.

Prof. Mukut Behari Lal: Then the aid can easily be withdrawn or withheld.

Shri M. C. Chagla: But he says that it will hit the teachers and the students.

Shri Bhatt: The teachers' salaries are the first charge. I shall tell you what will happen. For instance, at present no one is responsible. Money is paid, and if it is not returned, then we close an institution. There are funds with the management. How do I get those funds back? It is not possible. Even if we go in for litigation, it will take time. We have the provision in which people have been made responsible for carrying out the responsibility, and this pin-pointing of responsibility will make things much better. It was not there in the Code.

Prof. Mukut Behari Lal: Knowing very little of law, I think even after enacting a law you will have to go to the civil court for the money. How can you avoid that?

Shri Bhatt: This will be a statutory thing and it can be enforced.

Shri A. E. T. Barrow: Is the witness also aware of the administration in U.P. where he was an Education Officer, and where in the case of giving grants and buildings there is always a hypothecation deed between the management and the Government, so that that deed can be canvassed before a court of law? And you can get the money back just as you can do here under the Act. So that, you could easily get over this by having a contract with every school whereby the responsibility will be fixed, as you say, for the fees.

Shri Bhatt: This relates only to building grant.

Shri A. E. T. Barrow: Similarly a contract could be made before they receive the grant-in-aid; an agreement can be drawn up between the managing committee and the Department, and that agreement would be able to be canvassed before a court of law.

Shri S. N. Chaturvedi: If some money granted to a school by the Government for a certain purpose has not been utilised for that particular purpose and it is not returned to you, is the recipient not liable for criminal misappropriation?

Shri Bhatt: This will be a case which will take us to court. We will have to go to a court of law. What will happen to the school?

Shri S. N. Chaturvedi: What additional power do you derive from this Bill which will obviate the necessity of going to a court of law?

Shri Bhatt: It will have a preventive effect.

Shri M. C. Chagla: You see, you are talking that teachers will get pay better than they are getting now. Point it out. I don't know why they are asking you. I am responsible for this, not you.

Is it fair to ask him these legal questions? I have drafted this, not he. He is not a lawyer. You can cross-examine me as much as you like.

Mr. Chairman: If the witness does not know, he can say "I do not know, I am not able to answer it".

Prof. Mukut Behari Lal: And ultimately we will discuss it with the Education Minister.

Mr. Chairman: He is a Member of the Committee and therefore he cannot answer questions. Only in our discussions he can do.

Shri Diwan Chand Sharma: You served notice of derequisition on a school and then withdrew that notice. May I know under what circumstances you withdrew that notice?

Shri B. D. Bhatt: No. Derequisition is not done by me. Requisition is withdrawn by the Central Board of Secondary Education. I send a request to them that it should be derecognised.

श्रीमती जयाबेन शाह : मैं एक बात की तरफ ध्यान दिलाना चाहती हूं । अभी अभी गवर्नमेंट ने एक बांड तैयार किया है जिस पर जो इंस्टिट्यूट सेंट्रल गवर्नमेंट से किसी प्रकार ी मदद चाहते हैं उन्हें दस्तखत करने पड़ते हैं । मेरे ख्याल से वह इतना भारी है कि लोग उसको पसन्द नहीं करते हैं । उसमें इतने बन्धन रख दिये गये हैं कि उनका उत्तर देना भी मुश्किल है । चाहे कोई पार्टली ग्रान्ट लेता हो या पूरी लेता हो उस को सब की साईन करना पड़ता है । जब तक बांड साईन नहीं किया जाता है तब तक पैसा नहीं मिलता । उस में जो कुछ रखा गया है उस के अनुसार गवर्नमेंट इंस्टिट्यूट के साथ कुछ भी कर सकती है और उसी को फाईनल पावर दी गई है । उस के ऊपर कोई अपील भी नहीं है । मैं जानना चाहती हूं कि जो ग्रान्ट लेने वाले एडेड स्कूल हैं उन को इस तरह के बांड पर साईन करने पड़ते हैं या नहीं ।

श्री भट्ट : हम कोड के अन्दर ग्रान्ट दे रहे हैं । लेकिन हमारे सामने प्रश्न यह है कि अगर किसी स्कूल को ग्रान्ट न दी जाये या किसी स्कूल को डिरिक्गनाईज्ड किया जाय तो उस से बच्चों की तालीम की समस्या उत्पन्न हो जाती है । यह कोड इसलिये बनाया गया है कि बच्चों की तालीम में खलल न पड़े और उन को कोई असुविधा न हो । इसीलिये यह प्राविजन अभी तक रखा हुआ है ।

प्रो० मुकुट बिहारी लाल : आपने कहा कि अगर आप इंस्टिट्यूशन्स को डिरिक्गनाईज्ड करते हैं तो आपके सामने सवाल आ जाता है कि आप बच्चों को कहां ले जायें । जो बिल हमारे कंसिडरेशन में है उस में यह प्राविजन है कि जहां पर बिल्डिगंस वगैरह नहीं होगी उन को आप रिकग्निशन नहीं देंगे । लेकिन मैं खुद नई दिल्ली के कई स्कूलों में गया हूं जहां पर कि टेन्टस में स्कूल चल रहे हैं । अगर यह प्राविजन पास हो गया तो वह सारे स्कूल डिरिकग्नाईज्ड हो जायेंगे । उस के बाद जो बच्चों का सवाल पैदा होगा उस को आप कैसे हल करेंगे ।

श्री भट्ट : जब हम को ऐसा कुछ करना होता है तब हम उस के लिये तैयारियां कर लेते हैं । अगर हम किसी स्कूल को डिरिकग्नाईज करेंगे या उन की ग्रान्ट-इन-एड बन्द करेंगे तो बच्चों की पढ़ाई का कुछ न कुछ प्रबन्ध करेंगे । यह हमारी जिम्मेदारी हो जाती है और हम बच्चों की पढ़ाई की कोई व्यवस्था कर सकेंगे ।

Shri Hem Barua: In the event of financial irregularities in schools, why can't you follow the system that they follow in England? They pay the salaries of the teachers direct. You can withdraw the grant and you can pay the salaries of the teachers direct, because you are interested in the running of the school. We are also interested in the running of the school and in the fact that the teacher must not suffer because of the stupidity of the management.

Shri Bhatt: The other difficulty is that the Bill provides for this, because it makes the management directly responsible, and that is a direct charge, the first charge, on the school funds. There are instructions that if a management does not pay the teachers for three months, direct disbursement is to be made to teachers. But what happens is that even if we do that, as we do, the management do not come forth with their share of 5 per cent. The teachers get less to that extent.

Shri Hem Barua: You say you meet 95 per cent of the total expenditure incurred by the school. All right. Only 5 per cent remains. Besides the salar-

ies paid to teachers, there are other amenities and fields of expenditure. The five per cent might cover up those other items, and the 95 per cent that you give will cover up the salaries of teachers. The five per cent to be given by the management can be for meeting the other expenditure.

Shri Bhatt: Contingencies form only a very small portion of the total expenditure. For instance, a school which costs Rs. 5 lakhs per year will have contingencies worth only Rs. 15,000, whereas the establishment cost comes to Rs. 4 lakhs and something. So in this case that is not a very reliable source, even if we wanted to withhold these contingencies.

Col. B. H. Zaidi: I am not acquainted with the type of people who work as managers in Delhi. I only know one, Dr. Lokanathan. Will the provision that the appointment of managers will be subject to the approval of the Director lead to people like Dr. Lokanathan, distinguished, outstanding people, not willing to become managers of schools?

Shri Bhatt: Certainly not, but there are cases where a school clerk is working as manager of the school. The election of this kind of manager may perhaps be ruled out.

Col. B. H. Zaidi: What is the general type of managers?

Shri Bhatt: A fair number of schools have very good managers, and they have no trouble at all. We also respect that manager because he is meticulous and he sees to the good of the school, but the majority of the schools are having managers who should not be there perhaps.

Shri Hem Barua: This "manager of a school" is a contradiction in terms.

Shri Bhatt: We thought that private enterprise and private interest in education should be encouraged. So, if a good man is interested in running an educational institution, it is the good fortune of Delhi and we should like him to run an institution.

Mr. Chairman: In your opinion, what should be the minimum qualification and experience of a manager in the interests of the smooth running of the school?

Shri Bhatt: The only qualification I can think of is his past interest in the good of the educational institution, his devotion to the cause. It is difficult for me to say anything about the educational qualification, because most of them are educated.

Shri A. E. T. Barrow: You say he must have past experience or interest in education. What about the younger people who are going to take interest? Are you going to debar them?

Shri Bhatt: I think even younger people certainly have some experience. A manager must have some maturity, some experience, because he will be working with members who are probably elderly people.

Mr. Chairman: How is the provision for approval of the manager by the Director in this Bill a step in the right direction, and for what reasons?

Shri M. C. Chagla: I am moving an official amendment to delete that.

Shri Deokinandan Narayan: 95 per cent of the expenditure is paid by Government; that means 95 per cent of the teacher's salary is also paid by Government. If the Government pays cent per cent salary of the teachers, will it not improve the matter?

Shri M. C. Chagla: It is provided for.

Shri Deokinandan Narayan: If Government pays directly to the teachers from out of the grant sanctioned, will it not eliminate the difficulties faced by the teachers?

Shri K. Damodaran: Payment to the teachers through the headmaster of the school is a system that is authorised even today in Kerala. What is the harm if such a system is adopted in Delhi also?

Shri Bhatt: That would mean that we would have advance money from the management and get their share of 5 per cent deposited, create a fund and then go on paying from that fund.

Shri K. Damodaran: The entire teachers' pay is met out of this 95 per cent, and some extra money is paid to the manager. That is the system.

Shri Bhatt: That will create the post of a paid manager which Delhi will probably not accept.

Shri Deokinandan Narayan: What is your idea?

Shri Bhatt: Teachers might get the idea that they being under the management, could create indiscipline which we do not want, because the school as a unit must work harmoniously. So, if from this procedure these tendencies of rift develop, it will be in difficulty.

Prof. Mukut Behari Lal: Even if the Government is prepared to pay cent per cent of the teachers' salaries, you would like the salaries to be disbursed through managers and will only exercise control over managers? Would that solve all these problems? Suppose we recommend to Government that cent per cent of the teachers' salary be paid and paid in a manner that no conflict arises between the teachers and the managers.

Shri Bhatt: If cen per cent grant is given. I shall do this gladly. If it is not given, there will be trouble, because it may not be possible to give the share of the management.

Shri Deokinandan Narayan: 96 per cent of the approved expenditure is given as grant by the Government. I would like to know what is the unapproved expenditure of the management approximately?

Shri Bhatt: In the case of teachers, the oily unapproved item of expenditure is the appointment of an unqualified or under-qualified teacher. In the case of contingencies, we have fixed amounts for telephone, for stationery, for electric charges. Any amount spent beyond that is not approved.

Shri Deokinandan Narayan: What is the percentage of unapproved expenditure as compared to the whole?

Shri Bhatt: It will differ from institution to institution, but it is not sizable, but the managements now say that telephone rates have gone up, and we are considering whether some raise should be given to the contingency item in view of their representation.

श्रीमती अनीस किदवई : फ़ीस और डोनेशन्स से कुछ आमदनी तो होती होगी ?

श्री भट्ट : ऐसा मालूम होता है कि डोनेशन्स कम मिल रहे हैं । फ़ीस भी उसमें शामिल होती है । लेकिन सिर्फ पांच परसेंट आफ़ दी एस्टाब्लिशमेंट देना पड़ता है ।

श्रीमती अनीस किदवई : दिल्ली में बहुत सी स्कूल और सोसायटीज़ ऐसी हैं, जो पांच परसेंट भी इकट्ठा नहीं कर सकते हैं, जिस की वजह से कई कई महीनें तक तनख्वाहें नहीं दी जाती हैं ।

श्री भट्ट : यही दिक्कत दूर करने के लिये हम कुछ इन्तजाम करना चाहते हैं ।

Shri S. N. Chaturvedi: How is 95 per cent arrived at—approved expenditure minus the fees? Is 95 per cent of that difference paid to the schools?

Shri Bhatt: Gross expenditure on the school establishment is one side and on the other side is the fees plus their income plus 95 per cent grant.

If for example the total gross expenditure of a school comes to about Rs. 5 lakhs they have only to find 5 per cent.

Shri M. C. Chagla: Why don't you say simply: gross expenditure less fees.

Mr. Chairman: It has been represented to us that with the imminent changes in the administrative set-up of Delhi and there being diversified authorities dealing with education, teachers suffer a lot with respect to their seniority, service conditions, D.A., etc. They had therefore suggested that there should be only one authority dealing with education in Delhi. What are your views in this matter and how far will the above suggestion contribute to better educational standards in Delhi? That is the representation of the municipal school teachers.

Shri Bhatt: One authority will certainly improve matters from the point of view of planning and also instruction work in the class room because an integrated school is a better school and is able to look after a child for a longer period and the results are bound to be better. Probably from the point of view of teacher one authority will be prefarable. There will be one cadre and the chances of promotion would be better because every primary teacher aspires to become a secondary school teacher. That is the reason why they are demanding this unified control.

Mr. Chairman: What do you think should be done?

Shri Bhatt: As it is the practice in all the other States, the promary schooling should be the responsibility of the local bodies and secondary schooling, of the new set-up.

Mr. Chairman: Would you like the schools run by municipal corporation to be taken over by the administration?

Shri Bhatt: Probably that will be better because the teachers will be in the same category. There are ten schools run by the Corporation and three by the New Delhi Municipal Committee.

Shri Jairamdas Daulatram: When the suggestion is made about one central authority for education in Delhi you are excluding primary schools?

Shri Bhatt: Yes, Sir.

Shri S. N. Chaturvedi: When you bring these teachers on a common list how do they get their promotions? According to seniority?

Shri Bhatt: Delhi has a number of paradoxes of this kind, teachers going from district board to government and government to municipal corporation and this has created administrative difficulties. We were able to sort out questions of seniority and promotion ultimately. I am not talking just now of aided schools; I am talking of corporation schools and government schools.

Shri Rama Chandra Mallick: The Director just now referred to secretaries for the schools. I know that secretaries are very active. I have experience of some managing committees of some schools in Orissa as I am the president. They are appointing authority. In place of the manager of the institution, the secretary should act more actively and he should be the appointing authority of the managing committee. What is the opinion of the director?

Shri Bhatt: Principal has beer made the secretary and that is very conveient because he attends to the day-to-day administration of the school and he has to remain in touch with the managing committee also. This seems to be better. The present arrangement seems to be working well and satisfying all.

Shrimati Devaki Gopidas: I want to know whether the aided schools are able to enrol and maintain untrained hands as teachers? In Kerala in spite of so many trained teachers, private schools are able to entertain untrained hands.

Shri Bhatt: Not in Delhi because we have a large supply of trained teachers. Sometimes under-qualified

teachers are appointed for some reason but we do not approve their appointments and do not pay the grant-in-aid on account of them.

Shrimati Devaki Gopidas: I would like to know whether the services put in by the teachers in the private schools are counted for the purposes of seniority, etc., when they are recruited to Government service, by the Selection Committee.

Shri Bhatt: No; not in Delhi.

श्रीमती अनीस किदवई : बहुत से एडेड स्कूल हैं जिन्होंने नर्सरी और प्राईमरी स्कूल खोल रक्खे हैं कमर्शियल लाइंज पर क्या यह सही है ?

श्री भट्ट : जी हां । काफी स्कूल हैं जो नर्सरी से आमदनी पैदा करते हैं । लेकिन हम नर्सरी को कोड के मुताबिक एप्रूव नहीं करते हैं । कुछ केसिस है जहां एक ही इमारत में जहां हायर सेकेंडरी स्कूल होते हैं वहां इनको भी रन किया जाता है लेकिन इनका मैनेजमेंट अलग होता है । उनके ऊपर हमारा कंट्रोल नहीं है ।

Col. B. H. Zaidi: If it is only a question of 25 per cent, why not all private schools be converted into official schools and thus put an end to all this trouble and all these complaints?

Shri M. C Chagla: Nationalising education.

Shri Bhatt: We are forgetting one thing. We always say that good people and public-spirited people should come to the educational field and make it strong; then there are very good aided schools too.

Col. B. H. Zaidi: My question was deliberately put; what I wanted to elicit was this. There is need for good people and public-spirited people to come forward. We should deprecate any provisions in a Bill which may tend to discourage good people from coming forward, and this Bill will have to be tested, looked at and examined from that point of view. So, does the witness think that as a result of this Bill good, public-spirited people will be encouraged to come forward and establish institutions or whether the springs of private charity and enterprise will dry up?

Shri Bhatt: Those who are genuinely interested in education will remain in the field and the others less welcome would be eliminated; that is probably the spirit of the Bill.

Shri Jairamdas Daulatram: I am afraid the question was not viewed in its proper light. The question was not about the existing institutions. It was not about the existing managers. The question was about the future: whether the Bill will retard the starting of schools by new managers if these restrictions exist. That is the question as far as I was able to understand it.

Shri Bhatt: The reply is in the negative. Good managements will come, and only sound management will be able to come, which will be a good thing for education.

Shri Rama Chandra Mallick: I think the policy of the Government is to give more facilities to the Scheduled Caste and Scheduled Tribe students and to encourage them. When I visited the schools in the Shahdara area recently, I found that while 2,000 students were reading in a particular school in two shifts, only one Scheduled Caste girl was there. Now that the hon. Minister of Education, the Deputy Minister of Education and the Director of Education, Delhi, are present here, I want to know what the difficulties are, and why sufficient number of students from the Scheduled Castes and Scheduled Tribes are not there in the schools. I found only one student from the Scheduled Castes—I think she was reading in the VI class—out of the 2,000 odd students in the school.

Shri Bhatt: I am not aware of it. I had a survey made in Devnagar area only recently.

Shri Rama Chandra Mallick: I was speaking of Shahdara area.

Shri Bhatt: I am not able to reply, because I am quite sure that the percentage of Scheduled Caste and Scheduled Tribe students in the Government schools is fairly large. I was talking about the Devnagar area, and there, 11 to 12 per cent of the students in the Government schools belonged to the Scheduled Castes and Scheduled Tribes. About the Shahdara area, I cannot say.

Shri S. N. Chaturvedi: I am afraid we have digressed from the main discussion. The Director was pointing out what are the additional powers that this Bill would confer upon the Directorate in order to bring these private managements to effective control and discipline. The feeling of the Members was that powers already exist but that they were not utilised. The witness was going to give us what additional powers he is going to get through this Bill to enable the authorities to bring the private schools to greater discipline and control. We have digressed away from that subject.

Shri M. C. Chagla: It is more for discussion. How is he to know the legal aspects? Why do you ask this witness about them? We are going to discuss the Bill clause by clause, and I will satisfy the Committee on what are the additional powers that are conferred.

Prof. Mukut Behari Lal: We thought that though the legal aspects could best be explained by the Education Minister, who is also a legal expert, the Director of Education would be so conversant with the Bill as well as with the Delhi Code that he could make his suggestions.

Shri Bhatt: I said that the Code has no legal authority.

Mr. Chairman: First, let us take the provisions. By what sections are you vested with powers and also tell us whether they are sufficient for you and, if necessary, what additional powers and what deletion of powers do you suggest?

Shri Bhatt: The first thing is, the legal authority it confers. Then comes the question of managing committees.

Shri S. N. Chaturvedi: Let us be very clear about the provisions, so that we need not waste time. The point is, has the stoppage of the grant or reduction of the grant or derecognition ever been questioned by anybody or in a court of law? It was there before the introduction of this Bill, in the Code; the question is whether it was ever questioned, and if it was not used, how will this Bill help in doing so? This Bill gives additional powers also; that is true. But have the provisions of the Code ever been utilised against any erring management? That is the question.

Shri Bhatt: They were utilised. When things came to such a pass, when the school became a point of infection or a problem in the sense that it created factions and there was trouble and hunger strikes, as an extreme case, we have had to recommend derecognition. We had to withdraw grant-in-aid. This was done.

Mr. Chairman: How many cases were there during the last five years?

Shri Bhatt: We are very cautious.

Mr. Chairman: Give us a straight answer.

Shri Bhatt: There were three such cases during the last four years.

Shri S. N. Chaturvedi: When the Board derecognised a school or stopped or reduced the grant, was it ever questioned?

Shri Bhatt: It was not questioned in a law court.

Mr. Chairman: If somebody else questions it, what happens?

Shri Bhatt: The first thing is, no one can question me about the grant-in-aid. We have to make the

recommendation; closing of the school means giving very little facilities. In certain cases, in certain localities, it may not be possible.

Mr. Chairman: The question was asked about investing of powers. Suggestions were made that the Director has been invested with wider powers so that there might be a clash of prestige between the Director and the managements of the schools. Is there any force in it?

Shri Bhatt: There is no force in it. In fact, as the hon. Minister has pointed out, even that clause which was probably thought to have some odium from the point of view of the management has been taken out. The only good thing is that the managing committees are made more representative, and are made fully responsible for the discharge of their duties; and then there is a provision for closer supervision of the institutions which was not provided for in the Code; and then there is provision for withdrawal of money or grant-in-aid. It has also been provided that every school is inspected every year. This would mean closer supervision and watch, which would help in good management.

Shri S. N. Chaturvedi: You had greater representation under the code on the management than under this Bill.

Shri Bhatt: We have advisedly done it. Now there will be closer supervision and each school will be inspected at least once a year.

Shri S. N. Chaturvedi: Was the enactment of law necessary for inspection once a year?

Shri Bhatt: It was necessary in the sense that if you want to watch the institution and the management closely, you have to be in touch with them.

Shri A. E. T. Barrow: By providing for inspection once a year under the law, you are getting additional officers.

Shri Bhatt: I am not wanting additional officers, but better supervision of the schools.

Shri A. E. T. Barrow: Is it not possible now?

Shri Bhatt: By this, a definite purpose is given to these people that the schools should be properly watched and everything should be carefully seen. Now it is not possible for us to inspect a school once a year.

Shri A. E. T. Barrow: It means previous to this, there was no definite purpose in having the department.

Shri Bhatt: Previously we were inspecting the schools once in two years. It was mainly limited to educational objectives. Now we want to have a more thorough inspection.

Shri Jairamdas Daulatram: If these are the three or four additions to your powers, why could not the code be amended for that purpose?

Shri Bhatt: I was going to enumerate the difficulties under the code...

Mr. Chairman: Whatever the provisions in the code, they will be incorporated under the rule-making power and the Act will be made more thorough.

Shri Hem Barua: You said about inspection of schools once a year. Do you know that the representatives of the teachers' association who appeared before us suggested that the schools should be inspected at least four times a year?

Shri Bhatt: That is not necessary, because we want to give them time to improve. Next year we will see what has been done; there is a follow-on.

Shri Hem Barua: During the inspection, what do they try to find out from the schools?

Shri Bhatt: They see whether the teaching of subjects is done correctly, whether it is up to the mark and what improvements can be made. They call the teachers and discuss their findings with them. The maintenance of the building, etc. are looked into.

Mr. Chairman: How long does the inspection last?

Shri Bhatt: 3 to 4 days and even five days in the case of big schools.

Mr. Chairman: Could you not increase the frequency of inspections to once in six months?

Shri Bhatt: We call it surprise visits. Without information, the officer goes to the school and sees whether it is functioning properly as required.

Shri Deokinandan Narayan: Once a year?

Shri Bhatt: As many times as the school needs. If it is in bad shape, the zonal officer visits more often.

Shri A. E. T. Barrow: In U.K. the inspectorate is separate from the administration of the schools. Schools are under local authorities and inspection is done by Her Majesty's inspectors. There are voluntary schools and also local authority schools which correspond to government schools here. In both cases, the inspectorate is able to give an independent report because they are not under the persons administering the schools. Would this system improve the system of education in Delhi?

Shri Bhatt: No, Sir; I had occasion to go round the metropolitan council schools and London County Council schools. I visited some 12 or 13 secondary schools. They have their own inspecting officers or advisers and Her Majesty's inspectors. We find that our system is certainly a shade better, because there they are always clashing against each other. I had talks with both the cadres and they were not happy about this arrangement.

Mr. Chairman: Please see clause 20 regarding advisory committees. 'There has been a suggestion that the Director should have the advice of some independent persons, of a high-power education committee, before any action is taken. What do you think about it?

Shri Bhatt: It is acceptable to me—an advisory committee of people genuinely interested in education giving advice. This is how the Vice-Chancellor functions in the university and it is working well.

Shri S. N. Chaturvedi: Now there is very little curb on a teacher leaving in the middle of the session for a better employment elsewhere. That completely dislocates the working of the school. If the management wants to get rid of them, they have to pay three months' salary. But if the teacher goes away, only what remains with the management can be forfeited.

Shri Bhatt: Unless he is temporary, no teacher can make an application to another agency except through the manager. Where the management sponsors the application, it is bound to relieve him. But where aided institutions express a desire that a particular person might be retained by them till the end of the academic year, we have freely permitted them to do so.

Shri S. N. Chaturvedi: If he gets private employment and goes away?

Shri Bhatt: Such a thing has not come to my notice.

Shri A. E. T. Barrow: Are you sure no teachers leave aided institutions in Delhi to go outside?

Shri Bhatt: I do not know.

Shri S. N. Chaturvedi: Page 159 of the code says:

> "No teacher shall resign from his post during the last three months of the session without the previous permission in writing from the Director of Education, Delhi. If he violates this, he shall forfeit and pay due to him and the committee may terminate his services."

This is only if a teacher leaves at the end of the session. I am talking of a person who goes away in November or December.

Shri Bhatt: The managements have their own contract with the teachers and they see to it that the teachers fulfil the contract.

Shri S. N. Chaturvedi: Have you considered the quality of persons who get into the training schools? I do not know about Delhi, but my experience elsewhere is that those for whom all the other doors are closed get into the training schools. People with first division and second division certificates find it difficult to get in as teachers because the department insists on trained teachers.

Shri Bhatt: That is my view also. I also find that the training given is not of the best quality of the poorer type of persons who take it.

Shri S. N. Chaturvedi: What do you wish to do? There must be some standard below which only you should not take people in the training schools. If you take in poor quality candidates, it will only mean waste of time and money and it will not benefit education in any respect.

Shri Bhatt: This is an all-India question. There is a general deterioration in the cadre because of low salary and other things. But I would certainly like, now that we have correspondence training course, that some of these brighter people even if they are not trained are taken in as teachers. Probably this view is held by many others also.

Mr. Chairman: Please refer to clause 7(2) proviso. This proviso provides that no additional liability shall fall on the Government in respect of the school or class during the period in which the Director so arranges to manage the school or class. In regard to this a suggestion has been made that the Government should bear the whole responsibility because the teachers have to be paid fully for the unexpired portion. What is your opinion about it?

Shri Bhatt: This question of additional liability is slightly complicated because the extra liabilities created by the management may be of a very large size. So this kind of caution against that kind of thing happening is necessary.

Mr. Chairman: What happens to the salary for unexpired portion? How is it to be paid when you take over the management?

Shri Bhatt: We will try to recover it from the management.

Mr. Chairman: How can you do that? Will not the affected persons continue to suffer?

Shri Bhatt: We shall have to go to a court of law for that purpose, if necessary.

Mr. Chairman: Do you agree that this provision is necessary to be included under the rule-making powers?

Shri Bhatt: This is a very salutary provision because this is a preventive kind of provision. If the management themselves ask the school to be taken over, we will have to fix a certain time limit and also ask them to square up all the accounts without leaving any liability. If there are extraordinary circumstances, then the matter will have to be considered.

Shri K. Damodaran: Some representation was made to us that the terms and conditions of service of teachers and employees of not only aided schools but also unaided recognised schools should be prescribed and regulated. What do you say about that?

Shri Bhatt: The managements have all been insisting that they should have their own contract agreement forms, but some of them do not get those regularly filled. Therefore, we thought it would be a salutary provision if teachers in these schools also attend to sign the agreement forms and the management had these forms filled in every cases.

Shri K. Demodaran: May I know how many minority unaided schools are there, what you consider as minority schools and what is the nature of help that is given?

Shri Bhatt: I am not able to decide which of them are minority schools. I can only say that by convention we consider schools run by religious institutions and minority schools. It is not on account of any religion or caste that these institutions are unaided. They are unaided because they wanted to charge higher fees and by charging higher fees they could give better education.

Mr. Chairman: Have you received any complaint from such unaided unrecognised private schools regarding payment of salary, promotion, seniority or things of that kind?

Shri Bhatt: No. That question does not arise because I have no control over them. Only in the case of the J. D. Tytler school a complaint was received regarding trouble between the management and teachers, but there also we were unable to help in the matter.

श्रीमती जयाबेन शाह : क्लाज 2 के प्रोवाईजो में लिखा है कि गवर्नमेंट कोई लायबिलिटो नहीं लेगी । इस बारे में आपने जो एक्सप्लेनेशन दिया हैं, वह मुझे सैटिसफ़ैक्टरी नहीं लगता है । इंस्टीट्यूशन को पाँच परसेंट देना पड़ेगा । वे क्या करेंगे ? मैं यह जानना चाहती हूं कि अगर गवर्नमेंट की कोई लायबिलिटी न हों, तो किस तरह से काम चल सकेगा ?

श्री भट्ट : यह गवर्नमेंट की एडिशनल लायविलिटो का जिक्र किया गया है ।

श्रीमती जयाबेन शाह : एडीशनल नहीं । मान लीजिए, कि गवर्नमेंट के पास पैसे नहीं है, किसी न किसी रूप से वे खत्म हो गए हैं, उन के पास डिपाज़िट नहीं है और अगर आप ने टैक ओवर कर लिया, तो काम कैसे चलेगा ?

श्री भट्ट : टीचर्ज की जो लायबिलटी है, वह ले ली है । कई तरह की लायबिलिटी क्रिएट कर सकते हैं—लोन ले सकते हैं ।

श्रीमती जयाबेन शाह : लोन तो लेना पड़ेगा । मैं समझती हूं । कि इस क्लाज़ को रखने से कोई काम नहीं चल सकता है ।

श्री भट्ट : इस में एमालूमेंटस आते हैं, सीनियारिटी आती है, प्रोमोशन आती है, प्राविडेंट फंड आता है ।

श्री शिव चरण गुप्त : आपके नोटिस में आया होगा कि जो रिकग्नाईज्ड अनएडिड स्कूल हैं वहां पर स्केल आफ पे मुख्तलिफ़ है और अधिकतर ज्यादा है, गवर्नमेंट के स्केल्ज आफ पे के मुकाबले में । जब आप यह अप्लाई करे तो उसका क्या असर होगा ?

श्री भट्ट : एमालूमेंटस तो उसके मुताबिक डिटरमीन किए जाते हैं जिस हिसाब से वह काम करते हैं, जो उनकी क्वालिफिकेशन होती है । अनएडिड स्कूल्ज में माडल स्कीम में वे रह सकते हैं ।

श्री शिव चरण गुप्त : रिकग्नाईज्ड स्लकूज के अन्दर जो स्केल आफ पे है वे बिल्कुल मुख्तलिफ़ हैं और आम तौर पर वे बेहतर हैं । अगर गवर्नमेंट के स्केल आफ पे उस के मुकाबले में कम हैं और आप इसको यहां पर एनफोर्स कराने की कोशिश करेंगे तो उसके दो नतीजे होंगे । एक तो यह होगा कि आपके टीचर्ज जो गवर्नमेंट स्कूल में हैं या एडिड स्कूल्ज में हैं वे इस बात को कहेंगे कि आप तो रिकग्नाईज्ड स्केल मानते हैं इसलिए उनको यही स्केल दीजिए और दूसरा यह एराईज होगा कि उनके अगर कांट्रेक्टस हैं तो उससे एनामाली और झगड़े पैदा होंगे ।

श्री भट्ट : प्राविजन यह है :

It shall be lawful for the Central Government to give any

direction not inconsistent with the provisions of this Act to the manager or the Managing Committee of a school in respect of any of the following matters,

जब रूल बनेंगे तब इसको तय कर लिया जायेगा ।

श्री शिवचरण गुप्त : एमालूमेंटस की बात आप कहते हैं, स्केल आफ पे की करते हैं। लेकिन अगर आप इसकी ज्यादा बात न करें तो मैनेजमेंट्स के अन्दर इंटरफिचरेंस भी कम पैदा होगा और आपके प्राबलम भी कम पैदा होंगे ।

श्री भट्ट : कंडिशंज आफ सर्विस ज्यादा मुअ इोनी चा हये बजाय स्केल आफ पे के ।

Mr. Chairman: Clause 11 of the Bill says:

"(1) The terms and conditions of service (including conditions regulating recruitment) of teachers and other employees of an aided school shall be such as may be prescribed."

What have you to say on the suggestion that the terms and conditions of service of teachers and other employees of aided schools should be made indentical with those of the teachers of Government schools in the matter of gratuity, pension etc.?

Shri Bhatt: That would be difficult. Because, at the moment, teachers in aided schools are enjoying many privileges which the teachers in Government schools are not having.

Mr. Chairman: But suppose they are prepared to forego them in order to become eligible to some other facilities enjoyed by Government school teachers? What is your view?

Shri Bhatt: It is a matter of policy where finance is also involved. I would not be able to express an opinion on that. Though it would be ideal, it would not be practicable. It is beset with many difficulties.

Shri Deokinandan Narayan: There are many unaided recognised schools in Delhi. What powers do you posses today to inspect those schools?

Shri Bhatt: They are limited in number. They are treated just like other schools and I have all the powers of inspection. They are recognised mainly by the Central Board and in respect of those we exercise all the powers. But there is another type of school which is merely certified or recognised only for an examination. In those cases the Director functions in a way as Inspector.

Shri Deokinandan Narayan: Have you got the power to de-recognise those schools?

Shri Bhatt: I can make such a recommendation. But no such thing has happened so far.

Shri Deokinandan Narayan: This Bill gives certain powers to the Director in the case of recognised unaided schools. When Shri Anthony gave evidence yesterday he opposed the giving of such powers to the Director. Would you like the Director to exercise these powers in the case of those schools also?

Shri Bhatt: Yes, in consultation with the management of the school. There should be a healthy uniformity in the teaching institutions.

Shri Deokinandan Narayan: Certain powers are given to you regarding discipline, management etc. so far as these institutions are concerned, and they are being opposed by Shri Anthony. He does not want those powers to be exercised by any authority in the case of unaided schools. How far do you agree with that view?

Shri Bhatt: Already there is a difference of degree between aided and unaided schools. If it is further diluted, it will not be good. There should be some sort of control or

supervision over these schools as well.

Shri Deokinandan Narayan: Are you satisfied with the powers given to the Government in this Bill in this matter or do you want any change?

Mr. Chairman: Shri Anthony has made his position amply clear. I think we can discuss it amongst ourselves.

Shri P. C. Mitra: Clause 11(1) of the Bill refers to terms and conditions of service of teachers. But it applies only to aided schools. Do you want it to be applied to recognised schools also?

Then, under clause (2) of section 11, no employee can even be suspended without the previous approval of the Director. It is said that even after three months such sanction has not been given even though a teacher has been found to be accused of gross misconduct. So, what is the harm if the management or appointing authority is given the right of suspension alone. After all, that is not a punishment. You can always say that no punishment should be imposed without your previous approval.

Mr. Chairman: Let the question be pointed.

Shri P. C. Mitra: Should the power to suspend be given to the managing committee instead of laying the condition that it should be approved by the Director?

Shri S. N. Chaturvedi: This amendment has been made by the Minister and that has been accepted.

Shri P. C. Mitra: You want that conditions of service should be prescribed only for aided schools and not for un-aided recognised schools.

Shri Bhatt: Conditions of service are examined when a school is recognised.

Shri S. N. Chaturvedi: Under this clause will the management be able to terminate the services of a teacher who is on probation before he is confirmed or somebody's sanction will be necessary?

Shri Bhatt: Termination of service during probation will have to be done in consultation with the Director of Education.

Shri S. N. Chaturvedi: You cannot even do away with an inefficient teacher in that case. So far as Government schools are concerned, the probation period is three years but here it is only one year and it can be extended by one year, that is, two years. You have to refer it to the Director to see whether the man should be retained or not.

Shri Bhatt: There is one reason for it. If the teacher is not good in the classroom, a certificate from the Zonal Officer would be necessary and so consultation with the Director of Education has been provided for. Sometimes it has been noticed in the case of bad managements there is some sort of a vendetta for one reason or another and the teacher is called inefficient whereas the results are 100 per cent. Such cases have occurred. So, this is the safeguard against that.

Shri Barrow: But all the time managements have been picked up for this sort of thing. Are there not such people among teachers also and should not there be some safeguard for the management also? All the managements are not bad.

Shri S. N. Chaturvedi: Then, another thing is this. You say that no school or institution may be closed before the expiry of six months. Suppose, a management gives notice in the month of March, then according to this Section the institution will have to run the class up to September.

Shri Bhatt: We wanted a notice so that we could make parallel facilities for the class which is being closed down.

Shri S. N. Chaturvedi: But it means that he is bound to continue the class up to September. What is the sense in it?

Mr. Chairman: I think, some amendment may be suggested.

Shri S. N. Chaturvedi: I suggested an amendment but it has not been accepted.

Shri M. C. Chagla: You are asking him legal questions. He is not a lawyer.

Shri Bhatt: But this is related to school work in the sense that we cannot detach a section in the middle of the session.

Shri S. N. Chaturvedi: It will be a folly to continue it up to September. There is no point in it.

Mr. Chairman: We will consider that amendment.

Shri Diwan Chand Sharma: Mr. Chairman, you have been putting very leading questions to the Director and he has been giving very satisfactory replies, but you will see from his replies for the last half an hour or so that he has been saying that there will be difficulty in applying this, in implementing it and in making use of it. Therefore, are we going to add to the difficulties of the Administration by passing this Bill?

Shri Bhatt: I never said that. What I had said was that I had some difficulty in applying the processes of the Code.

Shri Diwan Chand Sharma: In reply to questions on clause 7(4) you said that there will be difficulty. In every answer you have said, I think, that there will be difficulty.

Mr. Chairman: I think, we will remove the difficulty by making a provision in the Bill. Referring to clause 9, according to the Sucheta Kripalani Report the sources of income of the aided schools were most inadequate and this lay at the root of all malpractices. How far do you subscribe to this view and what measures do you suggest to overcome this malady?

Shri Bhatt: It is a fact that most of the managements are not getting any help from outside and this was one of the reasons why malpractices are there, and that is why the maintenance grant was raised from 90 to 95 per cent and that is why there is a proposal to raise the amounts of contingencies given to schools. This was as a result of the Kripalani Committee's recommendations.

Mr. Chairman: Do you find whether inflated expenditure accounts are shown so as to be eligible to get more aid?

Shri Bhatt: There is some sort of a foolproof system and we cannot be deceived to that extent, but there are cases where we are helpless. The managements sometimes borrow from the pupils' fund. We know of a trust which has borrowed Rs. 67,000 and loan has not been paid. It is a very big trust. When we insisted that the money should be refunded, they said that they would refund the money in instalments of Rs. 100 a month which would take 20 years. These are the type of irregularities that are detected and that is why it is necessary that we enforce legally so that they pay back. There are several instances of this kind.

Shri Jairamdas Daulatram: In the draft model scheme on page 1 the constitution of the managing committees is given and in sub-clause (3) it is put down that two members of the managing committee shall be nominated by the Director one of whom shall be an educationist not belonging to his department and the other will be an officer of the department not below the rank of Principal of a higher secondary school. How many aided schools will be covered by this?

Shri Bhatt: There are 131 aided schools and that includes seven

unaided recognised schools; so, 124 managing committees will be there.

Shri Jairamdas Daulatram: How will you find so many departmental officers for this?

Shri Bhatt: There are 240 principals of Government schools and it is possible to give one to each one of them.

Shri Jairamdas Daulatram: The Principal of a Government school will be a member of the managing committee of private aided schools.

Shri Bhatt: Yes, Sir; that is what we thought. He is an educationist, he knows the conditions of schools also; so, he will be useful.

Shri Jairamdas Daulatram: Don't you think this might lead to other complications? After all, there are certain matters of competition etc. between the schools. Do you think it will be desirable to have the Principal of the Government school as a member of the managing committee of a private school?

Shri Bhatt: This was not objected to. No difficulty arose out of this during the last two or three years.

Shri Jairamdas Daulatram: We do not know.

Shri Bhatt: I have not come across any difficulty.

Shri Jairamdas Daulatram: But on principle, much can be said against it.

Then, you refer to p. 4; clause (g):

"The powers will be to control and manage the use of the moneys, securities, endowments, etc....."

Shri Bhatt: Yes.

Shri Jairamdas Daulatram: Again, you refer to p. 8. You have suggested that the quorum of a meeting of the managing committee shall not be less than one-third.

Shri Bhatt: Yes.

Shri Jairamdas Daulatram: They can make it half if they want but it shall not be less than one-third.

Shri Bhatt: Yes.

Shri Jairamdas Daulatram: In section 7, you say that every matter shall be decided by the majority decision of the members present. You mean majority of votes?

Shri Bhatt: Yes.

Shri Jairamdas Daulatram: That is all.

Shri S. N. Chaturvedi: Please refer to p. 6 of this model scheme. Is it necessary to have a finance sub-committee? The managing committee meets almost every month. Why should you have an additional authority?

Shri Bhatt: Our experience has not been like that. The manageing committee sometimes has not met more than 3 times in a year.

Shri S. N. Chaturvedi: The finance sub-committee also may not meet. The annual budget should be prepared by the managing committee and not by the finance sub-committee. The entire management should be there to frame the budget and pass it. Why should you have an additional body? This will only create more complication. The quorum of the managing committee is 5 members which is the strength of the Finance Committee also. You will then have to fix a quorum for this committee also. I know of a very big institution and there is no finance sub-committee. The funds are being managed by the managing committee. Why should you have additional bodies unnecessarily?

Shri Bhatt: We thought it would be quite handy and it will work quicker.

Shri S. N. Chaturvedi: If you want a fifth wheel to the coach, it is a different thing.

Then, my another question is whether the powers of the Treasurer and the Manager will not come in conflict at one stage or the other.

Shri B. D. Bhatt: They are only responsible for the safe custody and proper utilisation of the moneys.

Shri S. N. Chaturvedi: What is proper utilisation? Suppose the Manager says that a certain amount of money should be granted for a particular purpose. But the Treasurer says that that was not a proper purpose. What will happen? There will be conflict between them.

Shri B. D. Bhatt: It is likely.

Shri S. N. Chaturvedi: That is what I say.

Mr. Chairman: What is your suggestion on that?

Shri B. D. Bhatt: We shall cut out the word 'utilisation'. Only the safe custody of the moneys will remain with the Treasurer.

Shri S. N. Chaturvedi: Then about the duties of the Secretary. You say that it is the Secretary who will convene the meetings of the managing committee. You have given no power to the Chairman or the Manager to call a meeting of the managing committee. Is the power to be left only with the Secretary who is the Principal of the School or vested in the Manager and the Chairman. The Secretary has only to execute the orders of the Chairman. The Chairman and the Manager of the Managing Committee must have the power to call the meetings. They may direct the Principal to call the meetings. But they must have that power. The meeting may be called by the Chairman or the Manager or on a requisition of 5 members of the managing committee. That also should be provided for. If the Chairman or the Manager refused to call a meeting, then the requisition of the 5 members should prevail.

Shri B. D. Bhatt: I think, this provision should have been there.

Shri S. N. Chaturvedi: You said that about 10 or 12 institutions are ripe for being taken over by the Government. I would like to know the number of such managements which are taking out the moneys from the school funds by irregular practices but not spending them—on the institution—that is misappropriating all these moneys.

Shri B. D. Bhatt: We made some studies about four years back.....

Shri S. N. Chaturvedi: Those are out of date now.

Shri B. D. Bhatt: Yes. For the past two years, there has been some improvement. What I said was that about 10 or 12 schools are troublesome. They are not finding funds and they are not paying salaries regularly.

Shri S. N. Chaturvedi: My question is very simple. Apart from those institutions, there is the other type of institutions which actually misappropriate funds. I want to know the number of such institutions.

Shri B. D. Bhatt: I have not got any such concrete case at the moment. If I notice there has been a defalcation, I shall certainly refer the case to the police. We have had in the past two cases of this kind.

Shri Diwan Chand Sharma: We are living in a welfare State. All kinds of powers and duties and functions have been given to the heads of schools. The most important power has not been given to them and that power relates to the welfare of teachers, that is, what kind of provident fund they should get, what kind of gratuity they should get; what kind of other benefits they should get. I think it should be one of the duties of the head of the department to look after the welfare of teachers and to look after the amenities which are to be given to teachers.

Shri B. D. Bhatt: We have mentioned such powers for the Principal. There is a big list contained in the

Education Board Code and it contains what the hon. Member wants.

Mr. Chairman: The rule-making power is there.

Shri B. D. Bhatt: It is already there.

Shri M. C. Chagla: It is provided in the scheme.

Shri B. D. Bhatt: "To institute such schemes of retirement and other benefits for the staff of the recognised aided schools as may be prescribed from time to time."

Shri Diwan Chand Sharma: This is a kind of defect. You take something from the Education Board and include in the Bill and in regard to some others, you say that they are given in the Code and do not include them in the Bill. We must have a foolproof Bill which gives the right kind of powers and obligations.

Another thing is that, in this Model Bill, no mention has been made of the rights of teachers. After all, the teachers have got certain rights. There should be an item added here in the Model Bill as "rights and duties of teachers".

Mr. Chairman: You may press this point when we come to that.

Shri A. E. T. Barrow: I would like to ask the Director about the question of associating parents and teachers on the Managing Committee in aided schools or unaided schools. Would it not be better if we have a consultative committee in each school consisting of managers, parents and teachers, so that there is no conflict within the Managing Committee itself? Because the head of the school is likely to come under criticism in the Managing Committee; the teachers will be there and it will undermine the discipline of the school later if they know that the Principal is being criticised by the Management. There can be a consultative committee consisting of teachers, parents, managers and the head of the school, attached to each school, where they can go into these matters and then the matters may be referred to the Managing Committee.

Shri B. D. Bhatt: It has the other side also. If we do not keep the teachers, then there is some sort of suspicion that the Managing Committee is against the teachers and that is the reason why this representation was given. This gives satisfaction to the teachers. Then there is the provision for Staff Council on which parents, the management and the teachers are represented. That is probably meant for the welfare of the teachers and some other allied matters. So, this will do for the present.

Shri A. E. T. Barrow: As far as I understand—I have some experience of schools—the Staff Council generally deals with academic matters and it is not composed of parents.

Shri B. D. Bhatt: This Staff Council is mainly for the welfare of the teachers and the parents are associated with it. It has a larger function. It is in the Code.

Shri P. C. Mitra: In the draft Model scheme, it is provided that the power of the Managing Committee is to keep accounts of all moneys received in connection with scholarships and stipends and also to control and manage all moneys, securities, endowments and properties of schools excluding the pupils' fund and take necessary measures for their safe custody, investment, maintenance, etc. In the Bill it is said that only the Manager has got the power to maintain in proper and good condition the school property placed under his control by the Managing Committee, maintain such records and accounts and furnish such statements and returns as may be prescribed and afford all assistance and facilities, etc. etc. Why these have not been provided in the functions of the Managing Committee in the Bill? You have provided certain accounts to be maintained by the Managing Committee and certain other accounts by the Manager. Why

is there this difference between the Bill and the Model scheme?

Shri B. D. Bhatt: It should be done.

Mr. Chairman: Is it necessary?

Shri B. D. Bhatt: Yes.

Shri Deokinandan Narayan: Will you please refer to Clause 14?

"No aided school shall levy any fee....."

Will you replace the word 'aided' by 'recognised' because that would be more in keeping with our policy of socialism. At present in these unaided schools, fees are charged exorbitantly and they are meant only for the children of big people. So will you not like to remove the word 'aided' and replace it by 'recognised'?

Shri B. D. Bhatt: These institutions have been going on for years and they have been charging high fees. But the practice now is that they get their fees approved from time to time. So it is ensured that they do not raise fees as a means to profit. As long as we are satisfied that the fees are being spent on the welfare of the children and on their education and the benefits given are commensurate with the fees charged, we are allowing this. This has been the practice.

Shri Shiv Charan Gupta: I want to know whether any *ad hoc* grants are made to those institutions which are recognised and their fees are not just the same as are charged in government or aided institutions.

Shri B. D. Bhatt: No ad hoc grant is being given to these institutions. Some *ad hoc* grant was given to certain types of nursery schools which were of a pioneering nature. It was just an experiment and as soon as the experimental stage ended, the grant was suspended or withdrawn.

Mr. Chairman: That is all. Thank you very much for your evidence. That will help us in our deliberations.

(The Witnesses then withdrew)

(The Committee then adjourned).

JOINT COMMITTEE ON THE JUDGES(INQUIRY) BILL, 1964

COMPOSITION OF THE COMMITTEE

Shri S V Krishnamoorthy Rao .... Chairman

MEMBERS

LOK SABHA

2. Shri N. C. Chatterjee
*3. Shri Sachindra Chaudhuri
4. Shri Homi F. Daji
5. Shri R. G. Dubey
6. Shri Hari Vishnu Kamath
7. Shri Harekrushna Mahatab
@8. Shri Shankarrao Shantaram More
9. Shri Gulzarilal Nanda
10. Shri Ghanshyamlal Oza
11. Shri Tika Ram Paliwal
12. Shri Raghunath Singh
13. Shri Shivram Rango Rane
14. Shri N. G. Ranga
15 Shri Sham Lal Saraf
16 Dr. L. M. Singhvi
17 Shrimati Tarkeshwari Sinha
18. Shri U. M. Trivedi
19. Shri T. Abdul Wahid
20 Shri Jaganath Rao

RAJYA SABHA

21. Shrimati C. Ammanna Raja
22. Shri Jaisukhlal Hathi
£23 Shri Akbar Ali Khan
24. Shri R. S. Khandekar
25. Shri Debabrata Mookerjee
£26. Shri G. S. Pathak
27. Shri M. Ruthnaswamy
28. Shri P. N. Sapru
29. Shri D. L. Sen Gupta
£30. Shri K. K. Shah

---

* Resigned w.e.f. 10th January, 1966.

@Expired on the 6th March, 1966.

£Ceased to be members of the Joint Committee consequent on their retirement from Rajy Sabha with effect from the 2nd April, 1966 but were re-appointed by Rajya Sabha on th 7th April, 1966 on their re-election to that House.

DRAFTSMAN

Shri S. K. Maitra, Additional Draftsman, Ministry of Law.

REPRESENTATIVES OF THE MINISTRY

1. Shri C. P. Gupta, Joint Secretary, Ministry of Home Affairs.

2. Shri Mangli Prasad, Deputy Secretary, Ministry of Home Affairs.

SECRETARIAT

Shri M. C. Chawla .... Deputy Secretary.

Witnesses Examined

Sl. No.	Names of Witnesses	Date of hearing	PAGE
1.	Shri C. K. Daphtary, Attorney-General of India.	15-1-1966	2
2.	Bar Council of West Bengal, Calcutta.	15-1-1966	21
	Spokesmen : (1) Shri P. Barman (2) Shri B. Bajpayee (3) Shri D. Sen		
3.	The Institute of Constitutional & Parliamentary Studies, New Delhi.	17-1-1966	45
	Spokesman : Shri M. N. Kaul		
4.	Shri M. C. Setalvad, Former Attorney-General of India, Vice-President, the Institute of Constitutional and Parliamentary Studies and President, the Indian Commission of Jurists, New Delhi.	14-2-1966	76

JOINT COMMITTEE ON THE JUDGES (INQUIRY) BILL, 1964

MINUTES OF EVIDENCE GIVEN BEFORE THE JOINT COMMITTEE ON THE JUDGES (INQUIRY) BILL, 1964

Saturday, the 15th January, 1966 *at* 11.00 *hours.*

PRESENT

Shri S. V. Krishnamoorthy Rao—*Chairman.*

MEMBERS

Lok Sabha

2. Shri N. C. Chatterjee
3. Shri Hari Vishnu Kamath
4. Shri Harekrushna Mahatab
5. Shri Tika Ram Paliwal
6. Shri Shivram Rango Rane
7. Shri N. G. Ranga
8. Shri Sham Lal Saraf
9. Dr. L. M. Singhvi
10. Shrimati Tarkeshwari Sinha
11. Shri T. Abdul Wahid
12. Shri Jaganath Rao.

Rajya Sabha

13. Shrimati C. Ammanna Raja
14. Shri Jaisukhlal Hathi
15. Shri Akbar Ali Khan
16. Shri Debabrata Mookerjee
17. Shri G. S. Pathak
18. Shri M. Ruthnaswamy
19. Shri P. N. Sapru
20. Shri D. L. Sen Gupta
21. Shri K. K. Shah.

DRAFTSMEN

Shri R. C. S. Sarkar, *Secretary, Legislative Department, Ministry of Law.*

Shri S. K. Maitra, *Additional Draftsman, Ministry of Law.*

REPRESENTATIVE OF THE MINISTRY

Shri Mangli Prasad, *Under Secretary, Ministry of Home Affairs.*

SECRETARIAT

Shri M. C. Chawla—*Deputy Secretary.*

WITNESSES EXAMINED

I. *Shri C. K. Daphtary, Attorney-General of India.*

II. *Bar Council of West Bengal, Calcutta.*

1. Shri P. Barman

2. Shri B. Bajpayee

3. Shri D. Sen.

I. Shri C. K. Daphtary, Attorneys-General of India

(The witness was called in and he took his seat).

Mr. Chairman: Mr. Daphtary, whatever evidence you give, you know, is public. It might be distributed to Members and laid on the Table of the Houses of Parliament. Even if any portion is confidential, it might be distributed to Members. Now, we want to hear your views. I think you have gone through the Bill.

Shri C. K. Daphtary: Yes, I have.

Mr. Chairman: We want to have your views on the subject.

Shri C. K. Daphtary: The first reaction was this. In the beginning, it is said: "If the President, on receipt of a report or otherwise, is of opinion. . . ." etc. I think you might have perhaps received some Memoranda also from outside saying that it will be preferable not to leave it to the executive at the outset, but to have some other agency whereby the matter will be brought before the Tribunal which is to be appointed.

Mr. Chairman: What is your suggestion?

Shri C. K. Daphtary: At first I was inclined to think that way on the ground that the executive, as the President, comes into the picture really right at the end if the addresses have been presented to him. But the alternative way of looking at it is this. If it was limited in any way to the legislature—either the Speaker or a Committee of the House—really of that kind, would it not mean that that will be a discussion of the conduct of a judge before the appropriate time. That would attract Article 121. Article 121, I am sure, would have been considered at the time when this Bill was drafted. Article 121 says:

> "No discussion shall take place in Parliament with respect to the conduct of any Judge of the Supreme Court or of a High Court in the discharge of his duties except upon a motion for presenting an address to the President praying for the removal of the Judge as hereinafter provided."

Perhaps the better way would be this.

Mr. Chairman: Even to find out *prima facie*, some discussion will go on in Parliament.

Shri C. K. Daphtary: It might be in some sort of committee and that is equally Parliament.

Mr. Chairman: What is your view in regard to the Article 121?

Shri C. K. Daphtary: Yes. To leave it to the Speaker, I am not sure that the Speaker in the circumstances would be willing or appro-

priate for the purposes of looking into the matter. Therefore, there may be other considerations also perhaps which, I do not know if I should mention. There have been occasions of relations not being well between the judiciary and the legislature and I am sure that any friction of that kind would not be carried into any consideration of such a matter as this. So, it might perhaps on the whole, on the balance, be better to leave it where it is. That is to say, as it is drafted in the Bill. May I make one submission? It is this. Between the President and the reference to a tribunal, something might be interposed in the way of a consultation with a legal mind, which could advise him—I don't say control him, but advise him—as to whether there is material on which a tribunal could be constituted.

Mr. Chairman: Chief Justice of India.

Shri C. K. Daphtary: I was suggesting this. Perhaps it would be better not to have the Chief Justice, because it might lead to some complications. Take the very almost unthinkable, but always a possible thing, that the Chief Justice of the Supreme Court himself may be perhaps a person against whom also charges are to be made. What will happen? You will have to make an exception, and say, except where the Chief Justice is himself the person, he is not to be consulted and someone else is to be consulted. Rather than that, have someone else other than the judiciary. After all, it is one member of the judiciary who is to be the subject-matter of attack for one reason or the other. I was suggesting the Attorney-General himself. He may be the person, with whose consultation, or after whose consultation, the President may move.

An hon. Member: And the Law Minister.

Shri K. K. Shah: Shall we first hear him?

Shri C. K. Daphtary: There has been—as hon. Members are aware—an acute controversy as to whether the President, in any matter, acts on his individual discretion or only on the aid and advice of his Ministers. One view which holds the field is this. Under the Constitution, everything that he does must be on the aid and advice of his Ministers. It is ill-advisable, I think, to make any exception. That is why I would say that it is not right to leave it in his personal discretion. I personally appreciate what the hon. Member feels that in substance President is really the executive; he is only the Head. I am afraid that cannot be helped. That is my view. That is the first part.

The second part is a small matter. That is merely verbal. This is after all the main matter of principle. The second matter is a question of wording. It speaks of definite charges which while appropriate where the conduct of a Judge is to be enquired into on the ground of misbehaviour are not appropriate if it is a question of incapacity. Therefore, the suggestion is that some phrase should be found which should be common and could be used both for incapacity as well as for misbehaviour—call it allegations or heads of allegations.

The third thing is this: I thought at one stage—I am merely putting before you what I thought—that in the case of incapacity there would be no necessity for a Tribunal. It might straight go to the Medical Board. On a rethinking, I think, it is necessary to have a Tribunal because there may be cases where evidence has to be led and to be appreciated, because the earlier part says: "Where it is alleged that the Judge is unable to discharge the

duties of his office efficiently". So, you introduce a standard of efficiency and that may require evidence as to whether what he is doing actually in the Court is in conformity with that standard of efficiency or not because on that people may say that he has done this or that. It may require other kind of mind than the Medical Board to appreciate. So, I think it should remain as it is.

Then, I know that in one case one of the representations mentioned—this is a very unlikely thing—that supposing the incapacity of a Judge is such that it cannot be considered capable even of appreciating the allegations that have been made against him, what then? I think that is a very remote thing and I would not even consider it.

Once I thought: Is it really necessary to have all this at all? Something has occurred which has perhaps put this idea before all of us that something should be there. One wonders whether it will occur again. I have finished whatever I have to say.

Shri N. C. Chatterjee: May I draw your attention to the recommendation of the International Commission of Jurists? They have said:

> "The appropriate procedure, in our view, would be for Parliament, at the commencement of each session, to nominate a joint standing committee of both Houses consisting of 9 members to whom a representation or a petition regarding the conduct or incapacity of a sitting Judge shall be referred. Such Committee, if on considering such material as may have been placed before it, by a two-thirds majority comes to the conclusion that there is a case for inquiry, the Committee shall report the matter to the Chairman of the Rajya Sabha and Speaker of Lok Sabha with a request that a Committee of Inquiry be appointed and thereupon the said Chairman and the said Speaker shall proceed to appoint a Committee of Inquiry consisting of three persons from among . . ."

The International Commission of Jurists suggest three groups.

> "... (1) the Chief Justice of India and Judges of the Supreme Court of India; (2) Chief Justices of the High Courts; and (3) eminent members of the Bar, so that at least one member of such committee of inquiry shall be from each category. The Committee of Inquiry shall submit its report to the Chairman of the Rajya Sabha and the Speaker of the Lok Sabha who shall thereupon lay such report before each House of Parliament".

Then, of course, the ordinary procedure will be followed. If this is done and if this is accepted, would it not be a desirable thing?

Shri C. K. Daphtary: I take it that when the matter is put before the Committee of the House, it is before the House.

Shri N. C. Chatterjee: The Committee will decide.

Shri C. K. Daphtary: Technically the Committee is the House.

Mr. Chairman: He has answered that point by citing Art. 121.

Shri C. K. Daphtary: What about 121 then?

Shri N. C. Chatterjee: It is not an open discussion.

Shri C. K. Daphtary: It is a discussion in Parliament at any rate.

Shri N. C. Chatterjee: The Committee will discuss it.

Shri Jaganath Rao: Under Art. 121 even discussion is barred.

Shri C. K. Daphtary: No discussion shall take place. That is the only difficulty. Otherwise, I will welcome it.

Dr. L. M. Singhvi: The distinguished witness has referred to Art. 121

of the Constitution. If you refer to that Article, Mr. Daphtary, you will find that an exception is specifically made of the instances when a matter arises under Art. 124.

Mr. Chairman: You can put that question when your turn comes.

Dr. L. M. Singhvi: No, Mr. Chairman, this is important *ab initio*. I want him to refer to the exception in Article 121.

Shri N. C. Chatterjee: May I draw your attention to the language of Art. 121 which says:

> "No discussion shall take place in Parliament with respect to the conduct of any Judge of the Supreme Court or of a High Court in the discharge of his duties except upon a motion for presenting an address to the President praying for the removal of the Judge as hereinafter provided".

Mr. Chairman: That comes subsequently after the inquiry.

Shri N. C. Chatterjee: (4) and (5) of 124 are linked together to some extent. We are now legislating under 124(5) which says:

> Parliament may by law regulate the procedure for the presentation of an address. . . .

We are really exercising our power under this clause.

Shri C. K. Daphtary: That is for the presentation of an address. That is the first part. The second part says: "investigation and proof of the misbehaviour or incapacity". Read that with (4), the last portion, which says: "for such removal on the ground of proved misbehaviour or incapacity". The machinery is provided for proving the misbehaviour or incapacity by this Bill. That will ultimately be the proved misbehaviour or incapacity. The first part is only regulating the procedure for the presentation of the address. That deals with the actual machinery of presentation.

Shri N. C. Chatterjee: The International Commission of Jurists have recommended it under 124(5).

Shri C. K. Daphtary: That is the second part.

Shri N. C. Chatterjee: Do you think that Art. 121 will fetter us?

Shri C. K. Daphtary: 121 seems to say that no discussion shall take place except upon a motion for presenting an address so that there has to be a motion for presenting an address and on that there will be a discussion. What will happen is, the Tribunal will make a report. Upon that there will be a motion for presenting an address. At that stage a discussion will take place.

Shri P. N. Sapru: In England it is different. There you can ask questions about the conduct of a Judge. You may make your grievances about the conduct of a Judge. But, here in India we have actually accepted the wording of the old Government of India Act, which means, you cannot even ask questions about the conduct of a Judge and you cannot discuss the conduct of a Judge. Therefore, the procedure has to be somewhat different from that in England. There have been no cases where there had been an inquiry into the conduct of a Judge because the rules of the game are observed.

Shri C. K. Daphtary: It had been left simply for regulating the procedure for presenting an address that might have been moved. It proposes to include all this. But it happens that the second part says 'for the investigation and proof of the misbehaviour' this is the machinery for investigating and proof and the other part in Art. 121 says 'upon a motion for presenting an address'.

Shri G. S. Pathak: I will give an illustration and then I will put the question. If the correct interpretation of Arts. 121 and 124(4) and 124(5) is merely procedural, by that where the question of misbehaviour or incapacity of a Judge arises, then the proceeding must originate—I am using the technical word used—in a motion for presenting an address for removal. That is the origin. Therefore, the initiation will be with a

Thereafter preliminary investigation starts and evidence, etc. are taken. Would that be proper? That is also an aspect which should be considered.

Shri Debabrata Mookerjee: The motion would require to be supported by a member or a specified number of members. There should be only one motion and after the matter has been investigated, materials collected and facts marshalled, then it can be put before the House for an address to be presented to the President in the particular manner set out in the article itself.

Shri P. N. Sapru: The motion may be moved by a certain number of Members of Parliament, 15 or 20 or 25. That we can regulate by rules made by Parliament. Then after the motion has been introduced, there should be a preliminary discussion if you like. But I would avoid a discussion. If members feel that there is a *prima facie* case for enquiry, they should proceed to appoint a committee. As for the character of the committee, I would not go into it. But the judge will be removed from subservience to the executive.

Shri Akbar Ali Khan: Do you envisage that at the very start of the motion, there should be no discussion?

Shri K. K. Shah: The motion for the removal of a judge can only be laid before Parliament on the ground of proved misbehaviour.

Shri G. S. Pathak: Now article 121 does not speak of any proved misbehaviour. It says "....hereinafter provided."; the manner laid down is that without proof, you cannot support the motion. It has to be supported by a majority. The manner laid down is not that you cannot make a motion without proof. The manner laid down is that you cannot support a motion without proved misbehaviour or incapacity. Therefore between the motion and the stage where the support has to be given to the motion by this majority must intervene proof of misbehaviour or incapacity. Now this qualification, namely, proved misbehaviour or incapacity does not condition the motion. It does condition the support. Otherwise one would have expected the Constitution-makers to have said in clause 4 'if a motion is made supported by a majority' etc. as they have said in Article 121. Now, when they said, as hereinafter provided, they link up 124 with 121. Now, Article 124 says. . . .

Shri Sham Lal Saraf: When motion is limited to Members or Members of Parliament for removal of a judge, what will be the basis, what will be the ground, on which that will be discussed in Parliament?

Shri G. S. Pathak: The point made by Dr. Sapru should be made clearer and it is this. These very questions which are being put to me and with respect, to the witness, are questions which have to be answered which have to be answered by recourse to the law which we are making, clause 5. The gaps have to be filled up, not the procedural thing, how the motion will be made, how the support will be effected, how the proof will be secured and so on. It is for this reason and to answer all these questions which are being put to me at the present moment that clause 5 was enacted. And, Clause 5 said like this. . .

Mr. Chairman: Your motion may be there even without *prima facie* consideration.

Shri G. S. Pathak: It will be the responsibility of the Members who make the motion.

Shri Jaisukhlal Hathi: House may adopt that this Judge may be removed.

Shri G. S. Pathak: You may place a safeguard, namely, that ten persons will do that. Or you may say Government may do it, because Government is a suppliant at that stage, not the originator of the procedure. The

originator of the procedure is the motion in Parliament. Government will not be acting irresponsibly, I hope, and I am sure. And, so far as Members are concerned, you can be proceeded against. You can prevent an unsuccessful litigant to make a petition to the Parliament. In England it could be made. You could lay down another safeguard. So many Members alone can make a motion and they will be, in case of frivolous motions, subject to the control of the Deputy-Speaker and the Speaker and to discipline of the Parliament. This will be his responsibility. The person who makes a complaint, makes it on his own responsibility. If he is proved to be irresponsible Member, it is open to Parliament to visit him with such penalties as the Parliament may think fit.

Shri P. N. Sapru: Have we not got further that the British Parliament is not even allowing questions to be asked about the conduct of a judge? The procedure is this in England which we have borrowed in our constitution. I believe it is so in the case of the Commonwealth countries like Canada and Australia. When a motion is moved it may be that the best course should be for the Parliament to sit *in camera.*

Shri G. S. Pathak: In order to prevent Parliament from sitting *in camera* it is open to Parliament which is to make some law saying that at that stage there shall be no discussion in Parliament. Before a committee of the Parliament it must be a very important committee of the Parliament sits *in camera* and decides whether *prima facie* case is there or not, till then, it is open to the Parliament to say by law that there shall be no discussion. The discussion in Parliament can take place only after the judicial tribunal decides that the misbehaviour and incapacity have been proved.

Shrimati Tarkeshwari Sinha: I wish to ask one question. What the hon. Member suggested, I understand, is this. After the petition comes in, for avoiding discussion in Parliament, it should be directly referred to a tribunal or committee or whatever it may be.

Shri G. S. Pathak: I am not suggesting that—not directly.

Shrimati Tarkeshwari Sinha: How are Member going to decide or Parliament going to decide about the merit of a case, which is, whether reference to a tribunal is necessary or not. Suppose we avoid discussion. The question is this. Where is the body which will deliberate on behalf of Parliament and judge that this particular petition presented by Members of Parliament needs further investigation? There should be some link and some procedure.

Mr. Chairman: Mr. Pathak means, committee of the House.

Shri K. K. Shah: Every petition will be referred to a committee. That is what he says.

Shrimati Tarkeshwari Sinha: Some Members go directly into a committee. Before that committee inquires into that question how this committee gets at the merit of the case without that case coming into Parliament and Members having an opportunity to go into the question? Because it may be, suppose you make 10 Members present a petition to Parliament. That means, the Speaker will immediately refer that. Ultimately it will be referred to a tribunal.

Shri N. G. Ranga: Are we discussing among ourselves? Let us first hear the witness.

Mr. Chairman: We are examining the witness and hearing his views.

Shri G. S. Pathak: May I finish my questions?

Shri Sham Lal Saraf: Let us confine our discussion to his evidence. Let us not go to other points.

Shri M. Ruthnaswamy: Instead of trying to get information from the

witness we are discussing among ourselves.

Shri G. S. Pathak: I take it that your view is that this clause which says that if the President is of opinion that there are good grounds, should be retained?

Shri C. K. Daphtary: I may tell you that first I was not of that opinion. I thought that the Executive should not come in. Then I looked again and saw Art 121. I may be right or wrong. I felt that though having regard to 121 there will be no discussion except at a stage. . . .

Shri G. S. Pathak: Is it not incumbent on the President to take the advice of the Home Ministry or the Cabinet before he can arrive at any decision?

Shri C. K. Daphtary: I have already said that whatever he does is on the aid and advice of his Cabinet.

Shri G. S. Pathak: Does not the expression 'is of opinion' make the President's opinion a subjective opinion not examinable by anybody?

Shri C. K. Daphtary: I think 'he is of opinion' means the executive is of opinion.

Shri G. S. Pathak: It would mean in practice that the Government is of opinion and that opinion which the Government would hold would not be examinable by anybody.

Shri C. K. Daphtary: No.

Shri G. S. Pathak: Therefore, will you agree that such an opinion will be absolute, unfettered discretion of the Government?

Shri C. K. Daphtary: It would be. That is why I said that it is desirable to have something in between reference to the Tribunal and the President by way of consultation either with a judicial authority—which I do not very much favour—or an independent authority.

Shri G. S. Pathak: Will you agree that mere consultation cannot have any controlling effect?

Shri C. K. Daphtary: I agree. Consultation is consultation merely. It is not a consent.

Shri G. S. Pathak: Therefore, this would result in absolute discretion given to the executive in the matter of moving the Parliament whether proceedings should be taken against a Judge.

Shri C. K. Daphtary: It would be so subject to what I said.

Shrimati Tarkeshwari Sinha: That is the main point.

Shri D. L. Sen Gupta: You have referred to Art. 121. That Article says:

"No discussion shall take place in Parliament with respect to the conduct of any Judge of the Supreme Court or of a High Court....."

Discussion in the Parliament may take different forms. It may be through Questions, through Half-an-Hour discussions and through substantive motions. Discussion may be in relation to many matters. One such matter may be for removal of a Judge. There may be other types of discussion. All that I want to know from you is whether this Article has two parts—one is ordinary discussion and the other is discussion referred to in the second part, namely, 'except upon a motion for presenting an address to the President praying for the removal of the Judge as hereinafter provided'. The intent of that discussion is to remove the Judge. What I want to emphasize is that you cannot entertain any other discussion under 121. If that discussion or motion is for removal of the Judge, you can entertain it. All what I say is that Art. 121 is not a bar for discussion of the conduct of a Judge if it relates to a matter pertaining to his removal. So, it is not a bar. It is rather an enabling clause. We are enabled by the Constitution to entertain a discussion.

Shri C. K. Daphtary: Surely the exception itself is in Art. 121. There may be a discussion upon a motion. It is, not necessary to draw a distinction between one part and the other. Supposing one Member says: "I move a motion that an address be presented for the removal of such and such a Judge". Even at an early stage whether it should be referred to a committee or not referred to a committee, there will be some difference of opinion. There may be different views on the question whether the conduct is such or has not been such. It may not be a final discussion. But some preliminary discussion will be there. If what Mr. Pathak says is right that the whole thing is initiate by that motion, and discussion is perfectly legitimate. You cannot make it otherwise legitimate.

Shri D. L. Sen Gupta: Under Art. 121 there is scope for discussion.

Shri C. K. Daphtary: Upon a motion there could be a discussion.

Shri D. L. Sen Gupta: You preferred the substitution of the word 'misbehaviour' by the word 'allegation' or some such words.

Shri C. K. Daphtary: For 'charges'.

Shri D. L. Sen Gupta: My next question is: you have referred to the strained relationship between Legislature and judiciary. You said that kind of relationship is there.

Shri C. K. Daphtary: I said it may be there.

Shri D. L. Sen Gupta: The point is all the more important because if the Legislature is excluded or eliminated and the executive runs the race with the judiciary, will it not be the end of democracy?

Shri C. K. Daphtary: May I say this? I am not a politician, nor a Member of the House, nor am I particularly concerned with these aspects. I came here only in order to express such humble views as I have with reference to the terms of the Bill, in the sense that I may say that legally one thing is possible. It may be right or wrong.

Shri D. L. Sen Gupta: Please excuse me, if the Legislature is eliminated and if the judiciary is wrong somewhere, basically wrong nobody will expect that he will continue. Whether it should initiate reference to the legislature. If you eliminate the legislature, then porbably the lapses of the executive will go unchecked.

Shri C. K. Daphtary: Comparisons are invidious. Let me put it this way: it may be six of one and half a dozen of the other.

Shri Debabrata Mookerjee: Is it your view that the articles read between them mean that there will be just one motion and not more than one?

Shri C. K. Daphtary: At what stage?

Shri Debabrata Mookerjee: Followed by the inquiry by a Tribunal there will be a motion for presenting an address; in other words, to move that an address be presented for the removal of a Judge. Thereupon the matter will be referred to Tribunal or it may be an address will come subsequent to the Tribunal stage.

Shri C. K. Daphtary: I may perhaps call your attention to the wording in Art. 124(4)—'by a majority of not less than two-thirds of the members of that House present and voting has been presented to the President in the same session for such removal on the ground of proved misbehaviour or incapacity.'

Shri Debabrata Mookerjee: So 'proved misbehaviour' presupposes that something has gone before that. There are certain material that would mean and imply that there has been certain previous investigation. If that is the position, is it not your view that there can be only just one motion and not more than one?

Shri C. K. Daphtary: That is correct. May I also point out that Art. 121 says 'except upon a motion for presenting an address .... as hereinafter provided'? Therefore, you have to look to Art. 124 (4) and 124 (5) as 'hereinafter' means what is provided. I take it that the provision is for presenting an address. Then when you come to Clause (5) you see that you can regulate the procedure for the presentation of an address and for the investigation and proof. The way I look at it is: first of all the material is put before the Tribunal, then it reports and thereupon a motion is made for the removal on the proved misbehaviour or incapacity.

Shri Debabrata Mookerjee: Therefore, the address comes after the proof has been obtained.

Shri C. K. Daphtary: That is the suggestion.

Shri Debabrata Mookerjee: Therefore, that is your view?

Shri C. K. Daphtary: That is my view. That is the view upon which I changed my opinion from the one to the other.

Shri Debabrata Mookerjee: Therefore, it follows that the right to discussion is released only after the charges have been made.

Shri C. K. Daphtary: That would follow.

Shri Debabrata Mookerjee: Therefore, from this it follows that there is no previous right of discussion in Parliament.

Shri C. K. Daphtary: That would be so.

Shri Debabrata Mookerjee: Therefore, according to you, if I am able to see you right, there has to be an initiation of the proceedings and after the proceedings have been initiated, some material has to be collected and marshalled and then—for want of a better word I call them charges or allegations—they have to be put forward and then an address has to be presented. Is that the position?

Shri C. K. Daphtary: That will be so.

Shri Debabrata Mookerjee: That will negative all rights of prior discussion of alleged misconduct and misbehaviour.

Shri C. K. Daphtary: That will be so.

Shri P. N. Sapru: May I draw your attention to Article 124(5)? It says:

> "Parliament may by law regulate the procedure for the presentation of an address and for the investigation and proof of the misbehaviour or incapacity of a Judge under clause (4)."

May I suggest that these are very wide terms? They give very wide powers to Parliament. They enable at any stage accept that the motion for the removal has been proved to the satisfaction of the Government is ruled out.

Shri C. K. Daphtary: I follow that.

Shri P. N. Sapru: Therefore, there can be two stages. One is: a motion is moved for the removal of a Judge. Then Parliament refers it to a Standing Committee or an *ad hoc* Committee for investigation. At that stage all that has been done is to refer it to the Committee and it may also legislate that a motion must be supported by a number of members—say, 10, 20 or 25 or a larger number—and then refer it to a Committee and discussion shall take place after the Committee reports.

Shri C. K. Daphtary: That is a possible view. I have expressed my view in the matter. I am not prepared to say that I must be right.

Shri P. N. Sapru: Parliament becomes seized of the matter initially. Then it refers it to a Committee. At that stage there can be a convention that Parliament will not discuss.

Mr. Chairman: Art. 121 completely rules it out. There is no question of convention at all.

Shri P. N. Sapru: Art. 124 comes after 121. Therefore, Art. 124(4) and (5) have to be reconciled with Art. 121. Parliament to provide for a procedure which will investigate the misbehaviour or incapacity of a Judge. The article read by itself does it not suggest that Parliament can also legislate how the procedure for the investigation of a Judge shall be carried on?

Shri C. K. Daphtary: Yes.

Shri P. N. Sapru: You know the procedure which is followed by Parliament in regard to privilege motions. If a Member of Parliament moves a privilege motion, then Speaker looks into the question whether there is substance in the privilege motion or not. If he finds that there is substance in the privilege motion, he then places it before the Committee of Privileges. Does the wording of this Article rule out some such procedure that is followed in case of privileges?

Shri C. K. Daphtary: I would say 'not'. It is very wide in itself.

Shri P. N. Sapru: Therefore, there has to be a harmonious construction. The terms of Art. 121 have to be reconciled with the terms of Art. 124(4) and 124(5). Therefore, the interpretation that Parliament I am pointing out the way in which these two articles can be reconciled. We cannot rule out Article 124(5) altogether.

Mr. Chairman: Clause 5 simply says "Parliament may by law regulate the procedure.." The question of privileges is quite different from what this contemplates in (5). Privileges arise out of the Constitution. This is by special law.

Shri P. N. Sapru: The motion is initiated before Parliament. Immediately the motion is initiated before Parliament, Parliament will without further discussion refer it to a standing committee such as contemplated in Article 124.

Mr. Chairman: According to the Attorney-General, it should be initiated in the Parliament.

Shri P. N. Sapru: The difficulty is because of the article as it stands. Unfortunately, unlike Britain, we have a written Constitution.

Shri Akbar Ali Khan: Mr. Attorney-General, you see our anxiety. We are in the horns of a dilemma. We want to save the judiciary from the executive as well as from the politicians. That is the difficulty. You have given a hint. Taking that hint, may I suggest that suppose if the matter comes not before the House, but the Government in consultation with the Speaker or the Chairman and the Attorney-General comes to a decision....

Shri C. K. Daphtary: That is a matter of detail.

Shri Akbar Ali Khan: What I wanted to know is that if it comes before Parliament, some sort of discussion, which the Constitution desires to avoid, will come in and we do not want to put our Judges in that position. So, if the petition or representation with the requisite number can only be made either to the Speaker or the Chairman, they in consultation with the Attorney-General and the Law Minister will finally decide whether there is a *prima facie* case. That will also give satisfaction to Parliament that the Speaker and Chairman are seized of the matter. At the same time we will get the advice of the Attorney-General. That will as far as possible avoid either bringing down the position of the Judges or leaving it absolutely at the goodwill of the executive.

Shri C. K. Daphtary: If you adopt this particular system of the executive referring the matter, then you may consider what will be the best safeguard to see nothing frivolous or where there is not sufficient material on which the matter can be referred, comes before the tribunal.

Shri Akbar Ali Khan: Unless there is sufficient material, the matter should not come. That is our anxiety.

Dr. L. M. Singhvi: You said in the initial stage of your testimony that all this arose because of a certain case which is not likely to recur. In this connection, the Bill was necessitated because it was felt by the Government that no action under Article 124(4) could be taken unless legislation had been enacted under Article 124(5). Since I was the initiator of the resolution, I received a letter from the Home Minister saying that Article 124(4) cannot be pressed into service until legislation is enacted under 124(5). My contention is that afterall Article 124(5) is only an enabling provision and with the substantive power vested in Parliament by Article 124(4), why action cannot be taken because of the absence of legislation under 124(5) ? What is your opinion?

Shri C. K. Daphtary: Parliament may by law regulate, but I doubt if the power of the House to bring an address is denied although there may not be any procedure for a tribunal etc.

Dr. L. M. Singhvi: Would you agree that it is possible if a case happens to arise, to prescribe procedure on an *ad hoc* basis and therefore, from that angle, there is no need for legislation such as this?

Shri C. K. Daphtary: I think what is provided is for Parliament to prescribe by law if there is to be a procedure.

Dr. L. M. Singhvi: What would happen if there is no legislation under Article 124(5) and a matter arises in which it appears appropriate for the Parliament to act, for example. to begin investigation? Would the Parliament be able to act, to investigate, or would the Parliament be deprived of the right to act under Article 124(4) because there is no legislation under Article 124(5)?

Shri C. K. Daphtary: I cannot say I have considered from that point of view. I have not applied my mind to that. If I am given a little time, I may give my opinion.

Dr. L. M. Singhvi: We would like to have your opinion even if it is at a later time.

Shri Debabrata Mookerjee: Under Article 61, there is no provision for any kind of procedure being prescribed by Parliament or by any other authority.

Dr. L. M. Singhvi: Are you aware of any country in the world, where parliamentary system prevails or even where the Presidential system prevails, where the initiative for judicial impeachment rests with the executive and not with the legislature. I am personally not aware of any example whatever in the world. Are you?

Shri C. K. Daphtary: Offhand, I am not aware of it.

Dr. L. M. Singhvi: I would like to draw your attention to the Australian Constitution which uses the same expressions as used in Article 124(4). It says that the Judges of the High Court and other courts created by the Parliament shall not be removed except by the Governor-General-in-Council on an address from both Houses of Parliament, praying for such removal on the ground of proved misbehaviour or incapacity. It appears that our Article 124(4) has been bodily taken over from the Australian Constitution. I would like to draw your attention to the position in Australia where it is said "The matter is discussed and the proper procedure indicated by Todd where it is laid down that no address for the removal of a Judge ought to be adopted by either House of Parliament except after the fullest and fairest enquiry into the matter of complaint by the whole House or a Committee of the whole House, at the Bar; notwithstanding that the same may have already undergone a thorough investigation before other tribunals—such as a Royal Commission or a Select Committee". The initiative for such a

Motion rests in the Australian constitution entirely with the Australian Parliament. Investigation is to be held in Australia either by the whole House or by a committee of the House. If the language of Article 124(4) of our Constitution is the same as the language in section 72 of the Australian Constitution, would you not subscribe to the view expressed by Todd that such an inquiry has to be held by a whole House or a committee of the House?

Shri C. K. Daphtary: That leaves it open to Parliament. It is Parliament's discretion to provide for enquiry in such manner as it thinks fit. No outside tribunal should come in at all if it is restricted to the House.

Dr. L. M. Singhvi: There it is said, even if it is investigated by a Royal Commission, the Parliament must necessarily examine, investigate and arrive at its own conclusion in the matter either by a discussion in the whole House or a discussion in the Committee of the House.

Shri C. K. Daphtary: Discussion will take place after the tribunal.

Dr. L. M. Singhvi: It should be after 'fullest and fairest' enquiry by the whole House. It says fullest and fairest enquiry by the whole House, notwithstanding that it may have undergone a thorough investigation. It may be discussed in the House itself, according to this authority on the Australian constitution.

Shri C. K. Daphtary: I don't see this except the similarity of words. I do not know if they have any clause to the effect as 5 or Article 121.

Dr. L. M. Singhvi: The regulation of procedure is in consonance with requirements of Article 124 clause (4). It vests the initiative, the basic right of investigation, as well as discussion and conclusion in the House itself.

Shri C. K. Daphtary: There is no restriction as to who should investigate. Parliament may by law do it. If it is sought to be suggested that that must be read as restrictive in the sense that any inquiry should be made by committee of the House, I don't think that can be read into it.

Dr. L. M. Singhvi: That is why I asked you if you know of any parliamentary or presidential form of democratic Government anywhere in the world, where initiative is vested in a tribunal appointed by the executive. Now, I would like to question you on the procedure adopted in the U.S.A.

Shri C. K. Daphtary: Who is to appoint the tribunal? That is a different thing. You may say that there is no other provision in the world where the executive takes hand in the matter at all. The second thing is this, as to the nature of the tribunal. Will that be, and must be only one of the House? I say no. Clause 5 does not preclude a tribunal which is not a committee of the House.

Dr. L. M. Singhvi: There are two issues—one, authority to appoint and the other is in respect of the composition of the tribunal to investigate. Regarding the first, would you say that it is in consonance with the spirit of the Constitution, that authority actually vests in the Parliament, and composition of the tribunal may be such as to include even persons who are not Members of Parliament?

Shri C. K. Daphtary: As to the authority to appoint, that is the subject matter of the Bill, which authority should it be . . . .

Dr. L. M. Singhvi: In USA they make a distinction which is relevant between impeachment or suggestion of impeachment or voting of impeachment and inquiry or trial that follows. U.S.A. practice is useful as an aid to analysis. As for the procedure being following there, I would like to quote from Jefferson's Manual. It says:

> "There are various methods of setting an impeachment in motion; by charges made on the floor on the responsibility of a Member or Delegate; by charges preferred by a Memorial which is usually referred to a committee for examination; by a message from the President; by

charges transmitted from the legislature of a State or Territory or from a grand Jury; or from facts developed and reported by an investigating committee of the House."

These are various methods by which impeachments can be set in motion. Then it says:

"The impeachment having been made on the floor by a Member, or charges suggesting impeachment having been made by memorial, or even appearing through common fame, the House has at times ordered an investigation at once. At other times it has refrained from ordering investigation until the charges had been examined by a committee."

Shri K. K. Shah: There is no Article 121 there. Other legislatures can't discuss—can't put questions.

Dr. L. M. Singhvi: Except when a motion is placed in the House for impeachment of a judge or with the prayer for removal of a judge, in USA as in other countries discussion about judicial behaviour is normally not embarked upon. Surely, members of the Legislature can be credited with as much responsibility as a common citizen complaining under clause 3 of the present Bill. A possible restraint could be that the complaint cannot be made and charges cannot be preferred with prayer for removal except by specified number of members that would protect the judiciary, I suppose. It will also keep away executive from exercising untoward influence on the judiciary.

Shri C. K. Daphtary: Yes. It could be done. I have expressed my view, right or wrong.

Dr. L. M. Singhvi: The investigating body under the Bill would be extraneous to Parliament? Isn't it so?

Shri C. K. Daphtary: May be by a body within the Parliament, appointed by Parliament. In some way or other, it would mean, discussion in Parliament. That is the difficulty.

Dr. L. M. Singhvi: Would you not contemplate a situation in which motion is made for removal, but by legislation an embargo is placed in on any further discussion on the subject at that stage? No discussion whatever is made. Motion is made in Parliament and it is referred to a Committee. The precaution that could be taken is that a specified number of Members of Parliament would have to present such a motion.

Shri C. K. Daphtary: Thereupon it will be immediately referred?

Dr. L. M. Singhvi: Yes.

Shri C. K. Daphtary: Yes. That is possible.

Shri Hari Vishnu Kamath: May I, Mr. Chairman, with your leave, in the first instance invite the attention of the Attorney-General to the language of clause (3) of the Bill? You cannot miss it because it is in thick type. Does the Attorney-General think that the word "otherwise" envisages action *suo motu*?

Shri C. K. Daphtary: Otherwise it seems to import that.

Shri Hari Vishnu Kamath: Also action consequent upon presentation of address by Parliament?

Shri C. K. Daphtary: You mean the final address?

Shri Hari Vishnu Kamath: Interim.

Shri C. K. Daphtary: Just an application?

Shri Hari Vishnu Kamath: Yes, to which Dr. Singhvi referred.

Shri C. K. Daphtary: I take it that if 3(1) is retained in this form, anyone can apply, whether Members of Parliament or otherwise.

Shri Harj Vishnu Kamath: So as to obviate the objection stated here that President means in effect the Government, do you think it will help if you provide in the law that the President do act in his discretion or in his individual judgment?

Shri C. K. Daphtary: There is no other provision in the Constitution or

any legislation so far as I know for the President acting in his discretion.

Shri Hari Vishnu Kamath: Is there any Constitutional bar to make a provision of that kind in this law?

Shri C. K. Daphtary: There is a point of view that it is not possible for the President to act in any manner except on the aid and advice of his Ministers.

Shri Hari Vishnu Kamath: That is only a convention. But there are provisions which invest him with power to act in his discretion.

Shri C. K. Daphtary: Under the Constitution there is no power to excercise his discretion.

Shri Hari Vishnu Kamath: Is it absolutely final?

Shri C. K. Daphtary: There is no finality about it. That is my view.

Shri Hari Vishnu Kamath: Without amending the Constitution, you cannot do it?

Shri C. K. Daphtary: No.

Shri Hari Vishnu Kamath: I was trying to get materials from the Library with regard to the procedure for removal of Judges obtaining in other countries. I could not get much except in Japan. Japan is another great Asian democracy which has got very detailed provisions. The Attorney-General may consider as to whether they could be applicable to us also in India. I will read briefly two or three provisions which might be adapted or adopted by us also:

> A proposal to either Chamber of Parliament to prefer a charge under this section shall not be entertained except by the notice of resolution signed by not less than one-fourth of the total membership of that Chamber.
>
> No such proposal shall be adopted by either Chamber of Parliament save upon resolution of that Chamber, supported by a majority of the members present.
>
> Where the charge relates to a Judge of the Supreme Court, it shall be investigated by a special tribunal consisting of the President or a person appointed by him in his discretion, the Speaker of the Chamber of Nationalities, Lok Sabha in our case, and the Speaker of the Chamber of Deputies, Chairman, Rajya Sabha in India.
>
> Where the charge relates to a Judge of the High Court, it shall be investigated by a special Tribunal consisting of the Chief Justice of the Union, that is, Chief Justice of India here, the Speaker of the Chamber of Nationalities and the Speaker of the Chamber of Deputies.
>
> The Judge against whom the charge is preferred shall have the right to appear and to be represented at the investigation of the charge.
>
> The Special Tribunal shall, after investigation, submit its report to the Chamber by which the charge was preferred. The finding of the special tribunal declaring that the charge has not been proved, if unanimous, shall be final. But in all other cases, the report of the special tribunal shall be considered by both Chambers of Parliament in a Joint Sitting.
>
> If after consideration a resolution be passed supported by a majority of the members present and voting at the Joint Sitting declaring that the charge preferred against the Judge has been proved and that the misbehaviour was or incapacity is such as to render him unfit to continue in office, the President shall forthwith by an order under

his hand and seal remove from office the Judge to whom it relates.

I agree with Dr. Singhvi that so far as this piece of legislation is concerned, the initiative that was conferred upon Parliament by the Constitution is being sought to be removed. The Parliament is vested with the initiative and the Constitution has conferred upon it to move in the first instance for the removal of a Judge. Don't you agree that this Bill, if passed into law, will divest Parliament of that initiative?

Shri C. K. Daphtary: Parliament still has the right after the Tribunal has made its report.

Shri Hari Vishnu Kamath: May I draw your attention to the language of clause (6) and the language of Art. 124(5)? Clause (6) brings Parliament into the picture at what stage? After the Tribunal has made its report to the President and the President forwards the report to the Parliament. At that stage Parliament comes into the picture. There the language is:

"....the Judge is to be removed from his office on the ground of proved misbehaviour or incapacity".

Parliament is brought into the picture at this stage when the report of the Tribunal is sent by the President to the Parliament. Please read Art. 124(5). It says:

"Parliament may by law regulate the procedure for the presentation of an address and for the investigation and *proof of misbehaviour...*"

not proved misbehaviour. Proof of misbehaviour is one thing and proved misbehaviour is another. Parliament has got a right to come to the picture at an earlier stage for investigation and proof of misbehaviour. Proved misbehaviour is at the second stage. I am of the opinion—I may be wrong—that the Bill is repugnant, if not contrary, to the Constitution itself. It is *ultra vires* of the Constitution because it is inconsistent with, and sets aside the provision of Art. 124(5) which confers upon Parliament certain fundamental rights with regard to this—not fundamental human rights. Don't you agree that "proof of misbehaviour" is a stage prior or anterior to the "proved misbehaviour"?

Shri C. K. Daphtary: Yes.

Shri Hari Vishnu Kamath: Address could be moved under Art. 121. Please read it. The presentation of the address is at a stage anterior to the consideration by the Parliament of a report regarding proved misbehaviour.

Shri C. K. Daphtary: That is what Mr. Pathak said.

Shri Hari Vishnu Kamath: Don't you think that Clause 6 of the Bill as it stands now is mainly, if not wholly, inconsistent with Art. 124(5) and Art. 121 of the Constitution? At least it divests Parliament of certain powers.

Shri C. K. Daphtary: It has given the power to do what it likes in regard to the method and the manner.

Shri Hari Vishnu Kamath: I am glad you said it. You think that the Bill as it stands does not divest Parliament of the right even at the earlier stage if it presents an address to President. That is also possible if the Bill is passed into law.

Shri C. K. Daphtary: I understood the other point which Mr. Pathak said that you start with a motion moved with the support of 20, 25 or more members and the other matters are subsequent to that stage. When you go to the subsequent stage, there is an enquiry by a Tribunal. The next question is: who is to appoint the Tribunal and what the Tribunal should consist of. On the question of who is to appoint, it is for the Parliament to say. There is no fetter put upon the Parliament.

Shri Hari Vishnu Kamath: Then, according to you Parliament can come into the picture at both the stages—anterior and posterior.

Shri C. K. Daphtary: That is not the view that I expressed. The view that I expressed was that the motion which is mentioned in Art. 121 is a motion subsequent to the stage of the Tribunal. I may be right or wrong.

Shri Hari Vishnu Kamath: But the Bill as it stands will not operate as a bar to Parliament coming into the picture at both the stages—anterior and posterior.

Shri C. K. Daphtary: The Bill, if passed, of course, stands as a bar. The Bill envisages a procedure whereby nothing happens in Parliament until the stage of the report. If you ask me, I will say 'It does'.

Shri Hari Vishnu Kamath: Not under Clause 3?

Shri C. K. Daphtary: It is so far as President is concerned. It is in the initial stage.

Shri Hari Vishnu Kamath: You don't agree that Parliament can present an address to the President under Cl. 3?

Shri C. K. Daphtary: That is not an address if you mean the 'report or otherwise' in Cl. 3. Members can go to President and give him a report.

Dr. L. M. Singhvi: In that case Parliament does not come into the picture. Any citizen can go and give information.

Shri Hari Vishnu Kamath: Therefore, it will be necessary that the matter is made clear, and put beyond all possibility or shadow of doubt that the President could be empowered to appoint the Tribunal if an address by Parliament is also presented to him. In Sub-clause (2) of Clause 3 there is also another course open so that Parliament is brought into the picture in accordance with the spirit and letter of Art. 121 at the earlier stage also. This is the one way. The second way is by presentation of an address by Parliament.

Shri C. K. Daphtary: I do not quite follow. When you use the word 'address', the only 'address' that I see in the Constitution is the address that is presented for the removal.

Shri Hari Vishnu Kamath: You may call it 'a petition.'

Shri C. K. Daphtary: That any Member can do. That is not Parliament as such. If you are going to have it Parliament presenting it, then immediately there will be discussion.

Shri Hari Vishnu Kamath: If you want to conform to the spirit of the Constitution, I think the Bill will have to be drastically amended so as to divest the executive of the initiative. You do not agree with that?

Shri C. K. Daphtary: Which is more desirable as between Scylla and Charybdis is more for you to decide.

Shri Hari Vishnu Kamath: So, Parliament and President are comparable to Scylla and Charybdis?

Shri K. K. Shah: He used it only as a simile, not in comparison.

Shri N. G. Ranga: I have only one or two questions to ask. I am not a lawyer. Therefore, I do not wish to trouble you over these Articles—121 and 124(4) and (5). I am only concerned with the independence of the Judiciary. I do not want the Judges to have the feeling—they are obliged on many occasions—that if they were to give judgements contrary to the wishes of the Government of the day, they are likely to be harassed and you seem to have made an oblique suggestion that the legislature is also likely to try and impinge upon the freedom and independence of the Judges by the kind of atmosphere

that was created recently. I am not interested either in the Legislature or executive trying to impinge upon the freedom of the Judges. Keeping these things in view would not the provision that is presented before us in this Bill give that fear or impression in the mind of Judges that if their court were to go against the wishes of the Government of the day more than once or frequently—whatever it is—some Minister, including the Minister for so-called Justice or the Minister for Law may take into his head to set this thing in motion and create trouble which may not be proved. There may not be proof but any amount of harassment would be created and especially a Judge would be more afraid of these kinds of things than even a lawyer because they are conscious of the scores of complaint suits and delays of cases which even an ordinary man like me may not like, more so a lawyer and certainly not a Judge. Therefore, do you appreciate that it would be much better to leave the Constitution as it is and as suggested by Dr. Singhvi.

Shri Tikaram Paliwal: In that case you will have to amend the Constitution that a Judge will not be removed in any case.

Shri N. G. Ranga: My point is: already there is provision in the Constitution for the removal of a Judge—Arts. 121 and 124. The only point is: according to this Bill if you were to give this power—the Attorney-General does not want this power to be given to the legislature lest it might be used in a reckless way—my fear is that the executive is likely to do the same thing. These—Parliament, Executive and Judiciary—are the three great limbs. Here is the Judiciary. We must protect their complete freedom, unferrered freedom, to feel that unless there is some extraordinary justification they are not likely to be troubled nor the legislature nor the executive would be capable of troubling them. Therefore, my question is: would it or would it not create that kind of fear, that kind of impression, that inhibition in their minds if ever this Bill were passed or the kind of procedure that has been suggested by other friends that Parliament *suo motu* by a motion of one or two Members moved in a reckless manner may have the power?

Shri C. K. Daphtary: I have already said on the Bill that the executive power being with the executive, some safeguards may be provided by way of consultation or agreement by some independent authority, may be a Committee of 3 or any one you like.

Shri N. G. Ranga: Committee consisting of whom?

Shri C. K. Daphtary: Committee consisting of the Speaker, the Chairman and the Attorney-General.

Shri N. G. Ranga: Is it to be in consultation with.

Shri C. K. Daphtary: It is 'with the advice of'.

Shri N. G. Ranga: Therefore safeguards are needed both against the misuse by the executive as well as the legislature.

Shri Sham Lal Saraf: After all this discussion, do we understand that two motions are necessary, one at the time of initiation when we initiate charges or allegations; the first motion will come before Parliament for an address to the President with such and such charges and they should be gone into. After the finding of the tribunal, that will again go to the Parliament and a second motion . . .

Shri C. K. Daphtary: No, Sir. There are two alternatives. Either as Mr. Pathak put it, you make a motion in the first place for presenting an address on which there will be an enquiry by a tribunal and so on, and when the report of the tribunal is given, there may be a discussion; there will be a voting and if the requisite majority is there, the address will be presented. Alterna-

tively there will be no motion and only after the report is made by the tribunal, when it goes before the Speaker and the Chairman, there will be a motion and the matter will be dealt with.

Shri Sham Lal Saraf: In Section 3, sub-section (2), it is said that the Special Tribunal shall consist of such number of members as the President may think fit to appoint from among persons who are or have been Chief Justices or Judges of the Supreme Court..... Whether you would agree to the inclusion of Chief Justices of High Courts and reputed jurists, to be included for being nominated in such a Tribunal.

Shri C. K. Daphtary: That is a matter for you to consider as to who should be on the tribunal.

Shri Sham Lal Saraf: When a tribunal is set up and the judge is supposed to present himself before the tribunal, would you suggest that the enquiry should be held in camera or as a public enquiry.

Shri C. K. Daphtary: It would be desirable to have it in camera. But that is a matter for you to consider. You may provide as you like.

Shri Sham Lal Saraf: In the same section, the President may also appoint a lawyer if the judge asks for it?

Shri C. K. Daphtary: Certainly.

Shri Sham Lal Saraf: It should be at the cost of the Government?

Shri C. K. Daphtary: Certainly. It is for you to consider.

Shri M. Ruthnaswamy: May I know from the Attorney-General whether the freedom of discussing the conduct of a judge envisaged in Section 120(1) of the Constitution would apply also to the preliminary enquiry envisaged by Mr. Pathak?

Shri C. K. Daphtary: By convention or by rule of the House, there should be no discussion.

Shri K. K. Shah: Since Article 121 is regulated or controlled by Article 124(4), the motion contemplated is on the basis of proved charges?

Shri C. K. Daphtary: Yes.

Mr. Chairman: Thank you very much.

(The witness then withdrew).

(The Committee then adjourned to meet again at 15,00 hours).

(The Committee reassembled at 15.00 hourse).

II. Bar Council of West Bengal Calcutta

Spokesmen:

1. Shri P. Barman
2. Shri B. Bajpayee
3. Shri D. Sen

The witnesses were called in and they took their seats).

Mr. Chairman: Whatever evidence you give shall be treated as public and is liable to be published unless you specifically desire that all or any part of the evidence tendered is to be treated as confidential. However, even though it is to be treated as confidential, such evidence is liable to be made available to the Members of Parliament. We have got your Memorandum.

Shri P. Barman: We have sent a Resolution. You must have received that.

Mr. Chairman: That is the Resolution of the Bar Council of West Bengal.

Shri P. Barman: Yes.

Mr. Chairman: If you have any further comments to make, you may; otherwise, the members will ask questions.

Shri P. Barman: The only thing that we want to say is that this Bill is unwarranted.

Mr. Chairman: The principle of the Bill has been accepted by Parliament. That is for the Government to consider; this Committee cannot go into that question. If you have any comments on the Bill, you may make.

Shri P. Barman: The principle of the Bill has been accepted?

Shri Jaganath Rao: Yes; otherwise, it will not come to the Select Committee.

Shri P. Barman: If you say that the principle has been accepted, then we can only say that the Bill, as framed now, will raise some Constitutional questions.

The framers of the Constitution have never contemplated that these rules or laws should be framed in such a way as to take away any of the rights or privileges of Parliament. What the Bill contemplates is this; you are giving away your rights—Parliament's rights—to the President who is the ultimate authority to pass a final order. The Constitution says that if the Parliament, by two-thirds majority, thinks that a judge may be removed on grounds of proved misbehaviour, it may present an address to the President and the President will pass an order. From the Bill as drafted here, it appears that Parliament will divest itself of its powers. To give the power to the President to initiate the proceedings on a report or otherwise is, in our opinion, not a proper procedure. It should have been the other way round. The initiative should be from the Parliament. If there is any report against a particular judge, the initiative must come from the Parliament itself and if there is to be any inquiry, it should be by a Parliamentary Committee set up for that purpose; let them go into the question and if they think necessary, let them take evidence and place the evidence before the Parliament, so that the Members of Parliament may go into those things and if they then think it proper, they can impeach the judge.

Mr. Chairman: Have you read Art. 121 and (4) and (5) of Art. 124?

Shri P. Barman: Yes. Art. 121 reads thus:

> "No discussion shall take place in Parliament with respect to the conduct of any Judge of the Supreme Court or of a High Court in the discharge of his duties.....".

If a judge is guilty of any mis-conduct, then he is not doing his duties. The function of a judge is to administer justice.

Mr. Chairman: What other misbehaviour you contemplate?

Shri P. Barman: Maybe, personal misbehaviour. You may be aware of those cases where it has been held by the Supreme Court and High Courts that a public servant 'in the discharge of his duties'.... It is no function of a judge to take bribes

Mr. Chairman: We are concerned here only with the misbehaviour of a judge as a judge.

Shri P. Barman: In the discharge of his duties—his duty as a judge.

Shri Akbar Ali Khan: Suppose he drinks, our people will not take cognizance of this. When we say 'in the discharge of duties', that means whether, as a judge, he is behaving properly, whether he is honest, whether he is efficient, etc. You have to discriminate his conduct outside and his conduct as a judge.

Shri D. L. Sen Gupta: Is it your point that there are certain things

which a judge has got to do in the discharge of his official duty as a judge and that cannot be discussed?

Shri P. Barman: Yes.

Shri D. L. Sen Gupta: But misbehaviour is not part of the judge's judicial conduct.

Shri Debabrata Mookerjee: Will you complete reading Art. 121? It says:

> ".....except upon a motion for presenting an address to the President praying for the removal of the Judge as hereinafter provided."

I am asking Mr. Barman to concentrate his attention from the middle of Art. 121. "....as hereinafter provided." Therefore, we have to look to the other Article too—Art. 124.

Shri P. Barman: Art. 124(4).

Shri Debabrata Mookerjee: There we have got this question of proved misbehaviour or incapacity. Therefore, the analogy that you were trying to draw between the case where sanction is given for prosecution of a public servant and this use does not appear to be correct. Does it apply here? Sanction is given or withheld upon the consideration whether a judge has done something in the discharge of his duties. For example, a public servant misappropriates funds; he puts the money in his pocket. Will you require to give sanction in a case like this? No. But, if it is his duty to keep the books of account and he falsifies the account, there you require sanction. If that is correct, then you have to relate Article 121 with clause 4 of Article 124. If you read the two together, then I am afraid that the analogy that you are trying to draw between this case and the case of the public servant where sanction is necessary for the purpose of initiating prosecution does not hold good.

Mr. Chairman: You read also clause 5 of Article 124 of the Constitution, which says:

> Parliament may by law regulate the procedure for the presentation of an address and for the investigation and proof of the misbehaviour or incapacity of a Judge under clause (4).

Shri P. Barman: If you read Article 121 alongwith 124(4), then the question how the Parliament can discuss the conduct of a judge is answered. In my submission it could be done. Article 124(4) says:

> A Judge of the Supreme Court shall not be removed from his office except by an order of the President passed after an address by each House of Parliament supported by a majority of the total membership of that House and by a majority of not less than two-thirds of the members of that House present and voting has been presented to the President in the same session for such removal on the ground of proved misbehaviour or incapacity.

Mr. Chairman: In the end of Article 121 it is stated "....for the removal of the Judge as hereinafter provided."

Shri P. Barman: Therefore, there is no bar for the Parliament discussing the conduct of a Judge, provided it is done on a Motion as prescribed under Article 124(4).

Shri Jaisukhlal Hathi: How is the misbehaviour to be proved?

Shri P. Barman: Article 124 contemplates that the initiative must come from the Houses of Parliament. Our submission is that this initiative should not be left to the President who will act on the advice of the Secretaries. This is a very dangerous proposition.

Shri N. G. Ranga: The Ministers act on the advice of the Secretaries.

Shri Jaisukhlal Hathi: Here some machinery is suggested for the purpose

of investigation and to prove the misbehaviour on the part of the Judge. Some Law should be there for this purpose.

Shri P. Barman: We doubt whether it is at all necessary after 17 years of Independence. I am in the profession for the last 30 years.

Mr. Chairman: The Constitution says it.

Shri P. Barman: I have never heard of impeachment of Judges.

Shri P. N. Sapru: We have got cases where the Judges are physically incapacitated; they could hardly move about; they could hardly talk.

Shri Jaisukhlal Hathi: How to remove such Judges?

Shri P. Barman: Without any disrespect to anybody, I would like to say that the initial defect is in the procedure of appointment of Judges. We knew of Judges who retired by themselves or resigned because they felt that they were not capable of doing justice.

Shrimati C. Ammanna Raja: If they do not do that, what should we do?

Shri P. Barman: Let the Parliament have the power. Don't give that power to the President. If the President, on receipt of a report from others, a very bad report, is of the opinion.....

Shri P. N. Sapru: The power of removal is invested in the President on an address by both the Houses of Parliament. Would you like an amendment of the Constitution stating that the power of removal should be with the Parliament?

Shri P. Barman: That is in the Constitution.

Mr. Chairman: The appointing authority is the President.

Shri P. Barman: You are thinking on the lines of departmental proceedings that since the power of appointment is with the President he has also the power of removal. Unless there is an address from both the Houses of Parliament, he has no power of removal.

Shri Jaisukhlal Hathi: Here also it is ultimately with the Parliament.

Shri P. Barman: Once you get a finding from a Special Tribunal appointed by the President, I don't think the Parliament can go beyond that.

Shri P. Barman: When there is a positive evidence or finding about some Judge, maybe for or against, how can the Parliament go against it?

Mr. Chairman: The Parliament must have some material on which to act.

Shri P. Barman: Let there be a permanent Parliamentary Committee to go into such cases.

Shri Debabrata Mookerjee: Suppose a charge is preferred against a Judge and a certain Member takes it up and puts in a Motion saying that the Judge be removed. Before the House agrees to it, the House must have *prima facie* proof of the charges preferred. What machinery would you suggest in a House 500 Members, 500 esteemable gentlemen—some of them are qualified in the technical sense and some are not, some are indifferent, a large majority of them maybe indifferent—to get legal proof of these charges? Should the concerned Judge be left to the tender mercies of an uninformed House? Would you like to leave the Judge to his fate? You must consider this point also.

Mr. Chairman: Let him finish what he wants to say. Then the hon'ble Members may put their questions.

Shri P. Barman: We are feeling that the Executive is trying to control the judiciary. If this Act as framed is enacted,

it will take away the dignity and prestige of the judiciary and the people will lose faith in the judiciary. Our Council's view is that, if at all any Bill is to be passed in this matter, the Parliament should retain its control. The Parliament may set up an Enquiry Committee, consisting of Members of Parliament, a Standing Committee, for this purpose. If any complaint is made against any Judge, that Enquiry Committee may go into that question and if they think it necessary and proper they can deal with this matter, invite witnesses and take evidence or adopt the other procedure that has been laid down here. Then their Report may be placed before the Parliament so that the Members may go into the evidence and decide for themselves, whether on that evidence they would address the President for removal of such a Judge. I find there are certain provisions in the Bill which are unconstitutional. Article 124(5) gives power to Parliament to pass a law to regulate the procedure for the presentation of an address and for the investigation of the misbehaviour or incapacity of a judge under sub-clause (4). Article 124(5) does not give the power to Parliament to invest the power of investigation to anybody else other than the Parliament.

Shri Jaisukhlal Hathi ".... by law provide" means what?

Shri P. Barman: We should read the sub-clauses (4) and (5) together. In my view, Parliament can frame law for the purpose of itself finding whether a particular judge is guilty of misbehaviour.

Shri Jaisukhlal Hathi: Where is the word 'itself'?

Shri P. Barman: That is the meaning. Parliament cannot authorise somebody else to do it.

Our view is if this Bill is passed, there will be executive control, loss of dignity and prestige of the judiciary and people will lose faith in the judiciary. The framers of the Constitution did not contemplate such a law in the sense of giving power to the President to initiate the proceedings.

Shri G. S. Pathak: If it is possible to find from among more than 700 Members of Parliament a few retired Judges, experienced advocates and outside the legal profession some eminent persons who can exercise their mind judicially and if Parliament constitutes a committee of such persons, would you be satisfied that Parliament can safely act on the report of such a committee which may report that there are sufficient grounds for proceeding against the Judge?

Shri P. Barman: Yes; that is my view also.

Shri G. S. Pathak: I want to know whether there is any objection to a motion being made in Parliament for presentation of an address within the meaning of article 121 and then Parliament appointing a committee to consider whether there is a *prima facie* case against a particular judge and later appointing a judicial tribunal to decide whether the judge has in fact committed some misconduct or does not possess the capacity to continue as a judge? Would that be all right?

Shri P. Barman: Yes.

Shri G. S. Pathak: I have in mind a case where the proceedings commenced with a motion to present an address for the removal of a judge. For the consideration of the question whether there are sufficient grounds to proceed, instead of the executive, a committee of Parliament, as envisaged in the clause is constituted. After the standing committee of the Parliament decides that there is a *prima facie* case, do you see any objection to a judicial tribunal being appointed for the purpose of investigating into the matter and reporting to the Parliament whether the case has been proved or not and then

Parliament discussing that report and deciding whether an address should be presented to the President on the findings of the tribunal? Do you see any constitutional objection to this procedure?

Shri P. Barman: No; perhaps that will safeguard the interests of the judiciary.

Shri G. S. Pathak: In case there is no discussion by the Parliament at the earlier stage when the motion is made and the proceedings before the two committees are held in camera, would you agree that will safeguard the dignity of the judiciary and the interests of the public in that regard?

Shri P. Barman: It would be a much better procedure.

Mr. Chairman: Who is to appoint that judicial committee?

Shri G. S. Pathak: The Chairman and Speaker together may appoint it.

Shri P. Barman: As you suggested, that committee may be appointed from among the Members of Parliament.

Shri G. S. Pathak: That is the first one. For the second one, would you agree that the proper constitution of such a committee would be of three persons—one chosen from among the Judges and Chief Justice of the Supreme Court, the second chosen from the Chief Justices and senior Judges of the High Courts and the third chosen from the Bar? Will you agree that this will be a safer procedure which will remove your objection of assigning the powers or functions of removal even at the initiation stage to the executive?

Shri P. Barman: I would rather prefer the first and the last but not the middle one about appointing Chief Justice etc.

Shri G. S. Pathak: You do not agree with my suggestion about the personnel, but otherwise you agree with this proposal?

Shri P. Barman: Yes.

Shri G. S. Pathak: Would you agree with me that 'misbehaviour' may relate to the conduct of a judge in the discharge of his duties—it may or may not relate?

Shri P. Barman: It may or may not relate, but it may relate.

Shri G. S. Pathak: When the Constitution has made a provision that no discussion shall take place with respect to the conduct of a judge in the discharge of his duties, how could otherwise the Constitution have made an exception in favour of a case where removal is sought on the ground that the misbehaviour relates to the conduct of a judge in the discharge of his duties?

Shri P. Barman: Here you can discuss on a motion for presenting an Address and not otherwise. You cannot discuss the conduct of a judge except on a motion for removal on grounds of misbehaviour—not proved misbehaviour.

Shri G. S. Pathak: When you come to clause (4) you only find the later steps which would follow the initiation of proceedings by a motion before the Parliament, namely, proved misbehaviour or incapacity as the result of the decision of a judicial tribunal accepted by the Parliament after the submission of the report supported by the majority votes of the Parliament. What is supported by the majority votes is the motion, namely, that such and such a person should be removed. Will you agree with that interpretation?

Shri P. Barman: Yes, and the support must be on the ground of proved misbehaviour.

Shri G. S. Pathak: It means proved after the motion; at first a motion was made before the Parliament, later a committee was appointed and the

committee submitted a report or the Parliament itself went into that question.

Shri P. Barman: Yes, that was perhaps what I was saying.

Shri G. S. Pathak: Would you agree that this "supported by a majority" relates to the motion which was made at the time when Parliament started taking action under article 121, otherwise they would have referred to another motion in clause (4)?

Shri P. Barman: There may be two steps. It is said here: "excepting upon a motion for presenting an Address". That is the first motion.

Shri G. S. Pathak: Here, in clause (4), what is to be supported? It is the same motion which started the proceedings, which set the ball rolling—appointment of committees etc. etc. It is the same motion which is being supported by the majority votes.

Shri P. Barman: After 'misbehaviour' has been proved.

Shri G. S. Pathak: Would you also agree that in your experience as a constitutional lawyer you have not come across a case where in Parliament there is a motion for the purpose of considering whether there will be a motion for a particular purpose? If there is one interpretation that there should be a motion not in the beginning when the proceedings are initiated in Parliament but only after the judicial tribunal has found that misbehaviour has been proved, how will you describe the first motion? The Parliament cannot act without a motion. So, according to you, the first motion will be merely to decide whether there should be a motion later to remove a judge. Does it not look rather unusual?

Shri P. Barman: The first motion should be the motion to initiate the proceedings.

Shri G. S. Pathak: Mr. Attorney-General has stated that there can be only one motion contemplated by articles 121 and 124, there cannot be two motions, because if you read them together, as they have to be read, only one motion is mentioned and no other motion is mentioned in article 124.

Shri P. Barman: I do not think so, with respect to the learned Attorney-General, because it may contemplate two motions or two stages of the same motion.

Shri G. S. Pathak: You agree that there can be two stages of the same motion because article 124(4) does not talk of a motion but talks of supporting a motion?

Shri P. Barman: Support will come after the misbehaviour or incapacity is proved through a judicial or parliamentary tribunal.

Shri D. L. Sen Gupta: Article 121 says:

> "No discussion shall take place in Parliament with respect to the conduct of any judge of the Supreme Court or of a High Court in the discharge of his duties except upon a motion for presenting an address to the President praying for the removal of the Judge as hereinafter provided."

This article has two parts, one "No discussion shall . . . . in the discharge of his duties" and the other "except upon a motion . . . as hereinafter provided". So, one discussion is permitted and that discussion is upon "a motion for presenting an address to the President praying for the removal of the Judge as hereinafter provided".

Shri P. Barman: If the Parliament makes up its mind—I will not say "makes up its mind", I will rather say "is of the opinion"—that here is a case where an address should be presented to the President, then you can discuss the conduct of the Judge.

Shri D. L. Sen Gupta: There may be absolutely frivolous discussion. One may say that a certain judge has taken bribe. In Parliament we can raise question.

Shri P. Barman: That is disallowed. You cannot do it.

Shri D. L. Sen Gupta: That type of discussion is disallowed. We would not go to the length of removing a Judge. We may blackmail a Judge. That is also forbidden. But suppose a Member of Parliament—and we can take a Member of Parliament as a reasonable man, a responsible man—feels and has very good grounds to feel that a particular Judge should not be there but should be removed and if he has some materials in his possession in support of his contention and he presents a motion, for an address to the President, that discussion is permissible under article 121.

Shri P. Barman: Yes.

Shri D. L. Sen Gupta: Now comes my question. My apprehension is this. If you look at the last sentence of article 124(4) a Judge can be removed "on the ground of proved misbehaviour or incapacity". If the Tribunal comprises of outsiders, then the right of Parliament will cease for two reasons. If that external tribunal, external from the point of view of Parliament itself comes to a finding of "guilt not proved" then under article 124(4) the matter cannot be discussed because what can be discussed is only "proved misconduct". When we have delegated the authority of judging guilt to a particular tribunal, if that tribunal after taking evidence comes to the conclusion and says "it is not proved", then the matter ends there. Under article 124(4) we cannot discuss that matter. So, Parliament is practically shut out from discussion.

Shri P. Barman: Yes, it is divested of that power.

Shri D. L. Sen Gupta: At the same time, if that particular tribunal says "it is proved" then also Parliament has no right to go beyond that finding, because we start from the very premise that it is proved and we have no justification or cause to say that it is "not proved". So, in either case, if it is an external tribunal, that is to say, a tribunal other than a parliamentary committee, then the Parliament will be divested of its rights to discuss it. That is your view.

Shri P. Barman: That is what I was telling this Committee. Even in departmental proceedings there is a fact-finding committee and the punishing authority, in my experience, seldom goes beyond that finding of the fact-finding committee even where it is a criminal enquiry. Therefore, as Shri Sen Gupta was telling this Committee, if it is a third party tribunal if it comes to the conclusion that misbehaviour is proved, it is difficult for Parliament to say "no, it is not proved". Therefore, by this procedure Parliament divests itself of this right.

Shri Jaganath Rao: Parliament may not accept that report.

Shri P. Barman: That will be very difficult.

Shri Jaganath Rao: Why?

Shri P. Barman: If a judicial tribunal comes to the conclusion that misbehaviour or incapacity is proved, then it is difficult for Parliament to say "no, we do not think it is proved".

Mr. Chairman: What prevents Parliament from doing it?

Shri P. Barman: If I may say so, they have to safeguard their own interest. After all, they are the representatives of the people. The whole world will know that a special tribunal appointed for the purpose found a particular Judge guilty of misbehaviour or incapacity but Parliament said "No, we do not agree with that finding".

Shri D. L. Sen Gupta: The position of Parliament becomes worse still when the finding is "not proved". If the finding is that guilt "is proved" then Parliament can discuss and say "no, it is not proved". But when the tribunal says "it is not proved" Parliament cannot have any say in the

matter because there is no "proved misconduct". When the guilt is not proved and the tribunal says "not proved" then the matter ends there. Under article 124(4) Parliament cannot discuss that matter.

Shri P. Barman: If my reading of articles 121 and 124 are correct, there can be a motion provided Parliament is of opinion that it wants to remove a judge. Then it can be discussed.

Shri D. L. Sen Gupta: Only on "proved misbehaviour or incapacity". Of course, as the learned Chairman was putting it, Parliament can certainly turn down the finding of the tribunal and say "though you say it is proved, we feel it is not proved; so we acquit the judge". In that way, Parliament can take control of the situation even in spite of the finding of "proved".

Shri P. Barman: That will be dangerous even for Parliament.

Shri D. L. Sen Gupta: But the position becomes still difficult when the tribunal says "no, he is not guilty". It may be that the tribunal has erred. But when the tribunal errs in favour of the judge and says he is not guilty, under article 124(4) Parliament cannot discuss the motion because there is no proved misconduct. How can Parliament take hold of the matter in such a situation?

Shri P. Barman: Yes, you are right.

Shri D. L. Sen Gupta: So, the tribunal should not be an outside tribunal but a parliamentary tribunal.

Shri P. Barman: Yes.

Shri Debabrata Mookerjee: Do you not agree that article 121(1) and article 124(4) have to be read together?

Shri P. Barman: Yes, they may be read together.

Mr. Chairman: May be or must be?

Shri P. Barman: That is a matter of interpretation. It cannot be "must be".

Shri Debabrata Mookerjee: What do you think about it? Would you or would you not agree that these two articles have to be read together for the purpose of a true construction?

Shri P. Barman: They require to be read together.

Shri Debabrata Mookerjee: Clause (4) of article 124 speaks of an Address to be presented to the President by each House of Parliament for the removal of a Judge on the ground of proved misbehaviour or incapacity; therefore, it presupposes that proof of misbehaviour or incapacity of the Judge concerned has been obtained. Do you or do you not agree with this?

Shri P. Barman: Yes, on the ground of proved misbehaviour, supported by a majority.

Shri Debabrata Mookerjee: Therefore you agree when I say that clause (4) of article 124, if properly read, would imply that there is an antecedent stage where evidence has to be taken, facts have to be marshalled and then an Address has to be presented. Is not that the position?

Shri P. Barman: Yes; for proving misbehaviour evidence must be taken.

Shri Debabrata Mookerjee: Is it then correct to say that Parliament can present an Address straightaway to the President on receipt of a motion that a particular Judge be removed from office? When you make that motion, do you not contravene the spirit and the letter of article 121 of the Constitution? You do contravene.

Shri P. Barman: Article 121 says, "except upon a motion for presenting an address to the President".

Shri Debabrata Mookerjee: You just now told us that we should have such a motion upon evidence having been obtained, analysed and marshalled.

Shri P. Barman: That may also happen after evidence is taken.

Shri Debabrata Mookerjee: We would like to be instructed by you about your reading of the two articles.

Shri P. Barman: What I was trying to say was that there may be a motion and the same motion may have two stages. That motion may be made for presenting an Address to the President praying for the removal of the Judge as hereinafter provided, and that motion must be supported by the majority of the total number, on the ground of proved misbehaviour.

Shri Jaisukhlal Hathi: Motion must be supported, not the Address.

Shri P. Barman: Address means the motion; first of all, there should be a motion. Article 121 says, "upon a motion for presenting an address".

Shri Debabrata Mookerjee: Therefore, Address is not the motion.

Shri P. Barman: Address is not the motion.

Shri Debabrata Mookerjee: Motion is procedural; Address is substantive.

Shri P. Barman: A Member of Parliament may move a motion for presenting an Address to the President.

Shri Akbar Ali Khan: Without any proof?

Shri P. Barman: I have stated "if Parliament is of opinion".

Shri Debabrata Mookerjee: How can we expect Parliament to accede to a motion of the kind contemplated under article 124 without the facts being brought before it?

Shri P. Barman: That is a motion for presenting an Address for the removal of the Judge. There may be two stages of the same motion.

Shri Debabrata Mookerjee: Let us imagine that this is the House of Parliament and you are a Member. You stand up and say that Judge X of such-and-such court has misbehaved; let an Address be presented to Parliament for his removal. Do you expect Parliament to say "Yes" to it without any inquiry?

Shri P. Barman: Then article 124(4) will come.

Shri Debabrata Mookerjee: That implies an antecedent stage of investigation and proof.

Shri P. Barman: Or it may be a subsequent stage.

Shri Debabrata Mookerjee: No. How can we expect a reasonable body, a body of honourable men, about 500 of them, to agree with you when you straightaway ask for their agreement to a proposal that an Address be presented to the President because according to you a particular Judge has misbehaved in office, without there being any material before the House?

Shri P. Barman: That is why the procedure is laid down.

Shri Dababrata Mookerjee: I am putting it to you with the utmost respect that it lands you in difficulty. Unless you read articles 121 and 124(4) together, you do not have a complete picture. You cannot divorce the one from the other; you cannot read them in watertight compartments.

Shri P. Barman: I might say that once that motion is made, it will be supported on the ground of proved misbehaviour. It will not be supported unless the misbehaviour is proved.

Shri Debabrata Mookerjee: I understood you to answer Shri Pathak by saying that the initial motion might be made before the House and if the House agrees there might be a committee of the House or a committee of Members of the House as well as of outsiders to go into the question of misbehaviour or incapacity. But I am asking you, when

you initiate a motion by merely saying, "I So-and-so, Member of Parliament, say that I have proof that Judge X has misbehaved in office", do you expect Parliament to readily accept the motion without any facts?

Shri P. Barman: It may not accept; but how can you debar a Member of Parliament from moving a motion?

Shri Debabrata Mookerjee: We are not exactly on the rights of Members at the present moment: we are on the question of presentation of an Address to the President and are looking from the practical point of view as to how things will happen in the House.

Shri P. Barman: That is why the Constitution-makers say, "except upon a motion" you cannot discuss the conduct of a Judge.

Shri Akbar Ali Khan: Does it not jeopardise the position of the Judge if any Member stands up and says that he has misbehaved? You have said that you want to safeguard the position of the Judges against the Executive and I agree with you there: but, at the same time, you want to throw the Judge to the whims and fancies of any Member.

Shri Debabrata Mookerjee: Without giving the House any material whatever upon which the House can reasonably be expected to make up its mind.

Shri P. Barman: The Constitution-makers thought that Members of Parliament are responsible people. They will not just jump up and make an accusation against a Judge.

Shri Akbar Ali Khan: You cannot say that the Executive is not a responsible body. It is responsible to the Legislature.

Shri Debabrata Mookerjee: Suppose,—I am asking you to make an assumption—the House has a standing committee consisting of the Speaker of the Lok Sabha, the Chairman of the Rajya Subha and, say, five Members taken from both Houses of Parliament; suppose a complaint is addressed to this Committee, the Committee goes into it and if it finds that the complaint is frivolous, it takes no notice of it; but if it finds that there is something *prima facie* to be gone into and examined with care, it takes notice of the complaint and co-opts, say, two senior judges of the Supreme Court, two senior judges of a High Court, the Attorney-General and an eminent member of the Bar and then goes into the question of alleged misbehaviour or incapacity of the judge, if this Committee appointed by Parliament decides, on considering the matter, that the whole thing is frivolous, then it takes no further action. If, however, it thinks that there is a *prima facie* case, then, of course, it gives notice to the complainant to appear, give evidence, produce documents, if any, and gives to the judge concerned equal facilities to appear before the Committee and, if necessary, call evidence in defence. If the Committee, after having obtained the material in this manner, finds that the allegations are not fit to be acted upon, it makes a report to Parliament for its information. If, on the other hand, the Committee finds that there is proof in support of in the allegations, it refers the matter to the House; the House then, debates the whole thing, looks into the evidence and decides for itself whether a joint address is to be presented to the President recommending the removal of the judge. I have envisaged this procedure to invite you to give your opinion as to whether this would not safeguard the dignity of the judge concerned and uphold the primacy of Parliament at the same time.

Shri P. Barman: Yes; that is correct.

Shri Debabrata Mookerjee: Would it safeguard?

Shri P. Barman: Yes.

Shri D. L. Sen Gupta: To Mr. Pathak's question you said that you did not favour the idea of trying the judge by the judges. Mr. Mookerjee's point was about composition of a Committee consisting of two judges of the Supreme Court, two judges of the High Court, etc. So, have you changed your mind or do you stick to your earlier opinion?

Shri P. Barman: I am prepared to accept the idea. The latter procedure, suggested by Mr. Mookerjee, appears to be a better one.

Shri P. N. Sapru: You want Parliament to be closely associated with the inquiry. You do not want to give the power solely to the executive. We have got two Articles, 121 and 124(4 and 5). We have to place a harmonious consideration on those Articles. The law should provide that 25 persons should support the motion if it is moved by private members. Immediately the motion is moved, the House should proceed to appoint a Committee or refer it to a Standing Committee. The Committee should be appointed by the Speaker and should consist of the Chairman of the Rajya Sabha, the Speaker of the Lok Sabha and five other members. I would have liked the Attorney-General also to be included but I am not sure whether, though entitled to address Parliament, he has a right to vote.

Shri P. Barman: He has no right to vote.

Shri P. N. Sapru: I am, therefore, not sure whether you can regard him as a member of the Legislature.

This Committee will look into the question whether there is any *prima facie* case against him. If the finding is that there is a *prima facie* case, there will be a further inquiry.

Mr. Chairman: He has agreed to that.

Shri P. N. Sapru: That inquiry will be by a Committee consisting of the Chief Justice of India, two judges of the Supreme Court, two senior judges of the High Court, one or two Members of Parliament or two eminent jurists.

Shri P. Barman: This category of people may be found from among the Members of Parliament.

Mr. Chairman: (To Shri P. N. Sapru) A suggestion was made by Mr. Mookerjee and he has already agreed to it.

Shri P. N. Sapru: Then the matter will be thrown open for discussion. If Parliament, by two-thirds majority, finds that the findings of the Committee are correct, then the judge may be removed. There are two classes of cases contemplated here: one is infirmity of mind or body and the other is misbehaviour or misconduct. So far as the first one is concerned, the most important evidence will be that of the Medical Board. That is a matter which will have to be settled by the Legislature. Do you agree to this?

Mr. Chairman: He has already agreed.

Shri P. Barman: My view is keeping the judiciary out of the control of the executive.

Shri P. N. Sapru: In the scheme which has been proposed by Mr. Mookerjee and which has also been proposed by Mr. Pathak, we have to ensure that the independence of the judiciary is not interfered with.

Shri M. Ruthnaswamy: On a point of order. Are we canvassing our views or are we trying to get information from the witnesses?

Mr. Chairman: (To Shri P. N. Sapru) The witness has already given the answer.

Shri P. N. Sapru: I would like to put one more question. Do you or do you not think that it is desirable in the public interest that there should be some legislation, though not exactly not in terms of the proposed Bill, to deal with such cases where the Judges continue in office even when they are unable physically to discharge their functions properly. Such cases have occurred where the Judges have continued in Office even when they were unable physically to discharge their functions; there were no cases of corruption against them.

Shri K. K. Shah: What is your suggestion? When the enquiry is being conducted, he should not function as a Judge.

Mr. Chairman: He wants to know whether there should be a legislation for removal of such Judges.

Shri P. Barman: That is very unfortunate. We have heard cases where the Judges have retired themselves because they felt that they could not discharge their functions properly.

Mr. Chairman: If there are such cases, do you want some legislation to enquire into those cases?

Shri P. Barman: Yes, because the Constitution gives the Parliament that power. This reply I am giving because I have been given to understand that the principle of this Bill has been accepted by the Parliament.

Shri Jaisukhlal Hathi: When you said that the Judges should not be associated with the enquiry, you did not want them to enquire into these things because they were Judges or because they were not Members of Parliament.

Shri P. Barman: Because they are not Members of Parliament.

Shri K. K. Shah: Will you kindly see the last line of Article 121 which reads "as hereinafter provided"? Therefore, Article 121 is controlled by Article 124(4) and 124(5).

Shri P. Barman: 124(5) will not come.

Shri K. K. Shah: You agree that Article 124(5) talks about the procedure. In Article 121 the criterion is that there should be no discussion in Parliament of the conduct of a Judge except upon a motion for presenting an address to the President praying for the removal of the Judge. Article 124(4) says that on proved charges an address should be presented. Therefore, both read together, it amounts to this that it should come for discussion before the House after the charges are proved.

Shri P. Barman: It cannot be. Article 121 says "except upon a motion . . . ."

Shri K. K. Shah: My dear friend, will you kindly see that there is the word 'Motion' in Article 121 and that word does not appear in Article 124(4)? Is that correct?

Shri P. Barman: Yes.

Shri K. K. Shah: Therefore an address can only be presented by a Motion. There is no method of presenting an Address except by a Motion.

Shri P. Barman: That is why you are making a law now.

Shri K. K. Shah: My dear friend, kindly try to understand. We are all lawyers here. If you are to argue this before the Supreme Court or any other Court, when you read Article 121 and Article 124(4) together, the extire gamut of both the sections, by transporting 'proved grounds' to Article 121 you will understand.

Shri P. Barman: It can be read separately.

Shri K. K. Shah: The object is this. The Constituent Assembly has been wise enough for the simple reason that it did not want character

assassination before the charges are proved and brought to the House; otherwise, as suggested by other friendly, if the Motion is automatically referred to the Committee, the man is killed. The Committee may also say that there is no *prima facie* case, Therefore this care has been taken. Your anxiety should be that the Committee which recommends that, a Tribunal should be appointed or it should go to a Tribunal as laid down in the Act should be such a good committee that inspires confidence. Then the object is served.

Shri P. Barman: Yes.

Shri Hari Vishnu Kamath: Mr. Chairman, may I ask, Mr. Barman this question? You are anxious, and rightly so, if I have understood you aright, that the constitutional right, that the Parliament has been invested with under the relevant clauses or Articles of the Constitution with regard to removal of Judges of the Supreme Court and the High Courts should not be detracted from, in other words the Parliament should not be deprived of that right at any stage of the Address to President for the removal of Judges.

Shri P. Barman: That is correct.

Shri Hari Vishnu Kamath: From the stage of initiative to the final stage, Parliament should retain in its own hands the right conferred on it by the Constitution. That is the stand of yours and your colleagues.

Shri P. Barman: Yes.

Shri Hari Vishnu Kamath: Will you agree to this proposal that the right which has been conferred on Parliament by the Constitution will remain in tact, if a panel—in some countries they call it as Impeachment Court or Enquiry Court—or a Committee consisting of the Chairman, the Speaker, the Attorney General and also two or three Members of Parliament, who may or may not be practising lawyers, goes into the complaint against a Judge submitted by a Member of Parliament or from any other quarter, by anybody else—complaint, petition or representation against a Judge—*in camera* by inviting witnesses and taking evidence and then submits its Report to the President. The advice given by this body to the President shall be binding upon the President and he has no option with regard to the advice given by this Committee. So that the provision in clause 3 of the Bill becomes modified to that extent.

Shri P. Barman: But why ask the President?

Shri Hari Vishnu Kamath: Here the clause, as it stands, gives some right, some power to the President.

Shri P. Barman: Yes, the right is given to the President.

Shri Hari Vishnu Kamath: Suppose Parliament, through this committee acts, and the committee's recommendation or the advice given by this enquiry committee, preliminary enquiry committee—by whatever name you call it is a secondary or minor matter—that advice given by this committee to the President to appoint or not to appoint a tribunal for enquiry into the conduct of a judge with regard to misbehaviour and incapacity, that advice will be binding on the President, and the President cannot turn it down.

Shri P. Barman: Why leave it to the President? The enquiry committee can itself appoint the tribunal. You are saying that after that enquiry the tribunal will ask the President to appoint a special tribunal. Why ask the President? The enquiry tribunal may itself appoint a tribunal.

Shri K. K. Shah: You say so because you are a lawyer and not an administrator. There should be a channel through which it acts. The channel does not make any difference so long as the action is dictated by a tribunal.

Shri P. Barman: Who will execute it?

Shri K. K. Shah: The government machinery executes it.

Shri P. Barman: Parliament has no executive power? Parliament has its own officers.

Shri Hari Vishnu Kamath: The West Bengal Bar Council is a very well known bar council in India. And therefore I put it to you: suppose every Parliament at its commencement, soon after the constitution of the Parliament, in the first year of the five-year term, appoints for this purpose by resolution a committee, a standing or permanent committee, for examining any complaints to see whether there is a *prima facie* case against a judge. For that five-year term of that Parliament that committee will function. So that committee will go into the complaints received from a Member of Parliament or from any quarter against a judge to see whether there is a *prima facie* case against him for enquiry by a regularly constituted tribunal from a panel consisting of judges of the Supreme Court sitting or retired, judges of the High Court sitting or retired, eminent jurists, whether members of the bar or even outside the bar. From this panel the President chooses or appoints a tribunal to try it. Now, who will appoint it? Parliament itself will appoint, the Speaker or the Chairman?

Shri P. Barman: Maybe the Speaker, or the Speaker and the Chairman may appoint the committee.

Shri Hari Vishnu Kamath: So the President comes nowhere in the picture?

Shri P. Barman: He will come into the picture at the last stage when there will be an address by Parliament.

Shri P. N. Sapru: The word 'tribunal' will be unfortunate there, because you do not know what interpretation the courts of law will place on it.

Shri Hari Vishnu Kamath: You can choose another word.

Dr. L. M. Singhvi: I would like to know whether you have directed your attention to the usage in this respect in other countries.

Shri P. Barman: Oh, yes.

Dr. L. M. Singhvi: And whether you base your contention on the practice as it is found in other democratic countries of the world.

Shri P. Barman: Yes, and as I was looking into those constitutions nowhere do you find this type of legislation. And that is why our resolution was that this Bill should not be proceeded with.

Shri Hari Vishnu Kamath: That is too late now.

Dr. L. M. Singhvi: What you are saying now is not really consistent, because nowhere is the initiative vested in the executive. That would be no reason not to proceed with the Bill at all.

Shri K. K. Shah: It is in Australia and Canada.

Dr. L. M. Singhvi: I do not think so.

Shri P. Barman: I do not know. But if you look to the other constitutions, in U.S.A. the judges of the Supreme Court hold office during good behaviour and they are removed to other federal offices by the process of impeachment. What is 'good behaviour' is not defined in the constitution. Therefore the process of impeachment is under section 4, article 2. It says that the President, the Vice-President and all civil officers of the U.S. shall be removable from office on the impeachment for and conviction of treason, bribery or other high crimes and misdemeanours. And when they speak of impeachment it means that it originates from the House itself.

Then, in England, under the Act of Settlement of 1701 judges of the Supreme Court hold office during good behaviour and they can be removed by the Crown only on a joint address moved by both Houses of Parliament.

Dr. L. M. Singhvi: Would you also refer to the practice in respect of Australia and Canada?

Shri P. Barman: There the judges of the superior courts are removable from office on an address from both Houses, praying for such removal, to the Governor-General.

Dr. L. M. Singhvi: Taking it further in respect of Canada and Australia would it be correct to state that "the process of removal for federal and superior court judges"—I am quoting from Robert MacGregor Dawson—"is a joint address of both Houses of Parliament, followed by actual removal by the Governor-General-in-Council. Charges must be made by responsible parties and a petition submitted to Parliament praying for the Judge's removal; the charges in the petition must be both explicit and of such a serious nature that, if substantiated, they would justify removal; the House must appoint a select committee to investigate the charges; the committee must report unfavourably, and the House adopt its report, the address must then be passed by both Houses; and finally, although this would doubtless follow as a matter of course, the Governor General-in-Council must approve." That is the position in Canada.

Mr. Chairman: What are you reading from? Is it a part of the constitution?

Dr. L. M. Singhvi: I am quoting from a learned commentary on the Canadian Constitution. He has mentioned the constitution thereof, I am mentioning the constitutional practice in further elaboration of the constitutional principle which is enshrined in that constitution.

Shri P. Barman: That is also the same principle.

And the position in Scotland is that a judge of the Supreme Court shall not be removed from office except for stated misbehaviour or incapacity and then only upon a resolution passed by the Dail.

Mr. Chairman: The same thing here, proved misbehaviour.

Shri P. Barman: And in Japan, article 78 provides that judges shall not be removed except by public impeachment, unless judicially declared mentally or physically incompetent, and no disciplinary action against judges can be administered by any executive organ or agency.

Shri Jaganath Rao: Mr. Basu has given all that information in his book. Commentary on the Constitution of India.

Dr. L. M. Singhvi: What I should like to elicit from you specially is this. What is your objection in principle? I take it that your objection in principle is in respect of the executive having the initiative to do or not to do something to initiate proceedings for investigation? Is that so?

Shri P. Barman: Yes. For, we do not want the executive to have absolute control over the judiciary.

Dr. L. M. Singhvi: Do you think that vesting this initiative in the executive would give to them a decisive say in the matter of impeachment proceedings?

Shri P. Barman: Yes, we are experiencing it every day, how the executive is making inroads into the judiciary.

Dr. L. M. Singhvi: What would be your suggestion? Would you suggest that we adopt a procedure whereby a

Select Committee of Parliament goes into this immediately after the presentation of a complaint sponsored by a specific number of Members of Parliament?

Shri P. Barman: Yes, that will be on a safer ground.

Dr. L. M. Singhvi: But do you think that that could not be done until a motion as is referred to in article 121 of the Constitution, the procedure for which motion is prescribed in article 124(5) is there?

Shri P. Barman: Yes. We feel that the Members of Parliament are a responsible body and they will act reasonably and judicially.

Dr. L. M. Singhvi: So, in a legal sense, the motion for removal would mean a motion for the presentation of an address for removal of a judge would be made to Parliament, and immediately thereafter it would be referred to a committee which would investigate into the matter?

Shri P. Barman: It may be done in *camera*.

Dr. L. M. Singhvi: Would you like to have this inquiry conducted in such a manner that the judge against whom the charges are preferred has also an opportunity to present his case and have his counsel?

Shri P. Barman: Yes.

Dr. L. M. Singhvi: After the Select Committee reports back to Parliament, Parliament might consider the motion for removal in a substantive way?

Shri P. Barman: Yes.

Shri M. Ruthnaswamy: As I do not want support for my views from the witness and as he has given sufficient expression to his views on the subject, I do not want to put any questions.

Shri Hari Vishnu Kamath: Would you like misbehaviour to be defined in the Act?

Shri P. Barman: It is very dangerous to define 'misbehaviour'.

Shri Hari Vishnu Kamath: You had said something about it.

Shri P. Barman: You cannot define what is misbehaviour.

Shri Debabrata Mookerjee: A person may misbehave but you can never define misbehaviour with precision.

Shri Jaisukhlal Hathi: In all these Constitutions, could you show us any such article or provision as corresponds to article 121 of our Constitution?

Shri P. Barman: Because of the calamity, we got the news about this very late. I think there is one in Burma. . . .

Shri Jaisukhlal Hathi: There, at the initial stage, all these charges could be discussed, because there is no such constitutional provision there.

Shri P. Barman: There is nothing similar to article 121 of our Constitution there.

Mr. Chairman: I would refer you to article 121 of our Constitution relating to bar of discussion on judges in Parliament except on a substantive motion, and article 124 (4) and 124 (5).

According to the evidence that you have given, you contemplate a parliamentary committee to go into the question of *prima facie* case. Can the committee come to a decision whether there is a *prima facie* case or not, without a discussion even if it be *in camera*?

Shri P. Barman: *In camera* you can discuss. The constitutional provision only says that no discussion can take place in Parliament.

Mr. Chairman: Can the committee of Parliament come to a decision without a discussion among themselves, even if the inquiry is *in camera?*

Shri P. Barman: The bar is only for discussion in Parliament, but the committee can discuss.

Mr. Chairman: Can a parliamentary committee discuss what has been banned for the parent body namely the Parliament? Can a parliamentary committee discuss a thing which Parliament itself cannot discuss?

Shri P. Barman: A parliamentary committee can discuss these things surely. The provision is only that no discussion can take place in Parliament.

Mr. Chairman: Even if Parliament has no power to discuss, can the parliamentary committee discuss it?

Shri P. Barman: There is a difference between Parliament and a committee of Parliament. Discussion in Parliament is different from discussion in a parliamentary committee.

Mr. Chairman: So, according to you, we can discuss it in a parliamentary committee?

Shri P. Barman: Yes.

Shri D. L. Sen Gupta: But the moment a discussion takes place in a parliamentary committee, the news would somehow go out, and so, it cannot be distinguished.

Shri Jaisukhlal Hathi: Can they discuss *in camera?*

Shri P. Barman: Yes.

Shri B. Bajpayee: May I say something on the merits of the Bill? What has been said so far is with regard to the constitutionality of the Bill. But with regard to the merits of the provisions in the Bill, I would like to say something.

Mr. Chairman: You should have asked for this opportunity earlier. As soon your friend had finished, you should have asked for this opportunity. But now questions have been put and we have concluded the evidence. You may give us a note.

Shri B. Bajpayee: I would not take long and I would be very brief. With regard to certain provisions of this Bill, if the suggestions made by Shri Debabrata Mookerjee and Shri P. N. Sapru are accepted then our submission with regard to the constitutionality of the Bill goes. Then, the question arises about the actual provisions of the Bill.

Under clause 3, if a committee is going to be appointed, a committee as suggested earlier, and if that provision is going to be recommended by this committee, then the President has to act on the basis of a report. It has not been stated from whom the report has to come. These two terms are very elastic. 'Otherwise,' means *suo motu.* It may be on the basis of a complaint from any individual or from a responsible person. Will that complaint be in writing? Who will be responsible for the allegation? A photograph is sent to the President. He acts on it. Who will be responsible for the allegation and inquiry, if after the proceedings of the committee appointed by the President, the allegation is proved absolutely frivolous.

Shri Jaisukhlal Hathi: You envisage appointment of a tribunal on such a frivolous application?

Shri B. Bajpayee: Suppose a photograph is sent by a person showing a Judge taking a bribe.

Shri Jaisukhlal Hathi: On that a tribunal will be appointed?

Shri B. Bajpayee: Tribunal would come later. The President is to act on the basis of some report or otherwise. If the President refers that matter, whatever be the allegation. . .

Shri K. K. Shah: Is the President so irresponsible that on a frivolous

ground without satisfying himself he will proceed further in the matter?

Shri B. Bajpayee: Only for that reason I am suggesting certain provisions here. Before the matter is referred to the committee, the President will make an inquiry.

Shri Jaisukhlal Hathi: There is no committee.

Shri B. Bajpayee: The word 'tribunal' should be changed and the word 'committee' substituted. The President will make such inquiries as he thinks necessary. We suggest that the word 'otherwise' should be deleted. That is number one—I am adding to what my friend has said. The second thing is this. Accepting that the President is to appoint a committee, our objection here is this. Under art. 121(4), the President' action will come after a joint address in a particular manner from both Houses.

Mr. Chairman: Final decision.

Shri B. Bajpayee: I would say 'ultimate decision'. When a joint address in accordance with art. 124(4) goes before the President, he cannot return that to Parliament saying 'I do not agree with the views of Parliament', though it is couched in a negative form that a Judge cannot be removed except in such and such way. So the President has no other alternative but to accept it. Here, without meaning any disrespect, as you say in court, the cart is being put before the horse. Action begins from the President. The President has to be satisfied or first that there is a *prima facie* case before a committee is appointed. There is no provision for inquiry by the President before he forms an opinion. On receipt of a report, he must be satisfied that there is a *prima facie* case. On that material? That is left to the President. I never suggest that our President will be an irresponsible man. Therefore, he must be satisfied that there is *prima facie* a case to be sent to a committee. Once this case is sent to the committee, the committee or tribunal,—whatever be the name given to this body—will initiate proceedings. That decision of the President is final until the committee has examined and come to a finding this way or that. No option is given to the committee or tribunal. Even after the tribunal is formed, and the Judge appears before it and makes a statement and the committee finds that the complaint is based on absolutely frivolous material placed before the appointing authority, the tribunal cannot say 'we drop the proceedings'.

Shri Akbar Ali Khan: Why not? The committee has to say yes or no, proved or not proved.

Shri B. Bajpayee: Sub-clause (1) says:

> "If the President, on receipt of a report or otherwise, is of opinion that there are good grounds for making an investigation. . . ."

That is by the President.

Shri Akbar Ali Khan: You are thinking of the second stage.

Shri B. Bajpayee: That is the first stage.

Mr. Chairman: Report is about the allegations against the Judge, not the report of the committee.

Shri Jaisukhlal Hathi: Please see cl. 4(2).

Shri B. Bajpayee: I am reading cl. (1). 'If the President, on receipt of a report or otherwise...' That is at the very outset when a complaint or report is sent. I am complaining against a Judge to the President. My first suggestion was—drop 'otherwise'. The second suggestion is,—add 'and on making or a complaint, he has to do it.

Mr. Chairman: Before he refers to a tribunal, you want him to make an inquiry.

Shri B. Bajpayee: Some sort of inquiry. Otherwise, on what material will he form an opinion?

Otherwise, only on my statement a Judge will be asked to appear before the committee. With what consequences? After he for as an opinion, he may constitute a special tribunal for the purpose of making such investigations and forward the grounds of such investigations to the special tribunal. The President is formulating the grounds also as to on what basis the inquiry shall be made. That is what is provided in the sub-clause. That means, on the basis of a report or otherwise, the President before he refers it to a tribunal shall also formulate the grounds—not only assure himself that there is a *prima facie* case made about misbehaviour or incapacity.

Therefore, I was suggesting that 'otherwise' should be deleted and 'on making such inquiries as he thinks fit' should be decided. Thereafter, once a committee is formed—as is the case with almost all tribunals—if the tribunal finds that in spite of whatever material was placed before it by the appointing authority, there is no *prima facie* case against the Judge, it has not been given any power to drop the proceedings then and there. What the committee does is this.

I make my submission regarding sub-clause (2). What is the function of the tribunal? The Special Tribunal shall frame definite charges against the judge on the basis of which investigation is proposed to be held. Before a written statement is filed, the grounds are stated by the President, and on these grounds alone definite charges are being framed against the judge only on the allegation, and thereafter everything proceeds. Then the clause says:

> "Such charges together with a statement of the grounds on which each charge is based shall be communicated to the Judge and he shall be given a reasonable opportunity of presenting a written statement of defence within such time as may be specified in this behalf by the Special Tribunal".

All this paraphernalia will continue and it will and only in sub-clause (2) of clause 4. The committee will submit a final report. Therefore, what I was submitting is that this committee should be vested with the power, at the outset, before framing a charge, to throw out the complaint if it feels that the complaint is absolutely frivolous.

Mr. Chairman: That will be provided for in the rules, I think.

Shri B. Bajpayee: Whether such a power can be given to the executive is not known. Again, if the executive does not frame such a rule, there is no direction that such a rule shall be framed.

Shri Akbar Ali Khan: Is there anything to prevent the tribunal from throwing it out at the outset?

Mr. Chairman: Clause 7(1) provides that the Central Government may make rules to carry out the purposes of this Act.

Shri B. Bajpayee: About that rule-making power, I am placing my submission before the Committee. Therefore, what I was submitting is that power has always been given specifically to the tribunal in all cases. That power of throwing out the complaint if it is frivolous, has been given in almost all cases.

Regarding the constitution of the tribunal, clause 3(2) says:

> "The Special Tribunal shall consist of such number of members, being not less than three in number, as the President may think fit to appoint from among persons who are or have been Judges of the Supreme Court and one of them shall be appointed by the President as the Chairman thereof."

The words "who are or have been" may kindly be noted. The difficulty is, these provisions also apply to the sitting Supreme Court judges. If three sitting Supreme Court judges are appointed against another brother judge, the question is whether this sort of sub-clause, specific provision, should be there or not. There is the suggestion that those other than persons who are Supreme Court judges may look into the matter in a different way. As we have seen in the case of one of the judges of the Calcutta high court, out of the 24 or 25 judges, most of them refused to take up that case. It so happened that the juniormost judge who was appointed in the vacancy of the judge in question had to take that case ultimately. Therefore, the question is whether a provision like this should be made or not, should be considered: whether the other judges should consider the specific charges against a brother judge.

Shri Debabrata Mookerjee: You do not want inclusion of judges?

Mr. Chairman: Why do you suppose that judges of the same high court would be appointed? There are other high courts.

Shri B. Bajpayee: Kindly see the provision; no other judges can come in. Outsiders cannot come in. Even the Attorney-General cannot come in.

Shri Akbar Ali Khan: If you include others, you have no objection.

Shri B. Bajpayee: Shri Barman has accepted that.

Mr. Chairman: "Among the persons who are or have been judges of the Supreme Court." That means retired judges may also be appointed.

Shri Jaisukhlal Hathi: All the judges may be brothers.

Shri B. Bajpayee: In the place of this provision, we are suggesting that a committee, as suggested by the hon. Member, Shri Sapru, may be appointed. We prefer that committee.

Then, regarding the procedure that has been mentioned in the rule, it is a procedure which has been mentioned in the rules like the Railway Establishment Code and such other codes. I am referring to the framing of charges.

Mr. Chairman: Once the authority is appointed, charges will be framed and opportunity will be given for the written statement thereafter.

Shri Jaisukhlal Hathi: Please see clause 5, wherein the Special Tribunal has been given the powers of a civil court under the Code of Civil Procedure, regarding enquiries.

Shri B. Bajpayee: Powers must be given specifically: that is, with regard to the conduct of the proceedings in the tribunal. I am making my submission with regard to the framing of the charges and the continuance of the proceedings before the tribunal: the question is whether the power should be given to the tribunal or not.

In regard to clause 4(2), my submission is that it will go against the provisions of the Constitution in this way. The sub-clause reads as follows:

> "After the close of the investigation the Special Tribunal shall submit its report to the President.."

There is no option. It shall have to submit its report to the President—

> "stating therein its findings on each of the charges separately with such observations on the whole case as it may think fit."

The Constitution says that Parliament shall form its opinion before an address is presented to the President. But before that, this committee, not appointed by Parliament—

Shri Jaisukhlal Hathi: Where is it said that Parliament shall form its opinion? What is that article?

Mr. Chairman: The report will be placed on the Table of Parliament and Parliament will discuss it.

Shri B. Bajpayee: This committee comes to the conclusion on the charges and after that the Members of Parliament will come to their own deci-

sion. My submission is that this committee should make observations on the evidence recorded on the findings, each of the charges separately, with observations. On the whole what I submit is that instead of making the findings by the committee appointed by the President, this committee should submit the whole case before Parliament. Evidence has been recorded, and whatever proof can be gathered has been recorded. If Parliament says by a majority that a judge is guilty, let it say so. The only authority envisaged in the Constitution is Parliament. Only Parliament can say on the evidence recorded that such and such a man is guilty.

Shri Jaisukhlal Hathi: Your view is this committee should only collect evidence and go through the material?

Shri B. Bajpayee: Yes and also give their observations on those materials.

Dr. L. M. Singhvi: Would you like only evidence to be forwarded by them to the Parliament or also their observations which would be tantamount to conclusions? If the committee give their observations, it means they are the findings.

Shri B. Bajpayee: Observation is not conclusion. The committee observe that this is the nature of the evidence. It is for Parliament to say whether the Judge is guilty or not. In view of the provisions of the Constitution, the ultimate authority rests with the Parliament.

Shri M. Ruthnaswamy: You mean, their report should be like the summing up by the judge to the jury.

Shri B. Bajpayee: Yes. Under article 124, the power is given only to Parliament and none else.

Once the report is filed, tht President simply acts as a post office and it is to be put before Parliament. According to the provisions of article 124(4), the President should have come at the last stage.

Mr. Chairman: Any other points?

Shri B. Bajpayee: I think clause 7 about rule-making power has got to be changed substantially. This is very vague—"make rules to carry out the purposes of the Act". What are the purposes for which the Central Government will make rules?

Mr. Chairman: This power is given in every Act.

Shri B. Bajpayee: Suppose a complaint is made and the President thinks there are good grounds for proceeding against the Judge. A tribunal is appointed and the Tribunal is seized of the matter. In exercise of its rule-making power, if the Central Government says that the Judge shall not function after the proceedings start before the Tribunal, there is no provision in the Act to stop it.

Shri Jaisukhlal Hathi: But every rule will come before Parliament.

Mr. Chairman: It will be placed on the Table of the House for a period of Thirty days. If the Parliament makes any change, only the changed rule will come into force.

Shri B. Bajpayee: In my view, subclause (2) is not couched in proper language because even before the rules are accepted by the House that rule will be given effect to. The last three lines should be deleted. It says:

> "....so however that any such modification or annulment shall be without prejudice to the validity of anything previously done under that rule."

Shri Jaisukhlal Hathi: But that is only for those 30 days.

Shri B. Bajpayee: For those 30 days, it can be said that the Judge shall not function.

Shri P. N. Sapru: Judges work under the pressure of strong professional opinion. There is the famous case of James Stevens, who was a great judge and the author of our Evidence Act. Some leading articles appeared against him saying that he came drunk. Immediately Mr. Stevens tendered his resignation and eloquent

tributes were paid to him as a judge. Do our Bar Councils and Judges function in that way?

Shri Jaganath Rao: It is a matter of common knowledge.

Mr. Chairman: We shall adjourn now and meet at 2.30 on Monday.

(The witnesses then withdrew)

(The committee then adjourned)

MINUTES OF EVIDENCE GIVEN BEFORE THE JOINT COMMITTEE ON THE JUDGES (INQUIRY) BILL, 1964

Monday, the 17th January, 1966 *at* 14.30 *hours.*

PRESENT

Shri S. V. Krishnamoorthy Rao—*Chairman.*

MEMBERS

Lok Sabha

2. Shri Hari Vishnu Kamath
3. Shri Harekrushna Mahatab
4. Shri Ghanshyamlal Oza
5. Shri Tika Ram Paliwal
6. Shri Shivram Rango Rane
7. Shri Sham Lal Saraf
8. Dr. L. M. Singhvi
9. Shri T. Abdul Wahid
10. Shri Jaganath Rao.

Rajya Sabha

11. Shrimati C. Ammanna Raja
12. Shri Jaisukhlal Hathi
13. Shri Akbar Ali Khan
14. Shri Debabrata Mookerjee
15. Shri G. S. Pathak
16. Shri M. Ruthnaswamy
17. Shri P. N. Sapru
18. Shri K. K. Shah.

DRAFTSMAN

Shri S. K. Maitra, *Additional Draftsman, Ministry of Law.*

REPRESENTATIVES OF THE MINISTRY

Shri L. P. Singh, *Home Secretary, Ministry of Home Affairs.*

Shri Mangli Prasad, *Under Secretary, Ministry of Home Affairs.*

SECRETARIAT

Shri M. C. Chawla—*Deputy Secretary.*

WITNESS EXAMINED

The Institute of Constitutional and Parliamentary Studies, New Delhi.

Shri M. N. Kaul.

The Institute of Constitutional and Parliamentary Studies, New Delhi.

Spokesman:

Shri M. N. Kaul.

(The witness was called in and he took his seat).

Mr. Chairman: Under the rules whatever evidence you tender will be treated as public and laid on the Table of the House and distributed to members. Even if there is any portion which you want to be treated as confidential, it will be printed and circulated to Members.

Now, we have received your memorandum. It has been distributed to members. If you want to add anything . . .

Shri M. N. Kaul: Yes, certainly. But there is one thing that I would like to make clear with regard to my evidence. I have been all these years functioning with the Speaker and if the Committee wish that I should be of real assistance to them, it will be necessary for me to give an account to the Committee of what powers the Speaker has and what he has been able to do in this matter. In doing so I may have to refer to certain matters which it may not be advisable to make public. I can only say that after I have given the evidence.

Shri Jaisukhlal Hathi: That will not be on record.

Shri M. N. Kaul: It will be recorded. It will be part, of the evidence. But, I should like that, in the discretion of the Committee, such portions may not be divulged.

Dr. L. M. Singhvi: The usual procedure in the matter is that at a later stage it is decided what portion should be laid on the Table of the House and what portion should not be so laid.

Shri M. N. Kaul: I will try to see that the whole of my evidence may be laid on the Table of the House. But I am accustomed to deal with Members and Ministers in confidence. When I am present here I am at home, I do not feel that I am in a strange place. So, at times I may give out my whole mind in answer to questions and on reflection I may think that a part of it may not be published. Otherwise, I will try to so word it that the whole of it may be made public. But if some part is to be withheld, I leave it entirely to the Committee.

Shri Sham Lal Saraf: Then one question arises. So far as the Committee is concerned, unless it takes note of the whole of the evidence . . .

Shri M. N. Kaul: The whole evidence is on record for the Committee.

Mr. Chairman: Therefore, you can tell us what will not be on record.

Shri M. N. Kaul: That I will do after reading the evidence.

Mr. Chairman: You may yourself say as to what part of the evidence you would like not to be treated public.

Shri M. N. Kaul: I will try to so word it that the whole of it can be published. But if on reflection I feel that some observation or some statement may not be divulged, I should be given that opportunity, subject to the discretion of the Committee and the Chairman.

Mr. Chairman: All right.

Shri M. N. Kaul: Unless you wish to put certain questions, I would rather prefer to describe to the Committee the procedure that has been in existence in Lok Sabha for the last fifteen years since this Constitution came into force in 1950. I would be referring to the existing procedure with regard to this matter, which will be illustrated by reference to actual cases regarding Judges. I want the Committee to be quite conscious of this fact that no new procedure should be introduced which departs very widely from existing conventions and practices. As Prime Minister Nehru put it to Shri Mavalankar—after all is the conventions and practices that have grown up during the last fifteen years

in regard to this matter and that have been found to be satisfactory that are very important. I am very particular that nothing is done to affect those practices. The difficulty is that those practices are not fully known. Therefore, I will describe the current practice.

Shri Debabrata Mookerjee: I take it that the cases you have in mind and to which you are going to refer have direct relevence to article 121.

Shri M. N. Kaul: Absolutely.

Now, so far as article 124 is concerned, it embodies two important principles. The first principle is the independence of the judiciary, that the judiciary should be independent of the executive. That was what was in the mind of the Constitution-makers when they put in this provision. In this provision they followed the practice in Britain, and more particularly in Commonwealth countries. As you know, in Britain the Queen still retains the right to dismiss a Judge. In addition, the Parliament has also got a right to present an address to the Queen for the removal of a Judge. The power of Parliament in England is wider than that of the executive. That is to say, the judges must, in a wider sense of the term, command and enjoy the confidence of parliament. That is the test that the Parliament in England applies. The Queen applies the strict and rigid test of good behaviour. Our provisions follow more or less the Commonwealth precedents, more particularly those in Australia. In the British system there is no obligation on the Parliament to go through the entire judicial process. But the word "proved" has been put in our Article 124(4) deliberately to ensure that the address is presented after more or less a judicial trial has been given to the judge and he has been given an opportunity to present his case.

The other important principle that is embodied in it is that the Constitution-makers considered and thought that the independence of the judiciary should be entrusted to the Parliament. That is to say, they thought that it would be safe in the keeping of Parliament and so they provided the necessary safeguards that are present in the Commonwealth Constitution.

These are the two principles which are embodied in this article and any legislation that is brought before Parliament has to be viewed in the light of these principles. That is to say, no legislation that is brought before Parliament should in any way tend to dilute either of those principles. The independence of the judiciary should not be affected. In other words, the executive should not be brought into the picture at any stage, right from the beginning. At no critical stage should the executive be brought in because, in my opinion, that would be contrary to the intention of the Constitution-makers. I am not going into the legal question whether the Bill is *ultra vires* or not, but it would not be in consonance with the spirit of this article. Secondly, nothing should be done which will in any way subtract from the powers which the Speaker and Parliament have hitherto enjoyed under article 124(4).

Now, what are those powers? The first power that is given to the Members and Parliament under article 124 is the constitutional right to give notice of a motion for an address to be presented to the President praying for the removal of a Judge. That is a constitutional right of Member of Parliament. That is the first thing to remember that nothing that is done by legislation should, in any way, subtract, take away or postpone the exercise of that power. That power exists *ab initio* and it is implicit in every word of the relevant Article of the Constitution.

The second question that arises is the power of the Speaker in this matter. Now so far as the power of the Speaker is concerned, I had been associated for, more or less, 25 years with the Speaker and I can say that there is no high office under the

Constitution which can wield so much power to the good of the public, to the good of the judges and to the good of Parliament as what the Speaker can do behind the scenes. Now what is the power of the Speaker? Speaker Patel put it in those early days when he laid the foundation of Parliamentary procedure in India that the most fundamental power of the Speaker is to admit a motion. Nothing can come before Parliament unless the Speaker admits it. That power is final and cannot be questioned. You can remove the Speaker but you cannot question his decision whether a motion should be admitted or not. Until a Member gives notice, the Speaker has no powers, but the moment a Member gives notice, all the powers of the Speaker come into play and then he has to exercise those powers with great skill and caution and for the public good.

Shri P. N. Sapru: And with great independence of judgment.

Shri M. N. Kaul: The first case that arose was the case brought by Mr. Megnad Saha, an eminent scientist. As those of you who were present at that time know, he was a prominent and important Member of this House and took lot of interest in public affairs. He gave a notice in reference to a judge of a High Court—I would not name the High Court or the judge. When that notice came to the Speaker, Shri Mavalankar, he at that time made a very careful study of the entire position which is under your scrutiny at the present time—Articles 121 and 124. Those were the relevant provisions and he considered them very carefully. That discussion took place ten years ago, but it is still imprinted on my mind and was, in a sense, my education on this matter so much so that I have, when I speak to you now, a very vivid recollection of what happened. He took the view that the Constitution had made the Judiciary independent of the Executive and placed the entire responsibility in the hands of Parliament; so, that responsibility, the Parliament had got to discharge with great care, with great discretion and at all times in the interest of the preservation of the honour, the dignity, the independence and the authority of the Judiciary, which was an important part of the Constitution so much so that all the judgments, all the laws of Parliament, were enforced by the Judiciary. That was his basic approach and he said, "I, as Speaker, am the first important safeguard that comes into the picture; it is my duty to see that nothing gets on the order paper till I am satisfied that there is a *prima facie* case. My power it to admit the notice." And he told me as a side remark, "this power I can use to settle matters without the thing ever coming on the order paper". That is what he did in his regime. I am giving the facts which never saw the light of the day because they happened between the Secretary, the Speaker and the Member concerned and a file like that never goes to office; the notings on these important matters remain in the personal custody of the Secretary himself. I am, for the first time, divulging them because the matter is old and all the persons concerned are no longer there on the scene and I am merely doing it as an illustration. He said, "my first duty is to send for the Member". As you know yourself, Mr. Deputy-Speaker, the Speaker has *prima facie* to satisfy himself with regard to any motion; ordinary motions which involve no allegation, no defamatory remarks, nothing of any significance, are admitted by the Secretary, but anything of importance always goes to the Speaker; anything of high Constitutional importance is personally disposed of by the Speaker in consultation with the Secretary and the Member who has given notice.

Shri P. N. Sapru: Whatever he says about the Speaker applies to the Chairman, Rajya Sabha.

Shri M. N. Kaul: I am not speaking theoretically. I am giving evidence before the Committee from my

personal knowledge. Shri Mavalankar said, "I will send for Megnad Saha" and he called him. He said, "look here, you have given notice; you are an eminent Member and I know that you may have some *prima facie* evidence, but it is my duty, as a Speaker, to satisfy myself. It is a matter of high Constitutional significance. The Constitution makers have entrusted this responsibility to Parliament, but initially it is my power and responsibility to admit it or not to admit it. I think that I should view it with an extremely critical eye; that is to say, if I have no recourse left, then in those circumstances alone I will place this on the order paper. So you should satisfy yourself and the Speaker." Mr. Megnad Saha said, "I have satisfied myself". Then Shri Mavalankar said, "a Member, as you know, is responsible for every notice that he gives, for every statement that he makes, but under the law of Parliament, it is a moral responsibility and if there is a moral breach, he incurs the displeasure of the Speaker. In an extreme case, a Member can be expelled, but normally he incurs the displeasure of the Speaker. That is the law and practice of Parliament. He explained this and then added, "now beyond your statement, I should like to have a clear statement from you as to what are your allegations against the judges and you should be conscious of the fact that that statement will be checked, verified and no part of it, according to the best of your knowledge, should be untrue. Have you made personal enquiries?" "Yes" he said, "the constituents concerned, namely, the litigants before the Court, have come to me; they have complained to me, *i.e.*, three judges of the High Court delay their judgments for a long time; and in the case of one judge, he is about to retire; he has not yet delivered some judgments and the litigants are very anxious that he might retire without delivering the judgment; in that case, they will be subjected to an infinite harassment of going through the litigation." Mr. Mavalankar satisfied h mself. I was present there. Mr. Mavalankar was watching him as a judge watches the demeanour of the witness. When he had left, he told me, "Mr. Kaul, I think Mr. Megnad Saha is making a perfectly true statement. From the way he made it and the tone and tenor with which he spoke, I feel satisfied that he has verified them so far as he goes. I asked him, "what is your next step?" He said, "you see, I have got this weapon to admit; once I use it, it is exhausted; till I use it, it is a very potent weapon. So, I will write to the Chief Justice of the High Court concerned." He wrote to the Chief Justice concerned, "I will hold my hand. Here is this statement by a Member of Parliament making definite allegations. You kindly let me know what are the facts. If the facts are not confirmed I shall dismiss the notice; if they are confirmed, then I have to consider the matter further".

And he sent copies of that letter which he sent to the Chief Justice of the High Court, to the Home Minister, Pandit Pant, and to the Chief Justice of India.

Prompt came the reply from the Home Minister, approving the action of the Speaker and saying that he had acted in the interests of the judiciary and Parliament in holding his hand.

Then came the reply from the Chief Justice of India that he was going to that High Court and that he would talk about this matter.

And the Chief Justice of the High Court concerned himself replied later.

An hon. Member: Of Calcutta.

Shri M. N. Kaul: I do not name the High Court. The Chief Justice of the High Court concerned replied, and it was a pathetic letter. He admitted the facts. He said, "This action of these Judges is bringing the court into disrepute and I wish something could be done. I would give all the facts. I have been so sick of the whole matter." The Chief Justice

greatly appreciated the Speaker's letter and was full of appreciation. That shows the cordiality of the relations between the Speaker and the judiciary in this particular matter and how cooperative both sides were.

When the reply of the Chief Justice came I was sitting in the House and I took the permission of the Speaker to show the correspondence to the Prime Minister, Pandit Nehru. He read the correspondence. He did not know anything about it, and he immediately wrote out a short note—presumably he also wrote to the Chief Minister of the State—he said "This must stop; otherwise the whole judiciary will get into disrepute". And he approved of the action taken by the Speaker.

Now, just imagine what happened. All these various high persons holding high offices in the State were functioning in an isolated manner; the Prime Minister did not know, the Home Minister had no knowledge, the Chief Justice was feeling helpless in the matter, the Chief Minister did not know, the Chief Justice of India did not know. But just a simple act by the Speaker co-ordinated the activities of all of them, put more energy and heart into them, and this one threat that "if this matter is not remedied it will come before Parliament" resolved the whole thing. For, Mr. Mavalankar had never any occasion to bring this matter before Parliament and the matter was resolved.

Shrimati C. Ammanna Raja: How?

Shri M. N. Kaul: The cases were disposed of, the judgments were delivered and the litigants were happy. All the cases that arose, of which I am aware, were cases of non-attendance on the part of the Judges or of neglect of duty. There has been no case, and I do not think there ever will be, where it was alleged that the Judge degraded his office, betrayed his trust or wilfully and knowingly did a wrong thing, or that there was perverted justice and judgment. There has been no such case in India, and I think no such case will ever happen. And all the cases that have happened so far which have come to the notice of the Speaker—I do not know of what happened in the executive branch—have been cases of non-attendance and neglect of duty in the sense of delayed judgments on the part of the Judges.

Shrimati C. Ammanna Raja: There was no motive in delaying?

Shri M. N. Kaul: No. Just delayed judgments, I presume so.

Shri P. N. Sapru: A Judge has got a lot of work.

Shri M. N. Kaul: I am citing the actual cases that happened. And the other Judges felt that they were brought into disrepute.

The result was that judgments were delivered, the Judge who was about to retire delivered the judgments and then retired, and the High Court concerned began to move in a perfectly normal manner. And what is more is that Dr. Megnad Saha was satisfied. He reported to the Speaker, "I am completely satisfied and I am very grateful to you".

I cite this illustration to show that if you pass this legislation, you destroy all these precedents, practices and conventions that have been built up. Under this legislation, if enacted, Parliament is not at all seized of the matter right until the stage the tribunal has reported. Till then all the powers of Parliament and the Speaker are taken away. I put it to the Committee to consider whether the practices and the conventions that have grown and the way the Speaker has exercised his powers, whether all these should be destroyed—because these precedents are crystallized and every Speaker is advised accordingly.

There were one or two other cases subsequently. They also never came to the order paper.

Shri P. N. Sapru: What was the nature of those cases?

Shri M. N. Kaul: I do not recall just now. There was another case from some other High Court. That also was resolved when it was known that the matter would come before Parliament.

I have found from personal experience that so far as the judiciary is concerned, if the Chief Justice is clear in his mind—and the Chief Justices have been frank when writing to the Speaker, they have not suppressed anything—if they want a Judge to go because he is bad, in the sense that he is not attending to his job, they say so. They never try to write something which cannot be justified; they are quite frank. They know that the Speaker has to decide quickly. It is not a question where the matter can be postponed or the matter is before the Cabinet or the Minister is considering it. The Speaker has the power to say, "The Member is pressing, I must decide quickly" and the reply must come in a short time. And the reply in these few cases that I have referred to came quickly. And the procedure is well settled.

The third case, the latest, which was started by one of the Members of the present Committee, took place in 1963, and the hon. Minister will be aware of the facts of the case.

Shri P. N. Sapru: What was that case?

Shri M. N. Kaul: Mr. Imam's case, and one of your colleagues will be able to give you all the facts; I am concerned only with the procedural aspects and what happened so far as the Speaker is concerned. We showed all the precedents and advised him as to how the matter stood. We said that if a motion in regard to this matter is put on the order paper we have to see that every word, every comma, every syllabie of that motion is *prima facie* shown to have a basis. Otherwise the Speaker will not put it down on the order paper, it will not see the light of day, it will not come before Parliament. I should like to correct the impression of common people that the moment a Member shoots a notice under this section the whole thing may be made public. There is the able screening activity by the Speaker in this matter and he looks into it personally.

Shri Akbar Ali Khan: After submitting the motion is the Member prevented from giving it to the press?

Shri M. N. Kaul: Absolutely, he cannot.

Shri Debabrata Mookerjee: It will be a breach of privilege.

Shri M. N. Kaul: Those are our rules. No Member has done it. It is loosely talked—not by Members—but in certain circles that "Members will shoot notices". So far as the judiciary is concerned, Parliament has been most careful, and very few notices have come; and those that have been given have been absolutely clear notices.

In this particular case the Member concerned was in the fortunate position of citing chapter and verse. He tried every recourse, he was in long and continuous correspondence with the Minister concerned, and everything of importance he put down in his motion was authenticated by a ministerial statement. "Every fact of it" he said, "I will confirm by the correspondence I had". Or it was public knowledge and about which he was prepared to satisfy the Speaker. We got busy about it, and we consulted the Government. And speaking from recollection, Government said that the legislation has not been framed. And that was rather a difficult question for us to decide. The Member concerned said that he was not at fault and that his notice cannot be withheld. We very carefully considered the notice

because somehow matters were not progressing and the Member was insistent. He had *prima facie* proved every statement of his by chapter and verse from the Minister's letters and he was pressing the Speaker and saying 'Here am I, I have no personal interest in the matter; the facts are public knowledge, and this thing should now be finally closed'. Government for a variety of reasons were not in a position to expedite matters.

Then, this question was brought in that there was no machinery available for the investigation and proof of this matter. So, we considered this matter. We said 'Where does this legisaltion come in?' The legislation does not come in, so far as the constitutional right of the Member to give notice of the motion is concerned; no question of legislation arises at the point where the Speaker considers the admissibility. It is the Speaker's discretion and prerogative that he will not admit anything unless he is *prima facie* satisfied. That *prima facie* satisfaction is completely different from any investigation or proof. It is the Speaker's prerogative that he must be satisfied and he will not put it down on the Order Paper unless he is *prima facie* satisfied. So, at that stage, the question of legislation did not come in the way.

Then, so far as the motion is concerned, he can hold it over for some time; and he will only put it down on the Order Paper when there was no other course possible and no progress was made. Afterwards, he can put it down on the Order Paper, and he can ask the Member to make a speech; he may permit a discussion. But when it comes to the stage of appointing a committee to investigate and report on the matter in the formal manner, then in that motion, a clause could be inserted that this committee would begin to function as soon as necessary legislation was passed and a direction could be given to Government to the effect that they should immediately or as early as possible bring forward necessary legislation.

So, up to that point, things could go on in accordance with the Constitution, but where it came to the question of investigation and proof, then a direction could be given to Government to bring in legislation. After the legislation is brought in, then the matter could be pursued.

After all, the Speaker has to protect the rights of the Members, he has to enforce the Constitution, protect the rights of Members, protect the authority of Parliament and he should be able to justify his action in every way and what is above all this, satisfy his own conscience.

Therefore, he admitted a no-day-yet-named motion, but he did not circulate it in the normal course. He proceeded dead slow in the matter. But as you know, there are procedures for anyone who digs deep into the matter, because as I often say, it is almost an ocean; a person may say that there are no remedies available, but I think that there are many remedies provided; if only you could dig deeper and deeper you could find them, as happened in this particular case.

Shri Hari Vishnu Kamath: Dig for victory.

Shri M. N. Kaul: This motion having been admitted, it became admissible for the ballot. Here, the ballot helped the Member. The motion came in the ballot. This was beyond the control of the Speaker and beyond the control of anybody, and the motion got on to the Order Paper of the House as a private Member's resolution. But it came up last on the Order Paper of the day. It never came up for discussion. But after it appeared on the Order Paper, things moved rapidly, and the matter was concluded. It never came up to the stage of any discussion in the House.

Shri P. N. Sapru: The judge resigned.

Shri M. N. Kaul: Yes, the judge resigned.

I am just pointing out how all these processes antecedent to investigation and proof are very important. I am confident that it would never come to an inquiry and all that, and the matter would be settled; there may be a rare case of some judge; you can never rule out such a thing and it may happen, but for decades nothing of this kind may happen.

My submission before the Committee is that all this pro edure which has been established firmly for the last so many years with the concurrence and approval of the then Prime Minister and the then Home Minister is a very good procedure; I have read all the correspondence, and they said that this was a very good procedure and Shri Mavalankar had rendered a very valuable service in the way that he had dealt with this matter.

Now, all this procedure which I have described is at one stroke completely cut away under this Bill; because nothing can happen in Parliament till the Report of the Tribunal is laid on the Table of the House. I should say that if ever Parliament enacts legislation of this type it will be a piece of self-destructive legislation, because it removes the constitutional prerogative of members to give notice of a motion to *initiate* proceedings in Parliament; it would take away the power of the Speaker up to a certain point, and it would therefore destroy at one stroke all the conventions and practices that have been built up by patient labour. Of course, any procedure which takes time to grow is firmly rooted, and it is embedded in the memory and the conscience of the Secretaries of the House, and it goes down from officer to officer and from Speaker to Speaker and is thus firmly rooted.

Another question that arose at that time, particularly at the time of Shri Mavalankar was 'What should be the form of the motion?'. I think the Committee would like to hear me on that point because that is a procedural matter.

Shri Sham Lal Saraf: Before you reach that point, I think that there are several important and relevant questions which have to be put at this stage.

Shri M. N. Kaul: Let me finish what I have to say, and many of the questions may be answered thereby.

Articles 121 and 124 of the Constitution are linked together. In connection with article 124, in Shri Mavalankars' time, we went into the whole procedure. In fact, he had asked me to study the common law of meetings etc. I need not at this stage go into this question in detail. But you may be interested to know that the earliest thing was that the people met together and there was a discussion and the chairman who presided summed up the consensus. That was the ancient procedure. Then came the procedure that members assembled and they discussed and at the end of the discussion, taking the sense of the assembly, the person presiding drafted the motion. All that is now ancient history. The modern procedure which we have adopted is this. And I consulted May this morning to refresh my memory. The modern procedure is the notice of a motion. Notice of a motion is always given in a form in which the Speaker will ultimately put it to the vote of the House, as you are familiar with it every day. For instance, there is a motion of no-confidence in the Council of Ministers, and there is a motion for the removal of the Speaker and so on; as long as the House does not pass that motion of no-confidence, the Speaker is not removed and so on. But that is the parliamentary form so that the discussion is relevant. Now, what does such a motion mean? It means a proposal for the consideration of the House. To put it concretely in this case, what is the proposal? The proposal is that in the mind of the sponsors of this motion, misconduct or incapacity is proved, otherwise, the Speaker will dismiss it as frivolous. Those Members who give notice of the motion that is, the sponsors of the

motion, when they give notice of it, believe it for the time being to the best of their knowledge; that is their belief that it is true according to them; otherwise the notice will be inadmissible. The notice of a motion should be in such form that after discussion the Speaker could once put it to the vote of the House. He puts the very words; he puts it direct; he repeats those words.

So, it was decided by the Speaker, and now it is the settled procedure of Parliament, that the form of the motion should be in accordance with the provision in the Constitution; the Speaker ruled that notice of the motion must be in terms of article 124(4). That completely solved the problem. That does not mean that the thing is proved; everybody knows that it is only the view of the sponsors; that is all that there is there about it. So, it is only a well known parliamentary form and device in order to control the discussion and to make it more relevant, to make the person who has given that notice see to it that he gives the notice in a very precise and clear-cut form. That is the developed parliamentary procedure. The Constitution-makers undoubtedly proceeded on that basis; and they followed the normal constitutional practice of suggesting a motion for presenting an address.

This matter was also again considered by the Speaker when one of your colleagues gave notice of a motion—in regard to Shri Imam—and the Speaker ruled, 'Of course, the motion must be in a form in which I will put the question'. But that only means it is there. That does not preclude the House from taking all intermediate steps. As you know, there is a motion for consideration, one for reference to a select committee; there are motions for various things, intermediate and subsidiary stages. Those motions can be made. The whole procedure provided in the Constitution can be gone through. Those matters will ultimately be dependent upon the main motion. The main motion, when it is moved, initiates these things. There is no other method of initiating parliamentary discussion, of bringing the matter within the purview and control of Parliament, unless a motion is admitted by the Speaker and it is moved. Till that stage, the matter does not come within Parliament's purview at all. That is the normal process which brings the matter within the purview of Parliament. Then of course, the Speaker will only put the motion ultimately to the House when there has been investigation and proof, and the House has to approve it with the requisite majority. All these conditions are laid down in the Constitution. Unless all these are satisfied, he won't declare it carried.

But the formal motion, right from the beginning, will obviously, and according to parliamentary convention and practice be in that form. That is now settled practice of Parliament, ruled by Shri Mavalankar and confirmed by subsequent Speakers, and in the recent case of Shri Imam. Of course, you can have a look at the motion that was drafted by the Member, which was approved by the Speaker and which then came before the House—a perfectly good motion.

Now, it is in that background that I would like the Committee to examine it. What happens here in this Bill is that instead of the Speaker being on the scene, the President comes on the scene—which, in other words, means the Minister or the Chief Minister of the State. Correspondence goes on. There is more danger of publicity when there is correspondence between two governments; when the matter goes through files and all that there is more danger of leakage than in a matter which is dealt with by the Speaker himself in his own Chamber. I say that is not in accordance with the spirit of article 124, because it clearly enshrines the doctrine that the executive should not come into the picture anywhere. Look at the danger inherent here. If the President says that there is a *prima facie* case, the matter comes

forward; if he says it is not a matter where a *prima facie* case is established, then the matter in regard to that particular Judge can never come before Parliament. How could it be the intention of the constitution-makers to deprive Parliament of the power which has been conferred on Parliament?

My submission for the Committee's consideration is that this entire matter is within the purview of Parliament from beginning to end; all the procedures that are gone through should be under the control and direction of the Speaker and Parliament, and at the stage should the executive come into the picture. By all means provide any safeguards you like; ample safeguards can be provided. I suggested to you how in the current pratice ample safeguards exist even before the stage of admission. You can have further safeguards. You can develop conventions, that a full-dress discussion may not take place till there is a judicial investigation.

Now, on the point of this judicial investigation, I will submit that Parliament may by law provide for the investigation and proof of misbehaviour incapacity of a Judge. Just consider those words. I think in bringing forward this legislation, the meaning of those words have been stretched to the breaking point. 124(5) says:

> "Parliament may by law regulate the procedure for the presentation of an address and for the investigation and proof of the misbehaviour or incapacity of a Judge under clause (4)".

Legislation has to be provided from the point of time when the House passes a motion that there should be investigation and proof and a tribunal or committee appointed; till that time it is not, I think, competent to provide in the law for antecedent stages which are implied in the Constitution and are within the purview of Parliament and its rules of procedure. It would be overstretching the meaning of the words to deprive Parliament of its powers, to deprive the Speaker of his powers till the executive machinery has been set in motion and has given a report to Parliament which Parliament may consider. The executive machinery is nowhere under article 124; it does not come into the picture at all. It is being interposed in this legislation under the authority of these words 'procedure for the investigation and proof'. I say that these words do not give authority to provide for antecedent stages by legislation. These can be dealt with completely by the Speaker under the current rules or any rules as both Houses of Parliament may in consultation provide. I am not suggesting that there should be no rules.

Shri Jaganath Rao: Parliament may by law . . .

Shri M. N. Kaul: For investigation and proof. That stage must be reached. Notice is not investigation and proof; admission by the Speaker is not investigation and proof; putting it down on the order paper is not investigation and proof. I am only contending that all those three or four stages are neither investigation nor proof. We cut away all those stages, because under the Bill Parliament does not come into the picture at all till the report is laid on the Table?

Mr. Chairman: The resolution has to be on the ground of proved misbehaviour.

Shri M. N. Kaul: I explained with care that the notice of the motion has to be in the form in which it is ultimately to be put to the House. All that it implies is that the sponsors, one or two or more, of that resolution are satisfied in their minds that there has been misbehaviour and they have produced *prima facie* evidence; and the motion or resolution is a proposal before the Parliament to consider the matter. There is no other known method of procedure to deal with this matter.

Mr. Chairman: Even the two or three Members who table the motion . . . .

Shri M. N. Kaul: You can increase the number to 25.

Mr. Chairman: Even if it is 25, the resolution has to be on the ground of proved misbehaviour.

Shri M. N. Kaul: So far as this Committee is concerned, that is concluded by the ruling of the Speaker, because the Speaker has admitted the motion.

Shri Jaisukhlal Hathi: The Constitution provides that 'Parliament may by law provide.....' If proof was meant only according to the Members' minds....

Shri M. N. Kaul: No, no. According to the judicial process there must be a proper trial. I was explaining the form in which the notice should be given— 'that the President of India shall be pleased to order the removal of .....Judge of the High Court..... from his office on the ground of incapacity.' Now, that is the initial motion. The motion can be in no other form. Three successive Speakers have ruled that, because the Constitution so provides. If a motion is brought forward saying 'the House has no confidence.....' that is in the minds of the sponsors; that is their view. The House will ultimately decide. What other form can you devise? The Constitution precludes any other form of motion because it clearly says 'as hereinafter provided'. What the Constitution says is also in complete conformity with the current practice, procedure and rules of Parliament, that is to say, the words of the motion must be in a form which the Speaker can ultimately put to the House. That form is merely initiating machinery. No Member of Parliament should be under the impression that the charges are proved; only the machinery is being started.

Mr. Chairman: Your representation is for fixing the minimum as 25 members. Is that sufficient?

Shri M. N. Kaul: It does not prove anything. It is only, so to say, in the minds of the Members who have given notice of the motion and on the basis of evidence in their possession, for the time being. If he produces no evidence and says "I am not satisfied", then the Speaker may say, "You have no basis". The notice can only be admitted after the Speaker is satisfied that there is a *prima facie* case. There is no other method of bringing forward a charge. That is merely a form, a formality of parliamentary procedure. It implies nothing else and that has been settled now for the last 15 years.

Mr. Chairman: We agree there, but after the resolution is admitted, how will you provide for the proof?

Shri M. N. Kaul: By law. Now, there are two or three courses open after the motion is before the House. It may well be that before the matter comes up, it is settled out of court. If nothing is settled then the procedure is that the House may appoint a Select Committee to investigate the matter. My preference is for this. Or there may be a Joint Committee because both the Houses are involved or a tribunal may be appointed as defined here. It is perfectly good. I am only concerned with the powers that are vested in the President in the proposed Bill and with the way in which the current system or procedure has been destroyed as it were. I am only concerned with that. So far as the tribunal is concerned, I know from experience, even in the House of Commons, all cases are not susceptible of standard treatment. In some cases, the Select Committee may suffice. In other cases, the tribunal may be necessary. Certainly, for investigation and proof, a tribunal may be provided by law. But the law should also provide that that tribunal will come into being after the motion is adopted. Parliament has the discretion to pursue one of several

courses: a Select Committee, a Joint Committee of both the Houses—

Mr. Chairman: Can a Select Committee or a Joint Committee investigate? What about article 121 of the Constitution?

Shri M. N. Kaul: It is all right, because exception is provided when the motion for presenting an address is brought up. That is what we consider now. The bar of article 121 is removed.

Shri Akbar Ali Khan: Suppose it is proved that there is no case against the judge, by bringing a motion and after the motion is brought and publicity is given, harm will be done.

Shri M. N. Kaul: I have elaborated at such great length what precaution is taken by the Speaker to see that there is a *prima facie* case before the motion is admitted.

Shri K. K. Shah: The interpretation of the law that he is giving is, in article 121, the words "as hereinafter provided" will go with the address and not with the motion. Up till now, we were interpreting—at least I was interpreting—that the words go with the motion and not with the address. But in the light of what he has said, the interpretation seems to be that the words "as hereinafter provided" go with the address; that is correct.

Shri M. N. Kaul: No; I should say it goes with both.

Shri K. K. Shah: Then you are not right; it does not go with both. It may be that after such a long time it is not possible for him to remember all these things. Article 124 (4) refers to the words "after an address is presented to the President."

Shri Jaisukhlal Hathi: He will also explain it

Shri K. K. Shah: Article 124 provides for an address being presented; therefore, the words "as hereinafter provided" must go with the address.

Shri Jaisukhlal Hathi: If it goes with both?

Shri K. K. Shah: Then, if those words do not go with the motion he says sufficient safeguard is provided against character assassination.

Shri M. N. Kaul: What is approved by the Speaker is: "The House hereinafter resolves to present the following address to the President of India under article 124(4) of the Constitution....that the President may be pleased to order to remove the judge... on the ground of incapacity" and so on. That is the motion.

Mr. Chairman: As soon as that motion is made, you say the bar under article 121 goes.

Shri M. N. Kaul: The bar is removed.

Mr. Chairman: Once the motion is made, the bar is removed. It may be a Select Committee or a Joint Committee or a Judicial Committee.

Shri M. N. Kaul: Now, the matter comes before the House. Many procedures may be open. After the Member moves his motion, it may be that the House may not want a discussion. The House may want it to be referred to the Select Committee or a tribunal. Or, one or two other Members may want to speak. I personally am in favour that there should be little or no discussion at this stage. A convention should be established—I have not the slightest doubt in my mind that the Speaker will be able to establish that convention in this matter—which should be a very healthy convention, which would not permit any full-dress debate at a time when the House decides to send this matter for investigation and report by a committee or a tribunal.

Shri P. N. Sapru: If you use the word 'tribunal', then the whole thing comes within the purview of article 226 and article 227 of the Constitution.

Shri M. N. Kaul: Shri Sapru has raised a very good point. I have not

studied it. Off-hand, I am not prepared to give an opinion on it. So far as I am concerned, personally, my preference is always for a Select Committee which has full powers, and then no complications will arise.

Shri Hari Vishnu Kamath: Or a Joint Committee of both the Houses.

Shri M. N. Kaul: Of course. Then, in the case of the notice, it reads: "Further, the House requests the Rajya Sabha to present a similar address to the President for the removal...." etc. So, the two Houses have to work together. The Constitution provides that they can move independently also, but that does not make any difference. You know a Bill proceeds independently, but still you have a Joint Committee of both the Houses; the Constitution does not provide for that but you have a Joint Committee on the Bills when it is felt necessary. Then, by the process of messages between the two Houses and by consultation between the Speaker and the Chairman, it is perfectly possible to mould and evolve an adequate procedure for this matter, if a difficult situation should arise.

About the point raised by Shri Sapru,—speaking without going into the books—I might say that the appointment of a Select Committee is a perfectly safe method; that would meet his point that there is a danger of the courts coming in if a tribunal is appointed. 15 years have elapsed and I have shown to the Committee how the cases have been dealt with. If the procedure of the Select Committee does not prove effective, or some other lacuna is there, then, at a future data it ca be rectified. This is not a matter in which whatever machinery you provide will be used frequently: I may not be used for a long time Therefore, in these matters, a cautious approach, step by step as experience has proved, should be adopted; There is at present a lacuna because the Constitution provides there should be a law on the subject. The law can be that the matter can be dealt with by Parliament under its own privileges and conventions.

Shri Harekrushna Mahatab: Do you agree there will be no harm if the law is not there?

Shri M. N. Kaul: The Constitution provides that there must be a law on the subject.

Dr. L. M. Singhvi: Government had taken the stand at that time that because there is no legislation under article 124(5), the matter could not be proceeded with. I have had discussion with a number of very eminent jurists in the country and the language of article 124(5) does not seem to make it incumbent or mandatory that there should be legislation in order to deal with the matter under clause (4). What is your view?

Shri M. N. Kaul: In all legal matters, whose is the final word? Will the Speaker's decision be final in this matter? Can the Judge concerned take the matter to the court and say there is a lacuna in the procedure? Whether a law is obligatory or not, whether Parliament can act as in the House of Commons under its own established procedure—which of these two courses is permissible is a matter that can ultimately, under our Constitution, be decided by the Supreme Court and finally settled when an aggrieved judge takes the matter to that court. It is safer to pass a law saying that in dealing with this matter, the practices and procedures of Parliament established by the practice of Select Committee shall be followed. Why take the risk?

Dr. L. M. Singhvi: The language of sub-clause (5) is "Parliament may by law"; it does not mean "shall".

Shri M. N. Kaul: As regards "may" I am reminded of what Sir Tej Bahadur Sapru used to say. It is a ticklish word. The Judicial Committee has ruled that the meaning of "may" is empowering or discretionary. The courts have to consider it. If it is used in the discretionary sense, there

is no room for argument. But "may" in many contexts had been held by the Judicial Committee to be an empowering word.

Shri P. N. Sapru: I do not remember the name of the case, but it has been held that "may" shall have the force of "shall" and "shall" may have the force of "may."

Shri M. N. Kaul: The matter ultimately rests with the Supreme Court. Instead of taking a risk, it is safer to revive the normal parliamentary procedure by a legislation of a few lines. Sitting here in the committee we cannot conclude the matter.

My view is in so far as this Bill provides the machinery for a tribunal, it is a good Bill. But those portions of the Bill which take away the power of Parliament and the Speaker right up to the stage of laying of the report on the Table should be cut out completely. The present position under the Constitution should be maintained.

Shri Sapru raised the point that in the tribunal, there is the risk of court coming in under article 226. If that is the risk, you can have the Select Committee procedure.

Shri Debabrata Mookerjee: Should it be laid down in this Bill that we shall follow the Select Committee procedure?

Shri M. N. Kaul: Yes, if the Committee so desires. Tribunal procedure is also permissible and in order after the House has adopted a motion to that effect.

Shri P. N. Sapru: If the tribunal says the Judge is guilty, the Parliament has to vote it by a two-thirds majority. The tribunals decision will be subject to review by Parliament.

Shri M. N. Kaul: The existing machinery which I have described in detail may be strengthened in one respect. The Speaker may, if he is so advised, consult the Attorney General at the time he is considering whether there is a *prima facie* case or not. That should satisfy everybody. I think the Speaker will welcome it.

Shri Jaisukhlal Hathi: First notice of the motion is given to the Speaker. Then the Speaker examines it and with the help of the Attorney General decides if there is a *prima facie* case. Then?

Shri M. N. Kaul: Then the matter comes to the House where the motion is made. The House is not seized of the matter till the motion is made. In this Bill, the House is completely out of the picture till the report of the tribunal is laid on the Table. The proper procedure is that the matter is referred to a Select Committee, a Joint Committee or a tribunal by way of a motion made in the House.

Shri Jaisukhlal Hathi: The tribunal will be appointed by whom?

Shri M. N. Kaul: Many procedures can be suggested. My own inclination is this. In the Parliament, there is sufficient legal talent. You have people here with the competence of Supreme Court Judges, High Court Judges and ex-Judges. There can be a committee of three—a lawyer member nominated by the Speaker, one nominated by the Chairman and the Attorney General. This committee will be perfectly competent to dispose of this matter. You need not go outside. In addition to having legal talent, those who function in Parliament add certain further qualifications.

Shri D. L. Sen Gupta: Can the Attorney General function as a member of the body?

Shri M. N. Kaul: Since I have said that he should advise the Speaker, he may be kept out. It all depends on which course you adopt. The tribunal can be composed of Members of Parliament.

Shri P. N. Sapru: I would advise you to leave the word "tribunal".

Shri M. N. Kaul: As a student of parliamentary procedure I am always

more inclined for select committees for investigation. As Shri Sapru has pointed out this tribunal procedure will land us in difficulties.

Shri Jaganath Rao: Supposing somebody sends a petition to the President about the conduct of a judge, what is motion made in the House.

Shri M. N. Kaul: He may forward it to the Speaker through the Minister concerned. Look at the position under this Bill. There is a constitutional right of every Member to move a motion in Parliament. This Bill takes away that constitutional right and puts the member in the position of a citizen. As a citizen he has to apply to the President. Look at the curtailment of the rights of Members of Parliament.

Mr. Chairman: When a petition is sent to the President and he forwards it to the Speaker, what action can the Speaker take?

Shri M. N. Kaul: Advise the petitioner to move a Member to give notice of a motion.

Dr. L. M. Singhvi: The question is, if a petition is submitted to the President or to the Executive with regard to the misbehaviour or incapacity of a judge, what is the remedy. There is a practice in the United States which authorise the President to transmit such a case to the Congress by means of a message. The constitutional modality of a message is also adumbrated in our Constitution but it has not been used so far in such cases. Do you think, to obviate such a possibility or to solve such a difficulty, the right of the President to send a message in this regard should be there?

Shri M. N. Kaul: Of course, the President can send a message to Parliament, but further procedures have to be devised. It is competent for a Minister to give notice of a motion for the removal of a judge. Anybody can send a petition to the President as the head of the State. But the President will then send it to the Minister, there will be some preliminary enquiry and then only some action will be taken.

Shri Harekrushna Mahatab: I know of a case where a petition was made to the President with regard to the removal of the Chief Justice of a High Court and the President referred the matter to the Chief Justice of India. Is it open to the President to refer it to the Chief Justice of India?

Shri M. N. Kaul: He can forward it through the Minister concerned. The question that was asked of me was this, that when somebody sends a petition to the President and the Government through its own machinery have made the necessary enquiries and come to the conclusion that there is a *prima facie* case for the matter to be proceeded with, what is the procedure to be adopted. I say it is competent for the Minister concerned to give notice of a motion or, as often happens, he can sponsor a notice of such a motion through one of the members of his party.

Shri Debabrata Mookerjee: If a Minister moves it, will it not be considered as an official motion coming from Government?

Dr. L. M. Singhvi: A minister is crdinarily a member and he has a right to give notice of a motion as a member.

Shri M. N. Kaul: The right to give notices comes under article 124. The only advantage that the ministers have got is that there is a machinery at their disposal to make a more thorough investigation than a private person.

Shri Jaganath Rao: Who will appoint the tribunal? Can the President appoint the tribunal?

Shri M. N. Kaul: No, the President should not be brought in. The House can appoint a tribunal or a committee by means of a motion. Whether it be a tribunal or a committee, it should be done through the House. I only said that so far as the machinery and procedure portions of this Bill are concerned I have nothing to

say—framing of charges, how evidence should be taken and all that. But so far as the earlier portions are concerned—3(1) and 3(2)—I am opposed. They take away the rights of Parliament and vest them in the Executive.

Shri Jaisukhlal Hathi: Therefore, if we insert the provision that the usual procedure of a motion by a member will be there, will it be all right?

Shri M. N. Kaul: It is not necessary to insert anything new. Those procedures are alive under the Constitution. All that you have to do is to start at the point where a motion in the House is adopted and then provide the procedure. When a motion in the House is adopted for investigation by a committee or tribunal from that stage onwards you have to provide the procedure. Then you have to consider the point raised by Shri Sapru, whether you will provide a tribunal or a select committee. If it is done by Parliament it will be outside judicial purview.

Shri Jaisukh'al Hathi: Then there is no need to make a law.

Shri M. N. Kaul: The law is to get over Article 124(5). You have to revive the parliamentary procedure by making a law. You have to enact a law empowering the Parliament to adopt this normal parliamentary procedure for investigation and proof. Dr. Singhvi raised the point that it is not necessary to make a law. I think it is safer to make a law. In view of this discussion it is for the Committee to consider whether they will have a tribunal or revive the parliamentary procedure.

Dr. L. M. Singhvi: It is extremely illuminating testimoney that you have given and it has clarified various points arising in this matter. But I should like to clarify one matter particularly. You think that the only rationale for such a legis'ation is to get rid of the possible confusion or conflict of views arising from an interpretation of clause 5 of article 124. Will that be correct?

Shri M. N. Kaul: Yes, of course. In view of clause (5) of article 124 a doubt has arisen whether normal parliamentary procedures for investigation and proof are applicable in this case and in order to remove that doubt those procedures can be restored by legislation.

Dr. L. M. Singhvi: If this doubt is resolved, then the language of clause (5) is mandatory or enab ing?

Shri M. N. Kaul: The only way of resolving it is by asking for an advisory opinion of the Supreme Court. But why bother about it wnen a short Bill can solve the problem.

Dr. L. M. Singhvi: It is true that there are several cases on whether "may" should be construed as mandatory or merely directory. But, in this particular case, as the Attorney-General has pointed out, the language of clause (5) is perhaps enabling merely and not mandatory.

Shri Hari Vishnu Kamath: Sir, on a point of order. This point or a similar point was raised earlier and you held, rightly so, that it is not open to a member of this Committee to question the necessity or desirability of a legislation of this kind, because we have accepted the principle of the Bill. Therefore, with deference to Dr. Singhvi, it is too late in the day to canvass. . . .

Dr. L. M. Singhvi: I am asking a question and not propounding a view. When I propound a view it will be consistent with the work of the Joint Committee. At this stage I am asking a question.

Shri L. P. Singh: There may be some cases in which a rather detailed kind of investigation is necessary. You mentioned some cases where the complaints were of such a nature that very easy factual verification was possible. But there have been cases in which the integrity of the Judge has been questioned. Now, can the investigation of the complaint of that kind be done quite adequately by a Select Committee? Will the Select Commit-

tee have all the powers which this Bill seeks to give to the proposed tribunal?

Mr. Chairman: Parliament can give this power to the Committee.

Shri L. P. Singh: I am asking about the scope of the proposed legislation. If the proposed legislation provides that a Select Committee of Parliament may enquire into the investigation, then the question would arise whether without any specific provision in this legislation the Select Committee can do all the investigation that may be necessary in a case of the kind I have mentioned.

Shri M. N. Kaul: We had one investigation in the case of one Member who was expelled, Shri Mudgal. There we examined this matter. Shri T. T. Krishnamachari was the Chairman and there were certain other members. It was held in Bombay in 1951 or so. We asked the Attorney-General to assist us and Shri Setalvad was with us throughout. It was the first ti klish case and the result of that study I have set out in my memorandum. I have said:

> ". . . .the House may on a resolution order investigation by a parliamentary committee appointed by it for the purpose with specified terms of reference in each case. Parliamentary Committees possess adequate powers to send for persons, papers, and records and to make necessary investigations in the matter. The Judge concerned can also appear before the Committee either himself or through a counsel."

Shri L. P. Singh: So, all that the Tribunal can do will be done by the Select Committee?

Shri M. N. Kaul: Yes. Our powers are equated with those of the House of Commons. This is the essence of the powers of the House of Commons.

Dr. L. M. Singhvi: I am glad that Shri Singh has asked the question which arises naturally from this evidence. The other part of the same question is whether the legislation should provide for certain rights of the Judge who has been indicted or arraigned or accused that is, the right to counsel, right to proper hearing etc. because when we have framed a Bill under sub-clause (5) then it can legitimately concern itself with providing for some of these rights whi h are considered rights of natural justice or *audi alteram partem*, the right of hearing, the right of cross examination of witnesses etc. This Bill, therefore, could start at the stage, as you have indicated, after a motion has been moved, after a notice has been received or after a motion has been passed for reference to the Select Committee. Thereafter some of these procedures must come into play. That is to say, the rights of the judges, starting from the framing of issues, to evidence, to investigation and findings can be the subject matter appropriately of this legislation which is under consideration now. I suppose that is the idea.

Mr. Chairman: It is provided in our rules themselves—rules 270, 271 and 272. The Committee has those powers. Shall I read the rule?

Dr. L. M. Singhvi: I am saying of the rights of the judges, that is to say, the judge will have the right to counsel, the right to appear, the right to reply, etc. . .

Mr. Chairman: "The Committee may, under the direction of the Speaker, permit the witness to be helped by a counsel appointed by him."

Dr. L. M. Singhvi: A judge not a witness in this case; he is the accused. Therefore, certain rights have to be provided for him. The provisions that are made in our rules—those rights—can form the subject-matter of this legislation.

Shri M. N. Kaul: The House may, by a Resolution, order investigation by a Parliamentary Committee appointed by it for the purpose with specified terms of reference in each case. In the terms of reference, the House

can provide these safeguards and it is always in the power of the House to give further directions to the Committee. Thus the necessary safeguards could be provided.

Dr. L. M. Singhvi: Would you not like to provide them by means of a legislation under clause 5 of Article 124?

Shri M. N. Kaul: I am rather sceptical about the Tribunal or provisions in the Bill because of the comments of Mr. Sapru.

Dr. L. M. Singhvi: What I am speaking is on the assumption that all these procedures would come into play before a Select Committee of the House.

Shri M. N. Kaul: The House can give directions to the Select Committee.

Dr. L. M. Singhvi: These rights are to be given to the accused judge, that is to say, right of counsel, right of hearing, right of cross-examination, right of adducing evidence, etc.

Shri M. N. Kaul: You may provide ample safeguards, but provide them in the Resolution for reference to the Committee because if you do that, the whole matter comes within the domain of privilege.

Dr. L. M. Singhvi: Instead of making that provision in the Resolution, would you not prefer to provide for all these facilities by means of a Bill whereas the privileges and working of the Committee could be left to our own rules?

Shri M. N. Kaul: There is no objection except that you bring it within the purview of court. If it is done by a Resolution or a Select Committee procedure, that will come within the privileges of the House.

Shri P. N. Sapru: Articles 226 and 227 are very wide.

Shri Debabrata Mookerjee: Court, Tribunal and Authority. Surely, this Committee would be an authority. I was telling Dr. Singhvi that there was this further difficulty.

Dr. L. M. Singhvi: That argument stems out from what I am saying. If the Select Committee is subjected to such a procedure, then there is no escape from a remote possibility of judicial intervention. The language of Art. 226 and Art. 227 is very wide.

Shri M. N. Kaul: I should proceed step by step. You imagine many situations which actually do not arise.

Dr. L. M. Singhvi: Do you suggest, therefore, that all that we need to provide in this Bill, in this legislation, is to say that the investigation of misbehaviour or incapacity would be as determined by the Parliament and in consonance with the rules?

Shri M. N. Kaul: The investigation would be by a Parliamentary Committee to be appointed by the House.

Dr. L. M. Singhvi: Would you consider it appropriate or permissible to make any statutory provision for precluding any discussion at the time of the motion, *i.e.*, when it is made in the first instance, and before it is referred to the Select Committee?

Shri M. N. Kaul: I think the House should trust the Speaker. The tradition is very strong; the Speaker puts down firmly any discussion of the judiciary and the sense of the House is always in favour of the judiciary. Beyond the minimum I do not think the House will desire a discussion because the matter is very delicate.

Shri P. N. Sapru: Speaker or the Chairman of the Rajya Sabha.

Dr. L. M. Singhvi: Have there been any other instances of motions admitted in respect of any judge in the House. It seems that there was only one admitted motion which I had the occasion to sponsor.

Shri M. N. Kaul: That was because you were lucky in the ballot; otherwise it would not have come on the order paper. The matters were not making any progress. So the Speaker admitted the motion. You were pressing and you had ample proof of all

those statements that you had put down in the resolution.

Dr. L. M. Singhvi: There is a ruling in respect of such resolutions that Members have a certain priority in respect of those motions because if they are also subjected to the vagaries of ballot, in that case, sometimes the motions may never see the light of the day in the real sense of the term.

Shri M. N. Kaul: So far as the particular motion of the judge is concerned, it would be a statutory motion and the member had a statutory right. If you had insisted on it, the Speaker had no answer to give but he was postponing the matter. In the meantime, you were lucky in the ballot and so he said, "let it appear on the order paper" and it solved the problem.

Dr. L. M. Singhvi: Are you aware of any other instance?

Shri M. N. Kaul: None whatsoever except Mr. Imam's case. There was no question of integrity; it was just a case of incapacity. The Speaker was taking no risk in the matter.

Shri Debabrata Mookerjee: I am trying to collate the first part of your long evidence with the last part. Is it your inclination—I am talking of your inclination—that we should proceed with the Bill as it is?

Shri M. N. Kaul: Clauses 3(1) and 3(2) should be omitted and the Bill modified as suggested by me.

Shri Debabrata Mookerjee: Having regard to the provision occurring in Clause 5 of Art. 124 you seem to think that we have to have some kind of statutory provision, so that it might result in preserving the independence of Parliament and secondly in helping to build up the very healthy convention about which you spoke in the opening part of your evidence. Is that what you said?

Shri M. N. Kaul: I am obliged to you for putting it very clearly. That is my view.

Shri Debabrata Mookerjee: May I ask you to draw upon your long experience of these matters and say whether Parliament has at any time during the last eighteen or nineteen years thought it fit to associate with its committee any eminent outsider? For example, in the proposed committee if we ultimately agree to it, can we associate one or two Judges of the Supreme Court or the Attorney-General, and would that according to—I am not talking of law—according to parliamentary convention be treated as a committee of Parliament?

Shri M. N. Kaul: My answer is that a committee of Parliament must be entirely composed of Members of Parliament. The only non-member who can be associated with a committee of Parliament is the Attorney-General, and he has a right of attendance and no vote. The Attorney-General can certainly be associated with all committees of Parliament, and they still remain committees of Parliament. But the moment you bring in persons who are not members of either House, that ceases to be a parliamentary committee; it becomes a tribunal.

Shri Debabrata Mookerjee: A statutory committee, may I correct you with your leave? That will be a statutory committee, not a parliamentary committee.

Shri Tika Ram Paliwal: It will not be a statutory committee.

Shri M. N. Kaul: "Statutory" means by statute.

Shri Debabrata Mookerjee: If we pass a Bill in which we provide for a committee, it will be a statutory committee. And there will be no harm in associating outsiders with it, provided there is provision for Parliamentary control in the statute itself?

Shri M. N. Kaul: That is right.

Shri Debabrata Mookerjee: Suppose, under the provisions of the pro-

jected Bill—after amending it root and branch—we form such a statutory committee. Would it be in consonance with parliamentary practice to have such a committee in a matter like this? For the answer I request you to draw upon your long experience.

Shri M. N. Kaul: I will give it my second preference, as I said in my evidence.

Shri Debabrata Mookerjee: Namely?

Shri M. N. Kaul: First, it should be a parliamentary committee. And apart from the fact that I prefer it, there are other safeguards, which emerged during the course of our discussion, the proceedings not being liable to be declared invalid and all that. I have no objection as such to a statutory committee, but the basis of the statutory committee must be a motion in the House.

Shri Debabrata Mookerjee: That is, just as a motion is passed, the proposal in the Bill that a committee should be appointed has also to be passed by Parliament?

Shri M. N. Kaul: I think it should be passed. I am suggesting that Parliament's right to appoint a parliamentary committee should not be taken away. You can give a concurrent right or authority to appoint a statutory committee, but please do not take away the normal right of Parliament. I am against that.

Shri Debabrata Mookerjee: I follow. Suppose in a case of this kind, after the motion has been admitted and the Speaker is satisfied that it should be on the order paper, could it then be left to the discretion of the Speaker himself to constitute such a committee? Would that derogate from the dignity of Parliament?

Shri M. N. Kaul: No. That is to say, for instance, a tribunal or a statutory body may be appointed, and the Act may provide: one person to be nominated by the Speaker, one person to be nominated by the Chairman, and the Attorney-General.

Shri Debabrata Mookerjee: Something like that.

Shri M. N. Kaul: Then that would be a competent procedure. Every procedure is competent provided the authority for it emanates from a motion in the House.

Shri Debabrata Mookerjee: You want parliamentary control at every stage.

Shri M. N. Kaul: From the beginning to the end.

Shri Debabrata Mookerjee: Therefore I am asking you, will there be any harm if we under the statute authorise the Speaker to nominate Members upon the Committee?

Shri M. N. Kaul: If the House so desires by a motion, alternatively. But the discretion of Parliament should not be fettered. The alternative procedures may be provided for in the Bill. The Select Committee procedure may be revived, and the statutory body may also be created, and it may be left ultimately to the wisdom of Parliament in suitable cases to choose one or the other. In simpler cases it may have recourse to a Select Committee, and in complicated cases as for example involving questions of integrity and others it may have recourse to a statutory body. That would be a good compromise.

Shri Debabrata Mookerjee: You would not like something very rigid?

Shri M. N. Kaul: I would not like rigidity. And this will be used very rarely. We are imagining many difficulties which may not arise. But if the Bill provides for this alternative procedure, it must be linked with parliamentary authority right from the beginning to the end. A committee with one person to be nominated by the Speaker, one person to be nominated by the Chairman, and the Attorney-General would be a perfectly good committee. Of

course, it may have the other effect, that is to say, it will be subject to judicial scrutiny and all that.

Shri Debabrata Mookerjee: We have to face it, if it comes to that.

Shri M. N. Kaul: It is not such a formidable thing that we should not agree to it.

Shri Debabrata Mookerjee: From what you have said hitherto it follows that your view is that whatever may be the findings of that committee, those findings have to be submitted to Parliament in terms of clause (5) of Article 124 and Parliament is the final arbiter.

Shri M. N. Kaul: And any report by this statutory body, which you prefer to call statutory committee—statutory body is a better word than tribunal—must be submitted to Parliament.

Shri Debabrata Mookerjee: And Parliament, on being satisfied upon the material placed before it, may accept the recommendation or may not.

Shri M. N. Kaul: The word used is 'proved misbehaviour'. Proved to whose satisfaction?

Shri Debabrata Mookerjee: It must be ultimately to the satisfaction of Parliament.

Shri M. N. Kaul: Yes, when it comes before Parliament, upon the report of this tribunal, there can be a perfectly competent motion that the whole matter be referred to a Select Committee. Even under the present Bill that is permissible, because what is enjoyed by the Constitution is the judgment of the Parliament, not the judgment of the tribunal. The tribunal is merely assisting Parliament

Shri Debabrata Mookerjee: A sifting investigation.

Shri M. N. Kaul: And the precedents in other countries are clear that the decision must represent the mind of Parliament, and Parliament can appoint its own Select Committee to go into the whole matter. Of course, that makes it a little complicated.

Shri Debabrata Mookerjee: If it is going to be a statutory committee, with it may be associated outsiders?

Shri M. N. Kaul: Members, outsiders?

Shri Debabrata Mookerjee: Also outsiders?

Shri M. N. Kaul: Statutory committee means that.

Shri Debabrata Mookerjee: Consisting of Members as also outsiders. There is no harm?

Shri M. N. Kaul: If it is a committee to be created by Parliament under the authority of Parliament and which will submit its report to Parliament, after that the Parliament might consider appointing its own committee. Generally it will not; because it will be such a thorough report, who will bother....

Shri Debabrata Mookerjee: To go over it again.

Shri M. N. Kaul: That is right.

Shri Debabrata Mookerjee: In any way your view seems to be this, that the whole thing should originate by way of a motion in the House.

Shri M. N. Kaul: It cannot come in any other way.

Shri Debabrata Mookerjee: Supposing a letter was addressed to the President of India saying that Judge 'X' was guilty of misbehaviour or suffered from certain incapacity, Government would be really helpless?

Shri M. N. Kaul: No, Government has vast power. Government has its own machinery to make enquiries, and they do make enquiries. And on the basis of that enquiry the Minister can sponsor a motion in the House.

Shri Debabrata Mookerjee: Not as a Minister, as a Member.

Shri M. N. Kaul: Since you had a particular objection....

Shri Debabrata Mookerjee: Because the fundamental fact is that he is a Member. The danger is if we link it up with the ministry. We want to keep the ministry out. I am trying to follow your line.

Shri Jaganath Rao: The executive.

Shri M. N. Kaul: Ways can always be found. Government have no difficulty in this matter. They can sponsor a motion.

Shri Debabrata Mookerjee: What is your practical suggestion. Can you rule out discussion at the very first stage when the motion is moved?

Shri M. N. Kaul: Actually when the Speaker has admitted the motion, it appears on the Order Paper....

Shri Debabrata Mookerjee: Suppose so-and-so moves it, and then Members stand up to speak to the motion, then what happens then? What powers has Parliament got to prevent discussion at that stage?

Shri M. N. Kaul: My own inclination is this. Suppose something has happened in the meanwhile and some new factors arise which were not there before the Speaker at the time of admitting the motion on *prima facie* evidence, which alter the position in favour of the judge. Therefore, no hard and fast procedure should be laid down that after the matter comes up in the House the matter should be referred to a committee. You should not make it very rigid, because new situations may arise which may go in favour of the judge and the matter may have to be dropped.

But, normally I should think that the Speaker should ask the Member to move the motion and then he should place it before the House because then the House is in possession of the motion; then an intermediate motion can be moved that the matter be referred to a parliamentary committee; or it may be a statutory body as suggested. All that should normally be left to the Speaker, and a firm convention should be established, and it should be left to the Speaker to permit a relaxation in such circumstances which it may not be possible to envisage now. So far as the Speaker and the House are concerned, no rigidly should be introduced.

Shri Debabrata Mookerjee: Where the Speaker is persuaded that such relaxation ought to be allowed, would you not think that a discussion on the motion will be hit by Article 121 at that stage?

Shri M. N. Kaul: No; the moment the motion is admitted and it is before the House, the bar of article 121 is removed completely, because the motion is in terms of article 124; so, the bar is completely removed after it has been moved in the House.

Shri Debabrata Mookerjee: There you would not use the expression 'proved misbehaviour or incapacity'.

Shri M. N. Kaul: It is not proved at all till in accordance with the Constitution it has been judicially determined, and the judge had every chance of being given a hearing. But as I said it is a mere technicality of procedure, because the modern procedure is that the notice of a motion must be in the form in which the Speaker ultimately puts it to the vote of the House.

Shri Debabrata Mookerjee: The form must be very simple, I suppose.

Shri M. N. Kaul: The form is this. I have just read it out.

Dr. L. M. Singhvi: You may lay a copy of that motion before this Committee, and that would become part of your evidence and then we can discuss it.

Shri M. N. Kaul: Your Secretariat can give it to you.

Shri Debabrata Mookerjee: Therefore, your opinion is that as soon as a motion is admitted by the Speaker, he can in an appropriate case permit discussion.

Shri M. N. Kaul: After admission, the motion comes on the Order Paper, and afterwards, it has to be moved by the Member concerned; in the first instance, the speech is by the Member; whether it is permitted or not is another question; then the second stage is speech by another Member.

Shri Debabrata Mookerjee: Take the sponsor's case. Suppose the Mover or the sponsor wants to bring certain facts on record and says certain things against a judge, relative to the unproved allegations, and says that the judge has done such and such a thing. Would not that debate or discussion in Parliament at that stage be hit by Article 121?

Shri M. N. Kaul: The speech is competent.

Shri Debabrata Mookerjee: I am putting to you the question of constitutionality. I am not on the question of being fair or unfair.

Shri M. N. Kaul: He will only place before the House the *prima facie* material which he had disclosed to the Speaker; and the Speaker will not permit him to place any other material which he has not disclosed to the Speaker.

Shri Debabrata Mookerjee: Does it or does it not amount to a discussion of the conduct of a judge?

Shri M. N. Kaul: As I have said already, a motion means that those who sponsor the motion are satisfied in their minds for the time being, till further investigation is done, that there is a *prima facie* case. That is the basis of the motion. That is the basis of the other motions that you have, such as the no-confidence motion against Government and so on.

Shri Debabrata Mookerjee: It is an abstract proposition. Can one move such a motion without a speech and expect the House to endorse it?

Shri M. N. Kaul: Of course, one can. The normal procedure is there that the Member makes a speech and then moves the motion; by agreement or by the unanimous consensus of the House, the Member concerned may waive that right.

Shri Debabrata Mookerjee: But can the Speaker shut out a second Member and a third Member if they wish to speak?

Shri M. N. Kaul: Now, you are on the ground of unfairness.....

Shri Debabrata Mookerjee: I am on the question of the legality of the discussion on the question of its being liable to be struck down by Article 121.

Shri M. N. Kaul: Procedure should be elastic and not rigid. Along with the notice, the documents and other things that the Members supplied to the Speaker may be appended and they may be transmitted to the committee, and that in my opinion should suffice and there should be no further discussion. But if the House is of opinion, and there is a persistent demand that there should be a short discussion, then unless that procedure is barred by rules you cannot stop it.

Shri Debabrata Mookerjee: To avoid all this, could this be done consistently with the dignity of Parliament? The matter comes before the Speaker, and the Speaker feels satisfied that there is a *prima facie* case which requires to be looked into with care; suppose he is authorised by the law which is proposed to be passed, to appoint a statutory committee consisting of Members of Parliament and possibly also outsiders and they go into the whole matter, thrash it out and then make their report to Parliament; Parliament may then be moved for an address to the President when the whole thing could be discussed and bar of Article 121 avoided.

Shri M. N. Kaul: You are concerned with the initial stage when the motion is moved and the House is seized of it . . .

Shri Debabrata Mookerjee: I quite see that. But is it necessary to move a motion like that?

Shri M. N. Kaul: Moving a motion is necessary. Moving a motion has two

parts. The Member first makes a speech and then he reads out the motion and that is technically called moving the motion. What you are concerned with is whether he can merely move the motion without making a speech. I say that by agreement, a Member can waive his right of speech. Then, you may say that if he makes his speech, there would be only one side of the case, and the other side would not be there at all. There is that risk. But then everybody knows that . . .

Shri Debabrata Mookerjee: I was trying to eliminate that risk. Without compromising the dignity, prestige and authority of Parliament, could it be done in this way? The Speaker is the custodian of the rights and privileges of the House. Suppose he is empowered by the statute that upon being satisfied that a *prima facie* case exists, he can appoint a committee, a statutory committee consisting of Members of Parliament and eminent outsiders, one or two of them being judges of the Supreme Court or a High Court—that is a matter of detail; and suppose the committee arrives at certain findings either against the judge or in favour of the judge; the matter is then put before the House and the House discusses the whole thing; it may agree or it may not agree with the findings of the Committee; it can do what it likes. Does that compromise the dignity, prestige and authority of Parliament?

Shri M. N. Kaul: The creation of a statutory body under the law by a resolution of the House is one thing. But that cannot interfere with the parliamentary procedure as such.

Shri Jaisukhlal Hathi: What you mean to say is that instead of making a motion, he gives notice of a motion to the Speaker, and as soon as the Speaker receives the notice of the motion, he does not bring it before the House but sends it to this committee. . .

Shri M. N. Kaul: I have not suggested it.

Shri Jaisukhlal Hathi: Mr. Mookerjee has suggested it. After the committee comes to the conclusion, then he may allow the Member to make a motion and then the matter can come up before the House.

Shri M. N. Kaul: I am opposed to any interference with the powers of the Speaker.

Shri Jaisukhlal Hathi: The Speaker himself is appointing a committee to advise him, and the report will come to him.

Shri Debabrata Mookerjee: That committee will investigate into the allegations and then give a report.

Shri M. N. Kaul: That is to say, you want to alter the course of current procedure.

Shri Jaisukhlal Hathi: What Mr. Mookerjee suggests is this. When a notice is received, the Speaker passes it on to the statutory committee which is appointed by himself, consisting of some Members . . .

Shri M. N. Kaul: A statutory committee?

Shri Jaisukhlal Hathi: Yes, a statutory committee. The Bill may provide this that the Speaker may have a statutory committee appointed for the purpose of referring this notice to them, and the committee may go into the matter and then the report may be laid before the House, and then the motion may be made in the House.

Shri M. N. Kaul: Whatever be the merits of that proposal—that is a separate question—so far as the power of the Speaker to admit a motion is concerned, it is unrestricted, uncontrolled and cannot constitutionally be controlled by any statute at that stage, that is to say, where a notice is received and his power to admit the notice is concerned, the responsibility is . . .

Shri Jaganath Rao: Entirely his.

Shri M. N. Kaul: It is entirely his responsibility. That grave responsibility is his and no statute can control, limit or direct the Speaker to exercise it in a particular manner.

Shri Debabrata Mookerjee: That is where your convention comes in.

Mr. Chairman: Suppose the Speaker *suo motu* appoints a committee of inquiry himself.

Shri M. N. Kaul: No speaker in the Commonwealth countries, so far as the exercise of his discretionary powers are concerned in matters of this kind, has so far appointed a committee. I considered this matter carefully—I am not speaking offhand. I thought that the purpose which my esteemed friend has in view would be completely achieved if the Speaker consults the Attorney-General, because the Attorney-General has the right of attendance in the House and he is subject, in a sense, to the discipline of the Speaker. He stands on a completely different footing so far as Parliament is concerned. That was why I thought over this matter whether the current procedure in which the Speaker exercises *prima facie* discretion could in any way be fortified, and the only constitutionally safe manner in which I thought it could be fortified was by consulting the Attorney General—whom he does consult even at the present time in regard to certain matters.

Shri Debabrata Mookerjee: My concern was whether it would be hit by Article 121. I have very grave doubts whether you could bring a motion that way. Article 121 does not permit a discussion except under certain circumstances. Article 121 read with Article 124(4) does not permit that. A discussion is permitted only when you have got materials for an address on a substantive motion. Otherwise, it is completely barred.

Shri M. N. Kaul: That is the view on which the Bill proceeds.

Shri Debabrata Mookerjee: I just wanted to avoid that being hit by Article 121.

Shri M. N. Kaul: I feel that that is the view on which the Bill proceeds and that is the view I have contested throughout my evidence. There the matter stands. So far as the form of the motion is concerned, that matter is concluded by the Speaker's ruling so far as Parliament is concerned. The Committee may proceed on that basis, whatever the views of individual members may be; even in the House the views of individual members may at times differ from those of the Speaker. But ultimately his decision is final, and so far as the form of the motion is concerned, the matter is settled beyond any doubt.

Mr. Chairman: There is no question about the form of the motion. The point is whether a discussion can be avoided at the initial stage when the motion is made.

Shri M. N. Kaul: That should be left to the Speaker and the good sense of the House.

Mr. Chairman: Even if the Mover of the motion says, 'I want to place the grounds on which I have brought the motion'?

Shri M. N. Kaul: The way to avoid it is not through statute but through the rules of procedure.

Mr. Chairman: Can the Speaker prevent a Member from making known the grounds . . .

Shri M. N. Kaul: The constitutional way of evolving a different way would be by amendment of the rules of procedure, not by statute. The statute cannot interfere with the Speaker's discretion or with matters which come exclusively within the domain of procedure. The House is master of its own procedure. Procedures are self-imposed restrictions.

Mr. Chairman: Do you mean to say that while a motion is moved, no speech should be made?

Shri M. N. Kaul: Of course, rules can be made. You may point out these considerations. I have no doubt that the Rules Committee will under the Speaker's guidance mould and evolve, because all are agreed, without a dissentient voice, that the Judge's position should be safeguarded. I have no doubt that all these views will be considered including the recommendations of the Committee, and the Speaker will be very helpful and would like to mould the rules to suit

particular occasions and all that. But it should be provided in the rules.

Mr. Chairman: That will satisfy the provisions of 121.

Shri Debabrata Mookerjee: That clarifies the position.

Shri Jaganath Rao: Under 118, the House can frame its own rules.

Shri M. N. Kaul: The decision is with the House. It is master of its own procedure.

Dr. L. M. Singhvi: In that perspective, would it be correct to say that only a certain number of Members can sponsor such a resolution?

Shri M. N. Kaul: I would suggest that the Committee may recommend that in these matters which are intimately connected with Parliament, it would be better, before introducing the Bill, to forward it to the Speaker, because all these matters can then be technically examined. The Speaker can examine it with a critical eye . . .

Shri Debabrata Mookerjee: Unfettered discretion should be left to the Speaker or the Chairman.

Shri M. N. Kaul: He can examine what modifications are to be made in the Bill in the light of this discussion and report. I know such an examination will be fruitful. I hope there is no such case coming immediately. Let us proceed slowly and provide for the minimum of situations. Legislation should be there.

Shri P. N. Sapru: What is the legislation you propose?

Shri M. N. Kaul: I suggested that the powers of Parliament should be revived. The normal parliamentary power of investigating and adjudicating through a select committee procedure should be revived by legislation, because a doubt has arisen whether they can be applied in view of article 124(5).

Shri P. N. Sapru: Suppose you provide for a tribunal, you immediatly come within the purview of art. 226. Am I right there?

Shri M. N. Kaul: You are more experienced; you have applied these things. I am inclined to agree with you that the safer procedure is the select committee procedure. But as I said in answer to another question, my second preference would be—if Parliament considers it expedient—for a statutory body. The authority for that body should emanate through a motion in the House. Everything should be controlled by Parliament from the beginning.

Shri P. N. Sapru: The statutory body should consist of MPs and may have as assessors Judges of the Supreme Court or High Court or other judicial bodies.

Shri M. N. Kaul: My view is that as simple a measure as possible be brought before Parliament. All the alternatives can be discussed. It is very difficult to envisage all circumstances.

Shri P. N. Sapru: The moment you have a parliamentary committee with members of the judiciary or members . . .

Shri M. N. Kaul: It will cease to be a parliamentary committee.

Shri P. N. Sapru: . . the question of the authority of that tribunal comes. Therefore, we will not be able to apply the well-known rule of law enunciated by Lord Cooleridge in a famous judgment that nothing that happens at Westminster can be inquired into by a court of law. Britain did not visualise a situation in which Parliament can come into conflict with the judiciary if a body of that character is set up.

Shri M. N. Kaul: There is that danger, but a remote one, I think.

Shri P. N. Sapru: I do not call it remote; you know what happened in Uttar Pradesh.

Shri T. Abdul Wahid: From your evidence, I understood that you are

very cautious that the rights and privileges of the House should in no way be tampered with by this legislation.

Shri M. N. Kaul: Yes.

Shri T. Abdul Wahid: I suppose that the Speaker represents the House, and if this motion which is presented to the Speaker, is referred to a committee by the Speaker, at his discretion, will it be tampering with the privileges of the House?

Shri M. N. Kaul: I have not followed the question.

Shri T. Abdul Wahid: You recognise that the Speaker represents the House.

Shri M. N. Kaul: He is the guardian and custodian of the privileges of the House.

Shri T. Abdul Wahid: If he appoints a committee before referring it to the House, what harm is there?

Shri M. N. Kaul: I do not know of any provision which can control the unfettered discretion of the Speaker at the stage when he is considering whether there is a *prima facie* case admitting the motion.

Shri Hari Vishnu Kamath: It was refreshing, Mr. Kaul, to hear you. Knowing you as I do and your long association with Parliament for over decades, I believe, it was refreshing to hear from you that you want to ensure, you are anxious to ensure, that the powers conferred on Parliament by the Constitution should not be detracted by a jot or a title, right from the stage of introduction or initiative to the final consummation of the task.

Shri M. N. Kaul: Yes; and the executive should have at no stage anything to do with the matter.

Shri Hari Vishnu Kamath: Therefore when Parliament is sovereign in that manner, don't you think it would be a desirable safeguard by having a provision that any motion for the removal of a judge, under this provision of the Constitution, should be subscribed to by a minimum of members, that is to say, 50?

Shri M. N. Kaul: Let us see what is the provision now.

Shri Hari Vishnu Kamath: There is no provision.

Shri M. N. Kaul: The support of two-thirds majority.

Shri Hari Vishnu Kamath: I suggested that the motion should be tabled by, say, 50 Members, to safeguard the position of a judge. The minimum should be at least 50.

Shri M. N. Kaul: I considered this matter and I think that it is a good provision, that is to say, the notice should be sponsored by a specified number of Members. For instance, even in the case of the Speaker himself, or for a no-confidence motion against the Government, 50 Members have to support it. Similarly you can provide that a specified number of Members should sponsor this motion.

Shri Hari Vishnu Kamath: I believe, if my memory serves me aright, that the Burmese Constitution and the rules provide that it should be sponsored by at least one-fourth of the total number of Members in the House. One-fourth here would come to more than 100.

Shri M. N. Kaul: I have cited that provision in my memorandum. I would not have cited it but for historical and personal reasons. The Burmese Constitution is now in abeyance. It was the constitution of 1947. I mean no disrespect to Burma, but it has been in abeyance since March, 1962. But this provision had a historical background in my mind. It is novel in the sense that it is a practical thing. It does not proceed on any other basis. Sir B. N. Rau was asked to advise, and I knew that that was his suggestion, he had a hand in putting in that provision. It is a practical provision, but a different provision altogether. I am personally in favour

of the suggestion that the notice must be sponsored by 50 Members. If 50 Members of Parliament took care to apprise themselves and familarise themselves with the whole case, that would be a good safeguard.

Shri Hari Vishnu Kamath: I can answer your question this way: it is in the same manner, as you safeguard voting in Parliament by Members who are ignorant about what they are voting!

Shri M. N. Kaul: The moment it gets known that the Speaker converses with each Member, initially, things will take a different turn. Members will read the literature and satisfy themselves. I welcome the suggestion that there should be 50 Members; it will give a good public impression also.

Shri Hari Vishnu Kamath: Another question is this. Don't you think it will be practicable and advisable also for the Lok Sabha, soon after the commencement of its first session after the general election, to appoint a Committee consisting of the Attorney-General, the Speaker and the Chairman of the Rajya Sabha and certain other Members of Parliament, preferably non-practising lawyers of the Houses, which shall function as a standing committee during the tenure of the Lok Sabha to enquire into the motion for the removal of a Judge tabled by 50 members?

Shri M. N. Kaul: At what point of time will it function?

Shri Hari Vishnu Kamath: When it is moved in Parliament, you have barred discussion at the first stage.

Shri M. N. Kaul: After the Speaker has decided that there is a *prima facie* case, there cannot be a committee to sit in judgment over the Speaker's decision. Are you suggesting a committee to assist the Speaker on the admissibility of the motion?

Shri Hari Vishnu Kamath: No; after it is admitted and moved in the Lok Sabha, then it goes to the committee without any discussion.

Shri M. N. Kaul: Then it goes to a parliamentary or statutory committee. I suggested a committee of the Houses i.e. a joint committee or a statutory committee. You are suggesting a joint standing parliamentary committee.

Shri Hari Vishnu Kamath: You do not want committees at two stages?

Shri M. N. Kaul: I am opposed to committees at two stages. It is for the Speaker to decide whether there is a *prima facie* case or not.

Shri Hari Vishnu Kamath: The Speaker and Chairman together shall decide or the Speaker alone?

Shri M. N. Kaul: When simultaneous matters are pending in the two Houses, it is a matter for each presiding officer to decide. We cannot advise them on this matter.

Shri Hari Vishnu Kamath: You do not want them to sit jointly for their own satisfaction?

Shri M. N. Kaul: That is their mutual convenience. Constitutionally and factually they are quite independent and in fact act independently. They sometimes give different decisions also. I am opposed to any committee to assist the Speaker at the *prima facie* stage when he is considering admissibility. When the matter comes before the House, it should go before a committee of Parliament or whatever other committee may be provided with the minimum of discussion.

Shri Hari Vishnu Kamath: Somehow or other you seem to be allergic to the word 'tribunal'.

Shri M. N. Kaul: I am not allergic to any word. I am concerned with the substance of the matter. My preference is for enquiry and investigation by a parliamentary committee. The second alternative is a statutory body. But both should originate from a motion in Parliament.

Shri Hari Vishnu Kamath: You do not mind if it goes to a tribunal if the tribunal is constituted by Parliament itself.

Shri M. N. Kaul: I am in favour of one thorough enquiry by a parliamentary committee or a tribunal.

Shri Hari Vishnu Kamath: Sometimes a frivolous motion may be made.

Shri M. N. Kaul: That the Speaker will eliminate.

Shri Hari Vishnu Kamath: He need not be advised by anybody?

Shri M. N. Kaul: No; the Speaker's discretion is unfettered. He bears the full responsibility for the decision. But as I said, the Speaker may take the advice of the Attorney General,

Shri Hari Vishnu Kamath: You bring the President only at the very last stage to rubber-stamp the decision of Parliament.

Shri M. N. Kaul: Yes; it is a formal act and he must act in accordance with that decision of Parliament.

Shri M. Ruthnaswamy: You suggested that the statutory committee might include outsiders. Would that not be derogatory to the responsibility and power of Parliament granted under the Constitution?

Shri M. N. Kaul: My first preference is for a parliamentary committee. Any statutory committee which is rooted in a motion of the House is not derogatory, because that is the decision of the House in its own wisdom. There is no imposition on the House of any outside will or authority.

Shri M. Ruthnaswamy: The Constitution puts the full responsibility for enquiry into the hands of Parliament. Parliament must appoint members of its own. Diluting it with outsiders would reduce that sense of responsibility.

Shri M. N. Kaul: After the statutory body has concluded its labours and reported to Parliament, it is still open to the Parliament to appoint a committee of its own to review and examine it. Parliament is perfectly competent to do that.

Shri M. Ruthnaswamy: But a moment ago you were against two committees of enquiry.

Shri M. N. Kaul: I am merely formulating the right of Parliament because you said it would be derogatory. In so far as any decision is not imposed on Parliament and it is a decision of its own free will and wisdom, there is nothing derogatory. I said it merely to illustrate it.

Shri M. Ruthnaswamy: Would the appointment of a permanent select committee suggested by Mr. Kamath be preferably to an *ad hoc* select committee being appointed for each case? The appointment of a permanent committee would be a kind of provocation or temptation to people to refer cases whereas the practice in other parliament is for each parilament to appoint a special select committee for each case, because we hope and trust these cases will be very few and far between.

Shri M. N. Kaul: I would prefer *ad hoc* committees. Permanent committees also suffer from this difficulty. There are permanent committees in the House of Commons for various purposes and their personnel changes. When they are considering a particular matter, whips get busy to take out certain names and put in other names. The personnel does not remain permanent because of the way the Parliament works.

Shri M. Ruthnaswamy: With regard to the initial discussion before the appointment of a select committee, would not the immunity of Members of Parliament conferred by article 121 be applicable provided the Speaker took care to see to it that members referred only to allegations and charges against the judge in question

rather than go into a detailed discussion of the acts of the judge?

Shri M. N. Kaul: Once the Speaker has admitted the motion and it is before the House, the bar of article 121 is removed and there can be a full discussion in the House. My view is that before the matter is remitted to a statutory body or select committee, there should be no discussion in the House or it should be limited. In fact, we considered this question whether some provision could be made in the rules to give powers to the Speaker on this matter. It will be considered in due course. But the general desire of the Committee and all members of Parliament, the Speaker and everybody, is that when the matter is first put down on the Order Paper and the House is seized of it at that stage there should be no discussion or there should be as little discussion as possible.

Shri M. Ruthnaswamy: Do you mean to say that they should not even refer to the allegations or the charges.

Shri M. N. Kaul: That can be considered by the Rules Committee. Some procedure has to be devised regarding that. The Speaker can always control the discussion. It is a matter in which the Members themselves should decide and the general consensus of the House should prevail. The consensus of opinion is not to drag the judiciary into unnecessary discussion.

Shri G. S. Pathak: You have said, Mr. Kaul, that the question being one of privilege, the question of the Speaker doing it by rule, that is to say that there should not be any discussion in the initial stage can be provided only by a rule and not by a statute. Will you agree that whether a discussion should take place after a motion is made or not is a matter relating to the privileges of the House and that is the reason why you are saying that it should be decided by a rule?

Shri M. N. Kaul: The suggestion made was that there should be no discussion. Then the question arose that when a member moves a motion the normal procedure provided is for the member to make a speech and move the motion. The point raised was whether the Speaker can ask him not to make a speech. I said that the Speaker can only ask him not to make a speech provided that is the general sense of the House and the member concerned agrees not to make a speech. The Speaker cannot under the current rules take away his right to make a speech. If you take away the normal right of a member to make a speech, then there must be an exception in the Rules of Procedure.

Shri G. S. Pathak: This rule which you are contemplating will be a rule to protect and preserve the privilege of the House, namely, that the Members are entitled to speak. They may not speak if the rules say that they should not speak, otherwise they are entitled to speak. In this sense this rule would relate to the privileges of the House.

Shri M. N. Kaul: We are agreed on that. My own view is that conventions should develop. I am not in favour of making any prohibitory rule, but I have offered my opinion in the alternative. My opinion is that conventions should develop and it should be left to the Speaker to control the discussion. If it is decided to prohibit the discussion, then my suggestion is that an amendment should be made to the rules. I would say the House needs no rules at all. All these rules are self-imposed restrictions.

Shri G. S. Pathak: My question is this. If the rules can competently provide for absence of discussion in this matter, cannot a statute make the same provision—I am putting a constitutional question—in relation to the privileges of the House?

Shri M. N. Kaul: The position in regard to rules is this. When a matter is governed by a rule, the House

is master of its rule and there is no other authority which can direct or control the House in regard to the rules that are made. The only exception is this. In a number of places our Constitution itself has laid down the rules of procedure. Further my view is that unless there is a provision in the Constitution that a matter of procedure may be provided by law, in all other cases it must be provided by Parliament. There is a provision of this kind in Article 119 in regard to the timely disposal of the budget.

Shri G. S. Pathak: Your point is that unless there is a provision in the Constitution that it may be provided by a statute, it must be provided by rules.

Shri M. N. Kaul: It cannot be provided by a statute unless the Constitution itself authorises that it may be privided by law. It must have the sanction of the Constitution.

Mr. Chairman: Thank you very much, Mr. Kaul, for having come and given your valuable evidence before this Committee.

(The witness then withdrew)

(The Committee then adjourned.)

MINUTES OF EVIDENCE GIVEN BEFORE THE JOINT COMMITTEE ON THE JUDGES (INQUIRY) BILL, 1964

Monday, the 14th February, 1966, *at* 15.00 *hours*

PRESENT

Shri S. V. Krishnamoorthy Rao—*Chairman.*

MEMBERS

Lok Sabha

2. Shri Homi F. Daji
3. Shri Hari Vishnu Kamath
4. Shri Shivram Rango Rane
5. Dr. L. M. Singhvi
6. Shri T. Abdul Wahid
7. Shri Jaganath Rao

Rajya Sabha

8. Shrimati C. Ammanna Raja
9. Shri Jaisukhlal Hathi
10. Shri R. S. Khandekar
11. Shri Debabrata Mookerjee
12. Shri P. N. Sapru
13. Shri D. L. Sen Gupta
14. Shri K. K. Shah

Shri C. R. Pattabhi Raman, Minister of State in the Ministry of Law, was also present.

DRAFTSMAN

Shri S. K. Maitra, *Additional Draftsman, Ministry of Law.*

REPRESENTATIVE OF THE MINISTRY

Shri Mangli Prasad, *Under Secretary, Ministry of Home Affairs.*

SECRETARIAT

Shri M. C. Chawla—*Deputy Secretary.*

WITNESS EXAMINED

Shri M. C. Setalvad, former Attorney-General of India, Vice-President, the Institute of Constitutional and Parliamentary Studies and President, the Indian Commission of Jurists, New Delhi.

Shri M. C. Setalvad, former Attorney-General of India, Vice-President, the Institute of Constitutional and Parliamentary Studies and President, the Indian Commission Jurists, New Delhi.

(*The witness was called in and he took his seat*)

Mr. Chairman: Mr. Setalvad, the evidence you tender will be printed, published and distributed to our Members. Even if you want any portion thereof to be kept confidential, it will be distributed to our Members.

I would like to have your views on this Bill.

Shri M. C. Setalvad: At the moment, I do not think I will say anything which need be kept confidential.

As you know already, I represent two bodies, the Indian Jurists Commission and the Institute of Constitutional and Parliamentary Studies. Both of them have submitted memoranda to the Committee.

Coming to the Bill, I feel first that a part of the Bill is unconstitutional—that part I will presently point out. It is cl. 3(1). First, perhaps I may point out the constitutional provision which gives Parliament the powers to Legislate and that is art. 124(5) which says:

> "Parliament may by law regulate the procedure for the presentation of an address and for the investigation and proof of the misbehaviour or incapacity of a Judge under cl. (4)".

So the powers of Parliament to legislate are confined to matters of procedure in respect of these two matters, the presentation of an address and proof of misbehaviour and incapacity. Now, if one turns to the Bill, it goes much farther than providing merely for these two matters of procedure. I say this for two reasons. First, let me take cl. 3(1):

> "If the President, one receipt of a report or otherwise, is of opinion that there are good grounds for making an investigation into the misbehaviour or incapacity of a Judge, he may constitute a Special Tribunal for the purpose of making such an investigation and forward the grounds of such investigation to the Social Tribunal".

This is not procedure. It is left to the President, who is the Chief Executive of the Union, and which means ordinarily the government of the day.—it is left to them to form an opinion as to whether the inquiry is needed or not. That opinion may be formed either on receipt of a report or otherwise, howsoever. So that Parliament does not enter the picture; and the inquiry starts and a tribunal is appointed by the executive on an opinion formed by it. I say this provision is unconstitutional because the limits of Parliament's powers are restricted to procedure only. This is not procedure; this is actual formation of an opinion that inquiry is necessary which is a matter, if one looks at 124(5) entirely for Parliament.

Another clause which I say is unconstitutional is cl. 4(2):

> "After the close of the investigation, the Special Tribunal shall submit its report to the President stating therein its findings on each of the charges separately with such observations on the whole case as it may think fit".

This, again, brings in the executive, the President, who has no *locus standi* at all under article 124; the Government have no *locus standi*, the executive have no *locus standi*. Not only is the enquiry initiated under the proposed clause by the government of the day if it thinks fit that an enquiry is needed, but the report of the enquiry goes to them. That is why I say the Bill is unconstitutional.

Apart from unconstitutionality, there is another fundamental objection to the Bill, and that is, that it really brings into the picture the executive which is expressly excluded by the Constitution, the matter being left entirely to Parliament. And the danger of bringing the executive into the picture is this. The whole scheme of our Constitution is to keep the higher judiciary entirely independent of the executive. If you have a provision of the nature which is proposed, the result will be that the government of the day—and we must remember that we are not talking of the present government, we are talking of all governments for all time—

will be able, on its own motion and without consulting Parliament or, for the matter of that, anybody at all, to initiate an enquiry against a Judge, send down charges to him, constitute a tribunal and invite a report against him. Till then Parliament is not seized of it. Such a threat of a possible enquiry hanging against the higher judiciary is clearly influence, unwarranted influence of the executive on the judiciary.

I may take for illustration a Judge—this has happened in some cases not in the Union, but in the States—frequently deciding cases against the Government. Supposing the government of the day takes an attitude that this Judge is really an impediment to the carrying out of its policies, strikes down some actions or is instrumental in having some action or legislation struckdown and so forth, it is possible that the government may be able to use this instrument to over-awe and influence the Judge, and that is why I say that this really is entirely against the provisions and the spirit of our Constitution, apart from its being actually unconstitutional.

A third point to be considered is its impact on Parliament itself. The whole purpose of article 124 is to leave the removal of a Judge entirely to the discretion of Parliament, and that is so not only in our Constitution, but that is so in England, in Canada, in the United States and in Australia. The moment you bring in the executive, you really contravene the fundamental principle of the Constitution which leaves the matter entirely to Parliament. Therefore, in my view whether you judge matters from the point of view of constitutionality, or from the point of view of the independence of the judiciary or from the point of view of the spirit and provisions of the Constitution, this provision which invests the President with the power of initiating an enquiry is undesirable.

The question may, then, be asked: how is this to be done? The answer is very simple. We have only to turn to article 121 of the Constitution. Article 121 prevents discussion by Parliament of the conduct of a judge in the discharge of his duties and makes an exception—except upon a motion for presenting an Address to the President for the removal of the judge as hereinafter provided—so that what is contemplated if one read 121 and 124 together, what is contemplated is a motion in Parliament for this purpose. That is how proceedings should be initiated. The Memorandum presented by the Institute of Parliamentary studies sets out the procedure in various countries. In England it can be done by a motion in Parliament or by a resolution or even by a single Member drawing attention to the matter. If you turn to that memorandum it sets out a passage on page 2, from Halsbury's Laws of England:

> Proceedings may, it seems, be initiated by a petition to either House of Parliament praying for an address to the Crown or by articles of charge presented to the House of Commons by a Member, or proceedings may be originated in either House by a resolution for an address to the Crown to appoint a committee of enquiry into the conduct of the person designated.

The point of my observation is that however it may be started, the proceedings have to be started in Parliament.

So far as I am concerned, I am not in touch with parliamentary procedure but I had occasions to talk to the Secretary of Parliament, the retired Secretary of Parliament about this; he is the secretary of this Institute.

Mr. Chairman: He gave evidence before the Committee.

Shri M. C. Setalvad: He told me that the present rules of the House

made ample provision for a motion of this character to be made to the House. I think it is part of your record; he told me that occasions had arisen previously for drawing attention to the conduct of judges and I was told on these occasions motions were sent to the Speaker. The Speaker, I understand, is not bound immediately a motion is submitted to bring it to the House. He exercises his discretion and on these occasions he exercised his discretion with a view to elicit facts and he communicated with various authorities, judicial and other authorities, and gathered the facts and as it happened, in those cases by reason of what the Speaker did and by his intervention, either with the judiciary or other authorities, it resulted in no steps having to be taken by the House at all. Whatever was the trouble got solved or removed. That is what I was told. That merely illustrates how the thing can be properly worked by the House itself. Therefore, in my view, it is not necessary even to have a provision in legislation for a committee of inquiry and that I think is a better view. I may at once say that of the two bodies I represent, one body takes the view that no Tribunal need be constituted, and the other body seems to proceed on the assumption—I mean the Jurists Commission—that a Tribunal may be necessary. But that is a subsidiary matter. The main matter is even if the Tribunal is to be appointed and if legislation is thought necessary for that purpose, the legislation should provide that the Tribunal should come in at the option of the House after a motion has been initiated in the House and the House considers an investigation necessary. It must be the House which must primarily decide whether an investigation should take place and if so by what agency. It may be that a case may be so clear on a motion in the House, on investigation by the Speaker, that no investigation may be necessary. Or, the charge may be so frivolous, even though brought by a motion, that the House may at once form the view that "We do not want to do anything at all; it is a frivolous charge; it need not be investigated at all." All these functions are functions of the House. It may decide either to reject altogether the motion, or it may decide straightway, without an enquiry, to present an address, if the case is so gross, or it may take an intermediate course. If it chooses to take the last intermediate course of making an enquiry, again it should be open to it to choose the method of the enquiry. It may make an enquiry by a committee of both the Houses or it may make the enquiry by a committee of the whole House as has been done in some countries or in some other manner; and if the legislature may well provide that in the event of the House choosing to make an enquiry by a tribunal,—the Tribunal may consist of X, Y, Z —such a provision would be an optional provision of which the House may take advantage if it so desires, but not necessarily.

Mr. Chairman: Before the House comes to such a conclusion, would you allow a free discussion in the House about the conduct of the judge? How can the House come to a decision unless there is a free discussion? Would that be permissible according to you?

Shri M. C. Setalvad: As you know under article 121, an exception has been made; on a motion for removal, the House is competent to discuss the conduct of a judge in the discharge of his duties, but as a safeguard, I have already said that the Speaker will, before allowing the motion. . .

Mr. Chairman: Yes; it is covered.

Shri M. C. Setalvad: So, only if he is forced to put it before the House, the motion will come before the House. Article 121 does not prevent a discussion of the conduct of a judge in such cases by the House.

Shri P. N. Sapru: May I draw a comparison between the Privileges Committee and this motion?

Mr. Chairman: The Committee on Privileges is a committee of the House.

Shri P. N. Sapru: Yes; if you want a notice of contempt to be taken against a person, you generally approach the Speaker, and the Speaker has power to refer that matter to the Privileges Committee. He consults the Privileges Committee, and if the Privileges Committee says that is not ready, the matter is dropped; if the Privileges Committee says something in the matter, says that some action or notice is to be taken, and if the Committee says that the matter is important and it should go before the House, then it goes to the House; you can have some sort of a Standing Committee, an advisory committee—

Mr. Chairman: That is a different matter; that is about the breach of privilege by Members of the House being gone into by a Committee of the House. This is quite different. According to you Mr. Setalvad, the Speaker takes a decision to place it before the House and when he places it before the House, the House can go into it?

Shri M. C. Setalvad: Yes. I referred in that connection to the express language of article 121, which though it prevents a general discussion in the House of the conduct of a Judge in the discharge of his duties, specifically exempts this case because it is for the House to decide whether his conduct amounts to incapacity or misbehaviour. How can you decide it unless there is discussion?

Shri D. L. Sen Gupta: May I draw your attention to article 124(4)? It says "on the ground of proved misbehaviour or incapacity". So, "proved misbehaviour" is a condition precedent.

Shri M. C. Setalvad: It is a condition precedent to the presentation of the address. In my view "proved" means proved to the satisfaction of the House.

Shri D. L. Sen Gupta: Can it not be argued from this angle that only when the misbehaviour is proved, then only we have the jurisdiction or competence to entertain a motion for the removal of a Judge? Unless and until it is proved, we have no *locus standi*.

Shri M. C. Setalvad: Before whom would it be proved?

Shri D. L. Sen Gupta: That is being considered now.

Mr. Chairman: We have got a view placed before us that until it is proved, Parliament cannot discuss it.

Shri M. C. Setalvad: I would disagree with that.

Shri D. L. Sen Gupta: I was putting the same question to Mr. Daphtary also about article 121. The view expressed by you was also the view of many of us here, but then it occurred to us that if Parliament can take up the matter under Article 121, what is the point in putting in the word "proved" in article 124(4)? A consistent meaning has to be given. One cannot be isolated from the others. If you read articles 121 and 124(4) and (5), a certain anomalous position arises.

Shri M. C. Setalvad: Because the words are "such removal on the ground of proved misbehaviour or incapacity", it must mean proved to the satisfaction of Parliament. That is the authority which alone can remove a Judge. It cannot be that an outside authority is first to decide whether the misbehaviour or incapacity is proved and report to Parliament, and then Parliament acts. In that case, Parliament would really lose most of its functions under article 124(4).

Shri P. N. Sapru: According to you, a discussion in Parliament can precede the advice by some body to find out whether there is proof of the misbehaviour or incapacity or not?

Shri M. C. Setalvad: Undoubtedly. Misbehaviour may be of various

kinds. It may be a simple act. It may be payment of a sum as bribe. It may be so easy of comprehension and proof. Also, the misbehaviour may be in respect of some complicated matter or case proceeding before the judge. Therefore, it will depend upon the complexity of the matter brought before the House to decide whether it should have a committee to proceed with it or it requires an expert body like a tribunal to come to a conclusion or otherwise. Therefore, it must be entirely a matter of discretion for the House.

Shri P. N. Sapru: If the judge happens to be physically or mentally unfit to perform his duties, then the body to advise Parliament may be a body of medical experts.

Shri M. C. Setalvad: Undoubtedly.

Mr. Chairman: You may continue with your evidence and then the members may put their questions.

Shri M. C. Setalvad: I was discussing the manner in which Parliament may proceed in a variety of ways to deal with the matter, and I was suggesting that the legislation may provide Parliament with a body to whom it may entrust the inquiry if it thinks it fit to do.

Coming back to the present Bill, the anomaly of the provisions will appear very clearly from what may happen after clause 4(3) has been fully operated upon. Take a case in which the President has ordered an inquiry, the inquiry has been held, a report has been made under clause (4) and it has been forwarded to Parliament. The Parliament comes to know of it only then, from the report for the first time, and Parliament may take the view that the inquiry should never have been made, that there is no case for inquiry and may reject the report. Look at the consequence of such a case on the judge concerned. He would have by then been exposed to the whole risk and trouble of an inquiry and publicity because an inquiry like this cannot be held unless the knowledge of it gets about in the public. All that would have happened and it may still happen after, I should say, a report against him has been made that Parliament may decide not to take any action because Parliament even under the legislation has to be supreme by reason of the Constitution.

Therefore, the whole point is this, that the initiation of the proceedings must be before Parliament and the decision as to whether there shall be an inquiry, if so of what nature, whether it should be by itself or by a committee or by a tribunal etc., must be entirely that of Parliament. That is the sum and substance of what I want to say here.

I may state this, that there is a little divergence between the memoranda of the two bodies which have been presented to you and whom I represent. One proceeds on the basis of a public inquiry being essential in each case and the other prefers an inquiry only by a parliamentary body, either the whole Parliament or committees of Parliament. It may be pointed out, as has been pointed out in the memorandum of the institute, that nowhere excepting in Burma there is a tribunal. In the United Kingdom, in USA, in Australia, in Canada, it is either the House as a whole or its committee. In England we have a provision in the relevant Act that one of the courses which Parliament may adopt may be to request the Crown to constitute an inquiry. That is all that I wish to say.

Shri P. N. Sapru: Shri Setalvad has placed the whole position so clearly that it is hardly necessary to put any question to him. I would like to ask one question. Supposing we come to the conclusions that there should be some sort of an inquiry after a motion has been introduced, what would he suggest should be that inquiry? Supposing we think

that a parliamentary committee may not be the best method of sifting the truth. What would you suggest.

Shri M. C. Setalvad: I would suggest an Inquiry Committee like the one which is suggested in the memorandum of the Jurists Commission—the Chief Justice of the Supreme Court and a Supreme Court Judge, or the Chief Justice of the High Court and a High Court Judge and a senior member of the Bar.

Shri D. L. Sen Gupta: If the view expressed by the witness here is not accepted, then it occurs to me that there is a danger, and that danger is this, if somebody else other than Parliament is entrusted with the task of holding an inquiry and that body, whatever that body might be, takes the view that there is no misconduct then Parliament cannot take it up because Parliament can take up only cases of proved misconduct. If the misconduct is not proved by that body then Parliament under article 124(4) cannot take it up. If, on the other hand, that body says "yes, it is proved" then also there is nothing for Parliament to do because the decision has already been taken that it is proved. So, the witness says here that under article 121 it is sufficiently provided that Parliament can take it up and decide about the misconduct part of it and the whole thing has to be done by Parliament itself to avoid the risk of somebody saying proved or not proved and Parliament becoming practically a non-entity. Is that the position?

Shri M. C. Setalvad: Yes, undoubtedly. May I add this in support of what has been put to me? The result may be that if this Bill, as it stands, is enacted into law, it may well be said that in view of this legislation, supposing a Judge has committed some misbehaviour and some Member wants to bring it to the notice of the House by a motion, it may well be said "you cannot do it, it is only the President who can start or make the investigation and then make a report when the House gets seized of it" and notwithstanding what article 124 says, by reason of this legislation this procedure must be gone through before Parliament can have a look into the matter.

Mr. Chairman: That is what it means at present.

Shri P. N. Sapru: I suppose the motion for an inquiry may be made either by a private Member or by a Member of the Government because a member of the Government stands on the same footing as any other Member of Parliament.

Shri M. C. Setalvad: Yes, undoubtedly it can be done by any Member of Parliament. The point is: which is the authority which is to have the motion before it? Not the Government, but Parliament. That is the point.

Shri K. K. Shah: My difficulty and the only difficulty is this. Kindly refer to article 124, clause (5), where you will find a provision has been made for investigation and proof. Article 124(4) says "on the ground of proved misbehaviour", that means proved according to the procedure prescribed in article 124(5). Then, article 121 says that there can be no discussion "except upon a motion for presenting an address" provided for in article 124(4) and the procedure is laid down in article 124(5). Therefore, discussion can take place only as permitted on proved misbehaviour.

Shri M. C. Setalvad: It really comes back to the question which was put to me a little while ago, namely, what interpretation we give to the words "proved misbehaviour" or "incapacity", and proved to whose satisfaction. It is to the satisfaction of Parliament. Once we accept that interpretation, no difficulty is created by clause (5) of article 124 for the

reason that what clause (5) provides is merely the procedure for the proof of misbehaviour or incapacity. The judgement as to whether there has been satisfactory proof of the one or the other must depend upon the body which is to decide, namely, the Parliament.

Shri K. K. Shah: All this is after accepting what you have said and carrying in mind that under article 121 discussion in Parliament on the behaviour of a Judge is permitted only when you have gone to the stage of proved misbehaviour.

Shri M. C. Setalvad: That is not so, excuse me.

Shri K. K. Shah: That is why article 124(5) says that the procedure may be prescribed by Parliament and, therefore, Parliament must lay down some procedure for the purpose of providing proof so that after the conduct of a Judge is inquired into according to the procedure laid down by Parliament it comes before Parliament.

Shri M. C. Setalvad: No; with respect I do not agree for the reason that all that the exception in article 121 states is that for the purpose of a motion for removal you can discuss the conduct of a Judge; so, as soon as a motion is made in Parliament the bar that there should be no discussion is removed and you can then discuss. You will notice that clause(5) of article 124 does not make it obligatory to have a law. It says, "Parliament may by law provide". There may be no law. For instance, we will assume that this Bill is dropped. Then, Parliament may proceed by a motion as it does in many other cases. The motion may be debated. There may be no objection to a debate because it comes under the exception. Parliament may reach a conclusion that an address may be presented. The motion may say, "Whereas it is alleged etc., there should be an inquiry and if the inquiry finds this, that and the other, an address be presented". That motion being made, the House will first say, "Let there be an inquiry; the motion will stand over". Then, after the inquiry is over, the motion will again be brought before the House, the House will take its course on the motion and then only decide to present an address for removal.

Shri K. K. Shah: I thought, the entire gamut can envisage a situation where as you have said the Speaker makes the inquiry and if he is satisfied that a *prima facie* case is made out, the Speaker refers it to the committee, the committee comes to the conclusion that the charges are proved and then a motion is made.

Shri M. C. Setalvad: The Speaker can only refer it to that committee either if the legislation so provides or if your parliamentary rules so provide.

Shri K. K. Shah: Therefore, this legislation which is provided under article 124(5) may lay down that as soon as that motion is received and the Speaker is satisfied that a *prima facie* case is made out, he may refer it to that committee instead of bringing it before Parliament and having some discussion before that committee is appointed. It may happen that the committee may come to a decision that there is no *prima facie* case and still some discussion will have taken place in Parliament. In order to avoid a contingency of this type, after the procedure is laid down under article 124(5) by an Act of this type, if the Speaker is satisfied that there is a *prima facie* case, only then he refers it to that committee which may be a standing committee of the House and only after that, when it is found that the charges are valid, it comes before the House and there is an open discusion on that. Don't you think that will be better?

Shri M. C. Setavad: If I have understood you correctly, that is very much the same as I said, namely, that the matter comes before the House and the House may take one of two

or three courses. It may either send it to a joint committee or it may send it to an optional tribunal or it may decide otherwise.

Shri K. K. Shah: Once it comes before the House and there is no procedure laid down which the Speaker can follow, some discussion does take place in the House.

Shri M. C. Setalvad: But the discussion would be for the purpose of finding out whether there should be a removal or not. Therefore, it would be permissible under article 121, if that is your difficulty. If for other reasons, even though it may be permissible, one may take the view that one should avoid as far as possible any discussion in Parliament as to the conduct of a judge, then the Speaker may be vested with larger powers.

Shri K. K. Shah: You may kindly refer to the latter part of clause 6 of the present. Act which is also unconstitutional. Probably, through oversight, you have not referred to it.

Shri M. C. Setalvad: I am thankful to the hon. Member. I omitted to refer to it. That is unconstitutional. It says:

> ". . . . it shall present an address to the President . . ."

Now, it must be entirely at the option of Parliament to decide whether it will or it will not do so. That fetters the powers of Parliament under article 124.

Shri Debabrata Mookerjee: If I have correctly followed the trend of the evidence which you have given, is it your view that as soon as a motion is presented before the House, the bar imposed by article 121 is at once lifted?

Shri M. C. Setalvad: Yes; that is the meaning of article 121.

Shri Debabrata Mookerjee: Apart from the legal and constitutional aspect of the matter, there is, perhaps, another aspect which everyone of us ought to take into account. You take an extreme case, the kind of which is not likely to happen. Members of Parliament are very responsible persons and, perhaps, hundred times more responsible is the Speaker. In trying to test a principle, we must take an extreme case. Let us assume a Speaker, without exercising due caution, admits a motion which stands in the name of a Member and the Member introduces the motion in the House; naturally in the course of the debate, all sorts of references will be made to the conduct of the judge concerned. Would you consider that to be desirable in a democracy where the very foundation is the independence and the isolated character of the judiciary? I am asking you to take an extreme case. I am quite aware that normally the Speaker will be a very responsible person, but in order that we may judge the soundness of a principle, I want you to take an extreme case. A member decides to put in a motion against a particular judge and he is permitted by the Speaker to move it in Parliament. While moving it, he will have to say certain things against the judge. If the allegations are eventually found true, no harm will be done, but if the allegations are found untrue, then, of course, I imagine democracy will be in danger by the judiciary being weakened and no judge will ever feel safe if he is liable to be put in that predicament. What would be your advice in a case like this, assuming for the moment that the bar of Art. 121 is automatically lifted as soon as a motion is made and the member moving the motion is perfectly within his rights to say whatever he likes in support of his motion in relation to the conduct of the judge?

Shri M. C. Setalvad: I may preface my remarks by saying that it is extremely unlikely that such a case will occur and we know that by reason of what the Speakers have done in the past so far as Parliament

is concerned. But assuming that such a case does occur, then what is the choice? The choice, if I understood you correctly, would be between presenting the motion in Parliament and leaving it to the Executive. If that is the only choice, I would prefer it to be debated in Parliament to leaving it to the Executive.

Shri Debabrata Mookerjee: I hope many of us are of the view that a matter like this, ought not be initiated by the Executive; it ought to be initiated in Parliament. It must begin in Parliament and must also end in Parliament. Of course, many of us appear to agree to the point of view that the Executive must be kept out of the picture, so that the independence of the judiciary may not be questioned. But the point is how to do it. You have to keep in mind different possibilities: we have to be quite satisfied in our minds that Art. 121 is so framed as not to stand in the way at all of a member standing up and saying all kinds of things against a judge when moving the motion.

Shri M. C. Setalvad: You cannot say that unless there is a motion before the House and the motion can be before the House only if the Speaker has allowed it to be moved.

Shri Debabrata Mookerjee: I am asking you for the second time to assume that the Speaker is not the right type of gentleman. Of course, our Speakers have always been very fair. We are just testing a principle here.

Shri M. C. Setalvad: I do not believe that the Parliament of India will ever have a Speaker of the type you mentioned.

Shri Debabrata Mookerjee: I quite appreciate what you say. But would it not be better to have some kind of a machinery, devised by Parliament itself which will put a check on a member saying all sorts of things against the conduct of a judge?

Shri M. C. Setalvad: Which machinery could you devise if you exclude the Executive?

Shri Debabrata Mookerjee: I may suggest this. The Speaker is expected normally to satisfy himself about the factual aspects involved in the motion

After being so satisfied he would allow the Member concerned to move the motion. Could we then, within the framework of the proposed legislation, say that Parliament will not, at that stage, discuss that conduct of the judge?

Shri M. C. Setalvad: I want to be enlightened on that because you know it better that Parliament itself in their rules provides that the motion should be of a particular character and shall be dealt with in a particular way by a Committee or whatever you suggest. For this, you don't want any legislation. You may yourself provide for that.

Shri Debabrata Mookerjee: So. according to you, the Rules Committee of Parliament may make the necessary changes in the rules so that no speeches are allowed in the House at that stage.

..**Shrimati C. Ammanna Raja:** That is provided for in the Act itself.

Shri Debabrata Mookerjee: If I have understood you right, I think we have the powers under the Constitution and the Rules of Procedure we follow to revise the rules themselves.

Shri M. C. Setalvad: You have.

Shri Debabrata Mookerjee: After so revising the rules, could we pass a bare motion?

Shri P. N. Sapru: Would it be possible for us to revise the rules that the motion about the conduct of the judge shall be made by at least

25 members of the House either of Rajya Sabha or of Lok Sabha?

Shri M. C. Setalvad: I would not answer that because I have not studied your rules.

Mr. Chairman: This is for the Parliament to frame rules and you must adopt.

Shri Debabrata Mookerjee: Would you consider this and say from your wide experience whether it would be right for the Parliament to have some kind of rules of the type which we are considering so that the spirit underlying Article 121 is observed strictly and we do nothing or say nothing which may embarrass a judge?

Shri M. C. Setalvad: If, in the public interest, you feel it necessary to remove a judge, you may make any rules.

Shri P. N. Sapru: There is no rule preventing a Member of Parliament from asking questions about the conduct of a judge.

Shri M. C. Setalvad: But, they have a convention which they would observe properly.

Shri P. N. Sapru: You will remember that questions were asked about the conduct of the Justice (Mr. McCardie) in the House of Commons. I think questions were also asked about Sir James Stephen.

Shri M. C. Setalvad: I do not know about the second case. But, I know about Mr. McCardie.

Shri P. N. Sapru: Questions were put in the House of Commons about the conduct of the Chief Justice. On the following day, Sir James Stephen resigned his post. Lord Chancellor paid him a very handsome tribute about his great learning on this.

Mr. Chairman: We shall consider these things later.

Shri Debabrata Mookerjee: Apart from the legal or constitutional aspect, should the conduct of a judge be discussed in Parliament at the initial stage?

Shri M. C. Setalvad: As far as possible, discussions should be avoided. As I have already stated, that might be brought before a Committee to be appointed for the purpose.

Shri Debabrata Mookejee: My next question is this. As and when investigation is in progress, would you consider it desirable to associate with the Parliamentary Committee, Members of the Judiciary?

Mr. Chairman: He has given three alternatives one of whom is the appointment of a Parliamentary Committee.

Shri Debabrata Mookerjee: This requires to be answered. Would you like the whole thing to be considered by a Parliamentary Committee strictly so-called?

Shri M. C. Setalvad: As I have already stated, the whole thing under the constitution rests with Parliament; it should be open to Parliament to call in any legal adviser, Attorney-General or someone to assist them. It has been done in the past. I know of one case of Mudgal Committee which sought the legal advice from outstiders.

Shri Debabrata Mookerjee: Could any outsider be there as a member of the Committee? .

Shri M. C. Setalvad: I don't think that that would be appropriate. Mixing up the Committee with the Judges, I do not think, would be appropriate.

Dr. L. M. Singhvi: You have drawn our attention to Cl. 5 of Art. 124. I would like you to tell us whether a law as contemplated under C1.5 is a

necessary pre-condition for Parliament to function in the matter of impeachment of a Judge or it is only an enabling piece of legislation.

Shri M. C. Setalvad: Clearly, enabling.

Dr. L. M. Singhvi: I put that question because Government have taken the view earlier that as a matter of fact on a resolution under Art. 124 no action can be taken by Parliament unless there was legislation under Cl. 5. I thought that that was not defensible in terms of the language used in C1.5.

Shri M. C. Setalvad: I would take the view that this is merely enabiing and, in the absence of a law, even Parliament can entertain a motion for removal under Art. 124 dealing with it according to its own procedure.

Dr. L. M. Singhvi: So it is permissible for Parliament to prescribe procedure for proof of incapacity either in its own Rules or in an *ad hoc* manner.

Shri M. C. Setalvad: Undoubtedly. That is also one of the questions which an hon'ble Member asked earlier. Parliament can provide some procedure of that type in their Rules.

Dr. L. M. Singhvi: I would be glad if you could kindly tell us whether such legislation, because this legislation comes before us under C1.5, should provide for the various modalities that the Parliament can adopt in investigating into proof of misbehaviour or incapacity or should merely leave the whole matter to Parliament; whether such legislation could be countenanced which merely says that the matter of investigation and proof of misbehaviour and incapacity would be as may be determined from case to case by Parliament?

Shri M. C. Setalvad: If legislation has to be made—I have said already that is not necessary—but suppose, it has to be made, it can provide a machinery which Parliament may by choice adopt.

Dr. L. M. Singhvi: Would it be appropriate to provide for the manner in which our Committee should function by means of legislation because if we were to provide for an Inquiry Committee of our own or for the kind of a Judiciary Committee contemplated by the Jurists' Commission memorandum or by other means which is a part of the organization of the Parliament itself? Would it be appropriate to provide such a machinery outside our Rules by means of legislation?

Shri M. C. Setalvad: It is left to Parliament to choose a machinery which legislation has provided. There would be nothing inappropriate in Parliament choosing that machinery in a particular case. In other cases it may function as it likes by its own Committees. It is merely an option. I do not think there is anything contrary to law or to Parliamentary tradition in legislation providing such a machinery in view of the provisions of sub-clause (5).

Dr. L. M. Singhvi: What are the specific alternatives you would place before us: one is the Parliamentary Committee. Would you also consider suggesting a kind of Tribunal appointed by Parliament itself?

Mr. Chairman: He has said that. He has given three alternatives.

Shri M. C. Setalvad: Parliament may in suitable cases appoint a Tribunal but if there is already provided by legislation a Tribunal, a properly constituted Tribunal, then Parliament may either appoint a Committee of its own or choose that Tribunal that the legislation provides. Then it means that it is the choice of Parliament whether it should go to the Tribunal or to the Committee.

Dr. L. M. Singhvi: You have mentioned that no other Constitution in the world provides for this kind of a special Tribunal.

Shri M. C. Setalvad: Excepting Burma.

Dr. L. M. Singhvi: I want to pointedly ask this question about Burma. There also the initiative is entirely vested in the legislature and it is not with the executive. I would draw your attention to Sec. 143 (2) and (3). Clause 3 says that the charge shall be preferred at either Chamber of Parliament subject to and in accordance with the provisions of that Section. Though they contemplate a machinery somewhat analogous to the Tribunal contemplated by the Bill before us, the charge is to emanate only in Parliament.

Shri M. C. Setalvad: I agree the initiative is with the Parliament.

Dr. L. M. Singhvi: So that I suppose it could be said that as a matter of fact there is no country in the world where constitutionally it is provided that the executive may have the right to initiate proceedings?

Shri M. C. Setalvad: Not so far as I know.

Shri P. N. Sapru: Except Ghana where the Chief Justice can be removed by the President any moment.

Dr. L. M. Singhvi: There is one more question that arises in terms of the present Bill as it is framed. We have received several memoranda and one of the memoranda is from a judge of a High Court. In that he has said that in no case should a retired judge be appointed to these Tribunals. He has adduced the reason that many judges after their retirement look to some kind of patronage or favour which is at the dispensation of the Government and the Hon'ble judge has strongly pleaded in his memorandum to us that in no case should any committee to be constituted for the purpose include a retired judge.

Shri M. C. Setalvad: I think there is a lot of substance in his views.

Shri Homi F. Daji: My question is, would it be constitutional to allow the Speaker to rule out a motion. Let us do away with the question of desirability. Certain risks have to be taken in a democracy. It has now been argued that the Speaker may whet the motion or such a rule can be framed. In my opinion, such a rule to disallow a motion would be unconstitutional

Shri M. C. Setalvad: I understand —I have not studied your rules— your rules leave the discretion to the Speaker even at this moment. It is for him to decide whether a motion could be allowed or not.

Shri C. R. Pattabhi Raman: Article 105(1) refers to freedom of speech subject to rules and standing orders regulating the procedure. Short of that nothing can be done.

Shri Homi F. Daji: Article 105 refers to freedom of speech. Article 121 gives the right to a Member to move a motion. Would it be even wise— apart from its constitutionality—to leave it to the Speaker or would it be better to provide by a rule?

Shri M. C. Setalvad: My answer is Article 118: "Each House of Parliament may make rules for regulating, subject to the provisions of this Constitution, its procedure and the conduct of its business." And you have also made rules which leave the discretion to the Speaker in regard to motions.

Shri Homi F. Daji: I don't think so. As yet there is no such clearcut rule.

Draftsman: You can make a rule.

Shri Homi F. Daji: That is a different thing. Rules can be made

subject to the provisions of the Constitution. The Constitution gives the right of motion to any member. Supposing we make a rule that the Speaker can rule out such a motion, we thereby give the veto to one individual howsoever exalted.

Shri M. C. Setalvad: Article 121 of the Constitution provides that as a general rule there should be no discussion; except on a motion. It does not give, as you say, a right to move the motion. It only says that a discussion can take place if there is a motion. That is all. As to when there should be a motion or not is a matter for the House itself to decide under Article 118(1).

Shri Homi F. Daji: In that case, for the admissibility of adjournment motions or privilege motions, we have a provision that a certain number of Members must stand up. One Member has the doubt that an irresponsible Member may raise a motion of discussion. Would it not be better to have such a provision that, say, 50 Members or 25 Members should support such a motion so that it can act as a caution for any irresponsible Member and at the same time it would obviate the necessity of giving the decision to the Speaker?

Shri M. C. Setalvad: Undoubtedly that will be a very good method—a certain body of responsible Members supporting it.

Shri Homi F. Daji: Thirdly, under the Constitution, it is the sole function only of the Parliament both to conduct the enquiry and give the finding. This applies to the procedural part also. Therefore, the tribunal also can be appointed only by Parliament and it cannot be left to the executive or to the President or to anyone. In the case of England, it is slightly different because England has no Constitution in that sense of the word. It is the Parliamentary Committee that goes into such questions and no tribunal or so-called independent tribunal is permissible under the Constitution.

Shri M. C. Setalvad: Our constitution, which is a written constitution, has, in Clause 5, expressly provided that in respect of procedure, Parliament may make a law providing for the investigation of the misbehaviour or incapacity and that enabling legislation can be made in respect of procedure for these purposes.

Shri Homi F. Daji: There is this anomalous position. There is provision of a particular requisite majority required. Judges of the Supreme Court and the High Court are there. Suppose the tribunal says, yes, misconduct is proved. But then Parliament does not get the requisite majority. Then we land ourselves in an anomalous position.

Shri M. C. Setalvad: It may happen even when you have committees. Suppose the Joint Committee recommends in favour of removal of the judge, the House may take a contrary view or may not have the requisite majority.

Shri Homi F. Daji: It is no outside tribunal. It is a committee of the House. But in an outside tribunal it is different. Suppose you are appointed, what would you do? Would you argue before the same judge? Would it be a laudable thing?

Shri M. C. Setalvad: I would say, the view taken by Parliament is wrong, but our view is correct, that is all. Opinions may differ.

Shri Homi F. Daji: Parliament relies upon its own committees and its own procedure. It may call for witnesses and doctors or lawyers, and high court judges also to assist it. Parliament should not divest powers of investigation to an extraneous authority.

Shri M. C. Setalvad: By permitting legislation which contemplated after

you have a tribunal of eminent people who has reported on the matter leaving again the decision to the House as you must under the constitution, will put the tribunal in an awkward position.

Shri Homi F. Daji: Would you not prefer a Committee of Parliament rather than an independent tribunal?

Mr. Chairman: You need not argue with him.

Shri M. C. Setalvad: Parliament discharges many responsible functions. Its committees deal with important matters. It can well deal with this matter.

Shri Hari Vishnu Kamath: As I listened to the able and lucid exposition of the matter by the learned witness, I found that I was in good company. You will recall that at the last sitting of the committee I had used exactly the very words that the former Attorney-General used today, that is to say, the Bill suffered from the fatal defect of unconstitutionality. I recall now that when I said that it raised a faint titter, in some quarters of this Committee. Today I am glad to find that I am in good company. But there are two matters on which I will request the former Attorney-General to throw a little more light.

I believe, Mr. Setalvad, that you are anxious—and rightly so—that Parliament should not be divested of its powers, even by a jot or little right from the stage of initiation, to the final denouement, the final conclusion,—powers conferred on Parliament by the constitution with regard to the removal of Judges. Is that your position?

Shri M. C. Setalvad: That is my position except when Parliament chooses to send it to a Committee or a Tribunal, if it so chooses.

Shri Hari Vishnu Kamath: But the right is not abrogated by so doing.

Shri M. C. Setalvad: Yes.

Shri Hari Vishnu Kamath: Now it is open to any Member of Parliament to bring a motion in this regard and I am at one with my hon. colleague Shri Daji that as a safeguard against any possible character assassination—to use the phrase used, I think, by Mr. K. K. Shah, it would be desirable that the motion should be supported or signed by fifty members *ab initio.* That, I think, should be a proper and adequate safeguard. Don't you agree?

Shri M. C. Setalvad: I agree.

Shri Hari Vishnu Kamath: Make it even 100. I do not know what number will be adequate. Would you suggest fifty or hundred?

Shri M. C. Setalvad: I am not familiar with Parliamentary procedure. I will leave that to you, Gentlemen.

Shri Hari Vishnu Kamath: In a house of 500, what shoud be the number to provide an adequate safeguard?

Shri M. C. Setalvad: It will not be wise for me to answer that question.

Shri Hari Vishnu Kamath: Coming to the second stage, the motion is made under Art. 121. Would you suggest that in order to ascertain whether there is any *prima facie* case in intermediate inquiry is necessary or desirable?

Shri M. C. Setalvad: Either, as I have already said, the Speaker may be left before he admits the Motion to vet it, or it may be possible also to provide a Joint Committee whom the Speaker may consult. Supposing he has a Motion. He feels that there is something to be done. He wants to fortify his own view by referring it first to that Committee without any discussion in the House. That can be provided by your own Rules perhaps, so that you have got not only the Speaker vetting it, but that Joint Committee looking into it before it is allowed to be discussed in the House as a whole. That is for you to consider. I am only suggesting the procedure

Shri Hari Vishnu Kamath: You are in favour of some permanent Rules of Procedure, not *ad hoc* for each case?

Shri M. C. Setalvad: These cases do not happen very often, I think. *Ad hoc* or permanent, just as it suits you. It is a matter entirely for the House.

Shri Hari Vishnu Kamath: So you don't rule out, absolutely rule out an intermediate inquiry for determining the admissibility of proof of this matter.

Shri M. C. Setalvad: There may be cases where the Speaker himself may want it to be looked into by a Committee. In addition to himself he may want the assistance of the Committee. In such cases he may refer the matter to the Committee.

Shri Hari Vishnu Kamath: The House will delegate its powers to the Speaker or a Committee to be appointed by the House?

Shri M. C. Setalvad: The Committee will be appointed by the House, the Speaker may, if he feels it necessary, consult the Committee. The House will, of course, constitute the Committee.

Shri Hari Vishnu Kamath: Supposing *prima facie* case is established, then it goes to the Tribunal. That is the second stage or the final stage. Is that Tribunal to be appointed by the House again?

Shri M. C. Setalvad: The House may do so or it may ask a committee of its own to make the investigation, as it happens in many other countries. In England there is no Tribunal; in America there is no Tribunal. The Committee of the House conducts the investigation.

Shri Hari Vishnu Kamath: Would you suggest a joint committee of both the Houses of Parliament?

Shri M. C. Setalvad: It should be so. In a matter of this nature both the Houses are supposed to vote the address by the requisite majority.

Shri Hari Vishnu Kamath: Then the position finally boils down to this that the Executive or the President does not and should not come into the picture except to automatically okay.....

Shri M. C. Setalvad:....the decision of the House. In the Bill, as it is provided, the President comes in the very beginning, whereas in the Constitution he comes at the end.

Shri Hari Vishnu Kamath: I am glad, but I am afraid that the House as it is constituted today may not agree with the views expressed by you. Anyway, let us see.

Shri R. S. Khandekar: Supposing the Tribunal is appointed outside the House, you have suggested that the Supreme Court Judges and the High Court Judges should be appointed. Would you like that eminent persons in public life should also be associated with that Tribunal?

Shri M. C. Setalvad: If there is to be such a Tribunal, I should like it to be constituted by Judges and lawyers and not by any other persons.

Shri R. S. Khandekar: Lawyers from practising bar or those who are non-practising lawyers and should there be any age limitation?

Shri M. C. Setalvad: The Jurists Commission has suggested a Tribunal consisting of Supreme Court Judge or Chief Justice or High Court Judge or Chief Justice and a senior member of the bar.

Mr. Chairman: You agree with that.

Shri M. C. Setalvad: Yes.

Shri C. R. Pattabhi Raman: The differentiations between the Articles 218 and 124 about the Supreme Court and High Court Judges are dealt within the memorandum as being the same.

Shri M. C. Setalvad: Article 218 refers you back to Article 124.

Shri C. R. Pattabhi Raman: My esteemed colleague, Mr. Daji referred to Article 105 about the freedom of speech and also to Article 121.

Shri Homi F. Daji: That puts restriction on discussion in Parliament.

Shri C. R. Pattabhi Raman: Yes, it becomes unnecessary. I take it that the entire Bill is a result of clause 5 of Article 124 flowing from Clause 4 of the same Article.

Shri P. N. Sapru: Article 124(5) says that Parliament may by law regulate the procedure.

Shri C. R. Pattabhi Raman: I was wondering at one time whether the term 'members' used in Clause 3(2) of the proposed Bill was meant to refer only to the Members of Parliament

Shri M. C. Setalvad: Which clause are you referring to?

Shri C. R. Pattabhi Raman: I am referring to clause 3 (2).

Shri M. C. Setalvad: The term 'members' there means actually members of the tribunal.

Mr. Chairman: You consider that the executive should not be brought in. Suppose the President in consultation with the Chief Justice of India appoints a tribunal. Would you still hold that it is unconstitutional or would that satisfy your point?

Shri M. C. Setalvad: That would not get rid of the objection. Parliament alone can do it. That is the scheme of the Constitution, as in other countries. However much the executive may be fortified even if it be by the highest member of the judiciary, namely the Chief Justice of India that would not cure the unconstitutionality

Mr. Chairman: Thank you very much.

(The witness then withdrew)

(The Committee then adjourned.)

GMGIPND—LSI—2310(E)LS—30-3-66—900.

2. Shri Y. D. Sharma
3. Shri Prem Sagar Gupta.

(Witnesses were called in and they took their seats)

Mr. Chairman: Whatever evidence you give will be treated as public and is liable to be published. Even if you want anything to be treated as confidential, it is liable to be made available to the Members of Parliament.

Your Memorandum has been circulated to all the members. So, if you have got anything additional to say, then you may say that; otherwise, the members will ask questions.

Shri M. Farooqi: Whatever we wanted to say, we have already said in detail in the Memorandum.

Mr. Chairman: Any question?

Shri Anand Chand: You have been specific in your Memorandum about the demand for a full-fledged Government consisting of an Assembly and Council of Ministers. At the same time you have also said that New Delhi is the seat of Government and it cannot be amalgamated with the Delhi Administration. Now I have been confused about one thing: where exactly would you draw the line, *i.e.*, where would you think that the New Delhi area, administered by the Central Government, should end

and which area then you would like to come under your proposed Government consisting of an Assembly and Council of Ministers?

Shri M. Farooqi: Repeatedly the Government of India have said that Delhi cannot have two Governments—a Government at the Centre and a State Government—and it is, in fact, on this basis that about 3 million people of Delhi are being denied the democratic right which is exercised by the rest of the country. Therefore, we have said this: if the Government of India says that it would like to have special powers with regard to the administration of Delhi alright, let them have it, but let them have it in relation to areas which are specifically the concern of the Central Government, say New Deihi, because already in New Delhi you have a nominated Municipal Committee and we are told that New Delhi must have a nominated Municipal Committee because it is the special concern of the Government of India. Now if New Delhi is going to have a nominated Municipal Committee, allright, let that be the seat of the Government of India; but with regard to the rest of Delhi, which is now controlled by, what is called, the Delhi Municipal Corporation, I think the people in that area should have the same rights as are enjoyed by the people of other Union Territories at least.

Shri Anand Chand: The confusion that I would like you to resolve is this: Don't you feel that the whole of Delhi is becoming, from the point of view of roads, communications and other amenities, one integrated whole? In that case, how can we separate this limb—if New Delhi is to be separated from the rest of Delhi—from the rest of the body? New Delhi today is not what it was 20 years ago. New colonies are being built; apart from this, we might say that today New Delhi or the Delhi area, the urban area, extends right upto Faridabad in some cases. How would you reconcile this? The whole basis of your Memorandum is to have a Government on the basis of other Union Territories, but if Delhi is to be one integrated unit, then the whole demand falls down.

Shri M. Farooqi: At least the Government of India does not think that New Delhi is an integral part of Delhi. That is why they have given a nominated Municipal Committee to New Delhi.

Mr. Chairman: I would suggest to the hon. member that he need not argue with the witness. We have to get only facts.

An Hon. Member: I shall just ask one question.

Mr. Chairman: You may ask any number of questions.

Shri M. Farooqi: We have a Municipal Committee for New Delhi and a Corporation for old Delhi. The Corporation, after all, is something different from a Government. I mean, if it is only a question of Corporation, then under the Bill also, it is envisaged that there would be an Administration which would be even a step further than the Corporation.

We have said it more as a kind of argument that, if the Government of India thinks that it would like to exercise special powers with regard to New Delhi, then they can have New Delhi as the seat of the Government of India and give democratic rights to the rest of the people. It does not mean that we would like New Delhi necessarily to be separated from the Administration of Delhi. We would like that democratic rights should be preserved by all the people. We are at the moment demanding a democratically elected committee. The Government of India need not have any fear that there is bound to be necessarily conflict between a legislative assembly, if formed for Delhi and Government if formed for Delhi and on that basis envisage conflict between that authority and Government of India. Because, I

think, the Government of India have, under the Constitution, enough powers to preserve certain rights for itself.

Ch. Brahm Perkash: In the Memorandum you have suggested that the seats of the Metropolitan Council should be increased. What is the reason for the increase you have suggested? On what basis it is suggested that the number of seats should be increased?

Shri M. Farooqi: The old Legislative Assembly of Delhi had 48 seats. Now it is increased. There is increase in the number of seats in the Lok Sabha from 5 to 7. I suppose that is based on the basis of the increased population. We think that the Metropolitan Council—we would like to call it the Metropolitan Assembly—should have more than 48 seats.

Mr. Chairman: What number do you suggest?

Shri M. Farooqi: 56 we have suggested.

Ch. Brahm Perkash: You have said that there are a number of authorities, the Corporation and this and that. But such authorities are there everywhere, in every other States in India. There are various municipal committees, corporations, district boards etc. The State Government is separate; there are certain local functions which have got to be performed by the local authorities. There are special authorities for special functions. There is the Electricity Board and many other things are there. How do you say that when all this comes under one form all these difficulties will be resolved?

Shri Prem Sagar Gupta: Our main problem is multiplicity of authorities. There is the Delhi Administration looking over the affairs at the State level. Then you have at the local bodies' level the New Delhi Municipality which is a nominated body. You have the Delhi Municipal Corporation. Then you have so many authorities like the D.D.A. which is an autonomous body. You have all the Ministries of the Government of India almost functioning directly in Delhi. You have for instance the Land and Development Office of the Ministry of Works and Housing which has the nazur lands vested in it. You have the Corporation. You have the New Delhi Municipality under the Health Ministry. You have the D.D.A. under Health Ministry. There is also another aspect which we would like to bring to the notice of the Committee. Delhi has got its own geographical limitations. Delhi has its own special peculiarities. I don't think in any other State or in any other part of the country you have that queer intermingling and interdependence of civic issues and the States issues. On very small matters like for example the question of encroachment from the Streets the New Delhi Municipality follows a certain policy. The Corporation follows a certain policy. Delhi Development Authority comes into the picture and overrides both. It follows a different policy. All these separate authorities are functioning simultaneously parallel to each other, taking decisions which are contrary to each other on the same issues. But what we think is this.

Mr. Chairman: Each is functioning in its own jurisdiction.

Shri Prem Sagar Gupta: That is right. You cannot have in Delhi that type of water-tight jurisdiction of area in the matter of civic issues and State issues. The moment we come to that conclusion the present confusion will prevail. The Bill as it provides for the Metropolitan council and a few more authorities will amount to adding to the confusion of the civic issues. All the Members of Parliament are aware of the water crisis which Delhi faces every year. Last year there was water shortage. There was lot of criticism on this account. In Parliament itself such criticisms were raised. The enquiry which was conducted showed that the water crisis was due to the failure of the pumps of the Central P.W.D.

which are responsible for pumping the unfiltered water supply. That unfiltered water supply arrangement failed so that the people were diverting the filtered water supply for gardening and watering purposes and that type of confusion was created. Under the present arrangement the filtered water supply is the responsibility of the corporation. Unfiltered water supply is the responsibility of the CPWD. The question of coordination does not arise. The people have got to suffer. Take the taxation policy on water charges, for instance. Take electricity charges also. People living in New Delhi Municipal Committee area have to pay much higher charges for water and electricity than the people living in the corporation areas. That is charging very much higher rates for water, for electricity, with the result that profit is made in the entire transaction. This type of lack of uniformity for Delhi is a peculiar feature. I do not think that with the present geographical boundaries and with this queer intermingling of civic and State issues separate authorities on the local bodies plane and State level plane will solve the problem. What we need in Delhi is uniform policy on all issues to be followed all over. There should be one single central authority which should be responsible for the policy, and supervision and implementation of that policy. If an assembly were to be granted to the people of Delhi then the structure of local bodies naturally might have to undergo a certain change. The Corporation cannot remain in the present form, with all its present functions. That is a matter which Parliament would have to consider at a later stage. What we think is this. In Delhi, if you are really interested in solving the multifarious problems then one single, central authority must come into existence which can help in these matters.

Mr. Chairman: Everything should come under one body.

Shri Prem Sagar Gupta: All the bodies should come under one single authority. Whether it is a Metropolitan Council or according to us, a Metropolitan Assembly or Legislative Assembly, there should be a central authority, a single authority, from which such authority should emanate.

Ch. Brahm Perkash: You have seen the provisions of the Bill regarding the Metropolitan Council. The powers of the Metropolitan Council and the Executive Council have been clearly defined. Subjects coming in the State List and the Concurrent List could be transferred. So the subjects are all transferred to the Metropolitan Council and the Executive Council. As such how can you say that it will not be able to coordinate?

Mr. Chairman: That is only argument. Any more questions?

Sardar Kapur Singh: I have gone through the Memorandum and listened to what you have replied just now to our questions. You have complained about denial of democratic rights to the people. The Bill envisages association of people at advisory and discussion levels. It also envisages direct participation in exercise of power at the parliamentary level. Where precisely denial of democratic rights of the people occurs in this scheme?

Shri Prem Sagar Gupta: Main criticism is not only regarding democratic rights of the people of Delhi; but personally I would look at the problem from the administrative angle and as I have explained, it is an administrative necessity for Delhi to have a single centre of authority. Multiplicity of authority is what is primarily responsible for the denial to the people of an easily accessible administrative setup and an easily accessible administration. That is the main grievance. I can understand a situation where the Government decides to have a single centre of authority and then not give it a form of democracy or content of democracy; then it will be for me to raise the issue with the Government and say that

will convert itself into an elected Public Relations Committee. So it is a step forward in one respect, in that there will be an association of the people with the administration and....

Mr. Chairman: In this Bill the Municipal Corporation is not abolished.

Shri Prem Sagar Gupta: That is the biggest misfortune in our opinion, because it remains an autonomous body.

Mr. Chairman: It is a local body.

Shri Prem Sagar Gupta: The Metropolitan Council is not a local body, nor a body corporate; I do not know what to call it. It has no gender.

Shri R. V. Bade: My difficulty is this. In your memorandum you have said that it is merely a debating society. But now you say that it would be getting more rights. I quite agree with you that there are no rights regarding budget and regarding funds....

Mr. Chairman: It can frame its budget and pass it and recommend it to Government.

Shri R. V. Bade: You say that it would be merely a debating society. In what way do you think that the provision for finance should be there in the Metropolitan Council?

Shri Prem Sagar Gupta: Our understanding simply is this that it is a debating society, as we have said in the memorandum also, because in all matters it is a recommending society only. Nobody is bound by its opinions. Neither the executive councillors nor the administrator nor the Government would be bound by its opinions. It is merely a debating society.

But so far as finance is concerned, I understand that there are certain constitutional difficulties in the way of giving financial powers to a body like this which is neither a legislature nor a body-corporate. But I think that if some sort of democratic control of the people over their own affairs in this territory is to be ensured then the final authority to make decisions on policy matters and to implement them and also the final authority for passing the budget should be ensured for this body. Otherwise one does not know how to categorise this body.

Shri R. V. Bade: Do you mean to say that there should be some provision for creating funds and the budget of the corporation or the municipality should be under the control of this Metropolitan Council?

Shri Prem Sagar Gupta: Today, for instance, as I understand it, elsewhere the decision is there in the Government that two undertakings of the Corporation will be taken away from its scope. I am just giving two instances.

Mr. Chairman: Clause 21 provides that the Metropolitan Council shall have the right to discuss and make recommendations with respect to the estimated receipts and expenditure pertaining to Delhi which are to be credited to, or is to be met from, the Consolidated Fund of India.

Shri Prem Sagar Gupta: They can only make recommendations in that respect; that is so even in regard to matters of administration involving general policy and schemes of development in so far as they relate to matters enumerated in the State List or the Concurrent List. Everything is recommendatory.

Shri R. V. Bade: My question was definite....

Shri Prem Sagar Gupta: I am coming to that. The electricity and transport undertakings whose budgets are finally approved by the Corporation because it is a corporate body today will after this proposed legislation comes into force and after the amendments in the Corporation Act are carried out, become autonomous

boards under the Metropolitan Council, but then their budgets will form a part of the Consolidated Fund of the Government of India and not a part of the budget of the Metropolitan Council. Even the financial powers which the Corporation today enjoys will not be available to them. I do not know whether there are really any constitutional difficulties in granting financial powers to the Metropolitan Council, but I would say that if necessary the Constitution should be amended to give financial powers to the body; if we really want it to function with full authority and full responsibility, then it should have financial autonomy.

Shri R. V. Bade: In the County Council in England, they have got a budget of the whole county and then they distribute the amount to the boroughs. Those boroughs discuss the budget and then there is control by the county council. Should there be a similar provision here in regard to the Metropolitan Council or not?

Shri Prem Sagar Gupta: That has not been proposed, but I would very much like that.

Today, the total budget of the Union Territory of Delhi, including that of the corporation, the NDMC and the Delhi Administration and the Delhi Development Authority etc. comes to nearly Rs. 92 crores a year; I am talking only of revenue budget, not of the capital budget. If this entire budget of Rs. 92 crores on the revenue account were to be consolidated and centralised and even the policy on all issues were to be framed by a central authority and then the budget could be distributed to various authorities to whom the delegated powers might be given, that would be a good thing....

Mr. Chairman: It is the Parliament that provides funds for the DMC; that principle has been accepted by Parliament when this Bill was referred to the Joint Committee. You cannot go beyond that. You may frame the budget and send it to Government or Parliament, and it is Parliament that has to approve of it. That is the position unless the Constitution is amended otherwise.

Shri Prem Sagar Gupta: That is why I say that if necessary the Constitution should be amended.

Ch. Brahm Perkash: Whether constitutionally any financial power in regard to receipts or expenditure or both can be given to this body or not is a matter yet to be discussed at length.

Mr. Chairman: We shall discuss it among ourselves later.

Shri R. V. Bade: In your memorandum you have said that all authorities functioning in Delhi including the DMC, the NDMC etc. should be under the effective control of the Metropolitan Council. But you have not suggested what that effective control should be, nor have you suggested any amendment in that respect. So, I am at a loss to know what effective control on the autonomous corporations you envisage. Unless you amend the laws of the Corporation and create six divisions or zones as the Corporation has done and give them the amounts. I do not know how you can have effective control; by retaining the DMC and NDMC. I do not know how you can have effective control.

Shri Prem Sagar Gupta: Those laws may be amended because the primary consideration should be to have a single central authority.

Shri R. V. Bade: How can there be effective control?

Mr. Chairman: You have stated in your memorandum that there should be one governmental authority for the whole of Delhi.

Shri Prem Sagar Gupta: Yes, there should be one authority, and then consequential changes in the structure of the local bodies could be discussed. But while discussing these

concrete provisions of this Bill, naturally we could not go into them and that does not probably form a part of the scope of the Bill at present. So, all that we have suggested is that in case Government decide that the proposed Metropolitan Council should itself become a single centre of authority in Delhi then consequential changes in the present Acts and rules relating to the local bodies could be made.

Mr. Chairman: You are for the abolition of these local bodies?

Shri Prem Sagar Gupta: That is a matter which might follow if Government decide to have a central authority in Delhi.

Shri Bakar Ali Mirza: The question was put earlier about the federal capitals of the world. The general desire is that there should be an Assembly and there should be democratic control. That is common ground. But in order to meet the needs of a federal capital, can you suggest anything within the framework of the present Constitution which would satisfy those desires and needs?

Shri Prem Sagar Gupta: I have very carefully gone through the speech made by the Home Minister while introducing this Bill in the Lok Sabha. There was a very interesting and very revealing sentence in his speech to the effect that it would be very unfortunate if conflict were to develop between the national government at the Centre and the local Government which is a fully responsible Government. I quite see that position. But my feeling is that without going into parallels in the rest of the world, because parallels are not always valid, we should take into consideration the specific conditions in Delhi. After all, it is neither the form of the democracy nor the specific overall general provisions of the Bill but the actual content of democracy or the powers that you vest a particular body with, which matter very much. In case the Government of Delhi happened to have any conflict,—I do not know whether it means a conflict politically or a conflict in policies; I presume that it is a conflict in policies which is referred to—then certain safeguards can be provided by giving concrete authority and powers to a democratic set-up in Delhi, and having some limitations.

Shri R. V. Bade: Sometimes, the conflict may be political also.

Shri Prem Sagar Gupta: As regards political conflict I am afraid I cannot say anything about it because it is for the politicians outside this Select Committee probably to decide.

Shri Gulzarilal Nanda: You are not a politician?

Shri Prem Sagar Gupta: I am a politician very much, but I am not supposed to enter into that discussion here.

Shri M. Farooqi: If the Government of India are really afraid of political conflict, on that basis tomorrow the possibility may arise of giving up the concept of democracy in respect of many States in India. You have given it up in Kerala because conflict arose between the ruling Congress Party at the Centre and a different political party there. Twice the Government of India have exercised their powers. We call that undemocratic exercise of power.

Mr. Chairman: That is also under the Constitution.

Shri M. Farooqi: Yes. But the Constitution is there for Delhi also. It can be utilised.

श्री न वल प्रभाकर : आपने अपने मैमोरेंडम में यह कहा है कि हमें मैट्रोपोलीटिन कौंसिल नहीं असेम्ब ।
मि० बड़े ने यह कहा कि काऊंटी कौंसिल होनी

चाहिए तो आपने कहा कि मैं उसे भी तरजीह दूंग तो आप वास्तव में किस को तरजीह देना चाहते हैं

श्री प्रेम सागर गुप्त : मैंने कभी नहीं कहा कि मैं काऊंटी कौंसिल को तरजीह दूंगा। मेरी बदकिस्मती यह है कि मैं अपने आपको साफ नहीं कर पाया। मैंने बिलकुल साफ़ ह है कि मैं इस बात को तरजीह दूंगा कि दिल्ली के अन्दर एक बिलकुल जम्हूरी क़िस्म का ढांचा होना चाहिए, एक अथारिटी होनी चाहिए, जिसमें मेरे दिमाग़ के मुताबिक शक्ल यह है कि एक बिलकुल जिम्मेदार असेम्बली और एक जि मेदार हुकूमत होनी चाहिए।

श्री नवल प्रभाकर : काऊंटी कौंसिल नहीं ?

श्री प्रेम सा ार गुप्त : काऊंटी कौंसिल का सवाल ही पैदा नहीं होता है। वह काऊंटी कौंसिल लोकल बौडी की शक्ल में हो तो लोकल बौडीज़ का ढांचा क्या बने वह तो असेम्बली बनने के बाद गौर किया जा सकता है।

Shri Bakar Ali Mirza: Suppose an M.P. is made responsible for the administration of Delhi, he will be a Minister holding the portfolio of Delhi affairs. Will it satisfy your requirements?

Shri Prem Sagar Gupta: Will he be responsible to the elected House of Delhi?

Shri Bakar Ali Mirza: He will be responsible to Parliament.

Shri Prem Sagar Gupta: Then it does not meet any of our requirements.

Shri M. Farooqi: We will not be satisfied.

We definitely want a fully elected legislative assembly for Delhi. This is our first and final position.

Shri Hari Vishnu Kamath: I hope you will agree that the Union Territory of Delhi, by virtue of its being the seat of the federal Government, the federal capital of our great country, and the seat of the national parliament, is, in a sense, a national microcosm, and by virtue of its accommodating the various missions in this country—political missions, embassies, legations and all that, not religious missions is in that sense also an international microcosm.

Shri Prem Sagar Gupta: Yes.

Shri Hari Vishnu Kamath: Then logically the next conclusion to which I would like you to arrive at is that it is not absolutely on a par with the other Union territories in India. Do you agree or no?

Shri Prem Sagar Gupta: In that sense it is not a par.

Shri Hari Vishnu Kamath: It is a national and international microcosm.

Shri M. Farooqi: I think the people of Delhi are capable enough of providing all these facilities to the foreign missions as well as to our hon. MPs. I do not know why this mistrust of the people of Delhi. Certainly we are competent enough to provide all these facilities and so many other things that have to be provided.

Shri Hari Vishnu Kamath: I had not gone so far. I am sorry to say you are rushing in where angels fear to tread. I was only at the first stage.

Shri Prem Sagar Gupta: I said yes to your question.

Shri Hari Vishnu Kamath: Therefore, the next question: Is it on a par absolutely with the other Union territories like Goa, Manipur, Tripura, Himachal Pradesh and Andamans and Nicobars?

Shri Prem Sagar Gupta: In respect of the aspects you have mentioned, it is not.

Shri Hari Vishnu Kamath: Was the experience that we had during the

period 1952-56 when Delhi was a Part 'C' State under the Constitution, with a distinguished member of this Committee, Ch. Brahm Perkash, as Chief Minister of Delhi and another member also Kumari Shanta Vasist, as a Minister, conclusively indicative of a harmonious relationship between the Delhi State Government and the Union Government, or was it not?

Shri Prem Sagar Gupta: Unfortunately, I was not a member of that Assembly. I have never heard of any reports of conflict between the federal Government and the State Government at that stage.

Shri Hari Vishnu Kamath: I may point out to you only one field of conflict, because I used to tackle that field in the first Parilament—that was the tussle that used to go on between the Delhi State Health Minister and the Union Health Minister with regard to hospitals in Delhi. Are you aware of that?

Shri Prem Sagar Gupta: Yes. Similarly I am also aware of thousands of tussels between State Ministers and Union Ministers. Every single Minister of the Union Government has tussles with State Ministers even today. Why only Delhi, Manipur, Goa or Tripuria or HP? In UP, Madras, Kerala—everywhere tussle is there.

Shri Hari Vishnu Kamath: Now if you want to have a single authority, as you propose, for this Union territory, I suppose you are of the opinion that the Ministries of the Union Government which now enjoy or exercise certain powers in respect of this teritory should be divested to those powers and those powers should be vested in the Delhi Government.

Shri Prem Sagar Gupta: Yes. And I give you an instance. There was a scheduled strike in the textile industry some time last year, and the then Chief Commissioner, Shri Dharma Vira, agreed to the reference of the entire question of cost of living indices to an expert body. It took about six months before the reference by the Chief Commissioner of Delhi was approved by the Union Labour Minister, six months delay even in the constitution of the expert body. If there was a responsible Minister in Delhi, this six months delay could have been avoided. The expert committee has given its final recommendations, and they are going from Ministry to Ministry of the Government of Inida, they have not seen the light of day. The question of implementation is far off. I say that if Delhi is to be the victim of tussles between various Ministries leading to red-tapism and avoidable delay, better have a single authority in Delhi itself.

Shri Hari Vishnu Kamath: So, you are of the view that Delhi State Ministers in the new set-up are likely to be more efficient and more *inter se* harmonious than Union Ministers today?

Shri Prem Sagar Gupta: I cannot go into this, but obviously they will be as efficient as the others all round.

Shri Y. D. Sharma: They would have a better grasp of the problems of the people of Delhi, would be closer to them and would know what the people of Delhi want. In that sense, I do not think we should compare the efficiency of the Ministers in the States and the Centre. After all, the Union Ministers belong to various States, and the Members of Parliament, except those from Delhi, are primarily concerned with the problems of their own States. That is why I ask: why this disturst of the people of Delhi?

I also would agree that we are not on a par with Union Territories like Manipur or Tripura or others. Delhi is very advanced.

Shri Hari Vishnu Kamath: A little higher.

Shri Y. D. Sharma: People know their responsibility, and if you trust the people of Delhi, even if you visualise ultimately some conflict, there is the President's power and the power

under the Constitution, as my colleague put it. So, why in the name of all these things not let the people of Delhi decide their own affairs? There are consular and diplomatic representatives in Bombay and Calcutta also. I do not think the State Government of Bengal or Maharashtra interferes with them. They would be the responsibility of the Central Government. That is how we look at the problem. We really are not convinced that there is any reason not to give a State Assembly to Delhi, but as this Committee is dealing with the limited problems of the Bill, we have given some suggestions, how to improve even this Bill, which is a very difficult Bill.

Shrimati Renu Chakravartty: You can add you have no Naga hostiles also!

Shri M. Farooqi: If we had Naga hostiles, we would have already got a Legislative Assembly';

Shri Hari Vishnu Kamath: I do not know why you go on harping on this, that there is some symptom or voice of distrust in the Delhi people. Nobody has mentioned that.

Shri Y. D. Sharma: This problem of dual authority is there in every other part of the country.

Shri Hari Vishnu Kamath: Nobody in this Committee has voiced distrust in Delhi people so far. I do not know why, if you will pardon the expression, you have got that bee in your bonnet, you have repeated it the second time.

Shri Y. D. Sharma: Not in this Committee, but one hears outside that one of the reasons for which the Central Government is unable to agree to a State Assembly for Delhi is some sort of lurking fear that there may be sometime in Delhi another political party coming into power, conflicts might arise and the efficiency of the capital might suffer. This may not be the view of Members of Parliament, but this is what the newspapers write sometimes.

Shri Hari Vishnu Kamath: You will gladly concede, won't you, that the representatives who have been elected to the Lok Sabha from all over India today do care as much for Delhi and for the Delhi people as the local representatives do?

Shri Y. D. Sharma: I have no doubt about that, because they live most of the time here; they should be interested, and they are. But the problem is that they are elected by people living in other States and they owe a responsibility to other people also.

Mr. Chairman: They have other interests also.

Shri Hari Vishnu Kamath: They are not mutually exclusive.

My hon. friend Shri Bakar Ali Mirza put you a question whether you would be satisfied if a Minister with a separate portfolio of Delhi is appointed to the Union Cabinet and is responsible to Parilament. Knowing from past experience that Delhi problems have been raised in Parliament, I will not say more by non-Delhi Members, but at least as well by non-Delhi Members,—in the first Parliament the motion of no confidence in the then Health Minister was moved by me, who am not from Delhi, on the infective hepatitis epidemic—and conceding as you do that we do have the interests of Delhi at heart, I suppose you would not be averse or allergic to a Minister holding the portfolio of Delhi in the Union Cabinet and being responsible to Parliament, with the concurrence of a committee of members who are elected from Delhi.

Shri M. Farooqi: Minus the Legislative Assembly?

Shri Hari Vishnu Kamath: Yes. The present Council plus this.

Mr. Chairman: They are not satisfied.

Shri Y. D. Sharma: If that is in addition to an Assembly in Delhi, I think it will be useful.

Shri Hari Vishnu Kamath: Something more than the other Union Territories, because they do not have a Minister for Goa or Manipur.

In your memorandum in page 4, you say:

> "We are convinced that the solution of Delhi's multifarious problems lies only in the creation of a single authority".

Then you go on to say:

> "If the erstwhile Union Territories can be given a responsible Government . . ."

What do you mean by erstwhile Union Territories?

Shri Prem Sagar Gupta: Part "C" States. There was a gap between the liquidation of part "C" States and the 1962 Constitution Amendment Bill. They were called Union Territories at that stage.

Shri Hari Vishnu Kamath: That means to say you want a reversion to the *status quo ante* practically, as was obtaining in Part "C" States during that period. What do you want exactly?

Shri Prem Sagar Gupta: No, I do not wish that at all.

Shri Hari Vishnu Kamath: But it seems you are driving at that. You say here: "If the other erstwhile Union territories can be given a responsible government, there is no reason for denying the people of Delhi such a government."

Shri Prem Sagar Gupta: Keeping in view the peculiar features in Delhi, we have said that: "administrative necessity for eliminating multiplicity."

Shri Hari Vishnu Kamath: You cannot have equality plus privilege.

Shri Prem Sagar Gupta: In this part of the memorandum I am trying to counter the arguments advanced by taking shelter to the states reorganisation commission's recommendations. If a departure can be made from these recommendations in the matter of other union territories by giving them certain things, why not give it to Delhi also? It does not mean identical in every single provision. It should be popularly elected, fully responsible government with a council of ministers taking into account the peculiar administrative necessity for eliminating the multiplicity of authority.

Shri Hari Vishnu Kamath: You will not be satisfied with investing the proposed metropolitian council with greater financial and administrative powers, short of a legislative assembly?

Shri Prem Sagar Gupta: We have suggested certain concrete things: nominating the executive council should be given up; the executive council should be responsible to the Metropolitan Council. That is what we have suggested in our amendment to caluse 21 which is in page 6 of our memorandum. You can ask the Metropolitan Council to recommend legislation to Parliament but in regard to policies, in regard to the adoption of the budget, the financial authority should be vested with the council. Naturally consequential changes will have to be made. Actually I would urge upon the joint committee that the Bill may be withdrawn and in case the Bill is to be there we have suggested certain concrete amendments.

Shrimati Renu Chakravartty: Your position seems to be that you should give your advice and then we shall legislate. My impression is that is what is being done in the Bill. What is that you want in the matter of administration? It is not very clear.

Shri Prem Sagar Gupta: There are four types of legislation enumerated in clause 21: proposals for undertak-

ing legislation with respect to any of the matters enumerated in the State List, etc. The second is: proposals for extension to Delhi or any enactment in force in a State relatable to any matter enumerated in the State List or Concurrent List. The third is proposal for legislation referred to it by the administration with respect to any of the matters enumerated in the State List or Concurrent List. The fourth is the budget; that is the highest form of legislation probably. If Parliament or Government says that they do not want to give a full fledged legislative assembly for Delhi, we say: all right; you divide it into two parts there is a general legislation which is adopted by the Parliament for Delhi or certain enactment in any other part is made applicable to Delhi. Now, it has to be implemented in Delhi and in implementation hundreds of policy decisions of general administration have to be taken. Do you want to vest the Metropolitan Council with this authority or not? That also is denied to the Metropolitan Assembly. Even in the matter of implementation, there are recommendatory powers. Here is a body which is being proposed which has no authority at all and it is just a debating society. Supposing I am a member in that body and I just give my opinion. Nobody is bound by my opinion or even a resolution of the council. The executive councillors are not responsible to me; that are nominated.

Shri Hari Vishnu Kamath: If you succeed in achieving your laudable objective of having a full fledged legislature for the Union Territory, you would not like, I suppose, to burden that legislature and that government with the problems of New Delhi.

Shri Prem Sagar Gupta: We are on principle opposed to any differentiation or artificial demarcation between old Delhi and New Delhi. We see no reason why people living in the jurisdiction of the NDMC should be denied the right to elect a government of their own choice. So, if it comes to having a democratic elected government in Delhi, the people of New Delhi area should not be debarred. But if ultimately the government makes up its mind to have a democratic set up for Delhi and excludes New Delhi from it, I will take it as a *fait accompli*. But I would not like that.

Shri Hari Vishnu Kamath: You would like, therefore, that New Delhi must come within the legal, legislative and executive jurisdiction of the Delhi Legislative Assembly and executive.

Shri Prem Sagar Gupta: Yes. But if necessary, Delhi being the seat of the Central Government, I will acquiesce in the position where the Central Government may keep certain safeguards in regard to New Delhi.

Shri Hari Vishnu Kamath: You mean concurrent powers or over-riding powers?

Shri Prem Sagar Gupta: I will not mind even over-riding powers so far as New Delhi is concerned. The Central Government have already got over-riding powers over the Delhi Municipal Corporation. If they feel the Corporation is not fulfilling its obligations, they can intervene. In regard to any State Legislature also, it can intervene.

Dr. Sarojini Mahishi: In page 2 you have said that there is no effective democratic control over the administration of this Union Territory. Are you making this observation in the context of your comparative study of administrative control in other Union Territories?

Shri Prem Sagar Gupta: What was meant here was only this Union Territory and not in comparison to other Union Territories.

Dr. Sarojini Mahishi: At page 4 you have advised the Joint Committee either to accept the proposed set-up as an effective instrument of service or to recommend that the Bill be withdrawn. So, if the proposals are not accepted, you prefer the existing set-up to the one under consideration?

Shri Prem Sagar Gupta: I will accept it as a *fait accompli*. We are of opinion that this legislation is not going to serve any purpose, except that of accommodating certain people without jobs by appointing them as Executive Councillors. But this will not solve the problems of Delhi.

Shri I. K. Gujral: Do you advise the transfer of financial powers to the Metropolitan Council?

Shri Prem Sagar Gupta: My understanding is that the Metropolitan Council being neither a body corporate nor a legislature, there are certain constitutional difficulties and if necessary the Constitution may be recommended to be amended.

Shri I. K. Gujral: You have referred to merger of civic and governmental activities. Is it your contention that it will be useful for the town if the Corporation is abolished and the civic responsibility is discharged by the government that comes into existence?

Shri Prem Sagar Gupta: I have suggested there should be a single authority which might lay down the broad policy on every issue—civic or other State subjects. You cannot stand the position where even in small things like removal of encroachments, the municipality in its own jurisdiction follows a different policy. Once it is agreed there should be a single central authority, for implementation of the civic policies what sort of body you create is a different matter; that is a consequential thing. I feel the Corporation in its present form and with its present powers cannot remain.

Shri I. K. Gujral: What do you think is the ideal set-up for Delhi?

Shri Y. D. Sharma: If the NDMC is to be retained, the old pattern of District Boards for rural areas and Delhi Municipal Committee for the rest of the urban areas excluding New Delhi was better than the present Corporation.

Shri I. K. Gujral: Do you suggest that we should have a big municipality or small municipalities?

Shri Prem Sagar Gupta: I do not think we can really discuss that question in a vacuum. If the policies are laid down by a single authority for the entire Union Territory, then smaller bodies will be much better.

Shri I. K. Gujral: Among the subjects which are now with the civic bodies, on what subjects should the central authority lay down the policies?

Shri Prem Sagar Gupta: On all matters.

Shri I. K. Gujral: Even appointment of scavengers?

Shri Prem Sagar Gupta: That is not a question of policy.

Shri I. K. Gujral: Sometimes it can be.

Shri Prem Sagar Gupta: I am not talking of interference with administration.

Shri I. K. Gujral: For instance, you want that how water and electricity connections should be given should be laid down by the central authority. But for dispensing the civil services, you would recommend smaller municipalities, which should have nothing to do with the policy?

Shri Prem Sagar Gupta: They should have no authority to lay down the policy. Budget allocations must be made by the central authority.

Shri I. K. Gujral: Approximately how many such municipalities would come into existence?

Shri Prem Sagar Gupta: I have not worked it out. That is a matter which can be looked into once the Central authority is presumed.

Shri I. K. Gujral: I hope you presume that these municipalities should be elected bodies?

Shri Prem Sagar Gupta: Yes.

Shri I. K. Gujral: Do you think that elected members of municipalities will be satisfied if they will have no hand in making policies and their powers are limited to the dispensation of policies laid down by some other body?

Shri Prem Sagar Gupta: I do not think there will be any difficulty when there are two tiers of elected bodies.

Shri I. K. Gujral: Even when there are two-tier system in various towns of the world, the lower tier also has authority to lay down policies. Is he aware of any place in the world where the lower tier has absolutely no hand in making the policies?

Shri Prem Sagar Gupta: I said earlier that certain discretionary powers may be given to the lower tier, but the basic policies must be laid down by a central authority. The budget allocations, particularly, should be made by the central authority.

Shri I. K. Gujral: Are we to take it that according to you, on the broad basic issues the policy should be laid down by the central authority, but the real dispensation should be done by the smaller municipalities?

Shri Prem Sagar Gupta: Yes.

Shri I. K. Gujral: In your memorandum you have also talked of the language, as to what should be the language of the Metropolitan Council. They have suggested English, Urdu and Hindi. May I ask you whether Parliament should decide this in the Bill or we should leave it to the Metropolitan Council to decide as to what should be the language?

Shri Prem Sagar Gupta: Our feeling is that the question of language should not be left to be changed from time to time. Once a provision has been made in this Bill that the business in the Metropolitan Council shall be transacted in Hindi or English, our suggestion is that 'Urdu' should be added. Urdu is the second regional language in Delhi. Even under the present set up in the Corporation we have taken Urdu as the second regional language. Therefore, I think it should be provided in the Bill rather than leave it to the discretion of the Metropolitan Council to change it from time to time by way of resolutions.

Shri I. K. Gujral: You think that if it is left to the Metropolitan Council it is dangerous?

Shri Prem Sagar Gupta: I would not say it is dangerous, but it will leave enough room for changing it from time to time and if it is decided in the Bill it will avoid controversy.

Shrimati Renu Chakravartty: It is much better if the local people are allowed to decide it for themselves. How are we to know how much Urdu is in use now?

Shri Prem Sagar Gupta: The local people have already taken a decision; only that decision is to be incorporated here.

Shri Shivaji Rao S. Deshmukh: How would you explain this criticism that is often levelled by outsiders against this demand, particularly from Delhi, for a fullfledged legislative assembly and government, that this amounts to a retrograde step of reverting to the old Roman conception of City States?

Mr. Chairman: It is a matter of opinion.

Shri Shivaji Rao S. Deshmukh: You have suggested some central authority, because according to you a multiplicity of authorities has created confusion in the Delhi set-up. Do you consider it worthwhile to merge civic problems with governmental problems and have one authority attending to both civic and governmental duties?

Shri Prem Sagar Gupta: Yes; in the matter of laying down policies and for budget allocations.

Shri Shivaji Rao S. Deshmukh: Apart from laying down policies and budget allocations, there are so many other complications in governmental problems from which it is always safe to keep civic affairs at a distance. You now want to evolve a formula by which the same authority will be undertaking civic responsibilities and also carry out administrative functions.

Shri Prem Sagar Gupta: There is no civic issue which can be solved without governmental aid in any part of the country. In Delhi, this demarcation of civic and governmental issues looks rather artificial and creates all sorts of problems. Our feeling is that you must have a central authority to lay down the broad policies.

Shri Shivaji Rao S. Deshmukh: What do you exactly mean by laying down policies to be executed by subordinate bodies or administrative bodies?

Shri Prem Sagar Gupta: It is very simple.

Shri Shivaji Rao S. Deshmukh: In that case it will be a recommendatory body as it is now proposed. You have taken objection to this on the ground that it will be a recommendatory body. Your suggestion will also mean a recommendatory body.

Shri Prem Sagar Gupta: How?

Shri Shivaji Rao S. Deshmukh: You want that policy decisions are to be taken by a central authority. Then also it will be a sort of recommendatory body because the agency for enforcing that decision will be somebody other than the Metropolitan Council.

Shri Prem Sagar Gupta: Those agencies will not be autonomous bodies, they will be agencies to whom power will be delegated by the central authority.

Shri Shivaji Rao S. Deshmukh: Do you really envisage a situation where statutory recommendations of a representative body like the Metropolitan Council will be so lightly treated by another representative body like Parliament?

Shri Prem Sagar Gupta: I not only visualise a situation like that, but I visualise a situation where the statutory recommendations of the Metropolitan Council will be treated with contempt by the Executive Councillors themselves.

Shri Santokh Singh: You have mentioned certain problems of water, labour etc. You being a labour expert, may I know how development of industries is going on in Delhi under the present set-up and what will be the condition if you are given a fullfledged assembly?

Shri Prem Sagar Gupta: Then the basic approach would be that Delhi should have a sound industrial base and not the provisions of the present Master Plan.

Shri Santokh Singh: When the Central Government thinks that with the mounting problem of population in Delhi and this being the seat of Government there should be limited amount of industries in this city, if you are given a fullfledged assembly naturally you will think in terms of other States and say that other States have been given so much licences for industries and you must also be given. What will be the position of Delhi then?

Shri Prem Sagar Gupta: Then the state of the city will improve because it will have some economic life. That is my feeling.

Shri Shiv Charan Gupta: You said that there should be one unified administration. How do you propose to have co-ordination between this unified administration and the civic local bodies which you conceive of? Secondly, you want to ensure uniform implementation of the various policies and programmes. As Delhi is a small place, more of an urban character, how will you ensure that?

Shri Prem Sagar Gupta: We must keep in mind the background that we have of the existing realities today. In the name of co-ordination between various authorities there is complete confusion and chaos. Let us take, for instance, the Delhi Municipal Corporation. Apparently it looks that the Delhi Municipal Corporation is a single authority. But if we go into the provisions of the Act and the actual functioning of the Corporation, we find that there are several authorities within that authority and each authority by virtue of statutory delegation of powers to it is autonomous. Every day there are conflicts and the so-called co-ordination becomes impossible. What is required in Delhi is, if there is one statutory body which is responsible for all civic and governmental matters, which takes policy decisions, makes broad budget allocations and delegates powers to subsidiary bodies, then the situation will be solved. If what is visualized is two autonomous bodies then the question of co-ordination between the two will arise. In fact, it is the lack of co-ordination that is responsible for the present chaos.

Shri Shiv Charan Gupta: You have stated that there should be a unified administration and some people should be directly elected to that because you want a democratic organisation with all the paraphernalia of a democratic Government. Of course, you have suggested that the civil functions should be entrusted to it. I want to know whether according to you other persons should be elected to the different local bodies or you want the same persons who are elected to the different local bodies should form themselves into a larger body which should be known as the governmental body responsible for both administrative and other functions.

Shri Prem Sagar Gupta: Both alternatives are possible. But that body at the lower level, the body which is directly elected, will have its powers delegated by the Central Government, in which case that difficulty will not arise.

Sardar Kapur Singh: You represent a party which professes to be truly a Peoples' party whose main concern is for democracy. In your memorandum you have suggested that Urdu should be included as an alternative language to Hindi and English. In view of the fact that Punjabi-speaking people constitute the single largest group in Delhi, and also, in view of the fact that those who have declared Punjabi as their mother tongue constitute the second largest group in Delhi, may I know the precise reasons for which your party has thought it fit to exclude Punjabi altogether as a fit language for being the official language of the Metropolitan Council?

Shri Prem Sagar Gupta: As far as the party is concerned, we are in favour of recognising Punjabi also as an official language. There is no question of denying that. But here in the proposed amendments we have included Urdu only for two or three specific reasons. Firstly, Urdu has been recognized as the second regional language in Delhi.

Sardar Kapur Singh: Wrongly.

Shri Prem Sagar Gupta: I cannot say whether it is rightly or wrongly but it has been recognised as second regional language in Delhi by the Delhi Municipal Corporation. That is why a language which has become a

reality already by virtue of its recognition in Delhi as the second regional language had to be included. But if the Joint Committee were to kindly recommend that Punjabi also should be included, it will be included.

Shrimati Renu Chakravartty: Why do you not leave the choice of the language to the Metropolitan Council? If a large number of Punjabi-speaking people are elected they will adopt Punjabi also as an official language.

Shri Prem Sagar Gupta: We do not mind it. We suggested this amendment because the proposed Bill did not leave it to the Metropolitan Council.

(The witness then withdrew).

II. Shri Jag Parvesh Chandra, New Delhi

(Witness was called in and he took his seat).

Mr. Chairman: Whatever evidence you give before this Committee is liable to be printed, placed before Parliament and distributed to Members. Even if you want any part to be treated as confidential, it will be placed before the House.

We have received your memorandum and it has been circulated to all the Members. If you want to add anything new to what you have stated in the memorandum, you may do so. Otherwise, Members will ask questions.

Shri Jag Parvesh Chandra: I have nothing more to add. You can ask for more clarification or further elucidation.

Ch. Brahm Perkash: In one of the series of amendments that you have suggested you say that there should be a Public Service Commission for recruitment to the service. Then you say that there should be a strong co-ordinating authority. Will not the Executive Council itself be able to constitute the Public Service Commission and have a co-ordinating authority without a specific provision in the Bill?

Shri Jag Parvesh Chandra: These are my suggestions. I was not sure about their legal proprieties and constitutional niceties. In the general interests of public good I have suggested the formation of a Public Service Commission. As to in what way it should be constituted, it is for you to determine and decide. I am merely making a suggestion. As to how it has to come about and be implemented, it is for you, the Law Ministry or the Home Ministry to decide. I am told that there is going to be a Municipal Service Commission for recruiting staff to the Delhi Municipal Corporation. On the analogy of this, if we are to have a comprehensive and broad-based Public Service Commission for the whole of Delhi which should recruit staff for all the local bodies and for the various public authorities too, it will be a good thing. If the future Metropolitan Council can constitute a body like this, whose decisions will be binding on all and will be implemented in entirety even by those local bodies which are not under its direct jurisdiction, well and good. But, supposing, the Delhi Milk Scheme is not handed over to the future Metropolitan Council. Then, if the future Executive Council decides to have a Public Service Commission, it may be debarred from recruiting staff for the Delhi Milk Scheme.

Mr. Chairman: You want recruitment to all authorities in Delhi to be routed through the Public Service Commission?

Shri Jag Parvesh Chandra: Quite right. Because, without being disrespectful to the present administration in Delhi, may I say that officers from all neighbouring States come in and all sorts of influences and political pressures are used for being transferred to Delhi. We have today nothing in the Delhi Administration which gives the administrators a real

sense of belonging, a sense of being loyal to the parent government.

Mr. Chairman: Do you want recruitment to be restricted only to the residents of Delhi?

Shri Jag Parvesh Chandra: Not at all. I think, that would be against the Constitution, perhaps. I am only saying that recruitment for all the local bodies should be by this proposed Public Service Commission.

Mr. Chairman: What sort of co-ordinating committee do you contemplate?

Shri Jag Parvesh Chandra: My loud thinking is as follows. It is true, as Shri Brahm Perkash says, that in a measure the Executive Council could constitute a committee; but, I doubt very much if the Executive Council could constitute a co-ordinating committee for the Land and Development Office also which is at present a part of the Works and Housing Ministry. The Metropolitan Council could have committees for those local bodies and authorities which are or will be handed over by the Home Ministry to it. The purpose of this suggestion is both meaningful and essential. We, who live in Delhi and have some opportunity of public work, feel that we have to run about too much and to too many places and that too for too small things. Indeed there is no focal point in Delhi which can decide things concerning larger public interest. My idea is that if under any statute or under the Home Ministry's notification, apart from decision of the Metropolitan Council, a co-ordinating body of all the ministries, even of the Union Health Ministry.... Ministry and even of the Irrigation and Power Ministry, which deals with electricity, and other things should be formed. For example, huge, massive colonies are built. They are just built in isolation, in a way. The Water Department of the Delhi Municipal Corporation, I am told, does not know anything at all as to what will be the requirements of the Works and Housing Ministry in time to come for these thousands and thousands of flats. The result of this lack of consideration is that flats are built, Government officers want accommodation but water is not there, so ready accommodation lies vacant. Consequently, the Government suffers in revenue and Government officers are put to inconvenience. The Corporation, rightly says, "We have no idea as to what are your requirements". So, if this co-ordinating body is constituted under a notification of the Home Ministry, it will have the rightful authority and proper place also in Delhi's administrative life. Thus, all the representatives will be able to state their point of view and decisions could be taken in accordance with the felt needs, and requirements, and considering also the limitations of the public services agencies which are members of this body. The decisions will be binding on all the authorities. As decisions will be implemented immediately and, as you Members of Parliament want, more good could be done to the public.

Mr. Chairman: You mean, a co-ordinating body of the ministries?

Shri Jag Parvesh Chandra: A co-ordinating body of the representatives of the Metropolitan Council, the Delhi Municipal Corporation, New Delhi Municipal Committee, Delhi Milk Scheme, Delhi Development Authority, Land and Development Office, Health Ministry, Works and Housing

Ch. Brahm Perkash: In your memorandum you have mentioned about the powers of the Metropolitan Council. Do you think that the powers of the Metropolitan Council and of the Executive Council have a certain connection and do you think that the Metropolitan Council has got any power in it?

Shri Jag Parvesh Chandra: I would beg the question like this. You Members of Parliament having decided that there shall not be a State Assembly in Delhi.....

Shri Hari Vishnu Kamath: Nobody has decided yet. We are trying to decide; not yet decided.

Shri Jag Parvesh Chandra: Shri Kamath may kindly read article 239(1) of the Constitution. You have already decided. What you may do in future, I do not know. I am here only to respect the wishes of the sovereign body.

Shri Hari Vishnu Kamath: We may amend the Constitution, if necessary.

Shri Jag Parvesh Chandra: That is for you to do. I cannot suggest it.

Shri Hari Vishnu Kamath: Do not worry.

Shri Jag Parvesh Chandra: So, having decided that there shall be no responsible government within the meaning of article 164 of the Constitution, the only alternative is to have some kind of a body in which public association should be there in a very purposeful and meaningful manner and on a very broad basis as well. The Metropolitan Council, not being a responsible body, and the future Executive Council not being responsible to it, the Metropolitan Council cannot have the same powers as Parliament has, or a State Legislature can have under the Constitution. But, as has been made clear in the Lok Sabha by Shri Nandaji and in the Rajya Sabha by Shri Hathiji that the Executive Councillors will function more or less like Ministers, they will necessarily have all the authority, both intrinsic and external; besides, that they will have the backing of the Home Ministry also. So, whatever is lost at the base level of the Metropolitan Council is amply made up by the future Executive Council having the total backing of the Union Home Ministry.

Shrimati Renu Chakravartty: What is it exactly that you are trying to say? You have pointed out what we have done; now, what would you like us to do?

Shri Jag Parvesh Chandra: Pass the Bill immediately and implement it forthright.

Shrimati Renu Chakravartty: What is the principle that you are following?

Shri Jag Parvesh Chandra: Principles as embodied in the Delhi Administration Bill are there and Parliament has said, "We approve the principle; you Members of the Joint Committee can make any consequential changes". In my memorandum I have suggested various consequential changes. I have said nothing against the basic principles of the Bill or against the Constitution which has denied us a State Assembly.

Shrimati Renu Chakravartty: You cannot do anything against the Constitution. I was trying to know what you want us to do.

Shri Shiv Charan Gupta: You have just now stated that it is not possible to give responsible government according to the Constitution. The Metropolitan Council, as envisaged in the Bill, suffers from two important deficiencies—one is that it is not possible to make the Executive Council responsible to the Metropolitan Council and the other is that no financial powers are given to the Metropolitan Council. Do you not envisage that in the actual functioning when the members of the Metropolitan Council are directly elected there may be difficulties between the members of the Metropolitan Council and the Executive Councillors? In that case, in what manner and how do you propose to suggest remedies to overcome that difficulty?

Shri Jag Parvesh Chandra: I am glad that these relevant questions have been asked. As I said before, while we say that there need not be any Assembly in Delhi, as the Constitution categorically states, still we think in terms of the Assembly. That is our difficulty. When a child is dead; its memory should also be forgotten. When the Constitution says

that there shall not be any Assembly for Delhi, *ipso facto* it follows that there shall not be a responsible Government. That fundamental fact is almost a basic truth in Delhi's political life. That has to be fully remembered. Now, Mr. Gupta has raised the point about financial powers. There are three points envisaged in that. As you know, under articles 114 and 266 of the Constitution, we cannot have a consolidated fund because that prerogative is given to the Union Parliament and State Legislatures only. The Metropolitan Council, not being a State Legislature or a corporate body but being something in between a corporate body and a State Legislature, cannot have a consolidated fund of its own. That is the first thing.

Secondly, another basic fact that is forgotten is this. When we do not have the powers to legislate, to regulate even the shopping hours of Delhi shops or other establishments, we want to have the power to pass the Finance Bill which is the highest and the mightiest Bill. When we do not have the powers to legislate, how can we pass the Finance Bill? Further, as provided in article 114, no money can be withdrawn from the Consolidated Fund of India without an Appropriation Bill and the passing of an Appropriation Bill means that there is an inherent and basic power to legislate.

Thirdly, we have no powers of taxation. You might call these unfortunate things. But I am giving the facts as they are. When we have no powers of taxation, and no power of legislation, we just cannot collect money. Yet we want the power to withdraw money. That also cannot be done without an Appropriation Bill.

These are inherent difficulties and consequential limitations which come from the basic fact that there is not going to be an Assembly. If there was going to be an Assembly in Delhi, then all these things which we want will follow. Whatever limitations Mr. Gupta has pointed out are the logical consequence of the Metropolitan Council not being of the pattern of the State Legislature. We should remember that.

As regards the difficulties pointed out by Mr. Gupta, I have a very interesting point to make—it may look unconventional. Clause 21 of the Delhi Administration Bill says:

> "(1) Subject to the provisions of this Act, the Metropolitan Council shall have the right to discuss, and make recommendations with respect to....
>
> (d) the estimated receipts and expenditure pertaining to Delhi which are to be credited to, or is to be met from, the Consolidated Fund of India;"

In other words, that means that the budgetary proposals shall come before the Metropolitan Council and the members of the Metropolitan Council shall have the full liberty to discuss and to make recommendations in regard to the estimated receipts and expenditure. With due respects to you, I doubt if Members of Parliament can make any recommendations in the budgetary proposals. It is true they have the power to sanction or reject the whole of the budgetary proposals. But they cannot make any specific or particular recommendations as to *how* this item or that item should be spent and all that. But here we have been given the power to make recommendations.

Let me give a specific instance. Suppose in Delhi rural area, broadly speaking, the Home Ministry, of the Government of India, makes a proposal that Rs. 10 lakhs have to be spent on roads and only Rs. 5 lakhs on schools and all that. But if the members from the rural area feel that spending so much money on education is not feasible, and that more roads should be built or more money should be spent on food production, under the proposed statute,

they will be entitled to make specific recommendations that money proposed to be spent by the Government of India should not be spent in the proposed manner but that alternatively it should be spent in a different way. Surely, with due respects again to Members of Parliament, I say that members from the Metropolitan Council will have more intimate and personal experience of their own localities where they live and work and they know better how money should be spent than Members of Parliament who, though they live in Delhi, are not so intimately connected with the day to day problems of Delhi. Members of Parliament merely discuss budgetary proposals but they cannot make any recommendation—I am emphasizing it again—but here, we are given the power and the privilege to make recommendations. I am sure Members of Parliament who are also public representatives will feel that the wishes of the Delhi people and Delhi representatives, must be respected and suitable alterations in the budgetary proposals may be made. This attitude will be in consonance with our socialistic principle that democratic planning should be made at the primary basic level. We have not so far achieved that objective. But we might achieve it at the Metropolitan Council level. The wishes of the people and the felt-needs of different localities will have a bearing on the budget proposals suggested by the Union Home Ministry, and Parliament may suitably amend and change the proposals made by the Finance Minister.

Shri Shiv Charan Gupta: My question is this. I want to know whether you have also examined that there is no constitutional bar in creating a fund for the Government of Delhi and withdrawing money from it by a resolution of the Metropolitan Council for spending it on different heads. If there any constitutional bar on creating that sort of a limited power within the present framework of the Metropolitan Council?

Shri Jag Parvesh Chandra: Money by resolution can only be withdrawn by a corporate body like the Delhi Municipal Corporation as provided in the Delhi Municipal Corporation Act. Money cannot be withdrawn from the Delhi Fund, or whatever you might call it, unless it is in consonance with the specific provisions of the Constitution. There must be an Appropriation Bill and we cannot have an Appropriation Bill because we have no powers to legislate. So, to think luxuriantly that by way of a resolution we can withdraw money, is not constitutional. If you can find a way out, what objection can we have?

Shri Shiv Charan Gupta: As far as the corporate bodies are concerned, they have got powers under which money is received and they have got powers by which they can spend the money also. I only want to know whether you have examined that according to the Constitution whether it is possible or not to create a separate fund for the Government of Delhi and to withdraw money from it by a resolution of the Metropolitan Council?

Mr. Chairman: There are only two funds, the Consolidated Fund of India and the Consolidated Fund of States. Any grant to the Delhi Municipal Corporation has to be met by the concerned Ministry out of the Consolidated Fund of India.

Shri Shiv Charan Gupta: I want to know whether he has examined the point whether constitutionally that is possible or not.

Mr. Chairman: He says that it is not possible to do so.

Shri Shiv Charan Gupta: He has not categorically said so.

Shri Jag Parvesh Chandra: I categorically emphasize that no money can be withdrawn unless an Appropriation Bill has been passed. Money can be withdrawn by way of a resolution *only* in the case of corporate

bodies. But as the future Metropolitan Council will be a part of the Indian Union, it cannot have a fund as distinct from the Consolidated Fund of India. We shall be a part of the Indian Union. We forget that. Whereas we want to replace the Delhi Administration, still we want to have the power of withdrawing money as any corporate body. That is a contradiction in term and a clash between two ways of thinking.

Shri Shiv Charan Gupta: Have you examined whether there is any limitation in the Constitution for making Executive Councils responsible to the Metropolitan Council?

Shri Jag Parvesh Chandra: Articles 163 and 164 clearly say that there shall be a Council of Ministers with the Chief Minister at the head to aid and advise the Governor in the exercise of his functions and that they will be collectively responsible. A Ministry can only be collectively responsible if it is constituted within the framework of Article 164. That means, only a State Legislature can have a responsible Government and a Metropolitan Council cannot be. The Indian Constitution does not recognise a Metropolitan Council; it is only a novel experiment or a new creation. It is not recognised or envisaged by the Constitution.

Shri Shiv Charan Gupta: You mean to say that according to Constitution, a Metropolitan Council of the type envisaged in this Bill cannot be vested with this responsibility?

Shri Jag Parvesh Chandra: Only a State Legislature can do. At present there are two political agencies—Parliament and State Legislature. A third public institution in the Parliamentary parlance is not as yet recognised by the Constitution. Ministerial collective responsibility can only be given to Parliament and State Legislatures. We have to function within the four corners of the Constitution.

Sardar Kapur Singh: In the long list of amendments which you have submitted for our benefit, on page 3, under item 9, you suggest that, in Section 13, Clause 2, in place of the word "a" occurring in line 1, the word "the" be substituted and under "REASONS" you have said that the article "a" is grammatically incorrect. I learnt my Nesfield from the same teacher as you did, and I seem to remember that "a" is a singular adjectival article which can grammatically qualify any noun and 'the' is a particularising definite article. So it may be grammatically inappropriate but how is it ungrammatical?

Shri Jag Parvesh Chandra: The word 'inappropriate' is more logical than 'incorrect' in the chaste English language.

Shri Hari Vishnu Kamath: But English is going; so do not bother about it.

Shri Govindan Nair: When we are clear about the limitations of the Metropolitan Council, why is it that you want to change the name as Delhi Government Bill?

Shri Jag Parvesh Chandra: Even in the atmosphere of hard logic, there is always a place for some sentiment. I was appealing to your sentiments first and then to your logic. Something new is being created in Delhi. It may not be so satisfying to all as it should be. But it should create a senge of belonging among the people and a sense of satisfaction among political workers. People will say that formerly it was merely an administration but now it is a Government. Administration is supposed to be merely a department of the Governmental apparatus, but Government is definitely a political entity, created for political purposes. Certainly I do feel that, if this administration is going to be run by the elected people, then there is no place for the word Administration in the new set-up. Administration is only a coercive apparatus of the State authority. Administration is a part

of the Government and not the whole of Government and if, as the hon. Minister told us in Parliament, the Executive Councillors are going to function more or less like Ministers, it is appropriate and essentially logical that you should term this Administration into a Government. Lastly, the word 'Government' will definitely have a greater impact on the people for its authority is felt much more. Indeed, it will give us some kind of political respectability.

Shri Govindan Nair: You seem to be much more clear about the set-up: this Metropolitan Council has no authority; it cannot deal with finances. All these things you have made very clear in your earlier statements. Under such a set-up, just by giving the name 'Government', do you mean to say that you can fool the people of Delhi?

Shri Jag Parvesh Chandra: I have never said that it has got no authority. I am prepared to say and prove it too that the future Metropolitan Council—not the deliberative part of it but the executive side of it—will have more powers than the erstwhile Delhi State Assembly. It is a matter of fact and not a mere matter of conjecture or opinion. Formerly, so many municipal bodies were there and consequently many clashes arose between the Delhi State Government and the local bodies as they were not under it. Further, at that time all the powers of the President, under Article 239, were vested in different Ministries. Those who were running the Delhi Government knew that everything was delayed though not wilfully. But it happened to be so. Whereas now we are told that almost all the powers of the President will be given to the Executive Councillors. When the Executive Councillors are being given so much of power, to say that the future Metropolitan Council will have no authority, is hardly appropriate. I wish to emphasise that, so far the capacity to administer is concerned, the authority of the Executive Councillors will be complete and the co-ordination between the Executive Councillors and the Home Ministry will be of a very high order. I can summarise, if you will permit me.

As I told you once before, in the Delhi Assembly, although we had all the paraphernalia of a State Legislature, for every small thing the Home Ministry was there to interfere. I know; it happened twice. Once I moved amendments to some Bill, they were not accepted by the House. The Bill went to the Home Ministry for final approval. What I mean is that the Bill, having been passed unanimously by the State Assembly, used to go to the Home Ministry for final approval although the Bill had been previously approved by it when it was sent by the Delhi Government. I remember, I sent a letter to the Home Ministry saying that these were my amendments and they had not been accepted. The Bill was not accepted by the Home Ministry with the remarks that the Bill should be so amended in such and such manner. Even when there was the Delhi State Assembly, it would not be wrong to say that it was the Home Ministry which was legislating more than the State Assembly. It was true that the Delhi Assembly was a responsible Government. It was, if I may say so, responsibility without power and now we shall have power without responsibility.

Shrimati Renu Chakravartty: You began saying that you found that there were duplications, delays and too many authorities to which the people of Delhi had to go and, therefore, it was very inconvenient. Now you are quite satisfied with the Delhi Administration becoming a part or department of the Government. Yet, at the same time, you want that it should be a Government. There are contradictions in this. I wanted to ask you a question. What I would like to know is this. Instead of trying to draw a parallel as to what was followed in the part C States and now, in view of the fact that you would like

that there should be a Government with a unified control or unified authority, doing away with duplication and running about which you have experienced for so long, what is the difficulty in being able to have a better set up keeping Government also? It is to be seen in other States with even better provisions arising out of experience, rather than have this kind of another department coming in between the Government of India and the Delhi Municipality and Corporation. You have also enumerated the other authorities that are already there. Having started off with that position, that you find it difficult to get over this duplication, appointment of other authority in between, how will it solve this problem?

Shri Jag Parvesh Chandra: We have been told so many times that there should be a unified control and unified administration. Communist party has a weakness for this slogan. I have been asking them to tell me concretely what pattern of Government or administration they would like to have which could be truly called unified administration.

Shrimati Renu Chakravartty. We are asking you.

Shri Jag Parvesh Chandra: But nobody is able to come out with the pattern of Government which has the element of unified authority. It is merely a slogan. Maybe there is some purpose in it. But it is a slogan of escapism. So far as the multiplicity of authorities is concerned, the honourable member knows that in an expanding metropolis local authorities are bound to be there for specific purposes and particular objects. That is all over the world in all the capitals. No one authority can meet the entire needs of the entire metropolis which is sprawling and expanding in all directions. These local bodies have to perform various functions in consonance with the different needs of the metropolis. So far as the broad question of duplication of authority is concerned that is why I have suggested in my memorandum that there should be a coordinating Committee. There are three basic facts in Delhi's social and economic life. The first basic point is that it is a sprawling, expanding metropolis. That is point number one. Point number two is that as a logical consequence of this fact, there are bound to be certain authorities which are created for some specific and particular purposes. The third fact is that there might be some duplication of authority. That will be there. For example, let us take the case of land. Land vests in Land Development Office in some cases. Land in Delhi, I am told, vests in four or five different authorities. Sometimes it is not known to which department of the government, whether it is NDMC, or Land Development Office or D.M.C. where land vests. Unnecessarily, much time is wasted and duplication of authority follows from multiplicity of authorities and multiplicity of authorities follows from Delhi being a metropolitan town. Therefore, it becomes essential that there should be a coordinating authority, at whatever level it may be to achieve the desired result which I have in mind. Such a coordinating body will meet the needs. If this suggestion to have a coordinating authority is accepted, then all the evils and all the shortcomings that the honourable member has in mind will be removed. Lastly we are told that the metropolitan council will be a department of the Government. I strongly differ from such an opinion.

Shrimati Renu Chakravartty: It is your opinion. I never said like that. If you have misunderstood me, please clarify your position.

Shri Jag Parvesh Chandra: This Metropolitan Council will not be the traditional type of responsible Government because your Constitution forbids it. That is the basic fact. Not being a responsible Government it will still be a representative Government. Today Delhi Administration is not a representative Government in

any sense of the term. I don't want to say anything more. The Delhi Administration refuses to talk to the Members of Delhi in Parliament. Even in the present emergency, when Pakistan was attacking India, the Chief Commissioner never called a meeting of all the Delhi M.Ps. to know what their advice was. That is the bureaucratic character of the present administration. But the Metropolitan Council will be a representative Government in the sense that the four executive councillors who will be selected by the President from among the elected representatives of the people on the basis of direct franchise will be running the administration. Secondly, the President's entire powers are going to be given to the Executive Council under Article 239. The President is enjoined upon by the Constitution to administer the Union Territories whatever way he likes. All the powers of the President in relation to the Delhi Administration which today vest in diversified ministries will be transferred to the Executive Council which means that all the decisions will be taken in the Old Secretariat and not in the North Block. So, how it is a department of the Government, I do not understand it. Indeed, it is going to replace the entire administration of Delhi.

Shrimati Renu Chakravartty: You may know better than me. Therefore I must clarify my point. You said, you felt that there are duplicating Ministries and Departments, of Delhi Administration and Government of India. The only question is of coordination. If there is coordination there is no duplcation. If there is coordination at the level of the Delhi Metropolitan Council it will be a question of discussion, it will be another level of committee set-up. That committee's recommendation will go again to duplicating ministries and dup'icating bodies and that will be the authority to execute it. That is point number one. Secondly, instead of having a directly elected member to become executive councillor, what is your opinion with regard to the reason why it is necessary to have a nominated councillor as executive councillor?

Shri Jag Parvesh Chandra: There is at present duplication of authority between Government of India and the Delhi Administration. This need not be so.

Shrimati Renu Chakravartty: The point is this. Within the Government of India itself, there is the C.P.W.D., there is the Works and Housing Ministry and various agencies for the same purpose. There is duplication. Just by having such coordinating committee how will it help you? You are going to have Metropolitan Council on top of the Delhi Administration. We have our own experience.

Shri Jag Parvesh Chandra: I have been repeatedly saying that there are different authorities enjoined with diverse functions. There is the Delhi Development Authority. There is the Land and Development Office. There is the Delhi Municipal Corporation. The confusion in public service arises because all these authorities are functioning in isolation. Nobody knows what the other authority is doing. Problems are so directly inter-linked and inter-related and integrated that even the best of work done by one authority is nullified by the absence of any cooperative effort on the part of the other to serve the needs of the people. I will give you one example. Houses are built. They remain unoccupied because there is no water and no electricity. If the W.H.S. Ministry says in advance: "Look here, we are going to build ten thousand tenements in the year 1966," Mr. Gujral, if he were in the Delhi Electric Supply undertaking, might say: "I cannot give you electricity, so go slow; in that area with your building activity". The trouble today is arising that all these authorities, although doing useful work individually, are functioning in isolation.

And if a co-ordinating committee is established, all the fears and doubts of the hon. Member, I can assure her, will be removed, if this body becomes a very high powered one or something like that.

The hon. Member stated that the future Metropolitan Council will be merely a committee for discussion. My position is very clear. The Metropolitan Council admittedly will be a forum for discussion. That is the preamble of the Bill also. It is only going to be a forum for discussion, because our Constitution has placed that limitation so far as Delhi is concerned, under article 239(A). Although it is only to be a forum for discussion; yet all the other paraphernalia of a State Assembly, like asking questions, moving adjournment motions, etc. will be there. But the actual decisions shall be taken by the Executive Council which will be in charge of running the administration.

But so far as the co-ordinating committee is concerned, that will not be on the deliberative level but on the executive level. At the executive level we want that all the local bodies and authorities and the Ministries in the Government of India which have any relevancy to the work concerning Delhi should work in co-ordination.

Shrimati Renu Chakravartty: To whom will they be responsible? To this co-ordinating body?

Shri Jag Parvesh Chandra: Let me make it very clear. Nobody is going to be responsible to the Metropolitan Council, whether one likes it or not. Indeed, nobody is going to be responsible to the Metropolitan Council statutorily or constitutionally. But morally, yes; and politically, affirmatively yes. Though the Executive Councillors will be nominated by the Home Ministry, no Executive Councillor, however strong or mighty he might be, can stay even for a minute if the Metropolitan Council censures him. At least that is the code of conduct that we have at present in our public life. But legally and constitutionally, if the Executive Councillor's proposal is defeated by the metropolitan council, he cannot be turned out. Surely, the President of India who is elected by the Members of Parliament and of the State Legislative Assemblies, is under the Constitution responsible for the administration of all the Union Territories. How can we imagine even for a minute that the President who is the custodian of this Constitution is going to let an Executive Councillor function in an irresponsible manner, whose actions are divergent to the views of the people, although legally and statutorily he is not responsible to the metropolitan council? So, morally and politically, the Executive Councillor, although nominated by the President, cannot stay there even for a minute. So the fear that the Metropolitan Council will merely be a debating society, or a body without soul, does not carry much weight when it comes to concrete, practical things.

Then the hon. Member raised a question as to why some of the members should be nominated. I would draw her attention to section 3 of the Government of Union Territories Act, which she herself has passed, which says:

> "The Central Government may nominate not more than three persons not being persons in the service of Government to be members of the legislative assembly of a Union Territory."

So the principle of nomination has already been accepted by Parliament in the case of a State Legislature of Union Territories. Therefore, the question of accepting this nomination in the case of a Metropolitan Council should not be objected to.

Shri R. V. Bade: In page 8 of your memorandum you have stated:

> "With a view to ensuring that the Metropolitan Council has full

supervisory control over the various autonomous boards, which are being placed under it, specific arrangements should be made that the estimates of receipts and expenditure of bodies like the Delhi Development Authority, the Electricity Supply Undertaking, the Transport Undertaking and the Delhi Milk Supply Scheme should be at least discussed, if not formally approved by the Metropolitan Council."

You have not suggested any amendment regarding section 21 on page 8 of the Bill where it is said:

> "Subject to the provisions of this Act, the Metropolitan Council shall have the right to discuss, and make recommendations with respect to, the following matters in so far as they relate to Delhi".

The Communist Party have given a memorandum in which there is one suggestion. I want to know whether you think it proper or not—that is, instead of discussing and making recommendations only, it should discuss and take decisions regarding the estimated receipts and expenditure pertaining to Delhi which are to be credited to, or is to be met from, the Consolidated Fund of India. Why recommendations only; why not decisions? And if it is to make recommendations only, don't you think it would be a recommending society only? The Metropolitan Council will be—if not a debating society according to you—a recommending society only.

Shri Jag Pravesh Chandra: The Metropolitan Council will be a recommending society to the sovereign Parliament. That by itself is a privilege, that we have the right to recommend to a sovereign body.

Shri R. V. Bade: Instead of discussing and recommending, why not discuss and take decisions?

Shri Jag Parvesh Chandra: Then please give us the State Assembly. You, the Members of Parliament, are debarring us from having an Assembly; I have not said that we do not want it. But you, gentlemen, have decided that there shall not be a State Assembly for Delhi. I am here to abide by the wishes of the sovereign body. Once you give us a State Assembly, I shall be happy with your decision.

Shrimati Renu Chakravartty: You felt that it was an improvement on the powers of Parliament. You made a statement that "now we shall have been even greater powers than what the Members of Parliament have, of being able to recommend to the Government things with regard to the budget".

Mr. Chairman: He said Delhi Administration; he did not rerer to Members of Parliament.

Shri Jag Parvesh Chandra: I do say that if I am to choose between this Metropolitan Council and the erstwhile Delhi State I would choose the Metropolitan Council.

Shrimati Renu Chakravartty: That is one part. You said "with all deference to Members of Parliament, you don't have a right to recommend, because there is hardly any recommendation which is carried out". And you said that it has a better status.

Shri Jag Parvesh Chandra: In terms of parilamentary thinking I said I am making a novel suggestion. Maybe it is futile or may be it is fruitful, I do not know. But the Members, with due respect to you, only discuss things. Parliament may have the right to approve, but it has no power to change anything. The moment it changes, the Government falls. In the case oif the Metropolitan Council, when we recommend changes in the Budget proposals, Government does not fall.

Shrimati Renu Chakravartty: You have not got one the thing which we have. That is, the majority party

has the right of forming the executive, and the executive carries out, and must carry out, the wishes of the majority in the House. That is the basic difference between the two. You have no such thing.

Shri Jag Parvesh Chandra: But that is because of the Indian Constitution.

Shri R. V. Bade: On page 8 of your memorandum you have said that on the various autonomous boards the Metropolitan Council should be invested with supervisory control. In what way will there be supervisory control?

Shri Jag Parvesh Chandra: As I said before, at present authority is being exercised over most of these undertakings by the Home Ministry under article 239. Under this article the President has got complete powers over all Union Territories. Most of this authority will now be given to the Executive Council. Let me state the position of the Union Territory Legislatures *vis-a-vis* the Union President. Section 15 of the Government of the Union Territories Act says:

> "Notwithstanding anything in this Act, the Administrator and his Council of Ministers shall be under the general control of and comply with such particular directions, if any, as may from time to time be given by the President."

Thus, in the State legislatures of the Union Territories, the President has got complete and absolute control; but here, all the powers of the President are being given to us. So, we shall function almost like an independent unit in all administrative matters.

Shrimati Renu Chakravartty: Take the case of the DESU or any other autonomous board or body. What will be the powers of the President? How will he exercise those powers?

Shri Jag Parvesh Chandra: All these authorities in Delhi have their own different functional authorities. At present, the DESU is under the DMC. So, if and when the DESU is put under the charge of the Delhi metropolitan council by amending the Corporation Act, then it will function under the future Executive Council.

These days, the DDA is under the control of the Union Health Ministry, if, I am correct. When the Metropolitan Council comes into being then under article 239, the Health Ministry or the Home Ministry will delegate all its powers in regard to the DDA to the Executive Council. So, we immediately come into the picture. The future executive council will be replacing most of the authorities in the various Ministries in the Union Government plus the Delhi Administration.

श्री नवल प्रभाकर : यह जो मौजूदा बिल है इसको आप जैसा का तैसा मानने की बात कहते हैं । मान लीजिए कि यह कानून बन जाता है और उस हालत में आप के सामने कोई एक बिल आता है और उस बिल में आप कोई संशोधन करके पार्लियामेंट को भेज देते हैं और वह आपका संशोधन नहीं माना जाता, और वह बिल फिर वापस आ जाता है । उस हालत में आप क्या सोचेंगे ?

Shri Jag Parvesh Chandra: With due respect to the hon. Member I would say that he has made an erroneous statement. The Bill will be sent by Parliament to the Metropolitan Council before passing it; the Metropolitan Council will discuss and make its recommendations and send it back to Parliament. But Parliament will not return it back to the Metropolitan Council. When the Delhi State Assembly was there, the Home Ministry used to return a Bill to the Assembly which it did not approve. But now, the job of the Metropolitan Council will end once it discusses and makes its recommendations. It is for you Members of Parliament to accept our suggestions and recommendations or not. The Bill will not go back to the Metropolitan Council. It used to go back

Spokesman:

Shri Baldev Sharma.

(The witnesses were called in and they took their seats).

Mr. Chairman: How are you interested in this, as merchants?

Shri Dayal: It concerns us deeply because the population, as you are aware, largely consists of either office-going people or persons working in establishments and shops engaged in trade and commerce, and the economy of Delhi largely depends upon its trade and commerce. Therefore, it is our concern, and we want to associate ourselves. We are grateful to you for giving us an opportunity to express our views.

At the outset I must say that the present Bill does not satisfy the aspirations of the people. What the people of Delhi require is a full-fledged Legislative Assembly with a Council of Ministers and a Lt. Governor. We had that pattern in Himachal Pradesh.

Mr. Chairman: According to the Constitution, Delhi cannot have a full-fledged Assembly and a responsible Ministry. That can be done only if the Constitution is amended. We are now circumscribed by the Constitution.

Shri Dayal: That is our desire, that the Constitution should be amended. About the Bill itself, it needs certain important changes. For instance, we notice that there is no link between the executive officers and the members of the Metropolitan Council. That is a snag. The duly elected representatives of the people should have a right to participate fully in the deliberations of the Council. They are mere advisers, they are not so much responsible to the people.

For instance, the budgetary powers are not given to the members of the Metropolitan Council. They can only discuss it, but not approve of it. They can only recommend. Actually, when we are having a Metropolitan Council, and it is on the basis of democracy, it is very desirable that it should be given the powers to approve the budget.

Mr. Chairman: That means responsible government. It is not possible under the Constitution.

Shri Dayal: It cannot be said that by merely giving that power of approval, it is given responsible government. In NDMC also we approve the budget. Even as a nominated body government have given powers. My feeling is that government are not clear in their minds whether Delhi should be treated on par with other states. I am sorry to state that Delhi has been treated as a delinquent child. They have no confidence in the people of Delhi. My submission is that the budget approval powers should be given to the representatives of the city. We should have a chief executive councillor who should be responsible to the House and he should also have his own team. He should be given the powers to nominate persons. We have certain autonomous bodies and they function separately but their budgets should also be discussed and approved by the members of the metropolitan council. We as traders would like the Bill to be amended in that way, we form the majority of citizens of Delhi and we should be given adequate powers on that council.

Mr. Chairman: You can contest and come in the elections. The provision for nomination is there for interests which are not represented. Was there such a provision before?

Shri Dayal: Yes, Sir; the aldermen are also elected on that basis in the earlier municipal committee.

Mr. Chairman: As merchants?

Shri Dayal: We had Baba Bachitar Singh; my predecessor was a merchant.

Mr. Chairman: Were the merchants as such given reservation in the Delhi Municipal Committee? Is there any provision for merchants separately?

Ch. Brahm Perkash: There was provision in the Act before the 1958 Corporation Act came in. All these bodies were given special representation under that Act.

You might have perhaps read the statement of the Home Minister and you might also have gone through the SRC report. There an observation is made that the erstwhile Delhi State Government, 1952 to 1956, had miserably failed to satisfy the aspirations of the Delhi people. Now, I would like to ask you because you represent practically the whole trade of Delhi, what you have got to say about it?

Shri Dayal: When the Government decided to discontinue this set up, neither the traders nor the other people were consulted. We had submitted so many memoranda to the Home Minister and to the government, it may be called a white elephant or by any other name, it did satisfy the aspirations of the people. I can quote several instances to prove that the Delhi people had gained by that popular body.

Shri Sharan: May I say a few words? I do not know whether the Constitution was the same before or it has been amended.

Mr. Chairman: It was amended in 1962.

Shri Sharan: Delhi was given a democratic set-up. If it is so desired, another amendment can be made.

Mr. Chairman: That is beyond the scope of this committee.

Shri Sharan: I do not know. During the period when that assembly existed, I should say that trade is especially grateful for all the protection it

received during that time. If the democratic set up was not there, much harm could have been done. Problems such as the inter-state sales tax and local sales tax arose. There were problems with our neighbouring states. While the country has got a right to have an elected government, Delhi is denied that privilege and no reason is given for denying Delhi this right.

Shri R. V. Bade: The amendment of the Constitution may not be within the scope of the committee. But we can say that the sense of the committee is that the Constitution may be amended.

Mr. Chairman: We are concerned with the Bill as it is and how to improve it. I do not think we can recommend for the amendment of the Constitution. Regarding the sense of the committee, we can see after the evidence is over.

Shri Sharan: At present Delhi has got so many bodies which are independent that no work can be completed and it takes a very long time for coordination. We have suffered a lot because of this. I do not think the proposed metropolitan council can remove that lacuna.

Mr. Chairman: What is your remedy?

Shri Sharan: The metropolitan council should be given the entire powers in all matters connected with Delhi, over all these various government departments.

As my learned friend was saying, the erstwhile Delhi Municipal Committee was having reservation for trade, labour and industry—two for trade, one for industry and two for labour. I want to have it restored. Regarding the Delhi Municipal Corporation, we were given to understand that since it is based on adult franchise, even the trade representatives will have to come by election. There was a provision for six aldermen elected by the Corporation, but experience has shown that they are taken from parties and their allegiance is more towards politics than trade. So, provision should be made for nomination of the representatives of trade.

Mr. Chairman: But your friend expressed the opinion that all nomination should be done away with.

Shri Sharan: I am for nomination.

Shri Mittal: I represent the Federation of Sadar Bazar Trade Associations. There is a provision for nomination of 5 members by the government. We feel this nomination should not be done by the government, but they should be elected by the Metropolitan Council. Also separate representation should be given to trade, labour and industry.

Mr. Chairman: Your friend says if they are elected by the Metropolitan Council, again politics will come in.

Shri Mittal: If you specify in the Bill that two people are to be elected from trade, two from labour and two from industry, definitely they will have to provide those seats to them.

Mr. Chairman: His fear is that they would be elected by the parties. If the Congress is in a majority, they will be elected from the Congress. If the Jan Sangh is in power, they will be from Jan Sangh and so on.

Shri Mittal: But they will be from the trade, whatever may be the party in power.

In this Bill you have provided for reservation for scheduled castes. On that very basis, because we constitute a major portion of the population of Delhi, trade, commerce and industry should be given separate seats and that should be specified in the Bill.

Mr. Chairman: Is there any trader who will have no party affiliation? Who is to judge them?

Shri Dayal: The public will judge them. For instance, take the medical profession and other professions. There are independent persons who are chosen by the party, but they function in such an independent manner that they feel honoured that the party has chosen them and the party also is proud of them.

Mr. Chairman: Would you give this power to the Metropolitan Council or to Government?

Shri Dayal: If that power is given to the elected members, it would have better force.

Mr. Chairman: But the other opinion of politics coming in is also there.

Shri Dayal: Everybody has the right to express his opinion. That is why we are very grateful to you for giving us this opportunity to express our views. We do not want to be silent spectators.

Shri Sharan: In my opinion, it should be reserved for representatives to be chosen from the trade associations.

Mr. Chairman: That is another suggestion. There are so many trade associations.

Ch. Brahm Perkash: Previously when that provision was there, actually they had their own electoral colleges which elected the representatives for trade, etc.

Mr. Chairman: Is there one central federation of chambers of trade for Delhi?

Shri Sharan: No, but all traders are registered under the Shops and Establishments Act. Those registered under the Act can choose from themselves two representatives.

Mr. Chairman: That would not be nomination, that will then become election.

Shri Sharan: It will be election then by the trade associations. That is one way. The second one can be that all the trade associations in Delhi which are registered with the Registrar of Trade Unions will call upon those societies to elect one or two people.

Mr. Chairman: Would you be satisfied if instead of nomination the representatives of the trade are elected by the trade associations?

Shri Sharan: Yes.

श्री नवल प्रभाकर : पहले तो आपने अपने मैमोरैंडम में कहा है कि हमें एक फुल-फ्लेज्ड असेम्बली चाहिए, जिसमें कांउसिल आफ मिनिस्टर्स हो और लेफ्टिनेंट गवर्नर हो। लेकिन उसके बाद इस बात को छोड़ते हुए आप यहां यह कह कर तसल्ली कर लेते हैं कि :

"There should be a Chief Executive Councillor to work as the leader of the House;"

दूसरे आप कहते हैं कि :

"The Executive Councillors should be responsible to the Metropolitan Council."

तीसरे आप कहते हैं कि :

"The Metropolitan Council should have financial power."

अगर आप की ये तीन बातें मान ली जाती हैं तो आप अपनी पहली मांग को छोड़ देते हैं ?

श्री दयाल : जैसा मैंने शुरू में कहा था, दिल्ली की जनता यह महसूस करती है कि उनको किसी किस्म के अख्तियारात नहीं दिए जा रहे और दिल्ली के साथ यह जो एक्सपैरीमेंट किया जा रहा है, वह फेल होगा। लेकिन मुझको चेयरमैन साहब ने रोक दिया और कहा कि इस वक्त हम सिर्फ दिल्ली एडमिनिस्ट्रेशन पर मशविरा लेने को बैठे हैं, इसलिए इस वक्त इसी के बारे में बात की जाए।

इस सिलसिले में मैंने अपनी बात कह दी। मेरी आप लोगों से दरख्वास्त है कि अगर हो सकता हो तो गवर्नमेंट को रिकमेंड किया जाए कि वह इस बिल को वापस ले ले क्यों कि यह दिल्ली की जनता की मांग नहीं है। दिल्ली की जनता की तो यह मांग है कि उनको लेजिस्लेटिव असेम्बली दी जाए, काउंसिल आफ मिनिस्टर्स दी जाए और लेफ्टिनेंट गवर्नर दिया जाए। और बुरा मानने की बात नहीं है, मैं तो कहूंगा कि हमारा लेफ्टिनेंट गवर्नर नान आफिशियल होना चाहिए, हमको आफिशियल बिल्कुल नहीं चाहिए। लेकिन चूंकि चेयरमैन साहब ने मुझे रोक दिया, इसलिए मैंने अपनी यह बात कहना मुनासिब नहीं समझा। लेकिन यह बात याद रहेगी कि आप जो तजुरबा कर रहे हैं उसमें जनता के नुमायन्दे भी दे रहे हैं और उनको इख्तियारात भी नहीं दे रहे हैं। इसलिए यह तजुरबा नाकामयाब रहेगा और शायद आप को दो तीन साल के बाद यह जरूरत मालूम होगी कि इससे कोई काम नहीं हुआ और इसको खत्म कर देना चाहिए, कोई नया तजुरबा दिल्ली के साथ करना चाहिए।

नाम आप इसको चाहे कुछ दे लीजिए चाहे गवर्नमेंट कहिए, चाहे लेजिस्लेटिव बाडी कहिए या दिल्ली एडमिनिस्ट्रेशन कहिए इसके कोई मानी नहीं हैं। आप चालीस आदमियों की नामिनेटिड एडवाइजरी काउंसिल बनाते हैं। वह चालीस की हो या पचास की हो। वह नामिनेटेड ही रहेगी। अभी भी होम मिनिस्ट्री की एडवाइजरी कमेटी है, उसमें कुछ नामिनेटेड मेम्बर हैं कुछ एक्स आफिशियो मेम्बर हैं। जो आप बनाने जा रहे हैं वह तो होम मिनिस्ट्री की एडवाइजरी कमेटी से भी बोदी चीज होगी। इसको कोई अख्तियार नहीं होंगे। इसलिए यह तजुरबा नाकामयाब होगा। अगर आप उस बाडी को बनाते हैं तो ऐसा बनावें कि उसके सदस्यों को जबान खोलने का अधिकार हो। जैसा कि मेरे दोस्त ने कहा कि अगर इन लोगों को चुना जाएगा तभी वे अपने साथियों के साथ बैठ कर यह महसूस कर सकेंगे कि वे भी सही मानों में नुमायन्दगी करते हैं। इसी वजह से तो मैंने अपनी चार पांच बातें कही हैं।

दिल्ली में आथारिटी की मल्टीप्लीसिटी की वजह से खास तौर से बिजनैस वालों को बड़ी दिक्कत रही है। एक जगह से लाइसेंस मिलता है, दूसरी जगह से बिजली मिलती है और तीसरी जगह से कोटा मिलता है। । इस तरह दस जगह धक्के खाने पर काम पूरा होता है। जब मेट्रोपोलिटन काउंसिल की बात शुरू हुई थी तो सब ने कहा था अब एक ही छत के नीचे हमारा सारा काम हो जाएगा और हमको सहूलियत रहेगी। लेकिन अगर आप अलग-अलग आटोनोमस बाडीज को रखते हैं तो हमको कोई सहूलियत नहीं मिलेगी, न इन पर मेट्रोपोलिटन काउंसिल का अख्तियार और जोर रहेगा। इसका असर यह होगा कि जनता को काफी तकलीफ उठानी होगी और उनको कोई संतोष नहीं होगा।

Mr. Chairman: Your suggestion is that this Bill may be withdrawn.

Shri Dayal: That is my first suggestion. If this is beyond the scope of this Joint Committee, then I do not emphasise that.

श्री नवल प्रभाकर : आपने मेट्रोपोलिटन काउंसिल के बारे में अपने विचार बता दिए। कृपया यह भी बता दीजिए कि सन् 1952 से 1956 तक दिल्ली में असेम्बली थी और पापुलर सेट अप था, उसके बाद वह हमसे ले लिया गया, उसके बाद दस वर्ष गुजरे हैं। ये वर्ष इंडस्ट्री के लिये कैसे रहे, उसका फर्क बता दीजिए।

श्री दयाल : सवाल बहुत मुनासिब है और अगर आप मुझको वक्त दें तो मैं आपको पूरी दास्तान सुनाऊं। लेकिन थोड़े में यही कहा जा सकता है कि ये दस साल हमारे लिए काफी दुःख के रहे हैं। आपको मालूम है कि इंडस्ट्री को कितनी परेशानी उठानी पड़ी है। जो जनता के नुमायन्दे हैं, जो सियासत में कदम रखते हैं जिनका मेल जोल सेंटर से है वही अपनी बात नहीं मनवा सकते हैं तो हमारी आवाज जो कि नक्कारखाने में तूती की आवाज की तरह है उस पर कौन ध्यान देता है। इसलिए हमको बड़ी परेशानी उठानी पड़ी है।

हमारे लिए यह सोचा जाता है कि दिल्ली में इतने होशियार आदमी नहीं हैं जो कि जनता की नुमायन्दगी कर सकें। हिन्दुस्तान में और सभी जगह ऐसे आदमी बसते हैं लेकिन दिल्ली के लिएसोचा जाता है कि यहां ऐसे लोग नहीं हैं जो जिम्मेदारी से काम कर सकें और जिन पर जनता की सेवा करने का भरोसा किया जा सके। मैं अपनी बड़ाई की बात नहीं करता। लेकिन मैं कहना चाहता हूं कि हम किसी के पीछे नहीं हैं। मैंने हिन्दुस्तान के और हिस्सों की असेम्बलियों को जाकर देखा है। हमारे यहां के लोग उनसे किसी कदर पीछे नहीं हैं।

यह बात तो और है कि आप कहें कि दिल्ली मेट्रोपोलिटन सिटी है, कैपीटल सिटी है। यहां दूसरी जगहों जसी गवर्नमेंट की जरूरत नहीं है। लेकिन यह कहना उचित नहीं होगा कि यहां के लोग इस जिम्मेदारी को निभाने के योग्य नहीं हैं।

दिल्ली में अपनी हुकूमत न होने का नतीजा यह है कि जो इंडस्ट्री कि दिल्ली के अन्दर लगनी चाहिए थी वह पंजाब में फरीदाबाद में लगी हुई है। अगर हम कुछ कहें तो सेंटर कह देगा कि सारा हिन्दुस्तान हमारा है, अगर फरीदाबाद में इंडस्ट्री लग गयी तो क्या फर्क हो गया। लेकिन हमको नैरो सरकल में भी चलना होता है। आपने भी अलग अलग प्रान्त बना रखे हैं और आप अलग अलग प्रान्तों की जरूरत महसूस करते हैं, जिसे आप डिसेंट्रलाइजेशन कहते हैं। दिल्ली की खुशहाली भी दिल्ली के विकास पर मबनी है। अगर आप दस साल और दिल्ली को हुकूमत का आधार नहीं देंगे तो यहां की हालत और खराब हो जाएगी। वैसे जो मेहनती आदमी है वह तो कहीं न कहीं उद्योग लगा ही लेगा। वह केरल में उद्योग लगा सकता है। लेकिन दिल्ली वालों को फायदा क्या होगा।

श्री रामचन्द्र बिठ्ठल बड़े : आप रिजर्वेशन की मांग करते हैं शिड्यूल्ड कास्ट और शिड्यूल्ड ट्राइब्स के लिए। अगर आपको नामिनेशन की जगह जिस प्रकार का रिजरवेशन मेट्रोपालिटन काउंसिल में दिया गया है, दे दिया जाए तो आपको संतोष हो जाएगा ?

Mr. Chairman: He has said that if they are elected by the traders' representatives they will be satisfied.

Shri R. V. Bade: I want to know whether they want reservation by nomination or by election just as in the case of Scheduled Castes and Scheduled Tribes.

Mr. Chairman: They want election by registered trade associations.

Shri R. V. Bade: Why should they not be elected by the public as members belonging to Scheduled Castes or Tribes are elected by the public?

Mr. Chairman: They want the traders to elect their representatives.

Shri R. V. Bade: Does it mean that the interests of the traders are different from the interests of the public? Are they at cross-roads?

Shri Saran: Their interests are naturally different.

Shri R. V. Bade: How?

Mr. Chairman: You need not argue with the witnesses.

Shri R. V. Bade: If the interest of the trade and the interests of the public are at cross-roads, it should not be encouraged.

Mr. Chairman: It is for you to decide.

Shri Saran: I may clarify the position. Their interests do not clash. But, sometimes a case may go by default. A person, however clever he may be, he may belong to a political party.....

Mr. Chairman: We have discussed that point.

Shri Dayal: I think my hon. friend is not satisfied because he thinks that we are asking for something.....

Mr. Chairman: I do not think he will be satisfied even if you answer that question.

Shri Dayal: It is not necessary that they should clash. But they are different.

Shri R. V. Bade: In one memorandum they want 50 per cent reservation for nominated members. In another they say that the number should be six for the trade.

Shri Dayal: We find that three memoranda have been submitted by the various organisations. We have talked amongst ourselves and have come to the conclusion that if specific reservation is made for trade, one way or the other, we will all be satisfied. That may be taken as an amendment to our memorandum.

Shri R. V. Bade: In what way do you want the financial powers to be arranged? Now there is the corporation and the Delhi Municipality which have got their own budgets. Do you want the Metropolitan Council to have control over those budgets?

Shri Dayal: There are separate budgets for the Metropolitan Council and the autonomous bodies. What we have suggested is that the Metropolitan Council should have the authority to discuss and approve their own budget. The discussion is there but approval is very necessary. Even the budgets of the autonomous bodies which would be under the direct control of the Executive Council should come up for discussion and approval of the Metropolitan Council. That is how they will reach the people.

Shri R. V. Bade: In the memorandum you have suggested that there ought to be a Legislative Assembly. Is it not a fact that by this Bill you will get more rights than what you have got under the Corporation and Delhi Municipality?

Shri Dayal: There is a misapprehension. Civic bodies function their own way and they have got their limited scope of work. The administrative set up proposed for Delhi in the Bill does not satisfy my aspiration. But that is a different question altogether. We want to emphasise that this Bill does not satisfy the aspirations of the people. Unless it is converted into a Legislative Assembly it will not solve even a fringe of the problem.

Shrimati Renu Chakravartty: You have stated that you are in favour of a full-fledged Legislative Assembly. Then, when you come down to giving ideas about the Delhi Administration Bill you have proposed that the Executive Councillors should be responsible to the Metropolitan Council

But nowhere in the memorandum do I see that you have asked that the Executive Council should not be nominated but should be elected by the Metropolitan Council. At least it is not indicated in the memorandum of the United Chamber of Trade Associations.

Shri Dayal: Actually, this was upper-most in our mind when we prepared this memorandum. But in the various statements coming from time to time from the highest authorities it was mentioned that by convention it will be established that the power or authority for electing the Executive Council will vest in the Metropolitan Council. At a very early stage it was stated that the Councillors may be nominated, they will function independently of the body and that they will not be responsible to the House. After that earlier statement was made we are satisfied that these four Councillors by tradition or convention shall be out of this. If it is the intention of the proposed Bill that these four councillors will be nominated people—and they are, of course, not responsible to the House—there will be no link between the Executive Councillors and the members of the Metropolitan Council. But if these persons function like Executive Council members of the Viceroy and they are nominated then I would say please scrap the Bill as only a Legislative Assembly will satisfy us.

Shrimati Renu Chakravartty: If you look into the Bill itself, it is clearly stated that the members of the Executive Council shall be appointed by the President. So, however high the dignitary may be who made the statement, when the Bill clearly says that the members of the Executive Council shall be appointed by the President we have to go by the Bill. There, I take it that you are totally against nomination and you want the Executive Councillors to be appointed by the Metropolitan Council.

Shri Dayal: We would be very happy if these four Executive Councillors are eletced by the People. I do not want to be misled by any statement. This is another experiment in Delhi and we will have to watch and observe very carefully how much trust and faith the highest authorities have in the people of Delhi. Because, if they are nominated without taking the people into confidence and without consulting the members of the Metropolitan Council we are doomed. It is stated in one of the memoranda that they should be elected by the members of the Metropolitan Council.

Shri R. V. Bade: There is a contradiction between the memorandum and the statement of the witnesses. If some of the members are elected by the traders' associations and the rest directly the whole council will be full of traders.

Mr. Chairman: Out of the six seats they want two seats to be elected by the traders. They do not say that all the members should be elected by the traders.

Shri Dayal: I think it is an interesting point. My learned friend should understand the position that if you kindly analyse the situation and count the persons who represent us in the Corporation, you would be satisfied that those who represent us constitute only a very big minority.

Shri Govindan Nair: Suppose the nomination clause in the Bill is deleted, will you even then demand separate representation for traders?

Shri Sharan: We want that trade representation must be there very clearly.

Shri Govindan Nair: Whether there is provision for nomination or not?

Shri Dayal: We have only suggested a procedural change

Shri Sharan: Nomination for the trade should be there. Even in the Corporation there is nomination for aldermen but never has the trade been accommodated, though at the time of the adoption of the Corporation Bill it was assured that representatives of trade, industry and labour will be there. Those nominations have only been done on political grounds.

Shri I. K. Gujral: In their memorandum it is said that the city is lacking civic amenities and all those things. Since Shri Dayal has a lot of experience about civic working, may I ask him what set-up the Chamber is visualising in the sphere of civic set-up within the framework of the Metropolitan Council?

Shri Dayal: We were assured at one time of a unified administration and it was suggested by the then Chief Commissioner, Shri Dharma Vira, that they were taking stock of the situation and that things were alarming. Even though I am associated with the civic body and have experience of 12 years, I am not ashamed to say before this august body that civic amenities are on the verge of breaking point. It is not totally the fault of the members of the civic body but the circumstances in which we are placed today. There is always scope for improvement and a lot of things have to be done, particularly in the capital city of Delhi. While submitting the memorandum I was visualising that the function of the civic body would remain separate and it was not to be merged with the Delhi Administration; but, in order to elucidate and elaborate our point, I was only emphasising that by and large the people of Delhi are suffering and we have to solve the problem in a very realistic manner.

Shri I. K. Gujral: When these two set-ups are brought into being in the town, should the Corporation be dissolved, or should smaller municipalities be set-up, or should the Corporation also remain, or should another civic body be set-up?

Shri Dayal: We are not discussing the Corporation; there was no such Bill as the Corporation Bill before this august body. I have my own views as to how the civic bodies should function, but that will take the time of this body. I would only say that the civic body should be separate from the Delhi Administration. We want the Delhi Administration to be completely apart; I do not want to mix up civic functions with other functions of the city.

Shri I. K. Gujral: The memorandum says that the Metropolitan Council should have financial powers. Has he studied the Bill as also the Constitution and is he in a position to tell us if, within this framework, it is possible to delegate financial powers to the Metropolitan Council?

Shri Dayal: While studying these, I did not have that much intelligence as the hon. Member of this august body; but, with whatever we have learnt we have come here with our suggestions. We have come here to suggest to you that this Bill should be amended in a way so as to enlarge the scope of its working. Unless the powers of approving the Budget of the autonomous bodies are given to the members of the Metropolitan Council, who are duly elected representatives of the people, it would not function satisfactorily and this experiment will fail. If we were here only to look to the grammar or to semicolons and other things in the Bill, we will not reach any conclusion.

Shri I. K. Gujral: Does the Chamber feel that once the governmental authority, whether it is the Assembly or the Metropolitan Council, comes into existence, it is in the town's interest that another high-power civic body like the Corporation should be there or would it be in the town's interest that there should be smaller municipalities?

Shri Dayal: No, I am not in favour of small municipalities. But we are

not discussing civic bodies as such in this august body today. If that had been the problem, I think, we can discuss it separately at another time. We will do it with our learned friend.

Shri Shivaji Rao S. Deshmukh: Is the demand for a full-fledged Assembly and Government in Delhi only with a view to put them at par with the rest of the centrally administered areas or do they think that the present provision for a Legislative Assembly and Government in the other Centrally administered areas is itself transitory because ultimately those areas are bound to merge with their sister units? Delhi being the seat of the national capital, do they envisage a permanent set-up in Delhi apart from other Centrally administered areas or do they also think that this should be transitory because in the rest of the Centrally administered areas it seems that those provisions are transitory?

Shri Dayal: The answer to this question is very simple. We do not want to follow a certain pattern. This is the demand of the people of Delhi. They want a permanent solution to all their problems. The only solution lies in the setting up of a duly elected Legislative Assembly. Whether you scrap the Council or the Assembly in Himachal Pradesh or in other States or territories of India is none of our concern. The people of those States or territories can look after their own interest. We want to look after the interests of the Delhi people. My humble submission to this body is that we must be given the rights. When you concede this in the other States, why not give this to Delhi? We have a population of about 30 lakhs of people. They are quite educated people. They are very responsible people. They do not lack in anything. Why do you deny those rights to Delhi just because we have the Centre here? That is my argument and I would certainly like this to be emphasised. I would like you to recommend that this Bill should be withdrawn and another Bill for a Legislative Assembly for Delhi should be placed before Parliament.

Shri Shivaji Rao S. Deshmukh: Coming to the issue of Executive Councillors, it seems that in the present Bill there is no specific provision for their withdrawal or calling them back once the Executive Councillors are nominated, excepting the general provision that they shall enjoy office during the pleasure of the President. Will the witness be satisfied if there is a provision in the Bill for the proposal for nomination and removal originating in the Metropolitan Council?

Shri Dayal: It is a leading question and I have answered and elaborated it in another way earlier also. We are definitely not satisfied with the type of provision that has been made in it. When we are asking and emphasising for a Legislative Assembly and Council of Ministers, these Executive Councillors should not function like the Executive Councillors of the Viceroy in the British days. They should work in close liaison with the members of the Metropolitan Council. They should be responsible to the House. I would emphasise that the members should have a right to elect them or to put them in their places; they should have a right to censure them also. That is how democracy functions.

Shri Shivaji Rao S. Deshmukh: My question was this: will the hon. witness be satisfied if there is a provision empowering the Metropolitan Council to suggest a proposal for nomination or a proposal for removal instead of electing them and removing them by way of censure?

Shri Dayal: We leave it to this august body because they are also representatives of the people. When we are not satisfied with the important provisions in the proposed Bill and when we are challenging the fundamental things, this is a very minor point. If our rights are ignored, if our demand is ignored and

something is thrust on Delhi, Delhi will not be satisfied with it.

Shri Bakar Ali Mirza: The hon. witness was stressing that Assembly was the only solution. At the same time he is making a suggestion as to how the Executive Councillors should function and what should be the relationship between the Executive Councillors and the Metropolitan Council. How does he reconcile these two contradictory things?

Shri Dayal: I was quite aware when I came here that, if I were to give a suggestion, only one suggestion, that would be that we would be satisfied only with a Legislative Assembly and nothing else. I have issued a statement; we have already gone to the Press and to the public and made our view clear. It was also made clear by the Chairman at a very early stage when I started that it is not the function of this body to even discuss that thing which is not before the House; it is beyond the scope of this august body. I was quite aware of this. I am also responsible to my own constituents. They have said that, in case it is beyond their scope and they are not prepared to discuss the proposal of Legislative Assembly but will discuss only the Bill which is now before the Parliament, then these would be our views; they have said that I should emphasise before this august body that a recommendation should be made that a Legislative Assembly is the answer. There is nothing which is conflicting, which is confusing or which is contradictory. This is our demand and if that is not conceded to and if you are to give this Delhi Administration Bill to the people, then our suggestion is that it should be an effective body, call it by any name you like. But my other friend just now said that, if the changes which we had asked for were conceded to, then it would amount to a Legislative Assembly. If this amounts to a Legislative Assembly, then I am satisfied, but that will be seen later. Today I cannot visualise it. I can only say that these demands are not contradictory; they are separate. To discuss about a Legislative Assembly is perhaps beyond the scope of this body. If we were to discuss only the proposed Bill, what useful suggestions can be made, we have made.

Dr. Sarojini Mahishi: The hon. witness just now remarked that Delhi was a unique case which could not be compared with other Union Territories. We do appreciate that. Instead of this particular Bill, I would like to put before him another proposal and would like to know his reaction. There will be a Minister for Delhi Development in the Central Cabinet and there will be a Delhi Council—the members elected from Delhi will form the Council. This Council will assist the Minister in carrying out all the things pertaining to Delhi development. There will be a convention that the problems pertaining to Delhi will be discussed in this Council of representatives who are elected from Delhi and who represent Delhi in Parliament and this Minister for Delhi Development will be guided by this Council of representatives and, by convention, their recommendations will usually be accepted in Parliament.

Shri Dayal: I am grateful to the member who has raised this point. There was a time when we were thinking that all the Members of Parliament who came to Delhi and spent most of their time in Delhi were also our representatives and we were proud of them. But time has taught us that, in the Centre or in the Parliament, there are many things which go wrong not because the other representatives have failed, but they did not find good support from the members of the other States. Therefore, we feel very strongly that only one person representing Delhi cannot do anything to watch the interests of the entire State of Delhi; a Minister, even though he may be called a Minister, will not satisfy the aspirations of the people.

Mr. Chairman: There are three in the Rajya Sabha.

Shri Dayal: As I have said just now, I am sorry to say that they are left alone. Delhi may be a very important place; it may be considered the window, but I am sorry to say that the Delhi people do not get the support from the Members.

Dr. Sarojini Mahishi: It is not one Member representing Delhi, but all the Members representing Delhi who will form a Council and they will help and guide the Minister for Delhi Development in the Cabinet.

Shri Dayal: That is a new proposal and I wish that you introduce it in Parliament. If you have in mind control by elected representatives of the people, then whether the number should be 40 or 30, that is only a matter of detail. If you have a different pattern to represent Delhi, we should be happy if that is put in a proper form.

Shri Hari Vishnu Kamath: May I know whether he looks at this Bill and this problem mainly, if not wholly, from the point of view of progress and well-being of trade in Delhi?

Shri Dayal: I must make it clear that, when we have come here, we have come with a sense of responsibility and I know that, when the trader talks about the interest of Delhi, it is in the interest of progress and well-being of Delhi as a whole because, as I stated a little earlier, Delhi's economy largely depends on its trade and commerce. So, when I make any suggestion, it is not only to watch or safeguard the interest of traders of Delhi, but to safeguard the interest of the people of Delhi as a whole, of whom a larger number consist of traders and office-going people.

Shri Hari Vishnu Kamath: If I heard you aright, you said a little while ago that you wanted, for Delhi, not only an elected Legislative Assembly and a Cabinet but also a Lt Governor.

Shri Dayal: Yes; you have heard me correctly.

Shri Hari Vishnu Kamath: Without a Lt. Governor, the entire set-up is not complete and the trade will suffer.

Shri Dayal: That is your conclusion; that is not my conclusion.

Shri Hari Vishnu Kamath: No; that is your proposal.

Shri Dayal: Whatever is my proposal, that is not what I submitted.

Shri Hari Vishnu Kamath: You would not be satisfied even with the set-up you had from 1952 to 1956, that is, a Legislative Assembly and an elected Cabinet or Council of Ministers, but you want something extra—a Lt. Governor so as to ensure the well-being of the trade?

Shri Dayal: I do not want to emphasize trade, trade, trade, again. I want to make it very clear. We are called representatives of the trade. I want to submit very humbly that we are citizens of Delhi also. When we are traders, we are also consumers and we belong to this place and we are for the well-being of this State. We are very conscious of that. When speaking about the structure I was humbly submitting that there should be a Lt. Governor instead of the Chief Commissioner. We would not be satisfied with a Lt. Governor who is an official. He should be a non-official. I thought I was speaking in the same language which Mr. Kamath understands.

Shri Hari Vishnu Kamath: More or less. I take it that the eloquent witness means what he says when he earlier stated that the trade and well-being of Delhi require such a set-up. Is the Committee to understand that during the period from 1952 to the end of 1956 Delhi's well-being and commercial progress were very well looked after, the trade prospered and the citizens of Delhi became better off and since that set-up was given

the go-by, that is to say, came to an end, from 1957 to the end of 1965 Delhi has suffered in every way?

Shri Dayal: My other friend from Delhi, Mr. Prabhakar had asked the same question. I had answered it earlier also. I would again answer that.

Delhi did gain in those days. I wish an Enquiry Committee could have been set up to give the findings whether it did satisfy the aspirations of the people or not. It failed because it was considered a white elephant and the Centre did not want two Governments functioning in the same place. That is a matter for study. I think you could even now ask Parliament for a research team. There will be some defects in any Government. But by and large—this is my view—people have gained. I would not say that after we eliminated that approach it was all a downfall without any progress. After all we have great faith in our officials also. They do not suffer from any bankruptcy of experience or intelligence. The very basis of democracy is that it should be given when it is granted to everybody else in the country. Delhi should not therefore be denied it.

Shri Hari Vishnu Kamath: Is it your considered view as well as the view of the associations whom you have the honour to represent that the present representatives of Delhi in Parliament, that is in the Lok Sabha and the Rajya Sabha, have not that solicitude for the welfare of Delhi as you would like them to have?

Shri Dayal: If that was the position, they would not be elected again and again. You are not giving any compliment to the people of Delhi.

Mr. Chairman: There should be no reflection to any member.

Shri Mittal: I will reply to that.

Mr. Chairman: It is not necessary. It is a matter of opinion.

Shri Dayal: Whether I belong to A Party or B Party, it will not be proper for any Party to pass those expressions.

Mr. Chairman: It is a matter of opinion. Please drop it.

Shri Hari Vishnu Kamath: I have dropped it. I will put another question. If I heard him aright, he said that when questions concerning Delhi are raised in Parliament, unfortunately they do not secure support from other States' representatives.

Mr. Chairman: He has said that.

Shri Hari Vishnu Kamath: That is not a matter of opinion. He has said that. That means representatives from other States have no solicitude for Delhi.

Mr. Chairman: He said that it does not receive as much attention from them.

Ch. Brahm Perkash: They do not raise it because they are afraid.....

Shri Hari Vishnu Kamath: I did not catch it. Afraid of our leaders?

Shri Dayal: I have great regard for Mr. Kamath and therefore I would not give him that impression. What I said was in a general way and he will agree with me. He need not be so sentimental or touchy about it. I did not want to hurt his feelings. When you are a Member of Parliament, we accept you as a leader and have great confidence in you. What I meant was that you have got much bigger problems to attract your attention, rather than our sales tax affair or other affairs.

Shri Hari Vishnu Kamath: I was not referring to myself. I am only one of the representatives of the 'other' States. You said about my feelings, etc. I can assure you that my feelings cannot be hurt so easily. I am fairly thick-skinned.

Mr. Chairman: There are other members.

Shri Hari Vishnu Kamath: How many problems concerning Delhi have been raised in Parliament dating back from Pre-fabricated Housing Factory and Jaundice Epidemic by Delhi members and members from other States? When they were raised by other members, two or three members from Delhi did not extend to them that support which they expected of them. (*To Shri Brahm Perkash*): You were not in Parliament then; you were then the Chief Minister.

(The witnesses then withdrew).

V. Delhi Citizens (Non-political) Organisations Forum, New Delhi

Spokesman:

Shri Baldev Sharma.

Mr. Chairman: You represent Delhi Citizens' (Non-political) Organisations' Convention?

Shri Baldev Sharma: Yes.

Mr. Chairman: Your Memorandum containing these recommendations is with us. We have discussed all these problems.

Shri Baldev Sharma: I want to say something about this Bill. When this memorandum was prepared, this Bill was not in sight.

Shri Jaisukhlal Hathi: You say that this was prepared earlier.

Shri Baldev Sharma: This was prepared in 1963.

Mr. Chairman: We are not concerned with this then. We wanted your opinion on this Bill.

Shri Baldev Sharma: This is only an enclosure to our letter to you.

Mr. Chairman: According to this memorandum you will be satisfied if there is one Central Minister to look after the affairs of Delhi. Do you represent any institution?

Shri Baldev Sharma: I represent Delhi Citizens (Non-political) Organisations Forum.

Mr. Chairman: You confine yourself to the provisions of this Bill.

Shri Baldev Sharma: My impression about this Bill is that it is only a half-hearted measure; it does not go anywhere either in giving the responsibility to the representatives of the people or in completely handing over the administration to bureaucracy. This is something in between. I think, according to this Bill, the bureaucracy has been set at large and the representatives of the people shall have to bear the brunt of what the bureaucracy does or does not do. They will be held responsible for something for which they will not in any way be responsible. The New Delhi Municipal Committee is given some grants by the Central Government and the Members of the Committee function under the bureaucracy. This new body will be just like that advisory body which will have nothing to do with the peoples' aspirations and demands. It will only work under a bureaucratic regime. This bill does not satisfy at all our aspirations. We do not want merely the association of the peoples' representatives, but we want that the administration should be run by the representatives of the people. In this bill it has been sought to seek the association of the peoples' representatives rather than handing over to them the responsibility of running the administration.

Mr. Chairman: We have discussed all these things. Have you got any thing more to say?

Shri Baldev Sharma: No legislative or financial power is given to the Metropolitan Council. Without these powers nothing can be done by this Council. There is not going to be any improvement over the working of the present Delhi Administration. I represent an organisation of which on honourable Member of this House is the patron; that is, the Central

Tenants Association of Delhi. This Association had submitted a memorandum in a deputation in the hands of the Home Minister requesting him that the Delhi Rent Control Act should be suitably amended.

Mr. Chairman: We are not concerned with that. You need not refer to things with which we are not concerned.

Shri Baldev Sharma: I am coming to the point. The Central Government did not have time to devote or to consider our demands or to consider amending the Act. Similarly another memorandum was sent by the Delhi Landlords Association also. In spite of these representations the Government of India could not find time to amend the Act. Regarding the Punjab Municipal Act . . . .

Mr. Chairman: These are all beyond this Bill.

Shri Baldev Sharma: In the light of our experience, we want that the following addition should be made in the Statement of Objects and Reasons of this Bill:

"This Bill has been brought forward with the object of providing for a larger measure of association of the representatives of the people of the Union Territory of Delhi with the administration of the territory PENDING REALISATION OF THE GOAL OF RESPONSIBLE STATE GOVERNMENT FOR DELHI".

Mr. Chairman: You have not suggested this in your memorandum.

Shri Baldev Sharma: That is why I have requested in my letter to the Chairman for permission to appear before the Committee and explain our views.

Mr. Chairman: Even the Resolution which you mention in your letter has not been sent to us.

Shri Baldev Sharma: We have given it as an enclosure to the letter.

Mr. Chairman: It was passed in 1963.

Shri Baldev Sharma: It holds good even now.

Mr. Chairman: Please confine yourself to the provisions of the Bill.

Shri Baldev Sharma: My predecessor was given opportunity to express his views. I was to come alone. I happened to be here and I never knew that I will not be given the same opportunity.

Mr. Chairman: You yourself desired to come. You were hearing everything. Why repeat all those things again?

Shri Baldev Sharma: Clause 11(2) of the Bill provides that the Administrator may from time to time prorogue the Metropolitan Council. We do not want that the Administrator should have this power. It should be vested in the President. It should not be vested in the Administrator. The President should prorogue the Metropolitan Council in consultation with the Administrator of the Metropolitan Council. We suggest that the sub-clauses (a) and (b) should be re-written to say that the Administrator may prorogue or dissolve the Metropolitan Council with the approval of the President.

Mr. Chairman: The President prorogues the Parliament, the Governor proprogues the State Assembly and the Lieutenant Governor that of the centrally administered areas. Here the Administrator is appointed by the President.

Shri Baldev Sharma: The Metropolitan Council has no power to remove him, but the State Assembly can do that.

Mr. Chairman: The Governor cannot be removed.

Shri Hari Vishnu Kamath: It is difficult to remove the Ministers even.

Shri Beldev Sharma: In Clause 17(1)(b), it is said that "no person shall be a Member both of the Metropolitan Council and of the Delhi Municipal Corporation."

We want that this should stand. But a Member of Parliament can also be a Member of the Metropolitan Council. This should be deleted. We do not want the Metropolitan Council to be a mere civic body. We want the Metropolitan Council to be a political body.

Mr. Chairman: I think it is already there.

Shri Baldev Sharma: The clause provides that no person shall be a Member both of the Metropolitan Council and of the Delhi Municipal Corporation. We want that the Corporation Member may also become a Member of the Metropolitan Council because it is a political body.

Mr. Chairman: What else do you want?

Shri Baldev Sharma: Clause 21(2) is very important. It provides:

> "The recommendations of the Metropolitan Council, after having been fully considered by the Executive Council shall, wherever necessary, be forwarded by the Administrator to the Central Government with the views, if any, expressed thereon by the Executive Council".

We want that the Metropolitan Council's views should prevail and the Administrator should not have any hand in that. He should forward them direct to the President or present it to the Central Government. Since the Executive Counsellor will be a nominated person according to this Bill, he should not stand in the way since the Council is supreme. We want that this should be deleted. We want that the recommendations of the Metropolitan Council should be forwarded by the Administrator to the Central Government. That is all.

Mr. Chairman: You do not want the Administrator to express an opinion thereon.

Shri Baldev Sharma: Yes, Sir. In case there is any disagreement with regard to certain recommendations of the Metropolitan Council, the matter should be resolved in consultation with the Deputies appointed by the Metropolitan Council in this behalf. This is what we want.

Clause 27(1) says:

> "There shall be an Executive Council, consisting of not more than four members." After that, the following words should be added:
>
> "which enjoys the confidence of the Council".

Mr. Chairman: You mean that they should be responsible to the Council.

Shri Baldev Sharma: Yes, Sir. Along with that, there should be also added a proviso:

> "Provided that one of the Executive Counsellors is designated as 'Chief Executive Counsellor' while the remaining three are appointed on his advice". This should be done.

Lastly, I would say something about the Interim Council. At present as things stand, the administrative machinery is in suspense, indecision and uncertainty because they do not know as to what will be the policy of the future Administration. Therefore, the interests of the people are suffering a lot. We want that this clause, particularly, with regard to the Interim Council should stand. This is what I want to submit.

Shrimati Renu Chakravartty: The last suggestion which you have made is that the Central Government should

confine itself to the minimum necessary matters. I want to know what those minimum matters are.

Shri Baldev Sharma: In Part C States, now Union Territories, all the subjects are not handed over to the States representatives. There are certain subjects which are taken over by Central Government.

Shri Hari Vishnu Kamath: There are no part C States now. They are all finished.

Shri Baldev Sharma: The Central Government would like to retain certain subjects in their hands. This is a matter of discussion.

Mr. Chairman: All state subjects have been given to the Council. In this regard a legislation was passed. You will find them in the Seventh Schedule under List B.

Shrimati Renu Chakravartty: Can you give us your specific answer to my question as to what, according to your understanding, would be the minimum necessary matters which should be kept with the Central Government.

Mr. Chairman: Have they reserved any subjects to themselves?

Shrimati Renu Chakravartty: He is making certain amendments. He said that the Central Government should keep certain minimum necessary matters with them and that the full decisions should be taken by the Metropolitan Council. We want to have a clarification from him as to what, according to him, should be the minimum necessary matters which he would agree, to give to the Central Government?

Shri Baldev Sharma: The Central Government have got the Central Secretariat, Parliament House etc. They have got diplomatic missions' offices etc. If they want they can keep the subjects connected with sanitation, administration, law and order and any other subject with them. But they should not keep these subjects with them for the whole of Delhi.

Shrimati Renu Chakravartty: Your point perhaps is that if the Central Government so desires, New Delhi might be given over to the Administration but not the whole of Delhi.

Shri Baldev Sharma: Yes, Sir.

Mr. Chairman: Please see Clause 27(3). It says:—

> "The functions of the administrator with respect to law and order in Delhi including the organization and discipline of police force, and with respect to such other matters as the President may from time to time specify in this behalf, shall be exercised by him in his discretion."

Shri Baldev Sharma: With regard to these matters, we want that they should be handed over to the Metropolitan Council. Apart from this, if there are any other subjects which need be looked after by the Central Government, they may keep them.

Shrimati Renu Chakravartty: You will please see his memorandum. It seems you have not read his memorandum. He recommends that there should be a single authority vested with full legislative powers in respect of all subjects concerning the civic administration, social services, development schemes and general administration. This is his recommendation. Instead of saying these, he says that he would be prepared to give certain powers to the Central Government. In this connection, he mentioned about certain minimum necessary matters. This is not clear to me. I would like him to enlighten me.

Mr. Chairman: Please explain as to what, according to you, 'certain minimum necessary matters' are.

Shri Baldev Sharma: When we made this suggestion, we had this in our mind. In New York (Washington) the Federal Government have got

their own specific jurisdiction in a particular area. The Federal Government governs that particular area. If the Central Government would like to keep certain subjects and areas with them, it does not mean that they can keep them for the whole of Delhi.

Shri Baldev Sharma: For example, I may say 'the Parliament House area, the Central Secretariat area, etc.'

Shrimati Renu Chakravartty: How can you have sanitation, sewers, etc. around this little bit. What is that you would like to have? You have to specify the particular area. Otherwise, how can you say that?

Shri Baldev Sharma: That particular area can be specified.

Shri R. V. Bade: Here, in your resolution you recommend that:

> "The elected representatives of the citizens of Delhi be fully associated in the administration of their territory."

Do you mean to say that the Corporation and the New Delhi Municipal Committee should be dissolved and those Acts repealed and their functions handed over to Metropolitan Council?

Shri Baldev Sharma: We do not want that the civic matters should be handed over to the Metropolitan Council which should be a purely political body at Governmental level. Delhi should be divided into small civic bodies which are viable and administratively convenient.

Shri R. V. Bade: But you have asked for quite a contrary thing; that there should be a single AUTHORITY vested with full legislative powers in respect of all subjects concerning civic administration.

Mr. Chairman: That is not his view.

Shri Baldev Sharma: It should be very convenient for a small civil administration to function here. In Bombay they have a big Corporation working for the last so many years side by side with the State Government. Here, we have New Delhi Municipal Committee, the Delhi Municipal Corporation, the Cantonment and the Shahdara Committees. We do not have that idea in our mind about bigger municipal bodies but we feel that it is a better solution. In Bombay, given the choice, they would have taken to small civic bodies, but they had no such opportunity.

Shri R. V. Bade: One of his recommendations is: that there should be a single authority for civic administration. Then he says that there should be no single authority. What is the name of the single authority—whether it should be the Metropolitan Council or any other body?

Shri Baldev Sharma: There should be a single authority to look after the civic administration. It means the municipal body should be different from the governmental body.

Shri Hari Vishnu Kamath: Mr. Sharma, you are the sole representative. . . .

Shri Baldev Sharma: I was to be along with another gentleman who was not here in Delhi at present.

Shri Hari Vishnu Kamath: That is why I said: you are the sole representative of the Delhi Citizens' (Non-political) Organizations' Convention. Are you in a position to give the Committee an idea of those numerous non-political organizations which you represent here? Which are those organizations?

Shri Baldev Sharma: I can give you a detailed list. It contains about 50—52 organizations.

Shri Hari Vishnu Kamath: Are they longstanding organizations, or created *ad hoc* for this purpose?

Shri Baldev Sharma: No, Sir. As a matter of fact we had held a convention in 1963 wherein we had called all the representatives of the diffe-

rent organizations and there we resolved that we should form a forum. There we elected certain representatives from each organization and formed a forum. I am representing that forum.

Mr. Chairman: Is it a registered association?

Shri Baldev Sharma: No, Sir.

Shri Hari Vishnu Kamath: Are both New Delhi and the rural areas of Delhi represented in this forum?

Shri Baldev Sharma: Yes, Sir. As a matter of fact the other gentleman, Mr. Hira Singh, who was to have come along with me, is the former Chairman of the Delhi District Board. Unfortunately, he could not come.

Shri Hari Vishnu Kamath: I find from your memorandum that you have welcomed the Central Government's initiative and then you have expressed your firm conviction that half-hearted measures will not solve the problems of Delhi. Then you finally say in the last paragraph of your brief memorandum that the special interests of the Central Government, to which my hon'ble colleague, Smt. Chakravartty, referred, should be confined to the minimum necessary matters. And then you go on to say that you would like to have a single Minister in the Union Cabinet responsible for Delhi administration. That is what you want or have you dropped that idea now?

Shri Baldev Sharma: At that time that was the idea. It has been dropped now. We do not want that there should be a Central Minister as such.

Mr. Chairman: This Resolution was passed before this bill was placed before Parliament.

Shri Baldev Sharma: Yes, Sir.

Shri Hari Vishnu Kamath: You do not adhere to this view now?

Shri Baldev Sharma: No, Sir.

Shri Hari Vishnu Kamath: You won't be satisfied now if the Minister is vested with powers to look after the Delhi administration as such in the Union Cabinet and the representatives of Delhi—4, 5 or 6 whatever it be—are associated with the proposals for legislation.

Mr. Chairman: There are 7 in the Lok Sabha and 3 in Rajya Sabha from Delhi.

Shri Hari Vishnu Kamath: A very big group, a powerful group. So, if it is laid down as a rule, rather as a convention, if not a rule, that no measure or bill will be brought before Parliament unless the Minister for Delhi with the concurrence of this body of the Members from the Union Territory of Delhi has approved of it, would you be satisfied?

Shri Baldev Sharma: No, Sir. We feel that Parliament is already overworked and Parliament has got lot of work to do at the national level. We do not want to burden the Parliament with more work.

Mr. Chairman: It is very kind of you. You are very considerate.

Shri Hari Vishnu Kamath: Does he think when he says that the Union Parliament is so over-worked—he includes within the scope of his observation—that the Members of Parliament are over-worked and naturally the Members from Delhi and New Delhi are also over-worked having no time to look after Delhi's welfare?

Shri Baldev Sharma: We do not expect them.

Shri Hari Vishnu Kamath: You do not expect them to look after Delhi's welfare?

Ch. Brahm Perkash: We are happy.

Shri Hari Vishnu Kamath: Then, do you think that the experiment that was tried here from 1952-57 which gave Delhi an elected Legislature and a Council of Ministers was a grand roaring success?

Shri Baldev Sharma: Yes, Sir. I vehemently feel that had that experiment continued, Delhi would not have so many problems that we are facing to-day.

Shri Hari Vishnu Kamath: That means the Union Ministers who are in charge of Delhi Administration. . .

Shri Baldev Sharma: What I meant was that when there was a Legislative Assembly in Delhi, we were quite satisfied with the administration. During the period thereafter we were having a lot of difficulties which I wanted to place before the Hon'ble Chairman just now, what type of diffiuclties we have been facing. Take the case of rent control. We want that the Rent Control Act should be amended. The demand is from both sides—the landlords and the tenants. In spite of that the Parliament or the Minister did not have the time to go through these things. I submitted this memorandum in the hands of the Home Minister long ago. That has not been even acknowledged. This is the state of affairs.

Shri Hari Vishnu Kamath: So, you would be happy and content if that set-up of 1952-57 is revived?

Shri Baldev Sharma: Not only to that extent; we want a more powerful body.

Shri Hari Vishnu Kamath: I do not mean the very same set-up, with the same Council of Ministers. So you think a similar set-up with more powers will very well look after Delhi's affairs. So you withdraw partly this memorandum?

Mr. Chairman: All right, Thank you.

(The witness then withdrew)

VI. Delhi Pradesh Congress Committee, Delhi.

Spokesmen:

1. Shri Brij Mohan.
2. Shri H. K. L. Bhagat.
3. Thakur Hukam Singh.
4. Shri Vasu Dev.

VII Congress Party in the Municipal Corporation of Delhi.

Spokesmen:

1. Shri Brij Mohan.
2. Shri H. K. L. Bhagat.

VIII. New Delhi District Congress Committee, New Delhi.

Spokesmen:

Spokesmen:

1. Shri Mangat Ram.
2. Shri Bansi Lal Chauhan.
3. Thakur Hukam Singh.
4. Shri Virender Kishore.

X. Councillors, Municipal Corporation of Delhi.—(Group I).

Spokesmen:

1. Shri Khub Ram Jajoria.
2. Shri Bhiku Ram Jain.

(The witnesses were called in and they took their seats).

Mr. Chairman: You all represent the Congress Party. We have your memorandum; it has been circulated to all the members. If you want to say anything in addition to those arguments, you may say now; you need not repeat those arguments.

Shri H. K. L. Bhagat: We are extremely grateful to you for providing us with this opportunity to express ourselves on this Bill which is of vital interest to us and the people of Delhi. The views which we express are the views of the local Congress. We have submitted our memoranda; they are there before this Committee. We would like to amplify a few points.

We are quite conscious that we are before the Joint Select Committee which is considering the Delhi Administration Bill and yet, Sir, we would venture to place before it what we have been feeling about it since a long time.

Now, Sir, the Delhi Congress has always been asking for the status of a State for Delhi. Almost at every stage, it has pressed for it. In 1950-51 we got the status though only of a Class C State. Later on at the time of the State Reorganization, we travelled back again and we became a Union Territory. At the time of the reorganization of States, we had our feeling that the solution proposed regarding the pattern of Delhi Administration was not a correct solution and we said it; and yet it was our misfortune that we could not prevail, our viewpoint could not prevail and ultimately a new pattern was created which has been tried by now for nine years. During these nine years, when Delhi remained as a Union Territory and the administration was carried on by the Chief Commissioner, things, if I may be permitted to say so, instead of improving in any way, deteriorated further, and that is why this body is sitting to-day to consider this question. Therefore, we would like to stress that it has been our very strong opinion that the only logical solution and the correct solution for the problem of creating a pattern of administration for Delhi is to confer the status of a State to Delhi; and that is what we have all along felt. Of course, I can quite understand the limitations of the Joint Select Committee. But as I said this question is so much connected with our stand right from the beginning that we feel it strongly to place it before you.

Now, I would like to make one or two submissions on this question. Sometimes it is said that Delhi cannot get an Assembly, cannot get a Council of Ministers because the Constitution will have to be amended. I would like to make a very humble submission that it is not necessary to amend the Constitution to give the status of a State to Delhi. Articles 2 and 4 of the Constitution confer the powers to the Parliament to grant the status of a State to Delhi. I am not talking of the Council of Ministers and an Assembly as Union Territory; I am talking of conferment of the status of State on Delhi. It can be done without amending the Consituation. Article 4 makes it very clear that consequential amendments shall not be considered as amendments of the Constitution. So, we feel that the proper method for the Government of India is to confer the status of a State to Delhi. It may be said that the creation of a Council of Ministers and a legislature is only the accepted pattern for all other States. I would not very much go into detailed arguments at this stage in any case. But we say that with all the arguments that have been given at the time of the States Reorganization Commission, yet we have felt unconvinced. It is our misfortune that our fight for justice for Delhi could not prevail with the Government of India in whom we have immense confidence. We feel that this can be done to-day and Delhi should be given the status of a State. This has been our stand consistently and we would like to reiterate this stand.

Now, Sir, coming to this Bill, we would like to make a few observations. The objects of the Bill fall short of the requirements of the situation. It is stated in the Statement of Objects and Reasons that it aims at providing association of the people with the administration. This is entirely different from what we feel. We feel that the government of Delhi should be in the hands of elected representatives and that it should not be a mere association of the people with Delhi administration.

Now, the Bill suffers from some serious shortcomings, and with respect, I would say that the weakest point in the Bill is where it mentions

regarding the powers and functions of the general body of the Metropolitan Council. This is going to be a directly elected body, elected by the votes of the people, and if you go into clauses 21 and 22 they say that it will discuss and make recommendations—that is all—it will discuss and make recommendations on this matter, on that matter, etc. Obviously, if I may put it in the correct constitutional language, it is a consultative body; nothing more than a consultative body. It can talk and talk and talk. It will have absolutely no power to finally determine anything.

Imagine the frustration of a person who has been elected by the people directly, as anybody else, when he comes to the body and knows that he and the Body cannot finally determine a single thing. Therefore, I would submit respectfully that this body lacks status, authority, powers and functions which a directly elected body should have.

And then, after all, what is there? It shall discuss and make recommendations relating to certain matters. And it gives a little right of interpellation by clause 22. The right of interpellation too is restricted by the clause itself where also the Administrator can impose certain restrictions.

Shri Hari Vishnu Kamath: Sir, I am sorry to interrupt Mr. Bhagat. But may I suggest that the Committee do adjourn now and reassemble in the afternoon? Because the notice said "11 to 1" and then from 2-30 onwards, we have made certain other engagements. If he is finishing in another five minutes that is a different matter.

Shri S. S. Mariswami: You are reading the memorandum, I think. We are in possession of your memorandum.

Shri H. K. L. Bhagat: No, it is only the points that I am emphasizing.

Mr. Chairman: We will adjourn now and meet at 2-30.

(The Committee then adjourned to meet again at 14-30 hours.)

(The Committee reassembled at 14-30 hours.)

Mr. Chairman: Mr. Bhagat, your memorandum is very short but your evidence seems to be too long. Please confine yourself only to the memorandum.

Shri H. K. L. Bhagat: All these points are mentioned in our memorandum. I am only trying to amplify them.

Mr. Chairman: You need not refer to the points that have already been mentioned. If there is anything more that you want to add, you can mention them.

Kumari Shanta Vasisht: We may hear whatever they have to say.

Mr. Chairman: What is contained in the memorandum is already there before us. He need not go on repeating the same thing.

Shri H. K. L. Bhagat: I was referring to the powers of the metropolitan council. Before I come to that, I would like to make a few observations with regard to the conferment of the status of a State to Delhi. I had said that it would not be necessary to amend the Constitution and the status of a State could be conferred under articles 2 and 4. Even if it then ceases to be....

Shri Hari Vishnu Kamath: Have you had a look at article 239?

Shri H. K. L. Bhagat: I am just coming to that.

Shri Jaisukhlal Hathi: What he says is that instead of keeping Delhi as a Union Territory, you may make it a State. Then, article 239 would not apply.

Shri H. K. L. Bhagat: I am coming to that.

Even if Delhi remains a Union Territory, of course, it can be given a Council of Ministers and a Legislature only by amendment of article 239A. Article 239A will need only one brief amendment and that is to the effect that the word 'Delhi' be added. I would not take much time on this point except to say that even if the Constitution has to be amended, it would be only a very brief amendment to article 239A; I do not know whether this Joint Committee can recommend or not such a thing; it is more proper for them to see because I am not very much conversant with the limitations of this committee. But as I was submitting, it would be only a very brief amendment to article 239A.

I shall just take this opportunity to say something about it. After all, even if it is considered necessary to amend the Constitution, why should the Constitution not be amended? Even our late Prime Minister Shri Jawaharlal Nehru had said:

> "While we want this Constitution to be solid, as solid and permanent as we can make it,. there is no permanency in Constitutions; there should be a certain flexibility; if you make anything rigid and permanent, you stop the nation's growth, the growth of a living body of organic people. In any event we would not make this Constitution so rigid that it cannot be adapted to changing conditions; when the world is in turmoil and we are passing through a very swift period of transition, what we may do today may not be wholly applicable tomorrow.".

So, I say that even if it is necessary to amend the Constitution, it may be amended.

Shri L. N. Mishra: Wherefrom is this quotation?

Shri H. K. L. Bhagat: This is from Basu's *Commentary on the Constitution of India.*

Shri L. N. Mishra: This was in a different context.

Shri H. K. L. Bhagat: But the principle is there. What I am respectfully submitting is that we feel that Delhi can surely coexist as a State with the Union; a Council of Ministers and an Assembly can surely be reconciled with some safeguards in regard to Central control etc., and a system can be devised suitably and there would be no difficulty about it. Delhi citizens who include distinguished citizens like you also can surely be trusted to understand their responsibilities towards Delhi and towards the Central Government. Therefore, I would say that Delhi should be conferred the status of a State under articles 2 and 4 of the Constitution. Otherwise, article 239A of the Constitution should be amended.

As regards the powers of the metropolitan council, as I have submitted, it will have only power to discuss and make recommendations in other words, it would be only a consultative body and naturally it will not be able to finally determine any issue that comes before it. This will cause a lot of frustration in the minds of the people who would be directly elected. I would say with respect that that would be the worst example of responsibility without power. As I was pointing out, even the right to ask questions has been limited under clause 22. The institution has to be judged on its intrinsic constitutional merits. I would submit that if a body which is directly elected and which has all the enthusiasm and everything else does not get any constitutional channels to finally decide issues which come before it, it may tend to become irresponsible. If the members of that body cannot decide things themselves then they may talk anything and everything. So, my submission is that there is no constitutional channel for deciding things there; in that event certainly

they will have no control, constitutional control, as I would say, over the executive council. The executive council is not bound to follow their recommendations; in fact, even the executive council is not free; even there, the power is given to the administrator and he can refer all those issues again to the Central Government. So, what I am submitting is that the metropolitan council will not be bound to support the executive council, and similarly the executive council will not be bound to accept the advice of this body.

Now, I would like to compare the status of this body which is proposed to be created in this set-up; to that of all the bodies that would be created, the most inferior body would be this metropolitan council, in relation to its powers, functions, authority and status. It would certainly be nothing as compared to the administrator; he may be designated as the Chief Commissioner or as the Lt. Governor; but this body shall be nothing as compared to the administrator; again, it would be nothing as compared to the executive council; it would have no statutory powers; it would have no powers similar even to those enjoyed by the DMC or the NDMC or even the Cantonment Board, because it cannot decide anything. Of course, in a different context, the municipal corporation will pass a budget of Rs. 20 to 30 crores, whereas this body would not be able to sanction or revise the budget on its own right.

Therefore, my submission is that this body which is being directly created through direct elections will remain absolutely the most powerless and helpless body in the entire set-up. Then, this will raise questions *vis-a-vis* the corporation. What will be its status and authority when it has no powers? Then a question will arise *vis-a-vis* the mayor; he shall be directly elected and he shall have his own team, if the new proposals come through. All these questions will arise. In all these matters, probably this body which would be merely a consultative body or an advisory body or consultative committee would remain absoiutely a powerless body.

One more submission I would like to make in this connection is this, and that is that parties would be there. As we understand the situation today, elections would be contested on party tickets. What would be the position of the leader of the party, which has the majority, constitutionally speaking? He may be in the executive council or he may not be in the executive council. What would be his position constitutionally speaking? He may support the executive council or he may not support the executive council. You can imagine what frustration it can mean to the party there and what embarrassment it can mean to the executive council itself; so, even the leader of the majority party will have absolutely no constitutional status in the executive council. If he is not constitutionally bound to support the executive council, how can you expect the executive council to support? Of course, personal equations would be there and the ingenuity of human beings would be there; but, constitutionally speaking, the institution may create a situation like this. So, as I said, it has to be judged on its own intrinsic merits.

Even in regard to the acceptance of the recommendations of the metropolitan council, the Bill says that the recommendations will be considered by the executive council, and whereever he considers it necessary so to do, the administrator will send them to the Government of India. Even the executive council is not a final body to accept the recommendations of this general authority. I need hardly say that, because it is so very obvious, as it has no powers of purse control. The most important power of any elected institution would be these powers of control, but this

metropolitan council will neither be in a position to pass the budget proposals nor would it be able to reject them; nor will it be able to levy a tax or reduce a tax; it would have no control over appropriation of funds. All these powers are not there. It cannot even decide the question of the salaries and allowances of the members of the executive council. It cannot decide even the question of its own salaries and allowances. Without these powers, what will happen? The budget would come, the annual statement of income and expenditure would come, and this body would only discuss. I would respectfully ask whether this kind of situation will be fair to Parliament? We shall discuss the budget and then it will come before Parliament. Will our discussions have a direct impact on Parliament? With respect, I would submit that it would amount to somebody arguing a case not before the judge but before his peshkar. Ultimately, the authority will be Parliament; we just discuss, discuss, discuss.

My submission is that discussions may to a certain extent be helpful in the sense that we at least express ourselves. But how much impact can it create on Parliament? Will it be fair to Parliament? There will only be my speeches, the speeches of others and all those things. Will it be possible for Parliament to take all these into consideration? Because budget consideration is not just adjustment of figures, not merely moving cut motions with a view to sort of make changes. It is to express certain ideas, certain line of thought and certain fundamental aspirations and other things.

So my submission is that without those powers this body will remain a purely advisory body. One of my friends was saying when we were going through the Bill, 'Never bother; you will have enough opportunity to bark. Never mind, you may not have constitutional opportunity to bite. Under this arrangement, each one will bite the other'. That was the view he expressed. It may be wholly correct or it may not be. But without these financial powers, will the body we are creating have any status or authority or prestige? I am saying it will not have.

On the question whether these powers could be given to this body without certain amendments, I would say that it certainly involves intricate questions. I cannot answer this question with any positive certainty.

Mr. Chairman: You have said that, if necessary, the constitution may be amended.

Shri H. K. L. Bhagat: This is about the powers of the general body. As regards the Executive Council, of course, both the issues are interconnected. The first thing is the appointment of the Executive Council. The Bill provides that it will be appointed by the President. As I said, the leader of the party has no place; there is no advice of his sought; there is no constitutional provision for choosing the team or anything of the kind. In fact, there is absolutely no mention of it in the Bill while in the Part C States Act and even in the Union Territories Act also there was a mention that this team would work as a collective team. I have gone through the Part C States Act and am aware of the provision there in this regard. This Bill does not mention this at all. Therefore, how will it function as a team? Who will be its leader? Who will be the symbol of the people? Who will be the representative of the people directly elected by the people in this set-up? It shall be left to the Lt. Governor or Chief Commissioner, whatever he may be called? Who will be the symbol of this directly elected institution. To whom will they look? The Bill does not answer these questions.

Now the intention in the Bill seems to be very clear. In cl. 27(2), it is

said that the Administrator shall preside over the meetings, and in case he is prevented from being present due to illness or other causes, the senior-most Executive Councillor shall preside. The idea seems to be that the Lt. Governor shall preside or the Chief Commissioner will preside—whatever it may be. The Administrator shall preside. It means that he is the symbol of this institution, and everything remains as before. In the Part C States Act, the corresponding provision was different; there they had said that if the Lt. Governor is not present, the Chief Minister will preside. Now it is made obligatory on the Lt. Governor, unless due to special causes he is unable to be present, to preside. Therefore, I say that this does not create an executive which would be able to instil confidence, which should be able to deliver the goods working as a collective team.

There is absolutely no constitutional difficulty in this. The Bill is brought before Parliament by virtue of powers conferred on Parliament under Art. 239. Art. 239 absolutely does not debar it. It can be provided in this Bill that the leader of the majority party shall be the Chief Executive Councillor, that on his advice the other Executive Councillors will be chosen, that they will work like a collective team, that the Lt. Governor will have the right to preside. Provisions corresponding to those in the Part C States Act can be made here.

As I said, this body will have, as the provisions at present stand, absolutely no powers to remove the Executive Council, absolutely no powers to censure them. But there is absolutely nothing in the Constitution which debars making such provisions here. It may be that if the majority party passes a resolution expressing want of confidence in a particular Executive Councillor, the Administrator will remove him. There is no constitutional bar. The point is whether this has to be done or not. We suggest that constitutionally these provisions should be made.

All these things require serious consideration of this august body. After all, what is Delhi? Delhi is you, me and several other people. I would say it is a cosmopolitan city. It is growing fast. It is 35 lakhs today. Within five to ten years, it may be 55, 60 or 70 lakhs. Can Delhi perpetually be expected to be governed in this manner? Can Delhi, a sensitive place, with a high political awareness and sensitivity, with a high standard of literacy and education, be expected to be governed only through a bureaucracy, howsoever enlightened it may be at a given time, or only with the aid of advisers? That is the question you as representatives of our nation can best answer?

There are a number of other matters. Various other amendments have been suggested regarding the privileges by our Delhi MPs and by a few other friends. They have suggested certain amendments re: the privileges and powers of the members. the position of the Chairman. rules, procedures and so many other things. Of course, we surely welcome them. But as I said, the basic things are those concerning the general powers of this body, how it stands, what powers it has, what it can do and so on.

Mr. Chairman: Please refer to point 4, where you speak of a machinery which should be created for effective co-ordination of functions between the Metropolitan Council and other agencies. What is the sort of co-ordinating authority you envisage?

Shri H. K. L. Bhagat: I am deeply obliged to you for this question.

If things stay as they are, there should be some kind of a statutory provision for creation of a co-ordinating Committee which has at its head one of the Executive Councillors, say the Chief Executive Councillor, which should have representatives of all the local bodies and various statutory authorities and other agencies on it and which has powers to decide thos-

things It will not be just a meeting body again to discuss things. For that, probably the corresponding law relating to those authorities may also have to be amended. I would suggest the creation of this kind of a co-ordinating committee in the statute itself with adequate powers to decide so that whatever overlapping or duplication of functions remain could be eliminated and smooth functioning ensured.

Then if you look at the system, even now, a number of authorities will remain strictly outside the scope of this body, *e.g.* DDA, DMS. A number of statutory boards are there, also some other boards. The point is that today these statutory boards like those of Electricity and Transport are, to a limited extent, subject to some kind of review, looking into most of the things and deciding them in committees themselves. But still certain powers have been given to the general body of the corporation, but under the Bill the Metropolitan Council will be absolutely without powers. You may want to keep them as experts, but these are developmental activities which apart from planning, do require popular urges and inspiration to put them on the right path.

The general body should be made powerful. I would not like them to be as any other department. Today the budget comes before us, we decide and make changes. So, when an institution is being created, we should see whether we are progressing or going back.

So, my suggestions in brief are these: (1) we want Delhi to be made a State; (2) some central safeguards can be provided even while making it a State; (3) even if it is retained as a Union territory, it should be given a council of Ministers and a legislature; (4) the general body should be given the powers of budget and other things, even if the Constitution is required to be amended; (5) the leader of the majority party should be made the Chief Executive Councillor, and on his advice other Executive Councillors should be taken; (6) the general body should be given some power relating to their removal also. Then there are certain other amendments proposed by some friends.

We also feel that the New Delhi Municipal Committee should be democratised. Even the States Reorganisation Commission had recommended that the distinctions and barriers between Delhi and New Delhi should be abolished; yet the New Delhi Municipal Committee has been kept as a separate entity, in the face of the argument that there was already a multiplicity of authorities. We feel that it should be democratised in the sense that the members of this body should be directly elected by the people.

These are some of the suggestions on behalf of the Delhi Pradesh Congress Committee, the Municipal Congress Committee—I am not speaking on behalf of the Corporation as such—and the other district Congress Committees.

Shri Shiv Charan Gupta: Do you think the proposed arrangement in the Bill is better than the Part "C" States Act that was applicable to Delhi before?

Shri H. K. L. Bhagat: There is no comparison between the two. Under the Part "C" States Act, from section 21 onwards, you had control over most of the subjects, the leader of the majority party was the Chief Minister, he had to choose his colleagues, there was power to sanction the budget etc. I would any day opt for the Part "C" status even with its limitations.

Shri Bakar Ali Mirza: Every demand or suggestion of yours involves an amendment of the Constitution. Even about financial powers, you are in doubt whether the Constitution should be amended or not. We had an amendment of the Constitution only in 1962, and nothing new has happened since then to reconsider the same

issue. The same arguments will be put forward again. Hence the suggestion for amendment of the Constitution at this late hour is not likely to materialise. In the light of his. do you want any definite changes in the Bill to meet at least part of your demands?

Shri H. K. L. Bhagat: I do not agree that every suggestion of mine requires a constitutional amen ment. There is no constitutional bar to making a leader of the majority as the constitutional adviser and accepting the other executive councillors on his advice. Similarly, there are a number of things which do not require an amendment of the Constitution. I am not a constitutional expert and I must candidly admit that I have not given it the attention and study it deserves, but constitutional experts can go into it.

Shri Bakar Ali Mirza: The suggestion that the Chief Executive Councillor should be responsible, should be removable etc., means that in substance the Executive Council should function as a State Government. Is that possible as the Constitution and the Bill stand today, because the Executive Councillors are advisers and advisers are not responsible for their actions?

Shri H. K. L. Bhagat: I am afraid I cannot agree. There is absolutely no constitutional bar in article 239, and such provisions will not be *ultra vires* of the Constitution. If this body is made corporate as in the Territorial Councils Act, 1956, as in the case of Himachal Pradesh, even financial powers can be given, because that Act was also in terms of article 239.

श्री नवल प्रभाकर : आपने अपने मेमोरेंडम में कहा है :

> "There should be a Chief Executive Councillor. The Chief Executive Councillor should be made responsible to the Metropolitan Council".

क्या आप यही चाहते हैं कि सिर्फ चीफ़ एग्जेक्टिव काउंसिलर ही रिसपांसिबल र या जैसा इस बिल के अन्दर दिया गया है कि जो चार एग्जैक्टिव काउंसिलर होंगे उन चार का आप नामिनेशन ही चाहते हैं ? 42 जो सदस्य हैं उन में से आप चीफ एग्जैक्टिव काउंसिलर को ही निर्वाचित कराना चाहते हैं या चार को भी कराना चाहते हैं ? और उनको भी रिसपांसिबल करवाना चाहते हैं ?

Shri H. K. L. Bhagat: I want to make it clear that we want a directly elected team of four councillors; we want the leader of the majority party to be taken as the chief executive councillor and we want the three other executive councillors to be appointed by the President on his advice and the whole team collectively should be responsible to the general body.

श्री नवल प्रभाकर : दूसरा सजेशन आपका यह है कि मेट्रोपोलिटन काउंसिल को फाइनैन्शल पावर्स दी जायें । लेकिन अगर फाइनैन्शल पावर्स किसी हद तक न दी जा सकें तो क्या आप उसे स्वीकार कर लेंगे । अगर आपका पहला सुझाव मान लिया जाये लेकिन दूसरे तक हम न पहुंच सकें तो उस हालत में आपकी क्या प्रतिक्रिया होगी ।

Shri H. K. L. Bhagat: I think that question can be answered better by leaders of the DPCC who happen to be members of the select committee.

Shri R. V. Bade: In the memorandum of the Karol Bagh district Congress Commitee they say that there are a number of instances where the federal capital of the country happens to be the capital of one of the States and the State government belongs to an opposition political party. Can you give any concrete example of a democratic country, federal State, with such an assembly?

Shri H. K. L. Bhagat: I have not studied that question in minute detail

and each case has to be seen on the particular conditions existing in the country. We have a peculiar structure in this country according to which we should have a structure. But there are countries in the world in which in the State capitals they have according to their own forms of government a local form of government. For example, they have in Moscow such a system; the same thing in Tokyo. In certain other countries that is there; they have a local government. Leaving aside Washington which is a curious example, even in U.S.A. there is the local government. In London the Metropolitan Council is more than a local government.

Shri R. V. Bade: The County Council is quite different.

Mr. Chairman: Is there any country in the world where in the federal capital they have a State assembly also?

Shri H. K. L. Bhagat: Moscow. According to their system of government they do have a local government.

Shri R. V. Bade: Are you in favour of reservations of seats?

Shri H. K. L. Bhagat: Probably there will be four or five people nominated and one or two can be given to trade. But I am afraid we may not be able to answer this question; there are leaders whom you can address this question.

Shri R. V. Bade: You are diplomatic. In Delhi, there is the Corporation; there is the New Delhi Municipal Committee and then there is the Delhi Administration. They are all overlapping. Somebody has said that there is a three legged race going on everyday. Are all these three institutions to remain separate after the Metropolitan Council?

Shri H. K. L. Bhagat: Some people think that perhaps a solution lies in integrating everything into one institution to avoid multiplicity of authorities. Their objective is good. But can the question of, say, giving a water connection be considered in the same atmosphere and at the same level as some State policy question? So, some kind of separation has to be worked out. There are civic functions; there are administrative functions. But in what we are creating in this Bill, there is that distinction. The distance between the executive councillor and the executive council and again between the executive council and the general body is there; the government of India will be very much there. I am afraid this multiplicity will to a certain extent continue. One suggestion is to have better co-ordination. The other suggestion is that the metropolitan council should at least be one integrated institution with constitutional links with one organ or another.

Shri R. V. Bade: The Corporation has five or six zones, separately managed and there is one co-ordinating authority of the Corporation. If we create similar zones and have one Metropolitan Council and liquidate all these Corporations and Delhi municipality, what objection have you got?

Shri H. K. L. Bhagat: We considered this question at length. The mere creation of zones will not achieve the desired results because the mixture of civic and other functions would continue. I am a member of the Corporation now; I had been a member of the Assembly before. I know the problems that arise, the atmosphere and the temparament in which they are discussed at these different bodies. It would not be good to mix two things; the two things should be kept separate and the upper layer could be made more powerful.

Shri R. V. Bade: You say that there should be some financial control and the budget should be discussed by the metropolitan council. What sort of a budget is it going to discuss? In the financial memorandum, it is said that we are going to spend six lakhs over the metropolitan council. What other expenditure you have in view? We

want some concrete things from you. What sort of the budget would the metropolitan council discuss—the budget of the Corporation, municipalities or the government.

Shri H. K. L. Bhagat: If Electricity and Transport Undertakings are transferred to the Metropolitan Council, their budget and the budget of the Delhi Administration would come to about Rs. 35 crores. This can be discussed here. If necessary, the Constitution may be amended. It is not necessary that Parliament should go into these small things; Parliament has much more important things to do.

Shri R. V. Bade: What about law and order?

Shri H. K. L. Bhagat: We would certainly like law and order to be there entrusted to the Metropolitan Council, but because Delhi is the capital, Government wants to keep it exclusively in the discretion of the Administrator. It might do so, but by convention, he can take the assistance of the Chief Executive Councillor, as was done at the time the Part C States Act was in operation.

Shri R. V. Bade: In the Karol Bagh District Congress Committee memorandum it is said: "The provision for interim arrangement should be done away with as it will serve no useful purpose". What is the argument behind this suggestion? This is an important point, because only one witness yesterday referred to the interim arrangement and this is the second witness to refer to it.

Shri H. K. L. Bhagat: I have not said anything about the interim arrangement. Even if it finds a place in the memorandum, the local MPs. are there on the Committee and this can be discussed with them.

Dr. Sarojini Mahishi: At page 3 of the memorandum submitted by the Ajmeri Gate Congress Committee it is said:

> "Both in the case of Executive Council and the Metropolitan Council, it shall be a clear case of responsibility without power which would be a dangerous situation indeed."

What exactly do you mean by responsibility here?

Shri H. K. L. Bhagat: The metropolitan Council would be a directly elected authority responsible to the people while it will not be able to decide anything there. It will not have the power to decide anything. The position of the Executive Councillors is that of virtual advisers, who have no power. They shall also be held responsible by the people because they will be directly elected by the people. The Metropolitan Council also will think that the Executive Councillors should be answerable to them. So, it will be a case of responsibility without power.

Dr. Sarojini Mahishi: You mean direct election implies responsibility?

Shri H. K. L. Bhagat: Yes; even the Parliament derives its authority and power from the people.

Dr. Sarojini Mahishi: You mean, even though the four Executive Councillors are nominated, one of them should be the Chief Executive Councillor and the others should be nominated on his advice?

Shri H. K. L. Bhagat: Yes, this gives status and authority to both the Executive Council and the Metropolitan Council and ensures smooth working and collective functioning.

Dr. Sarojini Mahishi: These four should be members drawn from the elected members?

Shri H. K. L. Bhagat: Yes.

Dr. Sarojini Mahishi: If the Delhi Corporation in its wisdom has not found it advisable to have an elected

member for mayorship, how is it you are advocating this? The Mayor is appointed from among the eldermen.

Shri H. K. L. Bhagat: The same argument will apply to Parliament. The members of the Rajya Sabha are indirectly elected. But there is difference between a nominated member and an indirectly elected member. In choosing the present Mayor and certain other Mayors previously, we acted in the best interests of Delhi. It is a question of what you think best at a particular time. We are against nominated members being put as Executive Councillors.

Dr. Sarojini Mahishi: You have said that machinery should be created for effective and coordinated functioning between the Metropolitan Council and other agencies and authorities. What is the nature of this machinery you want?

Mr. Chairman: He has replied to that.

Dr. Sarojini Mahishi: If there is a minister for Delhi Development in the Central Cabinet and if he is assisted by a council of members who are drawn from representatives of Delhi in both Houses of Parliament and on each question pertaining to Delhi, the Cabinet minister acts only on the advice and guidance of this particular Council, do you think it will be good?

Shri H. K. L. Bhagat: With great respect, I may say that this situation already exists except with this little difference. The Home Minister is there — we do not have a separate minister for Delhi Development—but the Home Minister there and our MPs are already there. They meet and there is an advisory council. But it cannot obviously deliver the goods unless you have something at the local level. For example, we have the Delhi Transport undertaking which is a State Transport Undertaking under Chapter IVA of the Motor Vehicles Act. We wanted certain inter-State permits for routes between Delhi and U.P. because they are a little more paying and will make up to some extent for the losses on some uneconomic routes in Delhi. U.P. said, "You are not a State; you are a Union Territory. Yours is only a Municipal Transport Undertaking. So, we will not give permits." The Central Government said that we are constitutionally correct and they referred us to the Inter-State Transport Commission. They said, "You are right; we will tell U.P." But U.P. said, no. The matter has been going on for years. Ultimately, we requested the Chief Commissioner to do something. Then he passed an order that from such and such a date he will check every one of their buses and will not permit those running without permits. Then they came running to us and some permits have been given from Delhi to Ghaziabad. The other matters are still pending. The Central Government is sympathetic. We have Ministers in the Central Government on whom we have the confidence. At the same time, after all, they sit as judges to arbitrate between us and others. It is there that the difficulty arises. They have their own problems. They have to look after the whole country. Therefore, by merely having a Minister at the Centre and some people sitting with him as advisers it is not going to solve the problem. It might do some little good as it has been doing already, but my submission is that it will not achieve the desired results.

Shri Shivaji Rao S. Deshmukh: Coming to the financial powers of the Metropolitan Council, I would like to know whether the witness would be satisfied if there is a provision in the present Bill statutorily and permanently transferring the authority of Parliament to legislate for withdrawal from the Consolidated Fund of India in this form that subject to such modifications as Parliament may otherwise provide the Metropolitan Council shall be the competent authority to frame statements of estimated expenditure and receipts, will it satisfy the hon. Member?

Shri H. K. L. Bhagat: I would say that it shall be surely an improvement on the Bill in the sense that it would

give the Council additional delegated powers.

Shri Shivaji Rao S. Deshmukh: If this financial arrangement is agreed upon, what role is the witness prepared to delegate to the Executive Councillors, because there will be four Executive Councillors and they will have to divide among themselves the different duties and functions?

Shri H. K. L. Bhagat: The answer is obvious, in the sense that the budget estimates will be prepared by the Executive Councillor in charge of finance, they will be approved by the Executive Council and then they will go to the general body for approval. Surely one Executive Councillor will take the responsibility of the department of finance.

Shri Govindan Nair: I take it that the views expressed by the witnesses are shared by the entire Delhi District Congress Committee?

Shri H. K. L. Bhagat: Yes.

Shri Govindan Nair: The sum total of your suggestion amount to something like an Assembly and responsible government for Delhi, which is very much against the spirit of this Bill. As members of the Pradesh Congress Committee, did you not represent this matter to the Home Ministry? We were told that this Bill was prepared in consultation with all the political parties. Your views must have weighed with the Home Ministry while preparing this Bill. Now you, who form a wing of the ruling party, are coming forward with a suggestion which goes counter to the spirit of the very Bill itself. Why is it like that?

Shri H. K. L. Bhagat: This is more a political question. As I said, some of our leaders did have discussions. I was present at one or two meetings. I would say that this question can be more appropriately answered by the Members of Parliament from Delhi who are on this Committee.

Shri Govindan Nair: Coming to the Bill, do you feel that even with this Bill the various parallel authorities that exist in Delhi today cannot be co-ordinated?

Shri H. K. L. Bhagat: The institution as it stands today has to be judged intrinsically on its own merits. Certainly, institutions depend on men and, probably, men can make and unmake institutions. A weak institution may yield good results. Sometimes there may be Lieutenant Governor who is a genius or a Chief Executive Councillor who is a genius who can influence the Corporation, who can influence the Central Government and so on and in that case some good may result as compared to the present situation. But, as I said, this is conditioned by all these factors, who are the people, how are they going to work and so on. But as the institution stands at present it suffers from serious lacunae.

Shri Govindan Nair: I asked this question because you have suggested a co-ordinating committee apart from the Council. That clearly shows that you are not thinking in terms of co-ordinating the various authorities functioning here and bringing them within the fold and functioning of this Metropolitan Council.

Shri H. K. L. Bhagat: I am very sorry, I did not exactly appreciate the question put to me. Left to myself I do not like the DMS to remain a statutory authority or the DDA to remain a separate authority. I would certainly prefer that all these authorities are eliminated as much as possible and they are brought right within the purview of the Metropolitan Council and the Executive Council. But, as I said, some kind of a civic structure for Delhi and other areas may remain separately and that is why that co-ordination has been suggested. It is not that I want all these authorities to continue separately. We certainly want this institution of the Executive Council and the Metropolitan Council to cover everything within its scope and jurisdiction except this civic structure.

Shri Govindan Nair: If all these are brought within the jurisdiction of the Metropolitan Council, what will be

the type of civic structure that you would like to have.

Shri H. K. L. Bhagat: We should have an integrated type of civic structure. There can be two views. Some people feel that we might split it up into small municipal committees. But I think, looking to Delhi as it is developing now, its past and present problems and also commonness of problems and other things, we might retain one integrated body for civic problems. Of course, it may have to be two or even three if the NDMC and Cantonment Board are kept separate.

Shri Govindan Nair: From the experience of the past, do you feel that it would be better to take away the bus service, power and water supply from the Corporation?

Shri H. K. L. Bhagat: Unfortunately, I do not share this view. Perhaps, it may not be possible for me to get into the details now but, as I said, these statutory undertakings came within the purview of the Municipal Corporation in 1958. If I may tell you about the constitution of these committees, there are seven members out of which three are nominated by the Government of India who are experts of the Government of India. I am not going to put a blanket to cover their weaknesses or lapses. What I am saying is, these problems are legacies of a long past. Previously these undertakings were directly under the Chief Commissioner who used to be the Chairman. Then all members were officials and no non-official was there. All these legacies have been left. I do feel that in various respects some of these undertakings have progressed after they came over to the Corporation. The Corporation has certain difficulties and limitations. But I feel, that they have not functioned worse than what they were before they came over to the Corporation.

Shri Govindan Nair: Even in States road transport is under a separate road transport corporation for effective functioning. Do you feel that especially in the case of Delhi where there is not very much to the credit of the Corporation for the running of the road transport, it would be better to have it under a Road Transport Corporation or something like that?

Mr. Chairman: It should be under the Municipal Corporation.

Shri H. K. L. Bhagat: I have said it. Only one more word. What the hon. Member stated is a very big 'if'. If the State Government is there and there is co-ordination between State transport authorities and the road transport undertakings, they can pool the private transport with the public transport and achieve results. If you have a strong State Government it can achieve co-ordination and carve out a definite transport policy for the city which would be a good thing. So, it would be to the good of the City if the Metropolitan Council is made really powerful.

Shrimati Renu Chakravartty: It has been stated by many witnesses that the Government of India has many areas directly under it because of the Embassies etc. What is your view? Do you think that the Government of India should keep certain minimum areas under it for this reason?

Shri H. K. L. Bhagat: Personally I think this is an over-cautious approach from the people of Delhi we should expect that they would give the same consideration and courtesy to the Embassies as anybody else. After all, the Government of India is also run by certain officials. Similarly, the New Delhi Municipal Committee is also run by officials.

Shri Hari Vishnu Kamath: The witness has made a statement that the Government of India is run by officials. That is a damaging statement.

Shri H. K. L. Bhagat: I am sorry. I am grateful to Shri Kamath for giving me an apportunity to amend myself. What I meant was, that day to day administration in the Govern-

ment of India is run by officials. If the Government think it necessary, they may carve out a particular area and put it under them like the New Delhi Municipal Committee. The rest can become a State.

Shrimati Renu Chakravartty: But personally you would not like that?

Shri H. K. L. Bhagat: I would not mind it.

Shrimati Renu Chakravartty: You feel that it is not necessary for the Government of India to carve out a portion when a Metropolitan Council is formed with wide powers?

Shri H. K. L. Bhagat: Yes.

Shri R. V. Reddiar: What makes you think that the members of the Metropolitan Council, Executive Councillors, Chief Commissioner, the Chairman and the Administrator will always be fighting with one another?

Shri H. K. L. Bhagat: I do not want to be a prophet of doom. But, as it stands, the position is that the Metropolitan Council will not be constitutionally obliged to advise the Executive Council, the Executive Council will not be constitutionally obliged to follow that advice and the Lt. General will not be constitutionally obliged to follow any of their advice. You have not put any bridges between them to make them function smoothly. It is something like water. If you provide channels, it will flow to the garden; if there are no channels it will go waste or may go anywhere.

Shri R. V. Reddiar: Even without power they will be fighting with each other?

Shri H. K. L. Bhagat: I suppose there are quarrels everywhere but here it should be through constitutional channels. If it is suggested that the creation of a State will lead to quarrels I would simply prefer to keep quiet. You know, what is happeding elsewhere.

Shri R. V. Reddiar: Do you mean to say that the citizens of Delhi have a higher political conscience?

Shri H. K. L. Bhagat: I believe so.

Shri R. V. Reddiar: Then why do you anticipate that there will be disagreements and quarrels?

Shri H. K. L. Bhagat: The more the conscious the more the capacity to fight and quarrel.

Shri R. V. Reddiar: It means that no power need be given to any of these institutions.

Shri H. K. L. Bhagat: I would prefer not to answer this question.

Shri Hari Vishnu Kamath: May I, at the outset, know whether Shri Bhagat is representing all the four organisations listed here?

Shri H. K. L. Bhagat: Yes.

Shri Hari Vishnu Kamath: I take it that they share his views.

Shri Vasu Dev: If permitted by the Chairman, I would like to make a submission, because four bodies are represented here. Our views have been fully represented by Shri Bhagat but if you allow me to make a submission....

Mr. Chairman: Not necessary.

Shri H. K. L. Bhagat: I have already said that if there appear to be some contradiction, the MPs of Delhi are here to reconcile them.

Shri Vasu Dev: If I may be permitted.....

Mr. Chairman: No, it is not necessary.

Shri Hari Vishnu Kamath: You do not want the differences to come to the surface?

Mr. Chairman: Not necessary.

Shri Hari Vishnu Kamath: He is anxious to speak.

Mr. Chairman: He may be anxious. You may ask your question.

Shri Hari Vishnu Kamth: Shri Bhagat has not answered the question.

Shri H. K. L. Bhagat: What is the question?

Shri Hari Vishnu Kamath: I have asked whether the views that you have expressed are shared by all the four Congress organisations *in toto.*

Shri H. K. L. Bhagat: I made it clear in the beginning that I am speaking on behalf of all the four bodies. There may be slight differences here and there but, so far as the broad and basic principles which I have enunciated are concerned, I believe they agree with me.

Shri Hari Vishnu Kamath: You have so often referred to the MPs. belonging to Delhi. Fortunately or unfortunately, all the MPs. from Delhi are of the Congress Party. You have mentioned them so often that I am inclined to think that there is apparently some difference between their views and yours.

Shri H. K. L. Bhagat: Well, I have not stated this. In any case, they are there before you. You might ask them this question in our absence.

Shri Hari Vishnu Kamath: We will discuss that with them later, not now. What I wanted to know was, because you belong to the same party....

Shri H. K. L. Bhagat: All these questions you may ask the MPs.

Shri Hari Vishnu Kamath: You do not what to say anything about them? Very well. I gather that your first preference is for the elevation of the Union Territory of Delhi to the status of a State like Nagaland.

Shri H. K. L. Bhagat: Like Madhya Pradesh also.

Shri Hari Vishnu Kamath: Nagaland is also a State

Shri H. K. L. Bhagat: I would prefer to be in your company.

Shri Hari Vishnu Kamath: From the point of view of size, Nagaland is a good comparison.

Shri H. K. L. Bhagat: So far as the Assembly is concerned, you might give it according to our size. But give us the same thing which you have.

Shri Hari Vishnu Kamath: When you recommended that the status of a State should be conferred upon this territory, you said something about the safeguards, if necessary, to be provided. What safeguards do you have in mind?

Shri H. K. L. Bhagat: Some of those safeguards were there in the Part C States Act and some of them are there in the Union Territories Act also. While the final word remains with the Administrator in certain matters and with the Central Government in certain other matters—they are there mentioned in the Part C States Act and in the Union Territories Act—they may be provided. The whole idea is that in the event of anything developing in future, if the Central Government may have apprehensions, they might provide for safeguards but leave the day-today administration to the elected people.

Shri Hari Vishnu Kamath: From your observation and experience of the manner in which the Part C set-up functioned from 1952 to 1956—nearly 4½ years or more—do you think that that kind of set-up will not be adequate or suitable for the present times?

Shri H. K. L. Bhagat: I said it before and I would surely say that that would definitely be a very clear improvement on the present situation. In any case, that is not unsuitable; it may not be as adequate as we might want it to be. But, in any case, I suppose that should do.

Shri Hari Vishnu Kamath: If that set-up is revived, considering that the Union Government also has its seat in this Union territory, do you

not envisage or apprehend, as happened during the period 1926 to 1956, frequent, undesirable, unsalutary, unhealthy clashes between the Council of Ministers of the Union territory of Delhi and the Union Ministers?

Shri H. K. L. Bhagat: With respect I say that the question is based on a supposition.

Shri Hari Vishnu Kamath: Not supposition, experience.

Shri H. K. L. Bhagat: I submit with humility that, according to my experience, it is not correct. There were no clashes as such between the Council of Ministers of Delhi and the Council of Ministers at the Centre. There may be some difference of opinion, as you have here. There might be differences of opinion existing sometimes among the Ministers of the same State Government.

Shri Hari Vishnu Kamath: I did not mean physical clashes.

Shri H. K. L. Bhagat: I was referring to the clashes which the hon. Member was referring to. I did not mean physical clashes.

Shri Hari Vishnu Kamath: So, you do not think that the Union Cabinet Ministers will have to be stripped of some of their powers, in case the Delhi State Legislature has got to be created, and Delhi Ministers invested with them.

Shri H. K. L. Bhagat: I think, we will be lightening some little burden on them. We have absolute, immense confidence in them. It will mean lightening of some burden which, perhaps, is unnecessarily on them. We feel that it will be good in the interest of the Union Government also if we act as their shock-absorbers.

Shrimati Renu Chakravartty: You more or less very politely said that certain powers, which are today impinging on the State authority and which normally would remain with the State, may be taken away and vested with the Delhi Administration. Is it your idea that, having done that, there would be some sort of co-ordination in order to bring about smooth working, but the authority should vest clearly with the Delhi Administration?

Shri H. K. L. Bhagat: Co-ordination will certainly be there, but then there is a big condition attached to that. Suppose, you go on adding statutory authorities and the control of the Metropolitan Council over them and the Executive Council is not there; at least, then the essential condition of that integration is not there. That should be put there and put in the charge of the Metropolitan Council, under their jurisdiction, authority and executive control.

Shri Hari Vishnu Kamath: You said, if I remember aright, in a sort of rhetorical flourish, addressing the Chairman of this Joint Committee, "What is Delhi State—you and I and some other people". It is a fairly good definition, I must say. You expressed the fullest confidence in the Chairman and others—Members who are here and others outside. Therefore I believe, you have the fullest confidence in the Members of Parliament—the Lok Sabha and the Rajya Sabha—who represent Delhi and other States also, that they take adequate interest in the affairs of Delhi for the welfare, well-being, progress and prosperity of Delhi and function as such in the Parliament as responsible Members for the welfare of Delhi. That is obvious from that definition of yours.

Shri H. K. L. Bhagat: I may say a few words about it. Certainly we have confidence in the capacity of the Members from Delhi and in their desire for our well-being, as also in all the Members of Parliament; we have absolutely no doubt about it. But the point is whether even with all those good intentions it is possible

to do justice to the day-to-day problems of Delhi in Parliament. I am afraid, I believe, it is not possible and with respect I would say that perhaps it is unfair to Members of Parliament from Delhi and to Parliament to expect that a small, little measure relating to Delhi should take the time of Parliament.

Shri Hari Vishnu Kamath: Could you show any single, or at least a major, instance when proposals made by the Corporation or by yourself individually or by the Members who represent the Union territory of Delhi in Parliament, formally, informally or otherwise, to the Union Cabinet with regard to Delhi were turned down by the Union Cabinet saying, "No, we do not want to introduce that"?

Shri H. K. L. Bhagat: As I had already said, the Union Cabinet is very much sympathetic to us; but even being sympathetic sometimes it happens. I gave one instance. It is not that they were against us; they were very sympathetic to us. Still, the transport matter was not resolved and it is not resolved fully even today.

Shri Hari Vishnu Kamath: They are not sympathetic enough, that means.

Shri H. K. L. Bhagat: No; they are.

Shri Hari Vishnu Kamath: Then it is perhaps beyond their capacity.

Shri H. K. L. Bhagat: There are other things.

Shri Hari Vishnu Kamath: But the Delhi Legislature, when it is constituted, will be able to resolve that more satisfactorily? Why do you fight shy of that?

Shri H. K. L. Bhagat: As I said, their position is that they have to sit and decide matters between States; so, naturally.....

Shri Hari Vishnu Kamath: Priorities come in.

Shri H. K. L. Bhagat: If there are two parties sitting before them with equal authority and status, it makes a difference.

Shri Hari Vishnu Kamath: The first preference being for a full status of a State, the next preference of yours is for more powers.....

Shri H. K. L. Bhagat: No; Council of Ministers and State as Union territory.

Shri Hari Vishnu Kamath: If under article 2 of the Constitution it cannot be done, that the status of a State cannot be conferred, your next preference is for amendment of article 239A and if that also is not going to be done, your third preference is for the conferment of adequate financial and legislative powers.

Shri H. K. L. Bhagat: I also said about the appointment of Councillors and Chief Executive Councillor.

Shri Hari Vishnu Kamath: The principle of nomination must be abolished entirely.

Shri H. K. L. Bhagat: The Leader of the majority Party may be nominated by the President as the Chief Executive Councillor.

Shri Hari Vishnu Kamath: Appointed.

Shri H. K. L. Bhagat: That is what I mean.

Shrimati Renu Chakravartty: But may I read out to you from the memorandum given to us by the Delhi Pradesh Congress Committee, Ajmeri Gate, signed by Mir Mushtaq Ahmed, where it says:—

> "Executive Councillors be nominated by the President on his advice."

Is that your suggestion?

Shri H. K. L. Bhagat: It is a question of language; it means appointment.

Shrimati Renu Chakravartty: Appointment means nomination. Is indeed? I want to be clear in my mind because in one or two of your documents you have said that the Congress is of the opinion that the Executive Councillors should be nominated by the President.

Shri H. K. L. Bhagat: As I said, if the whole thing is read in totality, it makes it clear that the Leader of the majority Party should be the Chief Executive Councillor; the President will appoint him and on his advice, the other Executive Councillors should be appointed.

Shrimati Renu Chakravartty: That is not written at all. In fact, what it means is this: The Executive Councillors are to be nominated by the President on the advice of the Chief Executive Councillor and the Chief Executive Councillor is to be nominated by the President.

Shri H. K. L. Bhagat: From the majority party.

Shrimati Renu Chakravartty: That is right. You are not against the principle of nomination?

Shri H. K. L. Bhagat: What we meant was 'appointment'.

Shrimati Renu Chakravartty: Appointment means nomination.

Shri Hari Vishnu Kamath: As far as the appointments of Chief Executive Councillor and the other Executive Councillors are concerned, you want to put them completely on a par with the appointments of Chief Ministers and Councils of Ministers in States and of the Prime Minister and the Council of Ministers at the Centre. You do not want to make any difference in the method of doing it, i.e., in the *modus operandi*. Is it so?

Shri H. K. L. Bhagat: Yes.

Shri Hari Vishnu Kamath: Then does it follow that you would like to have identical powers for the Metropolitan Council with regard to finance and legislation, identical with those obtaining for State Legislatures?

Shri H. K. L. Bhagat: I have already said that our first preference is that..

Shrimati Renu Chakravartty: We have understood your first preference. As the Bill is today formulated, the Metropolitan Council remains as a recommendatory body and in fact, it is the Executive Councillors who will have the authority of implementation. In such a situation, i.e., when the Metropolitan Council itself remains more or less a recommendatory body—a deliberative body and not the executive body—would it be better or not to have elected Executive Councillors? What would be your opinion?

Shri H. K. L. Bhagat: As I said, we would prefer the way which we have suggested in our Memorandum. Instead of every Executive Councillor being elected directly, I suppose that the proposal that we have submitted is better.

Shrimati Renu Chakravartty: That is true. Your basic principle is that the full legislative and executive powers which remain normally with a State should be given to the Metropolitan Council. That is your preference.

Shri H. K. L. Bhagat: Yes.

Shrimati Renu Chakravartty: You are, therefore, proposing that the leader of the majority party will be appointed as the Chief Executive Councillor and on his advice, the President will also appoint the other Executive Councillors, who will more or less be the Council of Ministers as in other States. If such a situation does not arise and the Metropolitan Council remains only a deliberative body, what would be your idea about the formation of this all-important Executive Councillors?

Shri H. K. L. Bhagat: Even so I submit that we would like to have the way which we have proposed in our Memorandum.

Shri Hari Vishnu Kamath: You want a unified authority for the entire Union Territory?

Shri H. K. L. Bhagat: I do not mean a single authority. I said 'unified' in the sense that matters which are not within the civic forum should be unified at one place, i.e., in the Metropolitan Council and the Executive Council.

Shri Hari Vishnu Kamath: Unified authority will mean their being adequately empowered.

Shri H. K. L. Bhagat: Otherwise, there cannot be unification.

Shri Hari Vishnu Kamath: Then do you envisage redistribution of powers as between the Metropolitan Council or whatever legislature you want to have, and the municipal authorities and the Central Government on the other?

Shri H. K. L. Bhagat: If that kind of authority is created at the level of Administration or State, whatever the case may be, there is nothing sacrosanct; suppose we think that something has to come from one side to the other, it can come. The civic functions and authority should be kept separate, but, as I said, there is nothing rigid about it. All these can be envisaged.

Shri Hari Vishnu Kamath: Have you given adequate thought to this matter, particularly as to what powers could still be conferred upon the Union Government or retained by the Union Government?

Shri H. K. L. Bhagat: *Vis-a-vis* the Union Government, what we obviously find today is that the Union Government has so many Ministries and Delhi's problems have to be dealt with at various levels. Naturally, it also creates some delay. So we felt that, as far as possible, the powers of the Union Government should be exercised by the Lt. Governor. As I said, they can have some kind of supervisory powers. Those powers which are mentioned in Part 'C' States Act or the Union Territories Act could be retained by the Central Government.

Ch. Brahm Perkash: I am interested in the co-ordinating body for integration of certain statutory functions and other local functions. You have said that all the money that you draw for various matters should come from the various grants of the various Ministries of the Government of India. With the delegation of finance to the local administration now, how will you be able to integrate the matter through this co-ordinating body?

Shri H. K. L. Bhagat: I have emphasized again and again that integration is conditional on the Metropolitan Council and the Executive Council being vested with these powers. Otherwise it will only be a lose combination. Mere co-ordination as such will not achieve the desired result. The basic issue is the institution where we are going to put these things and whether it has all the adequate powers including financial powers or not. If they are there, you will achieve integration. Otherwise, it will be a lose combination.

Ch. Brahm Perkash: If these financial powers are not conferred on the body, then the appointment of the co-ordinating body for purposes of integration will lose all its force. Will you agree?

Shri H. K. L. Bhagat: It may not result in integration. There may be only co-ordination. The objective of co-ordination is integration which this body will not be able to achieve.

Ch. Brahm Perkash: Suppose we do not get for the proposed Metropolitan Council any financial powers. Today the Delhi Transport Undertaking and the Electricity Board are directly under the Corporation and about Rs. 15 crores are voted by the Corporation for them. What would be your answer with the transfer of these bodies to the new Metropolitan Administration?

Shri H. K. L. Bhagat: If it comes to a consultative body and does not have the powers, then in a modest way with all respect may I ask: Could it be called a progressive step? It will really be a retrograde step.

Shri I. K. Gujral: He has emphasized about civic inadequacies of the town. Does he visualise that the future....

Mr. Chairman: We are not concerned with that. You can ask anything on the Bill.

Shri I. K. Gujral: Talking of the financial powers, DTU and DESU were mentioned. In this connection, may I ask: Is it necessary that the right to operate Consolidated Fund be given as preamble....

Shri H. K. L. Bhagat: That, again, is an intricate question of Constitutional interpretation just as it was in the Territorial Councils Act of 1956 where the Council was a corporate body and a special fund was created. Regarding the Consolidated Fund there is a provision in Art. 112(3) of the Constitution according to which certain items are charged on the expenditure of the Union. They are, of course, open to discussion in Parliament, but not open to vote. Parliament or the President may also declare any other item as being charged on the Consolidated Fund of India. Then, the question of interpretation will arise whether the clause has to be interpreted *ejusdem generis* or it gives a wider power to the Parliament. Then provisions relating to Appropriation Bills etc. i.e. articles 113 and 114 etc. can go, because Parliament can say this is expenditure charged on the Consolidated Fund of India. These are very intricate Constitutional questions. I have not studied them and I cannot say anything on them with finality.

Shri I. K. Gujral: My second question is: May I ask you about the coordinating machinery? Would the witness visualise that such a coordinating machinery can also be in the Metropolitan Council itself with delegated authority, that being an approving body, that it could draw the line of action for them?

Shri H. K. L. Bhagat: Surely. I have been stressing this point over and over again.

Kumari Shanta Vasisht: The SRC body criticised the functioning of the Government in 1952—56. I would like you....

Mr. Chairman: That is not necessary. We are not going into that.

(The witnesses then withdrew)

Shri Hari Vishnu Kamath: The Leader of Opposition in British Parliament is here and some of us may have to go and meet him here.

Mr. Chairman: Those who want to go may go and come back.

Shri Hari Vishnu Kamath: When are we meeting next?

Mr. Chairman: We will meet on the 21st, 22nd and 24th which is a holiday on account of Id. If Mr. Hathi will oblige us, we will start on the 20th.

***XI. Shri Jag Parvesh Chandra, New Delhi.**

---

*His evidence was not concluded on the 31st December, 1965.

(The witness was called in and he took his seat)

Shri Hari Vishnu Kamath: Jag Parveshji, you have been described as representing the All India Newspaper Editors' Conference.

Shri Jag Parvesh Chandra: I am here absolutely in my individual capacity as a small political worker.

Mr. Chairman: In your memorandum also you have been described as Office Secretary of the All India Newspaper Editors' Conference.

Shri Jag Parvesh Chandra: That is the letter-head which I use for my personal correspondence also.

Mr. Chairman: We do not invite any person in his individual capacity. We invited you only in your individual representative capacity.

Shri Hari Vishnu Kamath: These are your individual views and not that of the All India Newspaper Editors' Conference.

Shri Jag Parvesh Chandra: These are my personal views.

Shri Hari Vishnu Kamath: I thought that the All India Newspaper Editors' Conference also shared these views.

Mr. Chairman: It is under that mistake we invited him.

Shri Hari Vishnu Kamath: The views which you have already expressed and which you will be now expressing are not shared by the All India Newspaper Editors' Conference?

Shri Jag Parvesh Chandra: No.

Shri Hari Vishnu Kamath: You have not consulted them either?

Shri Jag Parvesh Chandra: No. They are absolutely my personal views.

Shri Hari Vishnu Kamath: I am sorry to say that this detracts to some extent from the significance or importance of the evidence that you might be tendering before this Committee. I would like to ask only one question. You were a member of the Delhi Part C State Legislative Assembly, an M.L.A. Are you in a position to tell the Committee whether it is because of your experience, good, bad or indifferent, of the working of the Delhi Part C State Legislative Assembly and in the manner in which it operated, toiled and strove for the welfare of Delhi that you welcome the present set-up?

Shri Jag Parvesh Chandra: I am very glad that Mr. Kamath has raised this point. The Delhi Part C State was abolished because of the recommendations of the States Reorganisation Commission. The Commission has stated nowhere any other factor, personal or of any other kind. It was as a matter of all-India policy that Part C States were abolished and consequently they all became Union Territories. So far as I am concerned, I am very clear in my own mind and I am sure that every citizen of India also feels that there should be a State legislature in the area where he lives. As I stated the other day, the Constitution of India forbids Delhi from having a State Legislature. I say it again that within the framework of the Indian Constitution the present Metropolitan Council is a workable proposition and it should be given a fair trial.

Shri Hari Vishnu Kamath: You would not go to the length of advocating an amendment of the Constitution for conferring a State legislature on Delhi.

Shri Jag Parvesh Chandra: That is most welcome. That is upto you. Every citizen of India would like to have Statehood, but since you gentlemen of the Parliament have decided not to give us a State and within the framework of the Constitution you have suggested an alternative, we should give it a fair trial.

Shri Shivaji Rao S. Deshmukh: You say that every citizen of India should be raised to Statehood.

Shri Jag Parvesh Chandra: Every citizen of India would like to have Statehood for the area in which he lives. The citizens have only fundamental rights.

Shri Hari Vishnu Kamath: May I take it that it is your considered view based on mature experience that Delhi, the prosperity and the welfare of the citizens of Delhi, before the advent of the State legislature and after the abolition of the State Legislature, were not and have not been worse off than during the halcyon period from 1952 to 1956 when there was a State legislature.

Shri Jag Parvesh Chandra: Surely you know that there are all forms of civic disabilities from which most of the citizens of Delhi suffer because of bureaucratic and rigid character of Delhi Administration, though you live in Delhi for a short period.

Shri Hari Vishnu Kamath: Bureaucratic and rigid?

Shri Jag Parvesh Chandra: I said the other day that M.Ps. and even now I would say that they were never consulted by the Chief Commissioner.

Shri Harj Vishnu Kamath: So, you will be happy if more financial and legislative powers are conferred upon the Metropolitan Council.

Shri Jag Parvesh Chandra: If the Constitution of India permits that, please do that. But, it does not permit that.

Shri Hari Vishnu Kamath: The Constitution does permit the conferal of powers upon the Metropolitan Council without giving a State Legislature.

Shri Jag Parvesh Chandra: You can do it within the framework of the Constitution. We shall welcome that if the Constitution permits that.

Shri Harj Vishnu Kamath: You seem to have a soft corner for the Delhi Milk Scheme only.

Shri Jag Parvesh Chandra: Definitely, Sir. We are anxious that Members of Parliament should get good milk as they get special Lipton Tea for their use.

Shri Harj Vishnu Kamath: That is not a part of the Delhi Milk Scheme. D.M.S. does not provide Lipton Tea. It is provided by the Tea Board.

Shri Jag Parvesh Chandra: Naturally the Metropolitan Council would like to assure your getting a high quality of milk.

Shri Hari Vishnu Kamath: Why do you want to single out the D.M.S. only? Why don't you try to bring within the ambit of your suggestion Delhi Hospitals also?

Shri Jag Parvesh Chandra: So far as hospitals are concerned, some of them are already under the Delhi Administration, while some are under the Municipal Corporation and a few are with the Union Government. Our attempt will be to get all the hospitals within the ambit of the Metropolitan Council. But, at the moment, personally I would not like to raise a fresh controversy and thus create more enmity.

Mr. Chairman: Thank you very much.

(The witness then withdrew)

XII. Councillors, Municipal Corporation of Delhi—(Group II).

Spokesman:

1. Shri Sumer Chand
2. Ch. Fateh Singh
3. Shri Pyare Lal
4. Shri Chuni Lal Bhatia
5. Shrimati Kaushalya Malik.

(The witnesses were called in and they took their seats.)

Mr. Chairman: Gentleman, whatever evidence that you give here will be treated as public. It will be printed and circulated to the Members of Parliament. Some members of the New Delhi District Congress Committee also came forward and gave evidence before the Committee. I don't think you have got different views from what they have expressed. Your memorandum is explanatory. If you want to say anything more than what you have stated in your Memorandum, you can do so. Here I would like to say that anyone of you will please speak from amongst you.

Shri Sumer Chand: The Metropolitan Council is a recommendatory body. From this Bill, you will see that the Metropolitan Council shall have the right to discuss and make recommendations in respect of varying matters. That means they can only make recommendations. Even those recommendations can be forwarded to the Central Government only if the Administrator thinks fit. If he does not deem fit, he need not forward them. What we feel is that this body is only advisory in character. This Body has no financial powers nor even the budget. What we want is that you must give it some powers. It should be a legislative body. Now you will have the Metropolitan Council as well as the Delhi Corporation. The result will be that by having these two big bodies in Delhi, you will go on increasing your expenses. What we want is that either we should have a legislative body or all civic matters of Delhi should come under one body.

Shri Shiv Charan Gupta: Some time back some members of the local Pradesh Congress Committee, Corporation Congress Party gave evidence before us. Let us first know whether all these representatives are going to give the same views as the other Members gave. Let us enquire whether they belong to Congress party.

Mr. Chairman: I suppose you are all Congressmen. I may tell you that members of the Delhi Pradesh Congress Committee and other Municipal Members came and gave evidence before the Committee. We want to know whether your views will be contrary to what they gave to us.

Shri Sumer Chand: They are not different from what I am going to give.

Shri R. V. Bade: The witness says quite a differene thing.

Mr. Chairman: I know all of you are anxious to cross-examine him.

Shri Sumer Chand: What we want is that this Body must have powers. You should give them the legislative and other financial powers. Otherwise it will only be an advisory body.

Mr. Chairman: Take for example countries like Canada, Australia, South Africa etc. Is there any federal capital where such a Council exists along with Parliament?

Shri Sumer Chand: India is a country which should show its example to the other countries in the world. Let us take the example that India got independence by following non-violence. No other country has got independence by following the non-violence methods.

Mr. Chairman: So, you want to have another Government in Delhi.

Shri Sumer Chand: I only say that this body should have legislative powers. Either give them legislative powers or you don't have these two bodies together.

Mr. Chairman: So, you want to have one body.

Shri Sumer Chand: Here is a body which has no legislative powers or even financial powers. What I suggest is that this body should have a membership of 100; let them also have legislative powers in addition to their attending to civic matters.

Shrimati Renu Chakravartty: So, you want to take away the small powers enjoyed by the Corporation. Here, in this body, you are going to have nominated Executive Councillors who will have all the right which the Corporation has. You want to take away these powers from the Corporation and give them to the Council.

Shri Sumer Chand: No, Sir. I only say that instead of having two bodies in Delhi, there should be only one body. Let this body deal with civic subjects and legislative subjects.

Shrimati Renu Chakravartty: That is a different matter.

Shri Sumer Chand: Then, this body will also have financial powers and some budget also. So far as civic matters are concerned, at present, they can only discuss some matters and make recommendations. Even then, it is the Administrator who rules over this Council. Here, the recommendation of the Metropolitan Council, after having been duly considered by the Executive Council, shall, wherever necessary be forwarded by the Administrator to the Central Government. It is also left to the Administrator to forward them or not to forward them. So, it is only an advisory body—a sort of a debating club. What I want is that it should be made strong. At least if you give the budget and civic affairs in Delhi, it will have something to do. It will deal with the matters relating to Delhi administration and also the matters that go under the Corporation. At present it is not a legislative body nor is it a civic body. It is something between the two. Let it also deal with civic matters. Then you will cut down the expenses. Otherwise, you will have two white elephants in Delhi—the Corporation with a lot of expenses and staff and the Metropolitan Council also with a lot of staff. We suggested in public good that we should have one unified body which will deal with the civic subjects and also with legislative matters. It may be advisory in character. But we should not have two bodies. What is the necessity of having two bodies—the Corporation and this Metropolitan Council? This body can also deal with the civic subjects with a membership of 100 or so. They can deal with the civic budget and financial matters and all that. If we have two bodies, they may also come into clash. The Corporation is also an elected body; this Council will also be an elected body. So far as the bill is concerned, you say that this Council is superior to the Corporation and then the Corporation will say, 'We are also elected Members and so far as civic jurisdiction is concerned, we are concerned with it.' If you have just one body to deal with all matters in Delhi, I think it will be economical and it will reduce your expenses. It will be in public good and then also you will have better efficiency in administration. That is what we feel.

Shri I. K. Gujral: Did you visualise that if there is one body, how could the civic services be dispensed with? Do you want to have smaller Municipalities also?

Ch. Fateh Singh: One of the Executive Councillors should be responsible for civic affairs. Moreover, there should be Zonal Committees just as there are Civic Committees and day-to-day functions should be carried out by the Zonal Committees and the Chairman of the Zonal Committee should be a member of the Committee of which the Executive Councillor should be the Chairman. The general budget should be discussed first by the Committee and then it should go to the Metropolitan Council. Day-to-day functions can be carried out by these Zonal Committees which will have more powers.

Shri Sumer Chand: The members of the Metropolitan Council should be members of the Zonal Committee in which they live.

Shri I. K. Gujral: Do you feel that if the Corporation also continues and the Metropolitan Council of the type—powerful or not powerful—comes into existence, it is good for the Capital?

Shri Sumer Chand: It is no good having this body. It is only an advisory body. If you want to have a body, it should be a strong one which can deliver the goods.

Shri I. K. Gujral: Supposing it is a strong one, do you want to have a strong Metropolitan Council and also the Corporation?

Shri Sumer Chand: If both the Metropolitan Council and the Corporation exist, there will naturally be clash between the two.

Mr. Chairman: You want one big powerful body?

Ch. Fateh Singh: Both of them will have very heavy establishment. The Corporation budget is of the order of Rs. 15 crores. Similarly, the Delhi Govt. budget is also of an equal size. If both these bodies are merged, there will naturally be a cut in expenditure and the Metropolitan Council will have a budget and more financial powers.

Ch. Brahm Perkash: Do you agree that constitutional and administrative difficulties have been pointed out in conferring financial and administrative powers on this body? In that case you think it will remain an advisory committee. According to your proposal, whether you call it the Corporation or the Metropolitan Council the same hitch will be there. No financial or administrative powers can be granted in respect of certain subjects of Delhi administration. Then, again, you will accept that body?

Ch. Fateh Singh: Corporation has already got its power for its budget. Even if we are not given any power in Delhi administrative affairs, if at least this budget can be transferred from the Corporation to the Metropolitan Council, we will have power to make budget on those subjects.

Shri Sumer Chand: Firstly, we want some financial powers to be given to this body. In addition to that, we want the civic matters of the civic body also to be handed over to this body. Then it will be a strong body.

Ch. Brahm Perkash: If it is not conferred?

Shri Sumer Chand: Then, this bill looks to us like the constitution of a society under the Registration of Societies Act or a Trade Union at the most. Here, we find that the entire powers are with the Administrator.

Ch. Brahm Perkash: Your opinion is in relation to or in the context of the present Delhi Administration Bill. But certain political parties and individuals have recommended that there should be a State Legislature and there should be a State. So what would you prefer? Would you like to have a State or a State Legislature or this body of 100 clothed with powers?

Shri Sumer Chand: Our first choice is for State Legislature.

Kumari Shanta Vasisht: I think you are all members of the Congress

Party. You should have known the proposals of Congress Party about this Bill. Are you in agreement with what the others have said, you support them or have you got separate proposals?

Shri Sumer Chand: We have no separate proposals. There is no divergence. Our first choice is for a State Legislature. But if you do not have it, we must have a strong body with powers in monetary matters, expenditure and all that.

Shri Bakar Ali Mirza: You have suggested that instead of two bodies there should be one body. Of course, you want the powers of the civic body to be transferred to the Metropolitan Council. In other words, you will be transferring the powers of the Corporation to the Administrator because you cannot have an Administrator under this Bill and have at the same time powers of the Corporation like taxation, etc.

Shri Sumer Chand: You will have to make necessary changes.

Shri Bakar Ali Mirza: What are those changes?

Shri Sumer Chand: So far as the civic matters are concerned, we have already suggested that the civic matters should be entrusted to one of the Executive Councillors and he should deal with them.

Mr. Chairman: There are some suggestions like increasing the membership of the Council and giving them more powers, etc.

Shri Sumer Chand: So far as civic matters are concerned, it will execute and deal with them itself. At present also the Corporation executes civic matters. So far as legislative matters are concerned, it will be advisory in character. They may be dealt with as proposed in the Bill. Of course, our first choice is that if possible this power should be increased. So far as civic matters are concerned, as the Corporation deals with it, the Council can also deal with it.

Shrimati Renu Chakravartty: The New Delhi Municipality, the D.D.A., and the Delhi Milk Supply Scheme should all come under this Metropolitan Council?

Shri Sumer Chand: Yes.

Shrimati Renu Chakravartty: About all these, the powers of the Metropolitan Council should not be of a deliberative nature but that it should also have the power of taking decisions and implementation. Is that your suggestion?

Shri Sumer Chand: Yes.

Shrimati Renu Chakravartty: Regarding budget, discussion of budget, etc., you are not desirous of having anything more than the powers that are there with the Delhi Corporation?

Shri Sumer Chand: No, no. What we say is that our first choice is Legislative Assembly. But if the Government says that we cannot have a new State in Delhi—if you so decide —then what we want is that this Metropolitan Council should be made stronger than provided in this Bill and it could be made stronger by transferring the civic subjects to this body.

Shrimati Renu Chakravartty: Then the powers of the executive council will have to be enlarged?

Shri Sumer Chand: Yes. It will not be recommendatory in character so far as civic matters are concerned; it will execute itself. So far as legislative matters are concerned, it will be advisory in character.

Shri Jaisukhlal Hathi: If a member of the Metropolitan Council who would be an executive council member is put in charge of all the subjects of local self-government, will that suffice?

Shri Sumer Chand: Civic matters will have to be discussed by some elected body. But what I say is that it is needless to have an additional body like that.

Shri Jaisukhlal Hathi: Therefore you suggest that there may not be any corporation but there may be one Metropolitan Council with membership; and if one of the members is put in charge of this, you will be satisfied?

Shri Sumer Chand: He may be in charge of it and so far as legislative matters are concerned, they will be discussed by the Council first and for execution. . . .

Shri Jaisukhlal Hathi: For legislation it will be recommendatory and Parliament will pass laws.

Shri Sumer Chand: If you so desire.

Shri Shivajirao S. Deshmukh: I would still ask him what arrangement does he envisage when he says that all civic functions should be transferred to the Metropolitan Council and that one of the Executive Councillors should be in charge of the entire civic affairs—whether he would be a Mayor cum Administrator cum Municipal Commissioner cum Electricity Board Chairman. What is the arrangement he has in mind?

Shrimati Renu Chakravartty: I am also not very clear about what you envisage in the second preference—your first preference is, of course, an Assembly. Do you envisage the Metropolitan Council as the Corporation of Delhi plus New Delhi with the additional powers of a deliberative character on legislation. Now the Corporation cannot even deliberate on legislative matters. All that you want is plus deliberation and recommendations regarding legislation to the Parliament? That is all?

Shri Sumer Chand: Either you glorify the Corporation or make the Metropolitan Council the Corporation.

Shrimati Renu Chakravartty: Why then did you say when Mr. Hathi asked you that the work of the entire civic structure will vest on this one Executive Councillor?

Shri Sumer Chand: Not necessarily; we do not mind. Our basic view is that the Council may deal with all the civic matters. So far as execution is concerned, they may be put in charge of one Executive Councillor or other officers. This body is neither at present legislative nor civic; it is a curious creation. What we want is that this curious creation must be curious in the complete sense. Let it deal with civic matters and also deal with legislative matters. If it is to be advisory regarding legislative matters, let it be advisory. If you can increase its powers so far as legislation is concerned, you should do so.

श्री नवल प्रभाकर : लोगों की नागरिक सुविधाएं और उनके राजनीतिक अधिकार, यह दो अलग अलग मामले हैं । इस समय नागरिक सुविधाओं के लिये कारपोरेशन है, नई दिल्ली म्यूनिसिपल कमेटी है और कैन्टोनमेंट बोर्ड है । आप इन दोनों के साथ ताल मेल कर के उन के साथ किस तरह से न्याम करेंगे । नागरिक सुविधायें अलग चीज़ है । इस में सेनिटेशन या दूसरे तीसरे मामले आ जाते हैं । प्रशासनिक मामले इस से अलग चीज है । अगर आप दोनों में ताल मेल करना चाहेंगे तो न यह रहेंगे न वह रहेंगे ।

श्री सुमेर चन्द : इसी वक्त वह क्या कर रहे हैं । सिवा बातचीत करने के या बहस करने के वह करते ही क्या हैं ।

श्री नवल प्रभाकर : मैं प्रशासनिक ढांचे की बात कह रहा हूं । नागरिक सुविधाओं और प्रशासनिक ढांचे में आप कन्फ्यूज़न क्यों कर रहे हैं ।

श्री सुमेर चन्द : मैं कन्फ्यूज़न नहीं कर रहा हूं । आप जो बाडी दे रहे हैं उससे कोई फायदा नहीं है । यह तो सिर्फ एक डिबेटिंग सोसाइटी होगी, नहीं तो आप इस की पावर्स बढ़ाइये । चाहे आप किसी तरह से बढ़ाइये, लेजिस्लेटिव मैटर्स की पावर्स दीजिये, फाइनैन्शल पावर्स दीजिये, सिविल बजट उसे दीजिये, चाहे उसे जोनल कमेटी बनाइये जो कि लोकल मैटर्स से डील करे, कुछ करके उसे स्ट्रांग बनाइये । अगर 100 मेम्बर्स कारपोरेशन के किसी बजट को पास कर सकते हैं तो यह बाडी भी कर सकती है क्योंकि यह बाडी भी एक एलेक्टेड बाडी होगी ।

Shri Hari Vishnu Kamath: Are you for nomination of the Executive Councillors or for their appointment from the elected members?

Shri Sumer Chand: From elected members. It is already in the Bill.

Shri Hari Vishnu Kamath: Are you for the election of the leader by the majority party who will be *ipso facto* appointed, the President, or whosoever the nominating authority may be, having no option in the matter? That is, as in the States, the majority party elects the leader . . .

Shri Sumer Chand: Also in the Centre.

Shri Hari Vishnu Kamath: The leader or the chief executive councillor. You are for that?

Shri Sumer Chand: Yes.

Shri Hari Vishnu Kamath: You have said earlier that the powers of the Council will have to be enhanced.

Shri Sumer Chand: Because it has no powers.

Shri Hari Vishnu Kamath: So *pari passu*, that is when you enhance the powers of the Council, you automatically reduce the powers of the Union cabinet with regard to Delhi. Don't you?

Shri Sumer Chand: We don't. So far as the Corporation is concerned still we have it; so far as the Delhi Municipal Corporation is concerned we have still control on it.

Shri Hari Vishnu Kamath: But you want some more powers?

Shri Sumer Chand: Instead of these two bodies, the powers of the Corporation may be transferred to this.

Shri Hari Vishnu Kamath: Before you devolve powers on the new body, this metropolitan council, the Union cabinet will have to be denuded or stripped of those powers, unless you propose concurrent jurisdiction. Are you for concurrent or separate jurisdiction?

Shri Sumer Chand: If you don't agree to a State . . .

Shri Hari Vishnu Kamath: Suppose we don't agree . . .

Shri Sumer Chand: Then, naturally, you will have to have concurrent powers—if you don't agree to a State.

Shri Hari Vishnu Kamath: Then you are for concurrent powers?

Shri Sumer Chand: If it is not a State. So far as the Council is concerned, it will be working under the Central Government. So far as legislation is concerned, so far as the administrative matters are concerned, it will be under the Central Government. But so far as the civic matters are concerned, still we have got full powers, and this Council also should have full powers on these civic matters.

Shri Hari Vishnu Kamath: If concurrent powers are not agreed to, or if any enhancement of powers is not contemplated or finally agreed to, would you agree to a working arrangement like this, namely, the Metropolitan Council as suggested in the Bill plus a minister for Delhi in the Union cabinet who will have, to assist him and to guide him and to advise him, a council composed of all the members from the Delhi Union Territory in the Lok Sabha and the Rajya Sabha, and a convention that no measure is to be brought before Parliament without the concurrence of the minister for Delhi and the council assisting him? Will that be a satisfactory arrangement?

Shri Sumer Chand: What is the good of this council, the proposed council?

Shri Hari Vishnu Kamath: This will be as it is, with whatever powers

it has got. I am putting a hypothetical question. Suppose more powers are not devolved upon this Metropolitan Council and the Bill goes through as it is, with minor modifications. I suggest that as a compensation for not acceding to your demand for more powers, we have in the Union cabinet a minister who may be designated as Minister for Delhi and he will have, to assist him, to guide him and advise him, a council composed of all the members from the Delhi Union Territory in the Lok Sabha and the Rajya Sabha, the members who represent the Delhi Union Territory.

Shri Sumer Chand: Can you think that one minister can replace one elected body?

Shri Hari Vishnu Kamath: You want a State legislature. That is not possible. We are trying to find out what will be the next best.

Shri Sumer Chand: In the second alternative we must have a strong Metropolitan Council, and in addition to that let us have a Minister for Delhi Affairs—but in addition to the strong Metropolitan Council.

Shri Hari Vishnu Kamath: There is bound to be a clash very often between the two.

Shri Sumer Chand: You will agree that so far as civic matters are concerned, they are already with us in the Corporation. If these are entrusted to this Council, what is the difficulty?

Shri Hari Vishnu Kamath: But there are more important matters for which you want powers to be vested in the Metropolitan Council—other matters, not only civic matters—financial powers, all that you want to be vested in it.

Shri Sumer Chand: Nothing like that.

Shri Hari Vishnu Kamath: But if that is not finally agreed to, what will be the next alternative? This will be more or less the next best.

Shri Sumer Chand: If there is this body with civic powers and there is also a Minister for Delhi Affairs, what is the harm?

Dr. Sarojini Mahishi: I would like to know what you mean by concurrent powers. If the State Assembly is not given and absolute powers are not given as far as the State List is concerned, automatically it will become concurrent.

Shri Sumer Chand: That is what I mean.

Dr. Sarojini Mahishi: What is the concurrent power? Concurrent List means concurrent between the Centre and the State.

Shri Sumer Chand: It cannot be exactly in that sense, because you don't have a separate State. Only if you have a separate State do you have concurrent subjects between the Centre and the State. Not in that sense. It will be only in this sense that we will have this Council dealing with matters advisory in character and the Union Government will have complete control on them.

Dr. Sarojini Mahishi: That is, the Delhi Corporation with all its present powers, plus advisory capacity in legislative matters.

Shri Sumer Chand: Yes.

Mr. Chairman: Thank you.

(The witnesses then withdrew.)

XIII. Bhartiya Jana Sangh, Delhi Pradesh, Delhi

Spokesmen:

1. Shri Hardyal Devgun
2. Shri Kedar Nath Sahani
3. Shri Vijay Kumar Malhotra.

(The witnesses were called in and they took their seats.)

Mr. Chairman: All the Members have got copies of your memorandum

and your amendments. If you want to add anything more to your memorandum, you may do so. Otherwise I will ask the Members to put any questions which they may like to put.

Shri Hardayal Devgun: In addition to what we have already submitted, we would like to suggest one amendment to clause 33, *i.e.*, at line 32 at page 13, the word 'President' should be deleted and the words 'Metropolitan Council' should be inserted in its place.

Mr. Chairman: You want that the civic administration should be under the Delhi Administration. You have stated:

> "The civic administration, a State subject, should be under the Delhi Administration but the Municipal Corporation is under the Home Ministry and the New Delhi Municipal Committee is under the Union Health Ministry. Problems of land, and its development in New Delhi, are governed by the Ministry of Works and Power. The Delhi Development Authority is yet another autonomous body charged with the implementation of the Master Plan and the Development of Land in Delhi.
>
> The present Municipal Corporation in some ways enjoys more powers than the proposed metropolitan council. The continuance of a powerful municipal corporation after the establishment of the metropolitan council will not only be against the principle of a unified authority but also will be an unnecessary financial burden on the people of Delhi. The municipal corporation should, therefore, be broken into eight or nine municipal committees.'.

These are your suggestions?

Shri Hardayal Devgun: Yes.

Mr. Chairman: Then you have stated:

> The proposed set-up should guarantee a unified authority for Delhi with direct popular control of the people of Delhi over it.
>
> All subjects mentioned in the State and the concurrent Lists except law and order, the civic administration of Delhi and New Delhi, the Delhi Milk Supply, the implementation of the Master Plan, the Delhi Development Authority, electricity, transport and water supply should be under the proposed set-up.'.

Mr. Chairman: These are your suggestions?

Shri Hardayal Devgun: Yes.

We want to re-emphasise two or three points. Firstly, the people of Delhi should be given the right to manage their own affairs of a local nature. We agree that Delhi, being the metropolitan city, should not be the seat of two governments. But in regard to matters which are of a local nature, the people of Delhi should have a right to manage them and we believe that in every way the people of Delhi qualify for participation in the administration of those affairs, and yet, for the last ten years, they are being denied of that right.

As we have said in the preamble to our memorandum, there are many authorities today . . . .

Mr. Chairman: You need not repeat all that. We have already read your memorandum.

Shri Hardayal Devgun: We want that there should be one unified authority in Delhi, but that authority should have powers and should have control over the Municipal Corporation of Delhi and the NDMC, the DDA, the Delhi Milk Supply Scheme and so on.

Mr. Chairman: You are only repeating what I have read out already.

Shri Vijaykumar Malhotra: I would like to add one thing which has been left out. We do want that the chief

executive councillor should be an elected one; he should be elected by the Metropolitan Council and he should nominate the other members.

Shri Hardayal Devgun: We have said that already, but we want provision to the effect that he would be elected from amongst the elected members of the Metropolitan Council.

Shri Shiv Charan Gupta: You have stated in your memorandum that the proposed set-up should guarantee a unified authority for Delhi with direct popular control of the people of Delhi over it, and you have suggested certain amendments to this effect also at page 6. You have stated there that the members of the Executive Council shall be responsible to the Paur Sabha.

Assuming that this body is the main body and assuming that all the authorities which you have suggested in your memorandum are put under the control of this Paur Sabha, do you consider that the provisions in clause 21 would give enough powers for that purpose?

Shri Hardayal Devgun: We do not say that that is sufficient. So, we suggest that subject to the provisions of this Act, the Metropolitan Council shall have the right not only to discuss but also to decide by resolutions; the Metropolitan Council should have the right of decision. It should not only be a debating club but it should be able to decide and resolve. Therefore, we feel that the provision in clause 21 is insufficient; the metropolitan council should have more powers.

We would also suggest the deletion of the provision in clause 21(1) (d) relating to the estimated receipts and expenditure pertaining to Delhi. We would suggest that instead the Metropolitan Council should have the right to decide and pass the budget of Delhi.

Shri Shiv Charan Gupta: It is suggested that according to the Constitution it is not possible unless an Assembly is created. In that event, would you suggest an Assembly for Delhi?

Shri Hardayal Devgun: We have suggested in our memorandum the constitution of a Paur Sabha. We do not suggest the creation of a legislative assembly, because we want to reserve the right of legislation for the Parliament only. We believe in a unitary form of government; we do want to have an assembly for Delhi but not a legislative assembly. The right to legislate should remain with Parliament.

Mr. Chairman: You want the legislative power to remain with Parliament.

Shri Shiv Charan Gupta: It is suggested that according to the present Constitution it is not possible to give financial powers to a body like the Metropolitan Council or the Paur Sabha, that is, to approve of the budget and so on. You have stated before that this power can be given to the metropolitan council even according to the present Constitution, and if that is not possible, would you suggest the amendment of the Constitution for that purpose?

Shri Hardayal Devgun: Yes, I want that the power should be given to the proposed Metropolitan Council or the Paur Sabha. In order to give that power, if the Constitution has to be amended, then it should be amended. That is my party's stand.

Shri S. S. Mariswami: Do you want the legislative powers should be given?

Shri Hardayal Devgun: No; we want that budgetary or financial powers only should be given.

Shri Vijay Kumar Malhotra: And powers to decide the affairs of the Delhi Administration.

श्री नवल प्रभाकर : जो चार कार्यकारी परिषद् होंगे उनको आप मनोनीत पसन्द करेंगे या उन ४२ व्यक्तियों से चुना हुआ पसन्द करेंगे ?

श्री हरदयाल देवगुण : हमने अपने संशोधनों और सिफारिशों में कहा है कि जो पौर सभा के सदस्य हों वह जनता द्वारा निर्वाचित हों और उनमें कोई नमिनेटेड सदस्य न हो। और जो कार्यकारी परिषद हैं वे भी निर्वाचित स स्यों द्वारा ही निर्वाचित हों और उनके प्रति उत्तरदायी हों।

They should be collectively responsible to that House.

Shrimati Renu Chakravartty: Please explain it in English as I could not exactly follow it.

Shri Hardayal Devgun: The Executive Councillors should be from amongst the elected members of the House, and with the Chief Executive Councillor, they should be collectively responsible to the House.

Shrimati Renu Chakravartty: They should be from the elected members.

Shri Hardayal Devgun: Yes, and should be responsible to the House. They should not be nominated by the President.

Mr. Chairman: You want them to be elected by members or leave it to the largest party.

Shri Vijay Kumar Malhotra: The Chief Executive Councillor should be elected. He has to nominate the other three.

Mr. Chairman: You do not want the leader of the biggest party to come into the picture.

Shri Vijay Kumar Malhotra: He will naturally be elected.

श्री नवल प्रभाकर : मैं यह भी जानना चाहूंगा कि यह जो चार कार्यकारी सदस्य होंगे परिषद् के उनका या यह समझिये कि जो यह परिषद् है उस परिषद् के 42 सदस्य क्या अपना कोई नेता चुनने का अधिकार रखते हैं इस सम्बन्ध में आपका क्या विचार है ?

श्री हरदयाल देवगुण : जी हां।

श्री नवल प्रभाकर : आप ने अपने मेमोरैंडम में यह कहा है एक स्थान के ऊपर कि इसकी जो भाषा है आपने पृष्ठ पांच के ऊपर कहा है कि इसकी भाषा केवल हिन्दी होनी चाहिए और इसमें जो अंग्रेजी और हिन्दी है वह नहीं होना चाहिए, तो क्या मैं जान सकता हूं कि आप लोग पहली कारपोरेशन में जो साहनी साहब डिप्टी मेयर थे और दूसरे भी सदस्य थे उन्होंने यह निर्णय किया कारपोरेशन में कि अंग्रेजी, हिन्दी और उर्दू तीनों भाषाएं समान रूप से होनी चाहिएं तो इसमें आपका मत कैसे बदल गया ?

श्री हरदयाल देवगुण : यह कभी निर्णय नहीं किया गया कि यह तीनों भाषाएं रहेंगी। हिन्दी को ही राजकीय, शासकीय और क्षेत्रीय भाषा स्वीकार किया गया है और केवल हिन्दी में ही इसका सारा कामकाज होना चाहिए यह हमारा मत है। उर्दू दिल्ली में केवल 6 प्रतिशत: लोगों की भाषा है और इसलिए हमने और हमारी पार्टी ने कभी भी उर्दू को दिल्ली की कोई क्षेत्रीय भाषा भी स्वीकार नहीं किया। उर्दू से ज्यादा अधिकार यहां पर अन्य भाषाओं का है। अन्य भाषा बोलने वाले देश की 14 भाषा बोलने वाले बहुत से अन्य वर्गों की संख्या दिल्ली में उर्दू भाषियों की अपेक्षा अधिक है विशेषकर पंजाबी भाषी लोगों की संख्या ।

Ch. Brahm Perkash: You may be aware that our Constitution is based on a certain pattern. We have a federal structure. We have adopted in India the parliamentary form of government. There are different types of administration in the world. There is the unitary type. Even in the federal structure, you have the presidential type, the committee type and unitary form of government. But here in India, you have got a federal structure and parliamentary form of government. If the Constitution does not accept or provide through

its various articles for a unitary form of government, how would you advise conferment of financial powers or the power of appointment? You want a governmental or authoritative body?

श्री हरदयाल देवगुण : इसके बारे में हमारा मत यह है कि दिल्ली में हमें इस का परीक्षण आरम्भ करना चाहिए और इसलिए हमने इस पौर सभा के लिए सभी अधिकार मांगे हैं । जितने स्टेट लिस्ट में विषय हैं और जितने कौनकरैंट लिस्ट में विषय हैं उनके बारे में पौर सभा को निश्चय करने का अधिकार हमने मांगा है और बजट स्वीकार करने का भी अधिकार हमने इस में मांगा है । परन्तु यह अंतिम अधिकार केवल संसद् के पास रहना चाहिये और संसद् को यह तब तक जब तक कि यह युनिटरी फॉर्म आफ़ गवर्नमेंट, युनिटरी फॉर्म आफ़ कांस्टीट्यूशन देश में स्वीकार नहीं करते हैं तब तक संसद् को दिल्ली के निर्वाचित प्रतिनिधियों के द्वारा किये गये निश्चय को स्वीकार करके यह एक प्रकार की परम्परा डालनी चाहिए तो इस तरीके से यह जो उसके निश्चय होंगे वह लगभग दिल्ली के लिये केन्द्रीय सरकार को और संसद् को भी अन्तिम समझने होंगे ऐसा हमारा विचार है ।

श्री साहनी : इस में एक बात और भी कह दी जाय तो ठीक रहेगा । फैडरल सिस्टम आफ़ गवर्नमेंट केवल भारत ने ही स्वीकार नहीं किया है बल्कि दुनिया के और भी बहुत से देशों में है और उनकी राजधानियों में जो शासन व्यवस्था होती है तो कई बातें उनमें विलक्षण होंगी । यूनाइटेड स्टेट्स आफ़ अमेरिका में विलक्षणताएं हैं इसलिए अगर भारत की राजधानी दिल्ली में थोड़ी इसकी व्यवस्था कर दी जाए तो कोई बहुत आस्मान टूट पड़ने वाला नहीं है । भारत की राजधानी में जब यहां पर एक विधान सभा नहीं होगी तो कुछ विशेष अधिकार यहां के लोगों को देने होंगे और यहां पर जो नई शासन व्यवस्था की कल्पना की गई है उस के हिसाब से यह सारी चीज़ें यहां पर देनी चाहिएं । यहां पर युनिटरी फॉर्म आफ़ गवर्नमेंट कब होगी या नहीं होगी यह बाद का प्रश्न है लेकिन यहां जो आज फ़ैडरल सिस्टम है उसके होते हुए दिल्ली के लोगों को नई परिस्थितियों में कुछ अधिकार दिये जा सकते हैं । दुनिया के और देशों में भी दिये हुए हैं ।

Shri Vijay Kumar Malhotra: Financial and legislative powers can be given.

A Metropolitan Council fund can be created. From out of that, these powers can be given.

Ch. Brahm Perkash: I quite appreciate your stand on the unitary form of government and also appreciate your point of view on the conferment of more financial and administrative powers to this Metropolitan Council. But I think you would concede that according to the present Constitution, under the various articles regarding financial powers, that is not possible. When constitutionally it is not possible, would you advise the conferment of financial powers? That is one thing.

Mr. Chairman: He says—create a fund.

Ch. Brahm Perkash: You cannot create a fund for the Metropolitan Council. There are only two funds, one the Fund of the Union and the other that of the State. There are funds created for statutory corporations etc. That is quite separate. But in a form of government, you have only two funds, the Consolidated Fund of India and the Consolidated Fund of the State. So under what constitution would you like to confer those financial powers on the *Paur Sabha*?

Shri Vijay Kumar Malhotra: Naturally the Constitution has to be amended.

Shrimati Renu Chakravartty: If the idea of your party is that it should be only a glorified *Paura Sabha*, which means a corporation—this

Metropolitan Council—what is the necessity for you to also advocate that it should have extra financial powers beyond that already delegated to the present *Paura Sabha?*

Shri Kedar Nath Sahani: What does the hon. Member mean by glorified *Paura Sabha?* I have not been able to follow.

Shri S. S. Mariswami: What is *Paur Sabha?*

Shri Kedar Nath Sahani: That is the name we want to give to this body.

Shrimati Renu Chakravartty: All our corporations are called *Paura Sabhas.*

Shri Hardayal Devgun: That is a different thing. *Paur* in ancient literature is for the capital town and *Paur Sabha* means metropolitan sabha, Assembly.

Shrimati Renu Chakravartty: Since you do not want that legislative powers should be given to this body and your idea is that only civic powers should be there, why do you want to discuss financial matters, passing of the budget etc.? Whatever financial powers are already there with the corporation should suffice.

Shri Hardayal Devgun: That is not our stand. I think we have been misunderstood. We want all subjects which are presently with the Delhi Administration, except law and order, to be given to the proposed *paur sabha,* and we want this Metropolitan Council to be an elected body where the Chief Executive Councillor should be elected by that body. They should take decisions on all these matters, they should have executive powers with respect to all those subjects mentioned in the State List and Concurrent List, and they should have recommendatory legislative powers for those subjects. They should sponsor proposals for legislation on those things. Let the final authority of legislating remain with Parliament, but Parliament should respect the feelings of the people of Delhi.

Shrimati Renu Chakravartty: Do you think that Parliament with its heavy agenda is able to give the adequate time for the passing of such legislation as will be necessary. My understanding is that there will be a great deal of delay. With our heavy agenda, if we have time, you will get it passed, otherwise you will have to wait.

Shri Hardayal Devgun: Rather, we will lighten your burden, because now you are occupied with all our legislation.

श्री शिवाजीराव शं० देशमुख : दिल्ली नगरनिगम को विभिन्न नगरपालिकाओं में विभाजित करने के बाद इन नगरपालिकाओं को पौर सभा में प्रतिनिधित्व देना ज़रूरी आप समझते हैं या नहीं ?

श्री हरदयाल देवगुण : वह सोचा जा सकता है । उसके बारे में इन संशोधनों में तो हमने कुछ नहीं कहा है । म्युनिसिपल कारपोरेशन एक्ट में जब संशोधन लायेंगे तो जरूर उसके बारे में राय दी जाएगी ।

श्री केदार नाथ साहनी : हमने यह कहा है कि म्युनिसिपल सिविक एडमिनिस्ट्रेश जो सारी दिल्ली की है वह पौर सभा को दे दी जाए और वह पौर सभा यह निश्चय करेगी कि अपने पास रखे या आठ हिस्सों में बांट दे या चार में बांट दे । सिविक एडमिनिस्टेशन के विषय उनको दे दिये जाने चाहियें ।

Shri Shivaji Rao S. Deshmukh: Having suggested that the legislative functions should be performed by Parliament, what do you have in mind except enhancing the prestige of the *Paur Sabha* in suggesting that the rights and privileges of the Members of the Lok Sabha should be conferred on the Members of the *Paur*

Sabha? What specific purpose will it serve? That is not there in the Bill.

श्री केदार नाथ साहनी : दिल्ली एडमिनिस्ट्रेशन के जितने काम हैं वे सब इलैक्टिड रिप्रिजेंटेटिव्ज के पास होने चाहियें । इस वक्त जितने स्टेट या कनकरेंट सबजेक्ट हैं वे सारे के सारे दिल्ली एडमिनिस्ट्रेशन के पास हैं और वे सब इलैक्टिड रिप्रिजेंटेटिव्ज के हाथ में होने चाहियें ।

Mr. Chairman: Thank you, gentlemen.

(The witnesses then withdrew.)

The Committee then adjourned.

MINUTES OF EVIDENCE GIVEN BEFORE THE JOINT COMMITTEE ON THE DELHI ADMINISTRATION BILL, 1965.

Saturday, the 19th February, 1966 *at* 11.00 *hours.*

PRESENT

Shri S. V. Krishnamoorthy Rao—*Chairman.*

MEMBERS

Lok Sabha

2. Chodhury Brahm Perkash
3, Shri Shivajirao S. Deshmukh
4. Shri Shiv Charan Gupta
5. Shri Hari Vishnu Kamath

WITNESS EXAMINED

Institute of Constitutional and Parliamentary Studies, New Delhi.

Spokesman:

Shri M. C. Setalvad, *former Attorney General of India and Vice President of the Institute of Constitutional and Parliamentary Studies.*

Indian Institute of Constitutional and Parliamentary Studies, New Delhi:

Spokesman:

Shri M. C. Setalvad, *former Attorney General of India and Vice President of the Institute of Constitutional and Parliamentary Studies.*

(Witness was called in and he took his seat)

Mr. Chairman: Mr. Setalvad, I think you are representing the Indian Institute of Constitutional and Parliamentary Studies?

Shri M. C. Setalvad: That is so.

Mr. Chairman: Under the rules, the evidence shall be treated as public and is liable to be published unless you specifically desire that all or any part of the evidence should be treated as confidential; even if you want any portion to be treated as confidential, such evidence is liable to be made available to the Members of Parliament.

Shri M. C. Setalvad: I do not think that there is anything confidential in what I am going to say.

Mr. Chairman: We have received your memorandum and it has been circulated to the Members. If you want to add anything you may do so.

Shri M. C. Setalvad: I do not wish to add anything. If Members wish to ask any questions of me, I am here to answer them.

Chodhury Brahm Perkash: From the memorandum, it appears that according to the present provisions of the Constitution relating to Union Territories and particularly relating to Delhi, no financial powers as such could be given to this body; whether substantial or insubstantial, no power could be given to this body. My question is a little beside the point. Under articles 2 and 4 of the Constitution Parliament by an Act can create a State; suppose a State is created under those articles of the Constitution; I would like to know whether the Government of India could withhold to themselves under the Act for that State, certain powers to themselves, out of the State List.

Shri M. C. Setalvad: That will require not only an amendment of the articles mentioned but some other portions of the Constitution, because if the intention is to constitute Delhi into a separate State, then, if the Constitution stands as it is, it will have to be treated like any other State in regard to the State List and the Concurrent List. If you want to treat Delhi, even though it is a State in a different manner, then some other parts of the Constitution will also have to be amended. However, all that does not arise really within the framework of this Bill, and really I suppose we are confined to the framework of this Bill in any case.

Chodhury Brahm Perkash: Strictly speaking, my question does not relate to the framework of this Bill. But since a long time, we in Delhi as well as the people in the Government of India have been worried over the administrative set-up in Delhi, and we have been honestly and sincerely trying to evolve a formula for a democratic government for Delhi, under which the Centre, since they are very much concerned about the capital could have a certain amount of power for guidance and control and at the same time the people could have a democratic set-up. So, that is the background to my question. Under the provisions of this Bill and the explanation given in the memorandum, no such power could be vested in that body. Is it possible by any means to give a democratic apparatus for Delhi under the present Constitution?

Shri M. C. Setalvad: Your question involves first and foremost a question of policy. As I read the debates which have been sent to me, the relevant debates in connection with this Bill, at the moment—of course,

Government can always change their policy—the policy seems to be not to turn Delhi into a sort of a State with legislative and other related authorities. That is what I understand from the debates. But if at any time the policy changes, and if it is the intention of the powers to give Delhi what you have just now mentioned, certainly, it can be done but with very substantial amendments to the Constitution.

Chodhury Brahm Perkash: I am quite a layman so far as constitution and law are concerned. You may be knowing very well about the different forms of democratic governments in the world. One is no doubt the parliamentary form, mostly of the British pattern. But there are other forms of democratic governments, say, in the United States, Switzerland, France etc. Under our constitution as it at present stands, is it possible to have a democratic government where the executive is not subject to the vote of the legislature or parliament, as in US or Switzerland?

Shri M. C. Setalvad: Human ingenuity can certainly devise some such scheme as you have mentioned. But it would be very incongruous with the scheme of our constitution which is based solely on the British parliamentary system. Speaking from my own point of view, I think it will be very difficult to work it into our present scheme which is based on the British parliamentary system.

Chodhury Brahm Perkash: I take it from whatever I have been able to get from your memorandum and what you have said that according to our present constitution, in relation to Delhi, either there should be a basic change in the policy of Government so as to give whatever democratic form of government they want to give or Parliament wants to give or there can only be a sort of advisory government in the strict sense of the law, and there cannot be any sort of a democratic government of the type envisaged under the parliamentary system of government.

Shri M. C. Setalvad: That seems to be the position. You mean a body which can impose taxes and so on and has financial powers. That can only be done if you amend the constitution.

Shri S. S. Mariswami: Do you think that the Metropolitan Council as envisaged will serve the purposes allotted to it?

Shri M. C. Setalvad: The purpose seems to be entirely advisory, consultative. Undoubtedly, it will fulfil that purpose. The impression I got on reading the Bill is that it was a paraphernalia of a democratic set up, but when you came to the crux of the matter. it merely ended in the creation of an 'advisory body' so that you have all the cost, pomp and ceremony of an elected Metropolitan Council with merely powers to tender advice, which, undoubtedly may be useful. If the intention is, as it is, to create only an advisory body, nothing better could be done so far as I can see.

Shri Shiv Charan Gupta: I seek a clarification. In the last sentence of para 4, p. 4 of your memorandum, it has been said:

> "It needs no labouring that such a body, with no 'decisive' functions, cannot in the nature of things, enjoy, or be invested with, any substantive financial powers, without first altering its basic character."

According to our appreciation of the present situation, this basic character can be changed in two ways: one is by making the proposed Executive Council responsible to the Metropolitan Council; the other is by giving financial powers to the Metropolitan Council, *viz.* power of taxation or of expenditure or appropriation. In paragraph 8 of your memorandum, it has been suggested that without

amendment of art. 239A, no legislature can be created.

I want to know whether in this basic character some change could be effected by making it more democratic by conferring some type of financial powers without changing the constitution.

Shri M. C. Setalvad: Within the framework of this Bill?

Shri Shiv Charan Gupta: Not within the framework of this Bill, but generally.

Shri Jaisukhlal Hathi: Within the framework of the Constitution also.

Shri M. C. Setalvad: I do not think so. Within the framework of the Constitution, you cannot invest the Metropolitan Council with any financial powers, for imposition of taxes and so on—I take it what is implied by 'financial powers' is the imposition of some taxes, making some appropriations and so on. Those are either the functions of the legislature or to a very limited extent, of municipal bodies which have such powers subject of course to the approval and superintendence of Government—such as, to levy water rates, other rates etc. But a body like the one which has been envisaged in this Bill cannot be invested under the Constitution with the financial powers of the nature I have described.

Sh i Shiv Charan Gupta: As far as Delhi is concerned, some subjects are being dealt with at the Delhi Administration level. For that purpose, Government think that this Metropolitan Council may come into existence. They thought that that would be the best solution to the problem. But we are not satisfied. Within the framework of the present Constitution. Can this be made a more powerful body with financial powers, limited financial powers, not exactly the financial powers of the State legislatures? Is such a body possible within the framework of the present Constitution or not?

Shri M. C. Setalvad: I do not think so, because the only way to do it would be to amend the Constitution, and create, as you suggest a body in between a fullfleged state and a mere advisory body; a body with some limited powers, legislative, financial and so on. That would require special provision to be made in the Constitution not only an amendment of art. 239A, but also some other amendments of the Constitution.

Shri Santokh Singh: Without amending the Constitution. this body could not be given any financial powers. You have also stated that within the framework of this Constitution, no better body could also be framed than what is proposed now. Could the elected members of the proposed Metropolitan Council deliver the goods as per the aspirations of the Delhi people?

Shri M. C. Setalvad: Excuse me. I am not—though I am most of the time in Delhi—familiar with the aspirations of the Delhi people. I would not be able to answer the question.

Shri Shivaji Rao S. Deshmukh: Specially because this Bill purports to meet the long-standing demand for some sort of democratic set-up in Delhi and the anxiety experienced in all quarters that this Metropolitan Council should not be just a mere advisory body, do you envisage any constitutional limitation in conferring the limited financial power of framing the budget with such modifications as Parliament may desire, because normally the financial powers would vest with Parliament. In the set-up of the present Bill, could a provision be made of the nature of a permanent statutory delegation of authority to frame the budget with this reservation that such modifications as Parliament may make would by law be incorporated in the budget as passed by the Meropolitan Council?

Shri M. C. Setalvad: I think an attempt to make such a provision would perhaps infringe the Constitution, unless you amend the Constitution.

Shri J. Venkatappa: I would like to get a clarification from a senior man like you with regard to the feasibility of creating a State legislature for the Union territory where the federal Government is seated.

Shri M. C. Setalvad: This, of course, is a matter of policy, but as a constitutional lawyer, I would say that it would be extremely unusual to have a legislature at the Capital where Parliament itself is functioning. There are likely to be conflicts, and perhaps deadlocks and delays in the administration.

Mr. Chairman: Clause 21 of the Bill says:

> "(1) Subject to the provisions of this Act, the Metropolitan Council shall have the right to discuss, and make recommendations with respect to, the following matters in so far as they relate to Delhi, namely:—
>
> *** ***
>
> (d) the estimated receipts and expenditure pertaining to Delhi which are to be credited to, or is to be met from, the Consolidated Fund of India;"

Suppose out of the Consolidated Fund of India, Parliament sets apart a certain sum for the expenses of the Delhi Administration and authorises the Metropolitan Council to spend that amount, would it be against the Constitution? The Metropolitan Council can discuss that Budget and make recommendations to the Central Government and vote upon it, subject to the over-all control of the Central Government.

Shri M. C. Setalvad: They can vote upon it, ending, of course, in a recommendation. It will still be in the clause as it stands, a recommendation. There is on objection to that.

Shri J. Venkatappa: There is no obligation on the part of Parliament to accept the recommendations. Parliament may or may not accept.

Shri M. C. Setalvad: You are only suggesting an addition to its recommendatory powers. That can be done.

Mr. Chairman: Thank you very much.

The Committee then adjourned.

GMGIPND—LSI—2276 (E) LS—24-3-66—900.

WITNESSES EXAMINED

L. S. Davar & Co., *Patent & Trade Mark Attorneys, Calcutta.*

Shri L. S. Davar

L. S. Davar & Co., Patent & Trade Mark Attorneys, Calcutta.

Spokesman:

Shri L. S. Davar

(*The Witness was called in and he took his seat*).

Mr. Chairman: We have received your memorandum which has been distributed to all the Members. Do you want to add anything to it? You may add now, and then Members will ask you questions. I presume you represent the Patent and Trade Mark Attorneys, Calcutta.

Shri L. S. Davar: Yes, Sir. May it please Your Honour, if I may be permitted, I would like to give to the hon. Members a general idea of the development of the patent system in this world. That will be the basis upon which the patent system has been formed not only in other countries but also in India. Then, I will deal with the philosophy of the patent system and then I will deal with the points which have been raised in the memorandum which I have already submitted to the Committee, and then the implications of the submissions which I have made on the proposed Bill.

Regarding the development of the patent system, in the middle of the 16th century, when England was in a low stage of industrial development in relation to its neighbouring countries, it had the desire to industrialise itself. To fulfil that desire, England imported the craftsmen as well as the inventions from other countries. As an inducement to the importation of the knowledge and the know-how of the inventions, they gave what they called a certain amount of privilege which resulted in patents. That formed ultimately the basis of the patent system in England. The same thing happened about 200 years afterwards in the United States. When the United States got its independence in 1774,

the know-how and the inventions as well as the machinery were all in the hands of the British people, and they controlled the import of the know-how and the inventions as well as the machines to America. The United States was faced with a predicament as to how to industrialise itself. At that time, George Washington, in his inaugural address "urged the expediency to give effectual encouragement as well to the introduction of new and useful inventions from abroad as to the exercise of skill and genius at home." as a result of the policy of the first President of the United States, the patent system was introduced in the United States in 1790.

Coming to the patterns of the other Governments, firstly; the USSR, historically, the USSR introduced the patent system in 1812 and a planned and co-ordinated development of science and technology has therefore made Russia a great industrial and technical power. The introduction of a system of encouraging inventions played a large role in the economic and industrial development of that country. The patent system in Russia is based on public recognition of the personal interest of the inventor. When the new regime came to power, a new law relating to the patents was introduced and although it is the general belief among the public that there is no patent system in Russia, I would like the hon. Members to know that in 1964, 91,000 patents were filed in Russia as against about 65,000 in America and about 45,000 in England, and a similar number in countries like Germany and Japan. Of course, in Russia, there are two systems of patents: one is the system which we understand in the non-communist countries or what we understand in this country, and the other is the author's certificate, namely, the Government has got the right to use the invention, but when the Government uses the invention, it pays a certain amount of royalty or remuneration to the inventor, depending upon the profit which the organisation of the Government realises in that particular field, although the maximum profit which an inventor can get from his invention is limited to 22,000 dollars. The other system which Russia has got is the normal patent system. For example, any person in India can apply for a patent and if Russia respects the rights of the patent in the sense that if anybody else from another country or even in his own country wants to infringe the rights of a foreigner in Russia who is the patent-holder, then the Government will protect that right and prevent the importation of machinery or any article made according to the process into Russia and if at all it is necessary to import, they will ask the importer to pay a certain amount of royalty to the patent-holder. That is the position in Russia.

I have given to the hon. Members, the basis of the patent system both in the communist countries and the non-communist countries. I would now like to explain to the hon. Members what is the philosophy of the patent system.

Shri Shervani: He might give us the history of development of the patent laws in Japan also, before he proceeds to the next point.

Shri L. S. Davar: In view of the fact that one of the hon. Members has raised the point as to the history of patent law in Japan, I might say that the patent law in Japan is based on the system as obtains in any other country.

Shri Arjun Arora: When did that come into being in Japan?

Shri L. S. Davar: With your permission, Mr. Chairman, I might answer this question straightway.

Mr. Chairman: The questions will follow afterwards; otherwise, there will be no end.

Shri L. S. Davar: I might as well deal with one point here with regard

to Japan. Although it has been considered, and many people have the impression, that Japan is the biggest imitator, I may point out that that conception might have been right perhaps 20 years ago or in the pre-war period, but since the war period, Japan has improved its technology by importing the know-how from other countries and obtaining licences from other countries and at present, Japan is the leading country in the world in respect of the number of patents which are being granted there. The law is the same as in any other country, whether it be the United States of America, the United Kingdom or, for that matter, India; only certain details or provisions may slightly differ, but the principal basis upon which patent law is framed in Japan is the same as in any other country.

What is the philosophy of the patent system? We must appreciate that the inventor, the man who creates anything new, has the inherent right to keep what he invents secret and work it himself. It depends upon what profit he makes—that is immaterial—but he has the inherent right, the natural right to keep it secret to himself. Now, if he discloses to the public or discloses to the Government on behalf of the public, the Government says, since he has faithfully and honestly disclosed what he had the inherent right to keep a secret they will give him a reward. That reward is not in the form of a monopoly but a reward for the scientific achievement or improvement which the man concerned has made and which he discloses to the Government.

What is the effect of that on the economy or what is the social effect of that in the country? When a new invention comes out in the country it gives a cue to the other people to know that here is a field in which they can also develop or find out alternative products or alternative processes. Secondly, supposing a man comes to me and says: "I have got a wonderful idea; are you prepared to invest Rs. 5 lakhs?" Then I will ask him: "What is that wonderful idea?" Naturally, he will say: "First promise me that you are going to put in the money, otherwise I am not going to disclose". But, if he has a patent he can openly go to any prospective investor and say that he has such and such an idea, he has the patent which covers that idea, he has the protection and then ask him whether he is prepared to invest the money in it or not. Therefore, it can induce the prospective investor to invest money in developing that particular invention. That is another advantage, that development of industry can take place by virtue of the patent system.

Now, the other philosophy is that once an idea becomes common to the public after 17 years or 15 years of protection—whatever the term is—when the term of patent expires everyone is entitled to use it. That is another advantage to the public, namely, that the disclosure of the invention results in the prospect of people investing money in that industry and making the invention free to the public after the term of patent expires and thus giving inspiration to others to make inventions in the same field.

This is the philosophy of the patent system and the whole philosophy, therefore, turns round on this point, namely, that the industrial development in the country should take place. That is the whole idea behind it. Therefore, the object of our patent law should be that industry in our country should develop.

Now, in many countries, not only in India, there is a general feeling that this sort of monopoly is being abused. How is that being abused? It is abused in this way that a foreigner has got patent in this country, he does not work that invention, he has the monopoly in that particular product or particular process, he is the only person who can export from his country into our country, his

industry is developing while we are merely importers of that machinery. That is what they call the abuse of the patent system.

Therefore, in 1961, in the General Assembly of the United Nations this question was raised by Bolivia and the General Assembly of the United Nations requested the Secretary General to go into the question as to how the patent system is being abused by developed countries in developing countries and, also, what role do patents play in the industrial development of developing countries. In 1964, the Secretary General, after making enquiries from 55 different countries, prepared a report. I will give to the hon. Members just a gist of the report—this is the publication by the United Nations on the role of patents in the transfer of technology to developing countries—which was published.

Several hon. Members: We have not got that report. It is not available in the library also.

Mr. Chairman: I have also not received it. The Ministry will try to supply more copies.

Shri L. S. Davar: I have, for the convenience of hon. Members, prepared a gist of the report published in a public document published by the United Nations and which is available from the United Nations at a cost of $1·5. The resolution is this:

"That on the 19th December, 1961, the General Assembly of the United Nations in its resolution 1713 stated . . . ."

Mr. Chairman: You need not read that. The resolution has been circulated to hon. Members.

Shri L. S. Davar: I will now give hon. Members a gist of the replies from the various countries. Australia said:

"The patent system has fulfilled its function of industrial progress."

France said:

"60 per cent of patents are from foreigners.

The country pays 300 million new Francs, that is, equal to 300 million rupees, in payment of know-how and the transfer of technology is facilitated by the Patent System which gives assurance of protection to the owners of know-how.

Israel: The utilisation of foreign inventions by domestic enterprises will be rendered impossible in the absence of Patent protection.

Italy: The country is primarily a recipient of foreign inventions access to which is helped by Patent System.

Japan: Introduction of new foreign technology has contributed greatly to the development of industries and the right of Patents of foreigners is protected."

I may pause here and submit to the hon. Members that during the period of 1958 to 1962, Japan paid, in 1958, 40 million dollars in the form of royalty of patents and 2 million dollars for the know-how; in 1959, paid 51 million dollars in royalty and 4 million dollars on the know-how; in 1960, it paid 80 million dollars in royalty and 7 million dollars for the know-how; in 1961, Japan paid 99 million dollars in royalty and 11 million dollars on the know-how and in 1962, it paid 103 million dollars in royalty and 10 million dollars on the know-how. These amounts were paid as royalty for patents and the know-how respectively notwithstanding the fact that payment of foreign exchange is controlled in the same manner in Japan as it is in India.

Dr. M. M. S. Siddhu: You should have also read the Indian Govern-

ment's opinion on it. You are only giving the views of other countries.

Shri Sham Lal Saraf: The Government of India has said that the present patent law is functioning well.

Shri L. S. Davar: I submit the view of the Government of India should be known to hon. Members. I am giving the views of other countries. These are the views expressed by various countries which I have taken as extracts from the United Nations' publication for the convenience of the hon. Members here. I quote further the views of other countries:

"*Mexico:* Equality before the law of national and foreign inventors facilitates availability of foreign know-how.

Holland: Due to Patent System, foreign patentees are prepared to give licences and know-how for new inventions.

New Zealand: The Government has come to realise that it should not expect to be a recipient of inventive skill from abroad without payment of royalties towards cost of research and rewarding inventors.

Switzerland: To encourage the supply of inventions and know-how to developing countries, measures are taken to see that effective protection is given to patents."

In the United Kingdom, more than half the patents applications come from abroad. From early days, the British law recognises the advantages to the economy in exploiting of the new inventions in the country.

Shri R. Ramanathan Chettiar: In Switzerland, there is no patent law, I suppose.

Shri L. S. Davar: They have a patent law. We have obtained patents in Switzerland on behalf of Indian parties.

Then, this is what did Czechoslovakia say:

"There is an increase in the number of foreign patents applications in our country. Majority of agreements are based on undisclosed know-how and experience.

Hungary: The use of inventions and know-how has been secured on the basis of agreements with foreign patent-holders."

Now, the Secretary-General's Report further included the following conclusions:

"There is an extensive range of national legislation directed against practices that are considered abusive of the national patent system, such as, non-use of patents, restrictive practices and excessive royalties."

Provision for compulsory licensing exists in many countries. Here, I might tell the hon. Members that in order to overcome the abuses of the patents system, many countries, practically all countries, excepting United States and Russia, have a system of compulsory licensing, that is, if the invention is not being worked in the country and if anyone from within the country is anxious to work the invention, then he makes an application to the Controller and after due consideration, if the party is found to be suitable, the Controller can grant a licence.

Now, the experience of many countries has been that this compulsory licensing system has not been found to be very practicable. For example, I would give the figures for five years in different countries. In United Kingdom, only 7 applications were filed in five years; in Canada, only 5 applications were filed; in Denmark—7 applications; in Philippines—8 applications; in Ireland—1 application; in India—4 applications; Israel—3 applications; Japan—nil; New Zealand—nil; Switzerland—nil; Holland—nil; Germany—nil. In Norway, in 27 years, 3 applications were filed, but all those applications were not from nationals of the country but from foreigners asking for licences to work within the country.

There is a very pertinent question as to why, in spite of the fact that licensing system is there and it has failed, this system is still on the statute book. It has been well recognised throughout the world—that has also been confirmed in the Report of the United Nations after consulting several countries—that what is more important is the know-how. It is not patent alone that matters. Patent merely acts as a vehicle. I will show you what a patent document is. (A copy of the patent document was then circulated by Shri L. S. Davar for the perusal of the hon. members.) The patent document merely gives a general idea of the invention. Let me put it this way. If somebody gives me a sketch of this instrument (the microphone) and asks me to manufacture this, I will have to find out as to what metal I should use, what shou'd be height of this and what should be the weight. Thus, in the manufacture of every article, whatever it may be, there is a technical know-how involved and, therefore, patents by themselves are useless without the technical know-how except in some cases where the patent is of a very minor nature. For example, I remember, in 1934, there was a patent for a clamp. The clamp was of a simple nature made of hoop iron, one end turned this way and the other like this (the witness explained this by demonstration with a piece of paper). It was fixed at the end of a railway sleeper in order to prevent vertical cracks. Millions of these were ordered from England. One of the Indian parties realised in 1934, when we had the provision that a patent could be revoked if it was not worked in the country, "why can't I manufacture this." So we approached that party, "if you do not give the licence to us, we are going to make an application for compulsory licensing or revocation of your patent". This used to come from England. In those days when steel was very cheap it was imported at 4 annas and they would supply to the Railways at 8 annas, while the Indian party could manufacture at a cost of 2 pice. The man, in view of the provisions in the Act, readily agreed. The result was that importation of this thing from England was completely stopped and all the clamps since 1934 even today are being manufactured in this country. Those are exceptional cases. But when we come to the complex type of inventions with which we are now faced, for instance, in the petro-chemical field or in the machinery of a complicated nature, there we essentially want the know-how. From whom do we want the know-how? We want it from the man who has developed the know-how, who has worked it from the very beginning. Therefore, patent merely acts as a vehicle. It is a legal document, one which can establish a relationship between the man who has the know-how and the man who wants to establish the manufacture of that particular article according to the patent. This view has been established not only in this country but in every country of the world. How has Japan industrially advanced in the post-war period? It is because they have obtained the know-how and now you will see that, in countries like Germany or America which are highly industrialised, Japanese goods are being openly offered. These provisions of compulsory licensing or revocation are there, but where the technology is of a very advanced nature, there the know-how is very important.

I might give to the hon. Members another picture of this. What happened during the Second World War? In 1940 when England was invaded by Germany and many of the neighbouring countries had fallen, there was a great need for England to have aircraft as well as to make the radar and other weapons for defence. England could not do it firstly because of the restricted capacity of manufacture it had and secondly because it was always in the danger of being bombarded. What did England do? It went to America. The Tizard Com-

mission was appointed. He went to America and asked the Americans, "will you manufacture these things for us? Here are the patents; you manufacture the Rolls Royce engines according to these patents, radar according to these patents and other weapons for war according to these patents". The Americans said, "we cannot do it without the know-how". What happened on the other side? The English people who had the know-how refused to give the know-how. They said, "what will happen after the war? When the war is over, America will come in competition with us. We do not want to give the know-how notwithstanding the fact that the war is on." The patent is not so important as the know-how in the modern complex type of science. However, the Government prevailed upon them to give the know-how. The Rolls Royce people, for example, took an assurance from the Government that all engines manufactured under the know-how of the English people would be given back to England and not sold in the open market nor used in the open market. In addition to that, when America started manufacturing war weapons as well as the Rolls Royce engines, naturally they also had to develop a certain new technique during the course of manufacture. Then there was an agreement between the Government of the United States and the Government of the United Kingdom, which is known as the P.I.A., *i.e.*, the Patents Interchange Agreement, *i.e.*, the Patents of one country will be given to another country and free use will be made by either of them. The same arrangement now exists between the countries which have a Mutual Defence Pact. In the Mutual Pact, one of the clauses is that an invention which has been made by a member country can be freely used by another country which is a member of the Mutual Defence Pact and that is, of course, England and many of the European countries.

This is how the patents have been playing an important role in the transfer of technology or in the development of science, not only during peace but also during the period when the war is on. The efforts of the United Nations are still continuing to find out ways and means as to how the laws of developing countries should be formulated in order that transfer of technology takes place effectively from the developed to the developing countries. I am only dealing with transfer of technology from the developed to the developing countries because, in so far as the development of technology in our own country is concerned, of course, that is the business of our Government or the business of our industrialists.

BIRPI is an inter-governmental organisation in Geneva which looks after the patent system of various countries and it is organizing, in the second week of February an Asian Seminar in Colombo in order to consider again what should be the laws of the developing countries in relation to patents. I had the privilege of being invited to Washington to become a co-Chairman on world peace through law conference on the Industrial Property Committee and I was specially asked to deal with the subject of transfer of technology from the developed to the developing countries and the role of patents in that technology. The U.S. State Department particularly mentioned that India is not to be considered as an under-developed country and, therefore, my subject had to be as to how, after we have received the technology from other countries, we have developed our own technology and how can we transfer our technology to under-developed countries. Therefore, it is not that we are only going to be the recipient of technology from other countries, but we have to give technology to other countries which are much less developed than we are. There is going to be an international conference in Tokyo in April to consider the law which should be applicable to developing countries particularly in relation to the transfer of technology. This is what has happened throughout the world and what is the intention of the developed coun-

tries, how they want our laws to be framed so that transfer of technology is encouraged to the developing countries. Let us not think that we can get technology from any country. I have been told in many countries: Look, probably you can get technology from East European countries or from Russia for which you don't have to pay. I would like to give the position obtaining in the Soviet Union. During the Hanover Fair in 1965 Soviet Union offered 700 patents and technical processes for use by western countries (*Interruption*). Authorship as well as patents are there. Rights only vest with the government. For patents the right vests with the inventor and nobody else. Now, the Russian Government is setting up an office in West Germany in order to licence the patents which they have taken out in other countries. Offices are being opened in France, Italy and U.K. During the international conference held in Geneva in March 1965 Russian delegation manifested their interest in cooperation with western patent offices in order to remove misinterpretation about the practical procedures and to contribute to a better mutual understanding between the western countries and Russia.

The number of patents from Russia as well as from East European countries is steadily increasing in this country. They are anxious to give out licenses to Indian manufacturers on payment of royalty or lumpsum. The object of giving of this information to hon. Members is this, namely, to show what are the activities of the world wide organisation and not only the activity of the UN but also what other countries are also doing in this field because they have realised that prosperity in their own country cannot be maintained unless they share that prosperity with the countries which have the desire to develop themselves. I will just take a few more minutes.

Shri R. Ramanathan Chettiar: About West Germany please tell us something. What is the position of patents in West Germany?

Shri L. S. Davar: It is the same as in any other country.

Shri R. Ramanathan Chettiar: How patent law is operating there?

Shri L. S. Davar: The most severe patent law they have for examination procedure is in Japan, USA and West Germany. The only difference in the law in West Germany is that their scope of claims is given a much wider interpretation than in other countries. Each country is having its own system.

Shri R. Ramanathan Chettiar: It is more broadbased.

Shri L. S. Davar: They go into the spirit of the invention. In France there are no claims of a patent. Again when the suit is filed they come to know what an invention is. Each country has got its own system.

Shri K. K. Warior: Please tell us something about your experience with the Indian patents. Of course, you will take some time before you come to that.

Shri L. S. Davar: I will take up Indian patents. I have been connected in this field for over 35 years. It is my interest to see that industrial development takes place in the country. Before the independence, before our government started the plan periods, the number of Indian inventions used to be very small. The quality was so poor that it is a shameful thing to look at those inventions. The invention may relate to a *hooka* or a *chuhla* or some such article, no invention of any high merit was made by the Indian inventor. I am talking in general terms. No great invention was coming out of the country before Independence except in case of some companies like Tatas or Associated Cement Companies who have their own research departments.

How the patent system induces people to make inventions? Let me give one illustration. In 1933 a British company, Dorman Long applied for

patents for the manufacture of steel which had to be used in Howrah bridge. That composition was covered by a patent to Rendell Palmer who were consulting engineers to Government of India at that time. They said the steel required will be high tensile steel and this is the only steel to be used. We were faced with a problem like this. We said: Look here, we have a big work like the Tata Iron and Steel company and if these people are going to get a patent then we will not be able to supply an ounce of steel for the manufacture of the Howrah bridge which was at that time going to be the longest bridge in India. We opposed that patent—not only opposed that patent, but also Tatas started developing their own high-tensile steel. Before we were successful in throwing out that patent, we had developed our own high tensile steel which had better properties—at least as good properties as the steel developed by the British company. If Dorman Long had not come into the picture, Tatas would have gone on with the old type of steel and would not have thought about that. Since then they have been developing various processes in order to manufacture better quality of steel in a cheaper way.

After the war, things have improved in this country. Who can make inventions? It can be either by an individual or by collective efforts. The days of an individual as an inventor are gone. Technology has advanced to such an extent that individuals cannot be regarded as those who can give us good inventions. Individuals can be divided into two different categories. One is the ordinary individual and the other is an individual engaged, for example, in an industry, or in the Government. I am glad to inform the hon. Members that our Government officials for whom I have the highest regard have made some remarkable inventions which are being considered as good inventions throughout the world. I had the privilege of handling the well-known case of Mr. Suri and several other Railway officials because we help Government in these matters. Their inventions are considered to be of real practical value. You cannot say that patent system has not been responsible for stimulating inventions. As soon as we get opportunities and as soon as we know that Indian inventions can be used within the country, inventions are coming up. Our boys are very bright and clever. Slowly and slowly as the industries develop, things will come up. It is not the fault of the patent system. It was the fault of the Government. When I first went to Calcutta in 1930, letters came from all the people saying: Get us a good agency. Now there are no more agency systems. Everybody is interested in manufacturing. If industries develop, if there are more free enterprises, if there are less restrictions by the Government, if regulation Acts are removed, if more foreign exchange is available, if more raw materials become available and if more industries develop, there will be more competitions and more patents and more genius will develop. This is automatic.

Dr. M. S. Siddhu: Wait for the Dooms Day!

Shri L. S. Davar: Let us not.

The other is invention by collective efforts. The example is CSIR. The number of patents from the CSIR has increased considerably. They are being exploited. How can we say that the patent system has not performed its function? It is a complete misnomer. It is because our country is not industrially developed. As the development takes place, things will become better. Therefore, the object of the patent system should be to see that not only are the inventors encouraged, but also the industry is encouraged to take up inventions and risk their capital in those inventions rather than strangling them. I have made some cryptic remark in my memorandum. I could not help saying that if a man is foolish enough to go to the patent office, the patent office

puts a string round his neck to strangulate him. If he escapes, he is shot in the back. That is the exact feeling I have after reading this Bill. I am an Indian. I am sorry to say that the clauses which have been provided are most impractical, most unworkable even in the working of the patent office. The first duty of the Government should have been to see that the patent office works properly. What do the provisions say? They say that a patent will not be granted for seven years and eight years. The patent office can sit on it as long as it likes.

Shri D. P. Karmarkar: Can you cite a single case where the patent officer has taken seven or eight years to give the patent?

Shri L. S. Davar: The present Act provides that a patent must issue within a period of two years or within an extended period of 31 months. The present proposals do not make any provision as to the duration within which patent should be granted....

Shri D. P. Karmarkar: Can you give any instance where it has taken seven or eight years?

Shri L. S. Davar: The present Act provides that the patent must issue within a certain period. Does the Bill say that?

Shri D. P. Karmarkar: I see, it is a prophecy about the Bill.

Shri L. S. Davar: I will say something about the examination system. The examination system provides that search for novelty should be made on a world-wide basis. If that provision is implemented, what will happen? Although we have now got a staff...

Mr. Chairman: You have referred to staff in your memorandum and said that it should be increased ten times.

Shri L. S. Davar: That is a moderate estimate. It may be much more.

Mr. Chairman: You need not refer to that.

Shri L. S. Davar: I think I have finished what I have to say.

Dr. C. B. Singh: On the first page of your memorandum you have stated:

> "Further stimulation of inventions will obviously demand incentive which can only be achieved by strong patent protection and....

What do you mean by this expression 'strong patent protection'?

Shri L. S. Davar: I would define it in this way: Firstly, when you give protection to a person, do not give him the protection that the Government have the right to take away the right which has already been given to him.

Dr. C. B. Singh: How can that be? That cannot happen.

Shri L. S. Davar: That is what the Bill says.

Mr. Chairman: That is only under certain conditions which they have laid down.

Shri L. S. Davar: Under clause 48 Government have the right to use it at any time it likes.

Mr. Chairman: Yes, for public purposes.

Shri L. S. Davar: If it is for security purpose, yes, I am for it, but not for use by the Government.

Mr. Chairman: You want Government to pay compensation?

Shri L. S. Davar: Yes; otherwise, what will happen?

Mr. Chairman: Every Government has that right.

Shri L. S. Davar: Yes. But then pay compensation to the inventor.

Mr. Chairman: That we can understand.

Dr. C. B. Singh: The second point is about recognition of the inherent right of the inventors. According to you, how long this inherent right is to go on or will there be a fixed period?

Shri L. S. Davar: The period in various countries varies from 15 to 17 years or even 20 years. For example, in Australia, it is 16 years; in Austria it is 18 years; in Belgium it is 20 years. It takes about 2, 3 years before you get a patent. Then, you go to the man who looks into the possibility of exploiting it. He takes time in developing it; he is not going to work it out straightway. He takes time in marketing it. What is the inventor going to get all this time? Take, for example, the chemical field. The well-known medicine Thialamidine took 7 years before it came into the market.

Dr. M. M. S. Siddhu: Do you know that many more drugs like Chlortetracycline came into the market within one year?

Shri L. S. Davar: I am giving one example.

Dr. M. M. S. Siddhu: That is an exception.

Shri L. S. Davar: There are mechanical, electrical, electronic and hundred other types of inventions. In order to give a practical shape to a specification, it will take two, three years. Then the prototype which is made has to be tried and then put to commercial use and then exploitation. It will take 5, 7 years for the invention to come in the market.

Dr. C. B. Singh: The main complaint about the life saving drugs is, after being given the patent, it becomes very costly; it is not within the reach of common man. What steps are to be taken to bring the price down?

Shri L. S. Davar: That again, in my humble submission, is a misnomer. During the last three years no drug patent has been granted. Has the price of any drugs come down?

Dr. C. B. Singh: The prices of some have come down.

Shri L. S. Davar: On the other hand I will agree with you on this point. Another Conference in the month of October was held in Washington, which I attended. Then, I raised this very question which the honourable Member has raised now, when the Vice-President of an established firm was giving evidence, I said, 'my Government has raised this question; what answer can you give to that?' He evaded the answer before 1500 people present and he could not give a satisfactory answer. I said, 'if you can sell this product for Rs. 5,000 a kilo, have you gone and proved to the people who make the complaint that it costs you Rs. 4,000 a kilo and that your demand is not much. He replied, 'I am not here to answer your questions as to what is my cost price. This complaint is not only restricted to India; this is there all the world over. I have studied this problem. The people spend millions of rupees on research work on certain products which later prove a complete failure. They must recover their loss in some other items where they succeed. The price of sugar is high; the price of wheat is very high; the price of all other consumer goods is high. Why pick up only the poor medicine?

Dr. C. B. Singh: This is a very old argument that they spend so much money on research and sometimes they fail and they want to make up this loss elsewhere. I would like you to give some way out by which this can be minimised. Something has got to be done in this direction.

Shri L. S. Davar: Of course I will be giving you the commercial point. At the last meeting of the International Chamber of Commerce which took place here, the suggestion which I had given to the pharmaceutical manufacturers was this. I told them, 'out of every product that you sell for Rs. 100, 20 per cent or 25 per cent goes to the retailer and the wholesaler; 20 per cent goes on advertisement; out of 50 per cent perhaps 10 per cent or 20 per cent is your cost and the rest is your profit. I asked them, 'why don't you give all your products, whether covered by patents or not covered by

patents, to the Government for its hospitals under the generic names?

This is what happened in America. One store suddenly said that they will reduce the price of drugs to 25 per cent. He sold all the drugs under the generic name and not under the trade mark of a particular manufacturer; the prices came down. I told the drug manufacturers here also to adopt this policy. Don't give the profit to the retailer or to the wholesaler nor you spend any money on advertisement. I don't know whether they would do that.

Shri Dinen Bhattacharya: The Government is not the purchaser always.

Dr. C. B. Singh: Mr. Chairman, I would like you to consider whether this question of selling under generic names can somehow be brought in the Bill itself, so that the prices can be brought down.

Shri Sham Lal Saraf: Mr. Chairman. I would request you to call one member that side and another member from this side so that all of us get a chance to put our questions.

Shri Himmatsinhji: You suggest that the period of licence should be such that the cost can be recovered. Under Clause 53, in one case it is 14 years and in another 10 years. Do you think that is less?

Shri L. S. Davar: Very much less.

Shri Himmatsinhji: In almost all the countries generally the period allowed is 12 to 14 years.

Shri L. S. Davar: I have got a list before me. If the honourable Member wants to see it, I will pass it on.

Shri Bibhuti Mishra: The witness has made a long statement lasting more than one hour. He has spoken about all other countries of the world. India is also considered as a developed country now. He stated that the UK has made so much money by selling patents to France and *vise versa* I want to know how much we have earned as foreign exchange by selling our patents to other countries. During all these years we must also have developed some patents.

Shri L. S. Davar: Other countries...

Shri Bibhuti Mishra: I want to know in terms of money how many patents we have sold to other countries.

Mr. Chairman: How many patents we have sold to other countries and how much foreign exchange we have earned in that process?

Shri Bibhuti Mishra: When the witness knows so much about other countries, he must know something about our country also.

Shri L. S. Davar: I have already made my submission that since independence and since the Plan period, the quality of inventions and the number of inventions from within the country is increasing.

Mr. Chairman: He wants to know as to how many patents we have sold and how much foreign exchange we have earned as a result? If you have got the information then say so.

Shri L. S. Davar: I have no information on this except for a few patents of the railways which are being arranged to be exploited in other countries of the world.

Mr. Chairman: What is the foreign exchange that we have earned?

Shri L. S. Davar: I won't be able to give an answer to this.

Shri D. P. Karmarkar: You spoke about the international conferences. In that connection I want to put one question. Are you aware of the fact that in the international conferences ever since 1947 till 1965, there is a conflict between the developing and developed countries?

Shri L. S. Davar: We are aware of this.

Shri D. P. Karmarkar: Do you agree that what is being done is the best for our country?

Shri L. S. Davar: Yes, Sir.

Shri D. P. Karmarkar: The third question is this: Do you or do you not agree with the reasoning that under compulsory licensing, where a patentee is not having the capacity to produce and where he has not enough capital and know-how, when he applies for a licence, it is only after the Controller has satisfied himself that this can be issued?

Shri L. S. Davar: I think this needs explanation. I suppose I am not under cross examination to say 'Yes' or 'No'.

Shri D. P. Karmarkar: It is not a cross examination. I am a lawyer. I cannot cross examine a lawyer. But, what I want to know from you is this. There is a provision in the Bill similar to that for in the most industrially advanced countries that when the patent has not been put to the best advantage within a period of time, then it is open to any applicant who is fully comptent to produce that stuff from the point of view of know-how, capital and everything else to have a compulsory licence under such circumstances. Would you or would you not agree with this?

Shri L. S. Davar: I agree that the compulsory licences are good. In fact that will act as a threat to the other persons to come and give us the know-how. If we have provisions without having a compulsory licence, perhaps the Government might say that we shall take away the patent and we are going to make use of it.

Shri D. P. Karmarkar: The provision is there that the Controller should satisfy himself before issuing a compulsory licence. Otherwise this question would not arise.

Shri L. S. Davar: I know that provision is already there in our Act.

Shri D. P. Karmarkar: Are you aware that in most countries including England, there is a system of issuing of compulsory licence? Are you aware of the practice there to make arrangements with other licensees when a patentee is otherwise too idle to make the best advantage of his patent? Do you agree with that practice?

You know that the number of applicants for compulsory licensing is very few. This provision for a compulsory licence is good where a patentee has not exercised the best care to make use of his patent to bring his product into commercial use and things of that sort and where the applicant is competent to produce this patent. In those circumstances the existence of this provision by itself automatically induces him to manufacture this product. Otherwise he would remain idle. Are you agreeing with this?

Shri L. S. Davar: I agree to this extent that compulsory licensing is necessary.

Mr. Chairman: In spite of a few applicants is there any country which has thought fit to revoke that provision? Do you agree with this provision?

Shri L. S. Davar: I agree with this because the compulsory licensing may be useful in one invention but it may not be useful in another invention. As I have explained just now to the hon. Members, for an invention of some nature, compulsory licensing is very necessary.

Shri D. P. Karmarkar: I hope you will agree that in order to speed up the applications recording of patents registered should be kept uptodate?

Shri L. S. Davar: It is very necessary and I agree with this. The hon. Mem-

bers might be knowing that during the last four years or so, inspite of best efforts made, because of the shortage of staff, with the increase in the number of applications, indexing of the patents during the last four years has not been done. If I want to set up an industry, and wait to see what patent has been granted. I do not know as to why it has not been done.

Shri D. P. Karmarkar: We appreciate that.

Shri K. K. Warior: From what you say, I see that whereas the developing countries including India do not get the advantage whereas the developed countries take advantage of the Patent Law. Is that correct? You have inferred like that and that controversy is unsettled.

Shri L. S. Davar: That is the bone of contention that out of the Patent Laws, it is the developed countries which take advantage of that. For that reason, the laws relating to compulsory licences are introduced in the various countries. But how far it is true there are no statistics to prove. Nobody has yet been able to say definitely as to how much more relative advantage the developed countries have derived as compared to the developing countries by the Patent Laws.

Shri K. K. Warior: Our country has given patents to some of the foreign manufacturers where the manufacturing is not actually taking place here. How far have we stood in advantage or disadvantage in regard to that according to your knowledge?

Shri L. S. Davar: According to my knowledge, I would say the law should be so made that it should be conducive to the foreign patent-holder to come and work the invention within the country.

Shri K. K. Warior: Do you agree that the patent right should not be given to any foreigner if he does not intend to have the manufacturing also here?

Shri L. S. Davar: Whether you give the right to a foreigner or not, that point I might make it clear. In India there are only 5000-6000 patents granted at present every year. In other countries probably a million patents are being granted. We are free to use them. But can we use them? Have we used them? There were 3 million patents granted till 1961 in the USA while India had only one lakh patents and 2.9 million patents were available to us for use. Did we use them? Can we use them? No. It is the know-how which is important. As I have said, tender a small amount for the transfer and have the know-how. I can buy any patent copy for 2 shillings from England and use it here. Nobody can stop it. The value of the patent applies only to this country. Any patent granted anywhere in the world I am entitled to use so long as it is not patented here.

Shri K. K. Warior: Why should the foreigners come up for patents here as long as they are not prepared to give the know-how as well?

Shri L. S. Davar: It is for us to pay for the know-how. If the laws are stable; if we can give them the inducement to bring the know-how, then, of course, they will bring the patent and the know-how. And the man who invests money in this country will know by virtue of the patent that he has got a certain amount of protection for his investment in that particular industry.

Therefore, patents are very important for a psychological effect on the man who has the know-how, and the man who is paying in the money from this country. If somebody comes to me and says: "Look Mr. Davar: Can you put in Rs 5 million in this industry? I will say: 'All right. I will start my industry. Tomorrow another person comes and takes away my

workmen and sets up another industry of a similar nature. What protection have I got?'." Therefore, Patents Act has a protection for the man who invests money in that particular industry. That is the advantage of the patent system.

Shri K. K. Warior: Is it not also a fact that the larger interests of the community should be looked into when protection is given to individual concerns or manufacturers? In that case, what is the amount of protection? How that quantum of protection is determined? What are the criteria for that? Suppose the market is a very limited one, then there is necessity for more protection. Suppose the market is unlimited as in India. Then why should that amount of protection be given to manufacturers' work where they have scope for abnormal profit?

Shri L. S. Davar: The remedy is compulsory licensing system. I find the compulsory licensing system provides that even when somebody is working the invention, another person can ask for licence for the same invention within the country provided he is prepared to pay royalty for it.

Shri M. R. Shervani: The basic idea behind the Patent law in various countries was to import the inventions for exploitation within the country. If that is so, why should at all a patentee be granted the exclusive right to import a product at the cost of manufacture in India. According to the present law you just patent a product for setting up a plant here, but do not manufacture it within the country.

Shri L. S. Davar: That is not the only advantage of the Patent Law. There are other advantages with it, namely, if there is an invention within the country, supposing that thing is imported and is covered by a patent, then I would be induced to manufacture it or invent a better type of thing. Take the case of Penicillin. Here is a commodity coming into the market. I will invent a better penicillin.

Shri M. R. Shervani: With the technical know-how you cannot produce it if you patent a process here and a product. Then you just do not start manufacturing it here; you only import. In that case, why should that protection be there?

Shri L. S. Davar: Again when I said that it depends upon the nature of the invention, if it is of a complex nature you cannot help it. Nobody can deny that if a man possesses a particular technical knowledge even in this country, you cannot force him to give it to you—whether he is a foreigner or a citizen of the country. Supposing you take away his patent, how are you going to benefit?

Shri M. R. Shervani: My point is: that patent should be there, but that patentee should not be given the exclusive right to import the product. Let him put up a manufacturing plant within the country.

Shri L. S. Davar: The other thing as I said: what are the advantages of the patent system. There is also an international basis upon which you have to go. To-day you do not give the rights to another country. To-morrow they will not give their rights to you.

Shri M. R. Shervani: That tomorrow is 50 years hence.

Shri L. S. Davar: It is not 50 years hence.

Shri M. R. Shervani: My second question is: we have said that collaboration and technical know-how is more important than the patent process. There are many patents all over the world. But you are not able to accept that technical know-how is not patentable. Therefore, we have to go for technical know-how, pay royalties pay lump sum payment to get the know-how although the particular process is not patented. What harm

will come to the industrial development if we do not have any patent law. Actually industrial development depends upon the technical know-how.

Shri L. S. Davar: Where is the safety to the man who is giving you the know-how or the man who is receiving the know-how? As I just now explained, what was the position in England and America during the war period? The know-how was not protected by any patent. The Americans could not work the patents. Know-how is important.

Shri Arjun Arora: So you think it is useless. Even if you know what is contained in the patent, you cannot work it and you have to pay for the know-how.

Shri M. R. Shervani: The point was that technical know-how is not patentable and there is no guarantee that it will not be misused by somebody else. Technical know-how is given on certain payment and royalty. This technical know-how is protected without being patentable. Why cannot the invention also be protected because the man who invented is the best man to know the thing.

Shri L. S. Davar: This is a two-way trade. A man sitting abroad has a patent and the know-how. The man sitting here wants the know-how as well as the patent. He gets the patent to safeguard himself. Would you set up an industry, pay a large amount for the know-how and see that within the matter of one year your know-how is stolen and worked by other people?

Shri M. R. Shervani: Has the expansion of a patented industry been more during the life of the patent or has it been more in the decade following the life of the patent?

Shri L. S. Davar: It generally starts in the middle of the life of the patent. Science is advancing at such a rapid rate that whatever was invented 10 years ago is useless to-day . . .

Shri M. R. Shervani: You have not answered my question. For instance, take any drug or any other mechanism. After the licence has been granted and the thing has been patented, people start putting up factories. My question is whether the expansion or production is great after the expiry of the patent or during the life of the patent.

Shri L. S. Davar: I think this question is related to various factors like the capacity of the man to commercialise the thing and manufacture the article on a large scale. Patent is not the only factory which is responsible. In any business whether there is patent or no patent, there are several factors which come into the picture. I think it would be very wrong on my part to give an answer that only patent is responsible for this and nothing else. There are various other factors. I shall give a very simple example. I remember in 1936 an elderly gentleman came to us and asked for a patent for a tiffin carrier. We thought the idea was silly as there were hundreds of carriers of this type. But we took the patent for him. Later on they were taken up by a gentleman in Poona and we were surprised to know, when an application for expansion was filed, that business for Rs. 1.20 crores had been done. How was it? I think it was entirely due to the efforts of the man who commercialised it.

Shri M. R. Shervani: You said that this patent business is two-way traffic. Before India can develop enough technical know-how and scientific knowledge to be able to have more inventions, it would be one-way traffic and harmful to the country. Even to-day it is one-way traffic. Should not our scientists be allowed to learn from the experience of others, practise it here and take it further on as in Japan?

Shri L. S. Davar: Barring two countries in the world—the United States

and Japan—in all other countries, the number of foreign applications is more than that of the local ones. Therefore, we cannot isolate ourselves and make laws for our own convenience. We have to move in the international field. Why are not other countries stopping the grant of patents? In England also, 60 per cent are foreign patents and in Holland, 80 per cent.

Shri Sham Lal Saraf: While deposing before the Committee, you said that some inventions may also be kept secret. Should it be made obligatory upon the inventor to get registered under the patent law?

Shri L. S. Davar: No, it is not obligatory. You can still work it secretly.

Shri Sham Lal Saraf: For the common good of the community, if a particular person or a unit is in possession of an invention which has got something novel in it and can be patented, why not make it obligatory under law on the person to get it registered under the patent Act?

Shri L. S. Davar: I think it is an inherent right of a person to disclose or not to disclose. There are hundreds of medical prescriptions which are passed on from one generation to another in this country. You can't force them to disclose.

Shri Sham Lal Saraf: With the social objectives of our Constitution in view, should it not be made obligatory on the individual to get it registered?

Shri L. S. Davar: I would put it this way. Instead of making it obligatory, which is not practical, it would be better if as in other countries, it is popularised more. Supposing in London, you ask a taxi man to take you to the Patent Office, he will immediately take you there; you need not tell him that it is in Chancery Lane. If you ask any man in America where the Patent Office is, he will say it is in Washington. But here I know of a case where a man went to America to ask where the Patent Office is. It has not been popularised in this country.

Shri Dinen Bhattacharya: Is he an American citizen?

Shri L. S. Davar: Unfortunately, he is very much an Indian.

Shri Sham Lal Saraf: The days of individual inventors are gone. It is only the organised units that can invent things. But with your permission, I may mention a particular case in this connection. A few months back, an engineer who was drawing a handsome salary, went for a further course of training in some foreign country. On coming back, he invented a contrivance which was covered under the Patents Act. He did not have adequate finance. He shared the know-how with a financier who invested money on this. Later on the person who invested came to know of everything about this know-how and squeezed him out of that whole concern and the entire benefit has been going to the financier. How do you protect such inventors who make such inventions and which are patented under the law?

Shri L. S. Davar: There are two ways: one is, as I advocated way back in 1937 before the Shanmugam Chetty Committee, that, as in England, you should be able to buy a patent application in any of the post offices. The patent system has not been popularised in this country. Regarding the second point, about the case which you mentioned, the five-man world committee, on which I happen to be a member, is discussing the question whether the technical know-how should also be protected or not. And if we come to the conclusion that it should be protected, of course we can only make recommendations to the various Governments.

Shri Sham Lal Saraf: What is your personal opinion?

Shri L. S. Davar: Nothing can be done. That is why I said the lot of the individual inventor is not good.

Shri Sham Lal Saraf: It is accepted that particularly in the case of underdeveloped countries unless the know-how is imported from fairly advanced countries, the backward countries cannot progress much. Till now, as some friends have put it, comparatively a lesser number of these inventions or know-how could be imported to this country. What is the reason for that, and could you suggest ways and means as to how it will be possible to get more—whether it is from the Russian bloc or the American bloc or from any other country?

Shri L. S. Davar: It is a very long subject, and if the hon. Member is interested I would like to send him a copy of the paper that I submitted to the World Patents Conference on this subject.

Shri Sham Lal Saraf: Sir, the Secretariat may note it.

I have one or two more questions. I am not taking the industrial or the research aspect; I want to ask something about the compulsory licence. When a person or a group or a unit that is less resourceful is in a position to invent something and get it registered and they are able to derive some benefit, a person or a unit or an organisation which is more influential and resourceful and which can command a better organisation can force a unit like that under this compulsory licence. What safeguards have you got for genuine people, with genuine patents, to work up to the time they are permitted to work?

Shri L. S. Davar: That is absolutely a matter of discretion for the Controller. He has fairly wide powers, and that is what I have suggested, that the appeal from the Controller's decision should lie to the High Court and we have the highest regard for our judiciary—in order to safeguard the interests of every individual.

Shri Sham Lal Saraf: Everybody has been hearing about corruption in certain Government ranks and otherwise also. From experience we have seen, the more the discretion and the more the discretionary powers you give, the more chances for corruption. Are you of the opinion that people in the hierarchy of these officers, whether it is the Controller or anybody, should be given more discretionary power or less? Do you think that is the answer to this?

Shri L. S. Davar: I would tell the hon. Member one thing with pride. Throughout the world there is no patent office, including India, which is corrupt. That is one thing.

Shri Sham Lal Saraf: That is not my contention.

Shri L. S. Davar: I can stand up and say, and I want to challenge anybody to deny, that our patent office or any patent office anywhere in the world is free from corruption.

Shri Sham Lal Saraf: I would respectfully submit, it is agreed on all hands, a number of committees on this have been set up....

Shri K. V. Venkatachalam: He says, take away the word 'discretion'.

Shri L. S. Davar: The discretion is exercised on certain judicial principles and according to the law which has been laid down in relation to the grant of compulsory licences. Of course, every officer has got discretion.

Shri Sham Lal Saraf: In the present law, on an appeal from the Controller you can go to the High Court. The Bill that is before us intends to take away that right of appeal to the High Court and leave it to the discretion of the Central Government. If the *status quo* is restored that an appeal should go only to the High Court and not to the Central Government, again, for the reason that it would be interference on the part of

the executive in interpreting our law and our Constitution, may I know what is your reaction to that?

Shri L. S. Davar: I have already made my recommendation that an appeal from the decision of the Controller should be to the High Court, because, after all, the Central Government is again an administrative body.

Shri Sham Lal Saraf: My friend has said that the Controller's organisation is not working to the satisfaction of the people at the moment, for the reason that it has less staff, the staff is not enough to deal with the work that is coming up before them. May I ask him whether he means to say that physically they are not able to handle all the work that is coming up before them, or the working of the organisation is such that it cannot satisfy or meet with what this law demands from them in order to satisfy industry and all those covered under the Patents law?

Shri L. S. Davar: Physically, for the simple reason that the number of applications have increased. While in other countries one examiner is doing 50 cases in a year, in India an examiner is expected to do 200 cases a year. And he cannot do justice to the job properly.

The second thing is, the other job which has to be done, namely indexing of patents so that industry should know what new inventions have come, what new ideas have come into the market, that job is equally important, but they cannot do it, because the staff is short.

Shri Sham Lal Saraf: Do you think that the time has come when the non patentable inventions or novel things that may come to light need to be codified? Because, we find from experience that there is a lot of confusion to determine what is a patent and what is not. Do you think it should be codified, so that you know what inventions can come and be subject to patent?

Shri L. S. Davar: I would respectfully submit, we should say what are inventions but we should not say what are not inventions.

Shri Sham Lal Saraf: Therefore, when you codify, I think that is perfectly legal, and that should answer your feeling as well, the feeling that you have expressed just now.

Shri L. S. Davar: But nowhere in the world has any court yet been able to decide what is an invention and what is not.

Shri Sham Lal Saraf: Cannot we do a novel thing ourselves?

Shri L. S. Davar: No, we can only codify according to our experience. Sciences are of such a complex nature and the results can be such that you cannot codify these things. What you may think to be an invention, I may not think to be so. We handle the cases of Indian people in many countries of the world. The law is the same everywhere. The Indian patents office grants patent for something, the German patents office grants, but America refuses, England grants, but Japan refuses. They say, in view of the art or in view of the combination of the art in this patent, in that patent or the other, no inventive skill has been exercised as to be worthy of the grant of a patent. It is purely a matter of interpretation, how our office interprets and how other countries interpret. Therefore it is very very difficult to codify. We may codify as to what is an invention, but we cannot codify what is not an invention.

Dr. L. M. Singhvi: You have cited the UN report. I would like to draw your attention to what India has to say in respect of patents on drugs and articles of food. This is from the statement made on behalf of India:

> "It is a fact that the price of the same drug varies considerably from country to country. The

question of public interest is involved in these cases."

In this connection, is it a fact that India has perhaps the highest scale of prices of drugs all over the world?

Shri L. S. Davar: I beg to differ on that point. India does not have the highest price or drugs.

Dr. L. M. Singhvi: Could you kindly give statement to substantiate your point of view?

Shri L. S. Davar: I have not got any figures off hand to present to hon. Members.

Dr. L. M. Singhvi: You can present it to us at a later date.

Shri L. S. Davar: A statement of the relative prices of drugs in vari ous countires—I would be please to do that.

Dr. L. M. Singhvi: I have here several tables which go to show that the prices of drugs in India are anywhere between two to three times those prevailing in countries where they are manufatcured or in other countries. Here I would cite a Senate Report which says:

"India which does grant patents on drug products provides an interesting case example. The prices in India for broad spectrum antibiotics aureomycin and achromycin are among the highest in the world. As a matter of fact, in drugs generally, India ranks among the highest priced nations of the world and gives an inverse relationship between per capita income and the level of drug prices".

Shri L. S. Davar: There has a lot of controversy about drug patents unfortunately. Firstly, in spite of our sending questionnaire to the chemical manufacturers' association and to various organisations, we have not been able to find what is the percentage of drugs available in the country which are covered by patents. Is it one per cent or two per cent? Many people have the impression that milk of magnecia is covered by a patent. I am sorry to say it is not. We are talking of patents. What is the relationship of patents in regard to the prices of drugs. What is the percentage of drugs covered by patents? Is penicillin covered by a patent? No. The patent expired long ago. Why is the price high? There are other factors. Are we looking into those factors? Are we looking into the price structure of the manufacturers or the profit they are charging? Why give a dog a bad name in order to hang it?

Dr. L. M. Singhvi: I would appreciate if you can give figures to substantiate your contention, because there are figures made available to us. For example it has been reported to us that vitamin B-6 now manufactured by Merck-Sarabhai in this country is priced at Rs. 800 per kg. whereas the international price is Rs. 200 per kg.

Shri L. S. Davar: Is it covered by any patent?

Dr. L. M. Singhvi: That is what we would like to know—the part played by patents in India in this. Is it only a general phenomenon which is irrelevant so far as patents are concerned or is it because of patents coming into play?

Shri L. S. Davar: I would give the hon. Member some more information which appeared in *Fortune* two years ago only on this question, because this controversy is not only in this country; it is everywhere, even in America. As I have just now submitted, one of the proposals which I had made at the International Conference in February last year was: sell the products under a generic name and save the cost to government. This problem is there even in West Germany. Why are the prices of drugs high? I have known of the prices of three small tablets there—16 marks. Why so much?

I would give the hon. Member further information on the point he has raised.

Dr. L. M. Singhvi: The reply sent on behalf of India in the course of the UN study emphasises two factors particularly; one was the factor of the non-working of foreign patents and the other was the factor that patents were worked abroad wholly and not in this country, that is to say, patents were secured in this country merely to protect their export markets. What have you to say on these two factors?

Shri L. S. Davar: I would not make a general statement of this nature, nor would I agree with the statement of the Government unless statistics are produced. There are general causes, of what are known as abuses of the patent system which are known everywhere throughout the world.

Dr. L. M. Singhvi: Have you made any study of any such abuses being known in this country?

Shri L. S. Davar: I do not know any.

Dr. L. M. Singhvi: Would you say that most of the foreign patents which are secured in this country are not merely for the purpose of protecting export markets but also for developing indigenous production. If so, is this substantiated by actual experience.

Shri L. S. Davar: I want to give impetus to people who want to come and manufacture in this country. Give them tax relief, give them other facilities. They will come here. Why is it that in spite of the fact that India has been getting about a thousand million dollars from the aid-India consortium every year, the total foreign investment is 60 million dollars? Is it the fault of patents? No. It is the fault of our system. Have we given them certain reliefs? Have we given them certain impetus, inducement, to come and work in this country?

Shri Arjun Arora: You want the whole economic policy to be changed merely because you consider that the patent system is not responsible for this state of affairs.

Shri L. S. Davar: I am saying that patent is not the only factor. I am saying the other way. There are other factors.

Shri Arjun Arora: Because of the patents, they can make money from India sitting at home.

Dr. L. M. Singhvi: It would appear that you are pitting one generalisation against another. I would like to know whether you have any specific experience or study made in regard to these two factors, namely, utilisation of patents in this country and the fact that patents are used mainly for protecting their own export markets rather than for developing them indigenously.

Shri L. S. Davar: I would support my answer by one simple example, namely this: notifications requesting people to take licences for foreign patents are periodically issued by us in newspapers, and you would be surprised that nobody comes forward. Hundreds of them appear in the newspapers. Out of a hundred, there may be one solitary reply by a postcard 'Please send me particulars of this patent'—that is the end of the enquiry. This is the interest we are taking when a foreigner makes a public announcement, 'I prepared to give a licence to you if you want to manufacture in this country'. Nobody replies. Can you say that the foreigner is exploiting? No.

Dr. L. M. Singhvi: Would you say that this is on account of the fact that economic and technological conditions in this country are not sufficiently developed?

Shri L. S. Davar: No, as soon as more and more industrialisation takes place, within the country, things will be all right. That is my own view. If there is lack of industrialisation, how have things improved during the last ten years? Why are better class inventions coming from within the country itself? How are we producing more of the type of things which we want than the ordinary *chula* or hook or some such things we were producing in the prewar period?

Dr. L. M. Singhvi: I would like to know whether you would favour the system practised in South American countries as pointed out by you—Argentina, Chile, Columbia, Venezula and also Spain and Belgium, the system of patent import so that we do not grant patents broader than the patents available to the inventors in the country in which they are first and originally registered.

Shri L. S. Davar: That is one system of granting patents, and I would recommend that system to our government too.

Dr. L. M. Singhvi: Do you think it has some advantages?

Shri L. S. Davar: Great advantages.

Dr. L. M. Singhvi: What are the main advantages?

Shri L. S. Davar: At present, the novelty in regard to the patent is limited only to what is available within the country. Therefore, if a man in Chile or Argentina has a patent or has made an invention which he brought out 20 years ago, he can still come here and take protection for 17 years. But if we give him protection for the confirmation, he will get oniy protection for the unexpired term in his own country. If he took out a patent 10 years ago and only six years are left, he will get protection in this country only for six years. Therefore, it is of great advantage of our country.

Dr. L. M. Singhvi: You have suggested that a separate enactment should be brought forth for providing in respect of restrictive conditions and no provision should be made in respect of restrictive conditions in this enactment. What are your reasons for making this suggestion?

Shri L. S. Davar: My reasons are these: the business restrictive practices are not only related to patents; as hon. Members are aware, the repor of the committee which considered al the business restrictive practices, covers various subjects on this topic, and patents can be included in that as a separate enactment.

Dr. L. M. Singhvi: In another part of your memorandum, you have said that any provision for such restrictive conditions would only generate a psychological fear and it should be avoided altogether.

Shri L. S. Davar: We are now talking on two different points: one is whether it should be there, and the other is, whether it should form part of this Bill or not. I repeat what I have said: it will cause psychological fear and it is only in highly industrialised countries where they have got anti-trust laws, for example, in Germany and America and the United Kingdom, and not in every country, and every country has not got an anti-trust law.

Dr. L. M. Singhvi: Would you like a provision for final appeal to the High Court in all instances or a restricted right of appeal as provided in the present Bill in respect of only certain provisions?

Shri L. S. Davar: In all cases, the right of appeal should lie to the High Courts. I will give you a very concrete example: at present, when a patent application is opposed, and the Controller gives a decision, an appeal lies to the Central Government. I want to know one case where the Central Government has reversed the decision. All that the Central Government says is contained in just one sterotyped reply.

Government has no reason to change the decision of the Controller. That is the way in which the appeals are heard. Therefore, I submit that all appeals from the decision of the Controller should lie to the High Courts.

Dr. L. M. Singhvi: You have mentioned, while commenting on several clauses of the Bill, that the Bill seeks to vest very wide and unfettered powers in the administration. Would you suggest any specific means for curtailing, regulating or reducing such discretionary powers?

Shri L. S. Davar: My submission is, if you ask me candidly, there is nothing wrong with the present Act, except that if there is any particular provision which has to be changed and some people have to be satisfied, modify those provisions. No industry wants it and there has been no demand from the country, as far as I know, for a wholesale revision of the existing Act.

Dr. L. M. Singhvi: Would you say that, in spite of the fact that two committees, one being an informal committee and another being the committee, headed by Justice Ayyangar, who came to the conclusion that the present patent law has failed to fulfil the functions in the interests of the country?

Shri L. S. Davar: For the hon. Member's information, I may point out that the second committee was not a committee; it was a one man's report; evidence from the industry must be taken, evidence of the people who are interested. I would ask if Justice Ayyangar ever did it.

Dr. L. M. Singhvi: I would like to draw your attention to the opening portion of the report which says that such evidence was taken, that the persons whose interests were involved were consulted.

Joint Committee of Parliament is one thing. When an enquiry committee meets, it is one thing; but when a single person makes a recommendation, it is entirely different.

Dr. L. M. Singhvi: I would like to know whether you are in agreement with the report made by BIRPI, the international organisation, and with the model law which has been evolved by that organisation, and would you say that this legislation will fulfil the needs of our national economy or do you think various departures would have to be made from the model law evolved by BIRPI?

Shri L. S. Davar: Pardon me if I say that I have to answer that question at another conference and so I would not like to disclose here as to what my reaction to the BIRPI proposals is, but if the hon. Members want to know it individually, I would say it, but I would not like to disclose it openly, as to what my personal views on it are.

Dr. L. M. Singhvi: For the time being your answers are confidential. The evidence is confidential until it is placed on the Table of the House or is made public. I would not like to press you to answer anything like that, but it is an important question and we are in the course of evidence going to consider the relevancy and the adequacy of the model laws evolved by BIRPI.

Shri L. S. Davar: If this part of the evidence is not published, I am prepared to answer it.

Dr. L. M. Singhvi: That is for the Chairman to decide.

Mr. Chairman: The answer to this question will not be published; you can answer it.

Shri L. S. Davar: ***.

Dr. L. M. Singhvi: You have made a detailed reference to the examination of patents and you have indicated that the present system of examination in India cannot possibly meet the accidents which would be created or which are contemplated in the present Bill. Would you suggest any measures to make our examination system more adequate and more efficient?

Shri L. S. Davar: Yes, Sir. I have made a suggestion that so long as we are not highly developed, we should stick to the present system of examination that is a novelty in the country and no novelty from without the country. We should look into the literature available within the country in respect of any invention rather than look for literature throughout the world.

Dr. L. M. Singhvi: Would you suggest that we should set up a central institute within the country, say, a central international institute, as has been suggested in some quarters?

Shri L. S. Davar: The International Institute is at the Hauge, and in view of the fact that there are great resources in the western countries, they are taking advantage of the institute, but I am sure our Government would not like to spend so much money in foreign exchange in going to that institute. If the system is maintained as it is,—the system of examination as it is in the present Act and not in the proposed Bill—then the staff of examiners can manage to do the work properly if the staff is further supplemented by a few more officers, rather than going into the wider novelty question as has been proposed in the Bill.

Dr. L. M. Singhvi: Would you suggest that the period of 10 years is highly inadequate or just not quite adequate?

Shri L. S. Davar: I would say highly inadequate, more so because of the present provisions of the Bill which does not say how long it will take for the patent office to issue a patent. It may take them 7 or 8 years.

Dr. L. M. Singhvi: What in your views is a reasonable period?

Shri L. S. Davar: Before 1930, it used to be 14 years. Then it was increased to 16 years. Before the patent is granted and before the invention can see the commercial working of it or find a party who can work it, four or five years are normally lost out of the term of the patent.

Dr. L. M. Singhvi: What would you say if we make the period run from the time the patent is granted?

Shri L. S. Davar: I have said 14 years from the time the patent is granted.

Shri Kashi Ram Gupta: Do you think the present Act is much better than the proposed Bill?

Shri L. S. Davar: In my humble opinion, yes.

Shri Kashi Ram Gupta: Do you say the present Act does not need any amendments?

Shri L. S. Davar: It would require amendments of a very minor nature.

Shri Kashi Ram Gupta: What are they?

Shri L. S. Davar: I think it will be a pretty long job to enumerate them now.

***Omitted at the request of the witness.

Shri Kashi Ram Gupta: Out of 169 clauses in the Bill, you have suggested amendments only for certain clauses; Does it mean the other clauses are acceptable to you?

Shri L. S. Davar: In my opinion, the law for a developing country should be made as simple as possible. Unfortunately I have yet to see a masterpiece of obscurity as you find in this particular Bill. It has taken me 10 readings before I could understand what it implies. Either I am foolish or my 35 years of experience have all gone to waste.

Shri Kashi Ram Gupta: In your opinion, the present Act does not need any change at present?

Shri L. S. Davar: Not till we come to a certain stage of industrialisation should we modify our law.

Shri Kashi Ram Gupta: For what period should we wait for the amendment?

Shri L. S. Davar: So long as our plan periods go on, we should not touch the Bill.

Shri Kashi Ram Gupta: That means for an indefinite period.

Shri L. S. Davar: I think it will not go on indefinitely.

Shri Kashi Ram Gupta: Government propose to have the plan for the next 30 or 40 years.

On the one side you say great changes are going on and a thing which is good now may not be good after 10 years. Still you say the patent must be not below 10 or 15 years. This is a contradiction.

Shri L. S. Davar: There are two types of patents, of a simple nature and of a complex nature. The technology is moving very fast as far as complex nature of inventions are concerned. 10 years ago, the speed of the aeroplane was 300 miles. Now it is 500 miles. In another 5 years it may be 1000 miles. But changes are not so swift in other fields. We must take the overall picture.

Shri Kashi Ram Gupta: Do you think for simple things, a lesser period may be prescribed?

Shri L. S. Davar: It is very difficult to confine it like that. Nowhere else in the world it has been done. It is not practical to do it.

Shri Kashi Ram Gupta: You say the time of individuals is gone and this is the time for collective working. Then why should you insist on a period of more than 10 years?

Shri L. S. Davar: These two are not inter-related. I say the period should be more because it takes sometime before that piece of paper takes a practical shape.

Shri Kashi Ram Gupta: If a limit is put on the time taken by government and if the clause is so amended that the time will start from the date on which the patent is granted, do you think 10 years should be sufficient?

Shri L. S. Davar: In my paper I have said that we want 16 years, but if you want to reduce it to 14 years, give it from the date of granting the patent.

Shri Kashi Ram Gupta: You say, in Russia there are two sorts of patents—authorship certificates and patents. You say that here also patents can be held by the individual?

Shri L. S. Davar: Yes.

Shri Kashi Ram Gupta: The individual here is nowhere except where he works in the government laboratories. How can an individual working in government laboratories get the sole patent for his invention?

Shri L. S. Davar: Patents are generally taken out in Russia by foreigners. But authorship certificates are taken out by Russian nationals.

Shri Kashi Ram Gupta: You said there is not much relationship between patents and prices. But members feel that this is a very big factor. How will you be able to differentiate between the two, whether the high prices are due to patents or other factors? What percentage of it is due to patents and what percentage due to other factors?

Shri L. S. Davar: Let us see what was the price of Milk of Magnesia 10 years ago and what is its price today. Let us also see what was the price of another antibiotic ten years ago and what it is today. If you see any difference in the relationship of prices, you can say the prices are higher in respect of patented articles.

Shri Kashi Ram Gupta: We have received a memorandum from Messrs. Remfry and sons who are also Attorneys. You are also an Attorney. They have tried to deal with each and every clause of this Bill, but you have given comments only about certain clauses. It means that so far as the other provisions of the Bill are concerned, you are agreeable to them.

Shri L. S. Davar: They are harmless.

Shri Kashi Ram Gupta: In other words, only this is harmful.

Shri L. S. Davar: I did not want to waste your time by referring to provisions which are harmless.

Shri Bade: Is it a fact that 90 per cent of the patents in the field of drugs and medicians in our country is held by foreigners?

Shri L. S. Davar: I think it is the fault of Indian inventors.

Shri Bade: Is it a fact? All those who have submitted their memorandum are against section 87 which provides that certain patents shall be deemed to be endorsed with the words "Licences of right". If it is a fact that the licences are held by the foreigners, why should you object to this section? Because, our nationals will be benefied by this provision.

Shri L. S. Davar: I agree with you on that point. But I think hon. Members will realise one thing. When we talk of medicines we are playing with human lives. Would you like to take a medicine which is being sold on the street corners? You may know that it is the same generic product but you would not buy it. If my child is not well, I would not care what I pay but I will buy a product which I know has been manufactured by reliable and reputable persons, a product which has gone through many tests.

Shri Bade: But we do not want to be exploited by the foreigners.

Shri L. S. Davar: I agree with you hundred per cent when you say that we do not want foreigners to exploit us. Let us take the know-how of the foreigners. When a man is prossessing something you must induce him to give it to you.

Shri Bade: So, if the compulsory licence of patents is accompanied by know-how then you have no objection for section 87?

Shri L. S. Davar: Here again you cannot force a person to give the know-how. He will say "here is the patent, you can do whatever you want". It may be that 90 per cent of the patents in this country are held by the foreigners but let us see how many patents are there. Here we have 2,000 as against 20,000 patents granted in America and Germany. Why can't I pay a few rupees and get some of these patents? I can, but I know that I cannot make the drug as effective and as good as the person who has the

know-how and has developed the drug.

Shri Bade: In countries like Israel and Turkey they are imitating Belgium in this respect.

Shri L. S. Davar: The point is that each country is trying to have perfect drug patents but nobody has yet been able to find out what the real solution is. Everywhere people think prices are high. But what are we going to do about it? Even America says the prices are high. So also Germany and England. Recently, there was a case in a High Court in England about the right of the Government to make use of an invention in the interests of the public. For some time when they imported drugs from Italy, they found they were sub-standard drugs.

Dr. M. M. S. Siddhu: Italian drugs are not sub-standard. You should be factual when you refer to these things.

Shri L. S. Davar: I will put it in a different way. Are you going to be sure that a drug manufactured by any person is as good as the drug manufactured by the person who has invented it?

Dr. M. M. S. Siddhu: Sir Alexander Fleming discovered penicillin and gave it to the world. Since then penicillin is made all the world over. Is it being suggested that the Penicillin now being manufactured in various countries is different from the one invented by Sir Fleming?

Shri L. S. Davar: May I tell you one thing. I will show you a remark by Sir Fleming where he said the greatest folly which he did in his life was not to patent his drug. I have got that in writing.

Shri Bade: Section 35 refers to secrecy directions relating to inventions relevant for defence purposes. The same provision is there in the model law for developing countries. I hope you have no objection to that provision.

Shri L. S. Davar: None whatsoever when it is for the defence of the country.

Shri Bade: Not only for defence but for health also.

Shri L. S. Davar: Health is a very wide term. If my teeth are bad I can say that my health is bad. We must say something specific. Let us not generalise things.

Shri Bade: Since 90 per cent of the patents are held by the foreigners and none by our people it is being suggested that the patent law should be abolished and there should be no patents as long as there are no reciprocal arrangements. What have you to say in the matter?

Shri L. S. Davar: I would simply say this. All right, let us abolish it. But what are we going to gain? As against 1,500 or 2,000 patents of drugs which are taken out in India, there are 15,000 patents for similar drugs in America. Am I not right?

Shri Bade: The only point is that there should be no monopoly.

Shri L. S. Davar: I am coming to that. Those 15,000 patents which have been taken in America are free for us to use. I do not have to pay any royalty. But why is it that we are not using them again, because we will have to have the know-how. As I said, 3 million patents were granted till 1951 in America as against 1 lakh in India. These 29 lakh patents are available to us free, without any royalty. All that we have to pay is 50 cents for the patent specification. You can take it from anywhere in the world and use it; nobody is going to stop you from doing it. There is no monopoly. Patent is applicable only to that country; nowhere else. An American patent is applicable only in America. If it is not patented here, I can copy it, anybody can copy it.

Shri Bade: I will now come to the provisions of the Bill. We are exploited by the foreigners in the field of medicine. We have seen so many booklets about the difference between the international price and Indian price of medicine. So, we have to do something to put a stop to this exploitation. Now, regarding the compulsory licence, should it be given by the Controller or by the court?

Shri L. S. Davar: Court procedure becomes too expensive and too lengthy. In France what they have done is that they have appointed a committee of medical experts which goes into this question. I have suggested that we might adopt that practice, as is done in France, that a committee of medical experts be appointed by the Ministry of Health of the Government of India to go into the question whether the licence for drugs should be given or not.

Shri Bade: This again will be a lengthy procedure.

Shri L. S. Davar: These are alternative procedures.

Shri Bade: You have said that you cannot define "invention" while this Bill tries to define "invention" Some suggestions have been made that it should be "new" or "useful". What is your opinion about this?

Shri L. S. Davar: I would say that the addition of the word "useful" is good. Whether it is there or it is not there, if the invention is not useful, it is of no use to the public and nobody is going to bother about it. But my objection is: define what is an invention if you can, although the courts have not yet been able to give a proper definition, but do not say what is not an invention. That is the only submission I have made in my memorandum.

Shri Bade: If it is an invention, it is new; if it is old, it is not an invention. So, what is your view about the word "new"?

Mr. Chairman: New is new. We will adjourn here now and continue the examination of Shri Davar tomorrow at 14.00 hours.

(The witness then withdrew).

The Committee then adjourned.

I. L. S. Davar & Co., Patent and Trade Mark Attorneys, Calcutta.

Spokesman:

Shri L. S. Davar.

(The Witness was called in and he took his seat

श्री चौरड़िया : दावर साहब, यह जो आपने मेमोरैंडम दिया उसमें आपने बताया कि प्रोसेस पेटेंटिंग करने से इन्वेन्शंस में भी दिक्कत होगी और कई तरह के रिमार्क्स दिये तो मैं जानना चाहूंगा कि जिन देशों में प्रोसेस पेटेंटिंग होती है जैसे जर्मनी, स्विट्ज़रलैंड वगैरह में वहां इन्वेन्शंस जब ठीक तरह से हो रहे हैं तो अपने यहां इन्वेन्शंस क्यों नहीं हो सकेंगे ?

Shri L. S. Davar: The reply to that is that, so long as the product covered by that particular process is patented or is given protection, there should be no objection at all. I do not recommend that the product as such should be given protection, but the product according to that particular process should be given protection, so that others can also find out alternative processes for manufacturing a similar product. That is exactly what is happening in other countries where they have only the process and not the product *per se*. It is only in America that the product *per se* is covered by a patent, but in many other countries it is the product covered by that particular process which is patented and my submission is that that should be the law in this country.

श्री चौरड़िया : यह जो आप बता रहे हैं कि कुछ मामलों में प्रोडक्ट को पेटेंट किया जाय और कुछ मामलों में प्रोसेस को पेटेंट किया जाय तो ठीक रहेगा . . . .

श्री एल० एस० दावर : यह तो मैंने नहीं कहा ।

श्री चौरड़िया : तो जब मिक्स्ड है, हो सकता है, प्रोसेस भी कहीं पेटेंट होता है, कहीं प्रोडक्ट पेटेंट होता है, और कुछ कमोडिटीज़ ऐसी हो सकती हैं जिसमें केवल प्रोडक्ट को पेटेंट करवाना पसन्द करते हैं, तो वैसी सूरत में आप क्या सजेस्ट करते हैं ?

Shri L. S. Davar: For example, in the case of alloys which relates to the metallic industry, generally it is the composition and the end product which are covered by the patent. In such cases, it is preferable to give protection for the end product and not only for the process. It all depends upon each individual case—what type of invention it is—but the general principle which should be followed is that the end product should be covered only in respect of the process which has been developed for producing that end product.

श्री चौरड़िया : आपने यह बताया मेमोरेंडम में कि पेटेंट की अवधि दस या चौदह साल की जो है यह बहुत कम पड़ती है इन्वेन्टर्स के हिसाब से और हमारे ख्याल से उपभोक्ता के हिसाब से बहुत ज्यादा है, तो दोनों का इन्टरेस्ट सेफगार्ड हो सके उस दृष्टि से कुछ इसका क्लासिफिकेशन करते हुए आप बता सकेंगे कि कौन सा प्रोडक्ट किस प्रकार कब तक के लिये पेटेंट किया जाय ? .

Shri L. S. Davar: The law has to be uniform in all cases, but as I made my submission yesterday to the hon. members, it takes some time before what is written on the paper takes a practical shape. It is for this reason that I have suggested that the term of the patent should not be reduced.

श्री चौरड़िया : हमारे सामने ऐसे भी उदाहरण हैं कि जो चीज आज आठ आने में मिलती है वह किसी जमाने में 14 रु० में मिलती थी और उसकी प्राइस कम तभी हुई जब उसके पेटेंट की अविधि समाप्त होने के बाद वह चीज़ मार्केट में आयी तो ऐसी स्थिति में ज्यादा समय रखा जाता है तो

उपभोक्ता को उसमें कठिनाई पड़ेगी तो इसके बारे में कुछ सेफगार्ड और हो सके, कन्ज्यूमर का भी इन्टरेस्ट सेफगाड हो सके, इसके लिये कोई सजेशन आपका है ?

Shri L. S. Davar: But the hon. member has to see this: we must also benefit by the experience of other countries. After all, each country makes laws for its own benefit. If we take guidance from other countries—and that is what we have done—from the experience of highly industrialised countries or the countries which went through the same stage of development as we are now going through, they have found that the period of sixteen or seventeen years is the right period within which an invention can properly be put into a practical shape. It is very difficult to say for a particular invention the term should be so much and for another the term should be less. There should be one uniform law in regard to all inventions and we must follow the practice, what is being done in seventy or eighty other countries.

श्री चोरड़िया : आपने यह बताया कि एग्जामिनेशन की व्यवस्था जो रखी गई है उसके आप पक्ष में नहीं हैं और कारण आपने बताया कि पेटेंट आफिस डिले होता है और इससे दिक्कत होती है तो अगर इस कठिनाई को दूर कर दिया जाक टेक्निकल स्टाफ बढ़ाकर या किसी तरह से तब आपको एग्जामिनेशन व्यवस्था से कोई विरोध न होगा ? यही एक विरोध का कारण आपका है या कोई और विरोध इससे आपको है ?

You say that the examination should not be there.

Mr. Chairman: He never said that. He said the staff has to be increased. He said it may take seven years, so increase the staff. That is what he wants.

Shri Bade: Does he want that as soon as the application is filed it should be accepted without examination?

Mr. Chairman: He wants examination, but he says that can be done only by increasing the staff. I do not think there is any point in that.

Shri Vimalkumar M. Chordia: On page 8 of their memorandum it is said:

> "The present draft Bill in India proposes examination system similar to that which exists in other developed countries. If that is adopted, the strength of technical staff will have to be increased five times. Such staff is not available. Even with the present system which is less stringent than proposed, the staff is not enough to cope with the work. The Patent Office has since the last four years been neglecting its primary duty of indexing patents so that under present conditions any one cannot make a search in the Patent Office to ascertain if a certain invention has been patented during the last 4|5 years."

यह जो इन्होंने कहा उसके ऊपर से यह इन्फरेंस ड्रा होताहै कि he is not in favour of examination.

Mr. Chairman: Is that your opinion?

Shri L. S. Davar: No, Sir, I am in favour of examination.

I think this is a purely technical matter which the hon. Member may like to know and if you permit me I can give an explanation as to what is the practice and what I want to be done.

The practice at present is that when an application is filed, the application is accompanied by a technical document, what we call the specification. It is referred to the examiner and there is a certain provision, namely section 5 of the existing Act, under which the examiner makes a search or makes his report with regard to the application which has been filed.

What does the examiner do at present, or what is he expected to do? According to the present Act the examiner, in order to find out whether the invention is novel or not, what part of it is novel, makes a search through the records of the prior Indian patents which are lying in the Indian patents office or such publications which are available within the country. That is the practice in India. In some countries, for example, Germany or the United States, the practice is that they search through the literature of the whole world. They have got the facility to make it; we have not got it. We have not got such big libraries, nor have we got patent specifications of all the 110 countries in the world who have got their patents system.

According to the proposed Bill it says the novelty examination shall be extended to novelty anywhere in the world, which in my humble submission is impossible with the present staff, and although I have said that the staff will have to be increased by five times, it may perhaps by twenty times.

श्री चौरड़िया : आपने इसमें टाइम लिमिट के बारें में बताया है कि पहले टाइम लिमिट थी कि पेटेंट इतने दिन के अन्दर हो जाय और जब वह इसमें से हटा रहे हैं, तो आप क्या सुझाव देना चाहेंगे कि कितना टाइम लिमिट इसमें रखा जाना चाहिए ताकि पेटेंट के लिए अप्लाई करने वाले को दिक्कत न हो और कंट्रोलर भी उसको कर सके ?

Shri L. S. Davar: At present a patent must be accepted within a period of eighteen months or an extended period of twenty-one months, and the patent must issue within a period of two years, or thirty-one months including the extended period. In the proposed Bill there is no provision that the patent must issue within a specified time. And my submission is, if you do not do that, then the patent office can sit over it for several years. And they may have to sit for several years if they have to look into the novelty of the inventions in relation to what is available throughout the world. It may take twenty years before the patent is granted. And therefore I have suggested that the present system of the search for novelty should remain as it is and that a time-limit should be specified within which the patent must issue. Every inventor is like a child. Let us take the case of an individual inventor. He is very keen, firstly whether he is going to get a patent or not. If he is to hang on for five, six or seven years, he loses interest.

Mr. Chairman: You have not given any example where it has taken five or seven years.

Shri L. S. Davar: Now it cannot take.

Mr. Chairman: You mean, you expect it would take seven years.

Shri L. S. Davar: At the present moment the patent must issue within thirty-one months latest. But there is no provision in the Bill before us that the patent must issue within a specified period.

श्री चौरड़िया : पेटट करवाने के लिए जितना टाइम लिमिट आप रखना चाहते हैं, आपने जो पेटेंट रजिस्टर्ड करवाये उनके आधार पर क्या आप बता सकते हैं कि इन-इन चीज़ों के लिये इतनी-इतनी अवधि तय कर दी जानी चाहिये जिससे कि अप्लीकेंट को भी कठिनाई न हो और पेटेंट आफिस भी उसको आसानी से कर सके और काम जल्दी हो सके?

Shri L. S. Davar: This is again a related matter in relation to examination. If you ask the patent examiner to make a search through all the records available in the world, then it is impossible to lay down the time-limit, because he has neither the facilities, nor the time, nor the means to

do it. And therefore these two things are inter-related. If we stick to the present system, then we may say, instead of two years, or thirty-one months, the patent must issue within the maximum period of three years and not more.

Shri R. Ramanatham Chettiar: Since the time at our disposal is limited and there are many Members who would like to put questions, it is better if the questions are restricted to two in number. Otherwise the time must be extended.

Mr. Chairman: I shall leave it to the good sense of the Members.

श्री अचल सिंह : जो मेमोरेंडम्स हम को प्राप्त हुए हैं उनमें से कुछ ने भारत जैसे देश में पेटेंट्स ऐक्ट की अनावश्यकता बताई है तो इसमें आपकी क्या राय है ?

श्री एल० एस० दावर : राय के मैं बरखिलाफ़ नहीं हूं लेकिन पेटेंट्स एक्ट तो होना ही चाहिये ।

श्री अचल सिंह : भारत एक गरीब देश है तो इस बिल में क्या-क्या सुधार किये जायं ताकि दवाओं के दाम, इंजैक्शनों के दाम जोकि बहुत ज्यादा हैं वे सस्ते दामों पर जनता को सुलभ हो सकें ?

श्री एल० एस० दावर : यह कमर्शिल मैटर है । गवर्नमेंट के पास बहुत ताक़त है कि प्राइस कंट्रोल कर सके पेटेंट माल की । मैंने कल भी अर्ज किया था कि एक मामूली चीज है और सब दवाएं पेटेंट में नहीं आतीं । यूनानी दवाओं में कोई पेटेंट नहीं हैं लेकिन उनके दाम ज्यादा हैं वह बातें तब प्राइस स्ट्रक्चर की होती हैं वह इतना पेटेंट से रिलेशन नहीं रखतीं ताकि आप यह कह सकें कि ख़ाली पेटेंट की ही वजह से दवाओं के दाम बढ़ते हैं ?

श्री अचल सिंह : जो दवाएं पेटेंट हैं उनको वही बना सकते हैं, वही कीमत निर्धारित कर सकते हैं अगर आम लोग बनायें तो वे सस्ती मिल सकती हैं ।

श्री एल० एस० दावर : बनाने का तरीका भी तो चाहिए । लाइसेंस फ़ी अगर कोई पे कर के बनाये तो वह लाइसेंस एक्ट में प्रोवाइड किया हुआ है जो बनाना चाहे आगे भी पुराने एक्ट में यह था कि पेटेंट होने के बाद कोई टाइम लिमिट नहीं थी । कोई भी आदमी जो बनाना चाहे और कहे कि मैं यह दवाएं बना सकता हूं और सस्ती बेच सकता हूं मुझे लाइसेंस मिल जाना चाहिए तो वह मिल सकता था लेकिन अफ़सोस की बात यह है कि दस-पन्द्रह साल से ख़ाली 3–4 आदमियों ने लाइसेंस की अर्जी दी है तो इसका क्या मतलब निकलता है मेरी तो समझ में नहीं आता । मेरी राय तो यह है कि हर एक चीज़ के लिए कुछ न कुछ एक तरीक़ा होता है बनाने का । आप चूर्ण भी बनायें तो भी एक तरीक़े से बनाया जाता है । एक कुक खाना बनाता है वही दूसरा कुक अच्छा खाना बनाता है ।

The same rule applies as far as medicine or any other commodity is concerned.

Shri R. P. Sinha: The witness has been pleading for a longer period of patent rights. I would like to seek this clarification from him: what is the motive in asking for a longer period? Is it because the company concerned may .not get adequate return on the investment? Here is a Reserve Bank Bulletin which made a study of the investments and profit earned by the pharmaceutical and other chemical industries. From this it is clear that these companies make adequate profits in a very short period. I find that the average for 1961 to 1962-63 of gross profits as a percentage of the total capital employed works out to 17.7 per cent....

Mr. Chairman: The time is very limited. The hon. member may ask his question.

Shri R. P. Sinha: We have to make up our mind on the question.

Mr. Chairman: Yes; he may proceed.

Shri R. P. Sinha: In the pharmaceutical industries the profit was 22.9 per cent; in the basic industrial chemicals it was 20.5 per cent; in the other chemicals it was 10.8 per cent; and the average of all the three works out to 17.7 per cent. That was the return on capital invested—gross profit. What does it mean? If a man invests Rs. 100, in ten years' time he will get Rs. 170 by way of return on the capital invested. When we take into account the foreign participation and not the indigenous capital, we find that the total capital employed by the foreign participants was Rs. 14.87 crores and the dividend remitted was Rs. 204 lakhs, *i.e.* about Rs. 2 crores.

Mr. Chairman: What is the hon. member's question? The witness knows all these details.

Shri R. P. Sinha: But the Members may not know.

Mr. Chairman: The Members also have been supplied with these: The hon. member may now ask his question.

Shri R. P. Sinha: One more point and I would finish with that. The remittances on royalty and technical service on all these investments were Rs. 5.28 crores.

Shri L. S. Davar: In how many years?

Shri R. P. Sinha: For the period, 1961 to 1962-63, *i.e.*, in one year, on an investment of Rs. 14 crores, they took about Rs. 2.04 crores by way of dividend remitted. During 1956—63, they took away Rs. 5.28 crores by way of remittances on royalty and technical services. All these show that they get adequate return in ten years' time. You have been pleading that the patentee will not be able to get adequate return on the capital invested. If you have got some figures to contradict my statement, we would like to have them. The pharmaceutical industry gets a profit of 22.9 per cent.

Shri L. S. Davar: My first observation to that will be: how is that related to patent?

In any pharmaceutical industry, as I said yesterday, it is perhaps 2 per cent of the products which are covered by patents. Milk of magnesia is not covered by a patent and there re hundreds of products which are not covered by patents.

Shri R. P. Sinha: Whether it is covered by patent or not, the return is the same.

Shri L. S. Davar: If the return is higher, surely the Government have powers to reduce the profit. But that has nothing to do with patents.

Shri R. P. Sinha: Why do you want 14 years?

Shri L. S. Davar: Experience throughout the world has shown that this is the minimum adequate period within which an invention can be given a practical shape. Are we going against the experience of 70 or 80 countries?

Shri R. P. Sinha: Can you give us the figures of other countries to show that they have not been able to get adequate return on the capital invested in ten years?

Shri L. S. Davar: I am sorry I was not prepared for this question as to what have been the returns in other countries, but I have some figures and if the hon. members want, I can supply them.

Shri R. P. Sinha: The return on investment is higher in a developing country than in a developed country.

Mr. Chairman: We can have this information from the Government.

Shri R. P. Sinha: You want fourteen years. We are prepared to concede fourteen years if you give us facts and figures to show that the return will not be adequate if it is less than ten years.

Mr. Chairman: The Government spokesman will explain to you.

Shri R. P. Sinha: I leave it to the witness. If he wants to say something he may do so.

Shri L. S. Davar: I have already made my submission that it is not because of the profits earned during a particular period; it is the development of an invention which according to the experience of other countries takes a certain period of time before the thing can be put into a patent.

Shri R. P. Sinha: Every country makes its own patent law to suit the genius or the interests of the country.

Shri L. S. Davar: Correct.

Shri R. P. Sinha: We are now enacting our law for the benefit of our own country. We are anxious to have the flow of information and know-how from other countries. If you can give us figures to prove that for less than fourteen years there will not be adequate return, we shall consider it. But our experience in the country shows that you can get back your capital in less than ten years.

Shri L. S. Davar: That is in respect of those pharmaceutical preparations which have already been developed and are in the process of manufacture. Patents only relate to a new product or process. When we talk of any normal pharmaceutical preparation the process has been developed. No time is spent in developing from the very beginning. When you talk of patents you have to develop from the initial stages, give it to the guinea pigs and give it to human beings, and it takes some time before you can say that it can be safely taken by human beings. The hon. Member will agree with me that no pharmaceutical preparation of a drastic nature can be just doled out to human beings unless it has gone through proper tests.

Shri R. P. Sinha: I will put only one more question as other Members are waiting. We have found from the report of the Haffkine Institute that the patent system in India has strangulated the growth of the pharmaceutical industry and the drug industry in this country. And they have given instances of their own experience that in the case of cholera and plague drugs the foreign patent holders did not permit the processes to be developed and the products to be marketed here for seven or eight years and they carried on litigation in order to stop the processes from being used. They have given figures to show that what they could manufacture in India for Rs. 20 they had to import at Rs. 259. I am talking of the plague medicine—I do not recollect the technical name. You say that the patent system should be so devised that it should help the growth of the drug and the pharmaceutical industry in the country. That is what we are trying to do. But in your submissions and in your memorandum you have been saying that this will rather retard the growth of this industry. What have you to say to that?

Shri L. S. Davar: To what year does that report of the Haffkine Institute relate?

Shri R. P. Sinha: It is the latest report.

Dr. M. M. S. Siddhu: That was started in 1939, that medicine.

Shri L. S. Davar: May I submit to the hon. Member that in 1952 or 1953 the Indian Patents Act was amended by the introduction of section 23 CC which says:

"Without prejudice to the foregoing provisions"—

this relates to food or medicine—

"where a patent is in force in respect of a substance capable of being used as food etc., the Controller shall on application"—no time limit is provided, the moment a patent is granted anybody could go and ask for licence—

"the Controller shall on application made to him by any person interested, order the grant to the applicant of a licence under the patent on such terms as he thinks fit."

I am surprised why in spite of this provision the Haffkine Institute . . .

Shri D. P. Karmarkar: What happened in 1939.

Shri L. S. Davar: In 1953 the Act was amended. But in spite of the amendment of the Act it is rather unfortunate that very few people have come forward for this licence.

Dr. M. M. S. Siddhu: When by the order of the Madras High Court sulphathyocol was allowed to be imported, the price came down to nearly one-fourth the cost.

श्री ब्रज बिहारी मेहरोत्रा : आपने कहा कि पेटेंट की मियाद हर चीज़ के लिए एक ही होनी चाहिए तो एक चीज तो वह है जिसमें आदमी साधारण बुद्धि लगा कर बना लेता है और उसे पेटेंट कर देता है जैसा कि आपने टिफिन कैरियर्स का जिक्र किया था और एक वह चीज़ भी हो सकती है जिसमें कि वह आदमी वर्षों खोज करता है और तब उसके बाद कोई चीज़ का इन्वेन्शन करता है तो दोनों को एक ही मात्रा में समय देना यह कहां तक मुनासिब होगा ?

श्री एल० ए० दावार : उसको तो देखेंगे कि किस को कितना समय देना चाहिए, अमुक को कितना समय देना चाहिए और दूसरे को कितना समय देना चाहिए । उस में तो और ही ढंग लगाया जायगा ।

And where is the proof that the man has taken such a long time in inventing an article? All that proof will have to be submitted. Let us go by our past experience. Nobody has said that "I should be given more protection". But apart from that I am glad the hon. Member raised this question. In the present Act there is a provision that if a man has not made sufficient profits commensurate with the nature of the invention and the time and money spent in developing the invention, he can go to Government and ask for an extra provision of five years and in extreme cases ten years. Unfortunately, Sir, that provision has been deleted in the present Bill. I have to recommend that provision should not be deleted. That meets exactly the point that we have raised now.

Dr. M. M. S. Siddhu: I would like Mr. Davar to recall that he said that the imports of streptomycin were sub-standard. I would like him to see what has been stated in reply to a question in the Parliament in U.K. The Minister said that arrangements were made for inspection of overseas factories and samples of each batch were taken on importation and tested by the Government chemist for compliance with the British Pharmacopoeia requirements before issue to hospitals. Regarding the view that non-patented country's products are substandard, I would like to know what you have to say in this regard.

Shri L. S. Davar: My observations which were made yesterday were based upon what I heard only about 3 months back from people in the phamaceutical industry, who were representing England at a particular conference. I have no citation to place before the hon. Members. I have no reason to disbelieve what the hon. Member is saying, but I am only quoting what I heard about 3 months ago.

Dr. M. M. S. Siddhu: I would tell one instance. Alexander Fleming was taken round the United States. He was asked by the head of the firm which had become the largest manufacturer of penicillin in the world why he had not insisted on the rights and rewards which would enable him to live in the manner fit for so great a benefactor of mankind. 'I have never thought of it'—Fleming replied. Fleming was actually held in greater esteem because of his lack of commercial acumen.

Shri L. S. Davar: Not just now but at a later stage if the hon. Member so desires, I will place before you the evidence given in the Keafuour Committee in America and what were the observations of Fleming himself and

what were the observations also of the other people who were working along with Mr. Fleming after he went from England to the U.S.A.

Dr. M. M. S. Siddhu: The Reserve Bank, in its bulletin has observed: "Lumpsum royalty is treated as technical fee, while a so-called technical fee linked to output or sales is considered as a royalty". What is the effect of this observation? The question of royalty payment, when it is linked with the technical fee, becomes in such a way, a bigger thing than the mere royalty. What he has to say about the observations of the Reserve Bank?

Shri L. S. Davar: The Reserve Bank figure did not indicate separately how much was paid as royalty for the patent and how much was paid as royalty for the know-how. I have the figure, not just now here, but I have the figure with me and I don't think I will be wrong in saying that that figure is very very much less than the figure I quoted yesterday. As far as royalty payments on patents made during 1958—62 is concerned, I have the figures of the Reserve Bank with me, but not here just now. I can send it on to you.

Dr. M. M. S. Siddhu: The recent cases did not relate to pre-1951 period, but they relate to post-1951 period. Even if the Indian manufacturer were to work for no loss will it not be correct for right of licence to be given for the drugs?

Mr. Chairman: It is a matter for the committee to decide.

Dr. M. M. S. Siddhu: When I quote cases which are post-1951, that makes the difference in the answer.

Shri L. S. Davar: I have only to repeat my observations which I made before that after 1952, there was provision in the Act that anybody can ask for the licence. If people have not done it, it is entirely their fault and not the fault of the system, nor of the patent Act.

Mr. Chairman: Are you satisfied with his answer? It is for the committee to decide. It is for you to decide.

Dr. M. M. S. Siddhu: Is it a fact that the products of the patentee countries are imported in our country at very high price. Is it a fact that the products are patented, not the processes?

Shri L. S. Davar: Even according to the existing practice, it is the product made by a particular process. Supposing product 'A' is covered by patent in India, the protection is limited only in as much as the scope of the process is concerned. If anybody else or any other country can find out alternative process, he is entitled to get a patent for the same.

Dr. M. M. S. Siddhu: Production-cum-process is patented.

Mr. Chairman: It is to be interpreted by us.

Dr. M. M. S. Siddhu: He would like process to be patented?

Mr. Chairman: He says his view.

Dr. M. M. S. Siddhu: Would he like the process to be patented alone?

Mr. Chairman: Is there any answer?

Shri L. S. Davar: Product should be patented or covered by a patent only to the extent of the process by which that product is made and not product *per se* which is the position in America. In America you get patent for product *per se*, but here you don't get that protection.

Dr. M. M. S. Siddhu: Will the industry ask for still higher return over 20 per cent, while the 6 per cent which they spend on research is already covered? Certain pharmaceutical industries spend not more than 6 per cent and the return, after all the expenses, is 20 to 25 per cent.

Shri L. S. Davar: As I have already said, everything which the pharmaceutical industry does is not covered by this; and the Government have got

sufficient power with them to control the price structure of the various commodities.

Dr. M. M. S. Siddhu: A surgeon, after a good deal of research, finds out a new method of surgery. As a physician cures with his medicine, this surgeon cures by this newly invented method. Will the hon. witness like the surgeon to get his method of operation patented?

Shri L. S. Davar: In that case every housewife who can cook a better meal can get a better patent.

Shri Peter Alvares: You have stated in your memorandum that an importer should be recognised as an inventor more or less and given the same rights. In the absence of any corresponding provision for the compulsory working of patent in India, don't you think that these two, when combined, would deprive the country of any benefit of any invention?

Shri L. S. Davar: With due apology, I think the hon. Member has not appreciated the particular provisions of the Act. When we talk of an importer, he is an importer not of a commodity. He is an importer of an invention. You go abroad and visit various countries to see various processes. You see how various articles are manufactured. Then you decide that something is good for our country. You bring it to this country and start working it. Are you not entitled to get a patent?

I can give you an example. In 1934 we used to import bangles from Czeckoslovakia at a price of Rs. 2.50 per gross. One Mr. Mehta went to Japan and found out the process by which lustre bangles could be manufactured. He found out what the process was, came back to India and started working that process in his own factory. The result was that the price of those bangles came down to Rs. 1.25 per gross. Would he not be entitled to get protection for his wonderful choice of finding out some thing which will save foreign exchange and bring a new industry to the country? This is what I meant by importation of an invention.

An hon. Member: That is importing the know-how.

Shri L. S. Davar: Along with that you are importing know-how also. This is something which is beneficial for the country. We should continue that practice for a few years to come. As far as compulsory licensing is concerned, that provision is already there.

Shri Peter Alvares: In view of the fact that in the international field today developed nations are paying attention to the needs of the developing countries, is it not in the interest of India or any underdeveloped country for that matter to insist that the product should be worked out in India?

Shri L. S. Davar: I entirely agree with the hon. Member. There are two types of people who have got patents—one is the local people and the other foreigners.

Shri Peter Alvares: What I said applies to foreigners.

Shri L. S. Davar: When we talk of a foreigner, if you give him enough inducement to come and work in this country, why would he not do it? I can give you an example. Mexico which is a developing country is offering considerable advantages to the investors there is other countries and money is being spent in developing industries, by the developed countries, in Mexico. If we give enough empetus to the foreigners, they will come and do it.

Shri Dinen Bhattacharya: Yesterday you were telling us that patent is nothing today; what is important is technical know-how. Why then you are so much interested in opposing this Amendment Bill?

Shri L. S. Davar: This will take a long time to answer. In one sentence I can explain it in this way that the Patent acts as a legal vehicle for the transfer of technology. It gives a good

psychological feeling to a person who has got the know-how.

Shri P. S. Naskar: It is not an individual as you seem to say, but a company who gets the patent.

Shri Dinen Bhattacharya: You have said that the price has nothing to do with the patent. May I draw your attention to the furore created in our country about the import of librium which was sold at the rate of Rs. 5,000 a kg. Then, suddenly, a small firm of Delhi imported the same material from an Italian firm. That cost was Rs. 300 a kg. How did it happen? Has it got anything to do with the existing patent law which requires immediate amendment so as to remove these difficulties?

Shri L. S. Davar: The story of librium has travelled throughout the world. You cannot make a law on the basis of a particular instance. You must look into the overall picture. I have myself asked questions about librium. I have asked those people: Have you gone and explained to the Government why you are charging such high price? You cannot make a law on the basis of a particular instance. That is my answer.

Shri Dinen Bhattacharya: Is it not a fact that before the First World War, in America chemical industries were totally and fully dominated by German companies? America continued to get patent rights and built up their own chemical industries issuing licences to the American firms. Is it not time for India to follow the same example in respect of so many things which are still being imported by the monopolists from foreign countries?

Shri L. S. Davar: We did that during the War. All the patents belonging to Japan and Germany, the enemy countries, were being given freely to anybody who wanted.

Shri Dinen Bhattacharya: That was the starting point of the chemical industry in the USA. From that time it started developing.

Shri L. S. Davar: I think that again will need a long reply.

Mr. Chairman: Then, it is not necessary.

Shrimati Sharda Mukerjee: In your memorandum you have referred to Clauses 87 and 88 regarding the 'Licences of right' in respect of food and drugs and you have said that these two clauses in your opinion should be deleted because they will be a disincentive to foreign drug companies to come and work their patents here. You have also mentioned that where the process is very complicated then the provision of such a section in the Act will not in fact benefit the country because of lack of technological base or industrial base. I would like to know whether you would have any suggestions whereby instead of deleting these clauses the intention of these clauses can be safeguarded. Even Justice Iyengar has mentioned that Licences of Right should be included in view of the fact that in future there will be industrial development in this country and that we should not thereby block this possibility. Would you have any suggestions to make?

Shri L. S. Davar: I would suggest that just as in the U. K. the patentee should have the right to say, 'mark this as Licence of Right' and not the Government.

Shrimati Sharda Mukerjee: You know that these drug companies are very powerful organisations. You have Rs. 6 crores; even then you cannot compete with the drug manufacturers of the USA and the U. K. So a small man will not be able to compete with them. What you suggest will provide blanket protection. Would you still say that the practice in England should be adopted in India?

Shri L. S. Davar: I think this is purely an economic question in the sense that, if there is a powerful group what will happen to others. There are so many powerful groups in this country or in any country for that matter. When we talk of laws, we should not

discriminate one person from another. Government have acted strongly in countries like America. You probably know what happened to Dupont. They were going to take over General Motors. The Government came into the picture under the powers of Anti-Trust Law and said that they cannot control so many companies. We are also proposing now to have Anti-Trust Laws. The Government have got enough measures to prevent the domination of powerful groups.

Shrimati Sharda Mukerjee: These groups are outside our country. How can we control them? Therefore, in this Bill it is proposed that there should be protection for all the newcomers. You are objecting to that by saying that Clauses 87 and 88 are to be deleted.

Shri L. S. Davar: As I submitted, you cannot fix royalty straightaway for every product.

Shrimati Sharda Mukerjee: Only with regard to food and drugs.

Shri L. S. Davar: There are drugs and drugs. You cannot say that for all the cloth sold in India there should be a particular profit or so much should be royalty. Each case must be considered on its merit If there is more benefit to the community by a particular product, that should get more royalty. If there is less benefit to the community by a particular product, then that should get less royalty. I think that every businessman sets a balance when he is making a contract with the man who is giving the know-how or patent and the man who is receiving the benefit from it. I can tell you that all the businessmen are not fools. They will not pay much if they are not going to benefit much.

Shri M. R. Masani: I want to ask only one question to draw some more information out of the witness. The impression that has been given is that there is one way traffic between the rest of the world and India and that India is at the receiving end of a raw deal. Can you, from your experience, tell us if this impression is correct? In our country also the trend towards inventiveness in the people is growing. Indians also have abundant inventive genius to make inventions just like people in more advanced countries. To what extent do you feel that this inventive trend has increased in our country an' what benefits have we derived out of that?

Shri P. S. Naskar: In which field?

Shri M. R. Masani: In all fields.

Shri L. S. Davar: I don't bother about the quantity of inventions although the quantity is also increasing. The quality of our inventions is increasing to a very very large extent. Let us take, for example, the pharmaceutical industry. I cannot disclose the name unfortunately. But one of our American clients has paid probably 200,000 dollars for buying a process from this country because they felt that it was so good. I drafted the agreement for them. So we cannot say that there is no genius in this country and my submission is that we should encourage them in order to develop it further rather than strangle them.

Shri P. S. Naskar: Is that product not being sold at a very high cost?

Shri L. S. Davar: It has not yet started working. If the honourable Member is interested to know, that company is operating in this country.

Shri R. Ramanathan Chettiar: There is the following note in the Reserve Bank of India which has made a survey of the pharmaceutical industry on page 1389 of November 1964 issue.

> Although the burden of foreign collaboration is perhaps most readily apparent in the form of payments for patents, knowhow and other ancillary services, the real effect of such collaboration has also to be evaluated in terms of the contribution of the transmitted technology and management

practices to the development of a particular industry and the long-run contribution that it makes to decreasing the country's dependence on imports and increasing its exports.

Do you find any trend towards this objective?

Shri L. S. Davar: I think it is a very sensible statement.

Shri R. Ramanathan Chettiar: Are these people to whom we have given the licence taking steps to meeting the desire expressed here?

Shri L. S. Davar: If overall conditions for foreign investment is improved in this country, you can see that a number of industrialists will come and invest in this country.

Shri R. Ramanathan Chettiar: It is one-way traffic now.

Shri L. S. Davar: When we reach a particular stage of development, then we are going to give the know-how to the other countries. That is the proposal which I had made to the United Nations. Look, we want knowhow from the developed countries and we are prepared to give knowhow that we develop because we are industrially better developed than many other countries; we can synthesize our genius with the knowhow of the foreign cauntry and the process which we will develop will be more applicable to developing countries than the processes which have been developed by highly developed countries. Therefore, I said, 'you give us an opportunity to take the know-how from highly advanced countires and we will synthesize that with our practices and knowledge; we will develop our own processes which will be more applicable to other developing countries.' For instance, in America they would manufacture one million pieces of this microphone. We do not need one million of these microphones. To manufacture one million microphones they will adopt a particular process. But we may need only 10,000 and we shall adopt another process. Therefore, we shall take their process, and see how it can be applied to the technical conditions of this country, and the moment we have developed that, we are prepared to give it to other countries, and I can assure you that other countries are looking forward to receiving the technical know-how from our country. That is what I gather from my contacts with people in the other international fields.

Shri R. Ramanathan Chettiar: How would you like the idea of the system prevalent in Switzerland to be adopted here? That system is that the patents are only for the process and not for the products. In Switzerland the drugs are free from being patented.

Shri L. S. Davar: We must consider the conditions of each country. In my opinion what is good for our country is that we should give protection, as I have said before, for the product covered by that particular process, which as I said, each country must consider according to its circumstances; each country must consider the laws according to its own convenience; what is good for us, in my opinion, should be the practice.

Shri R. Ramanathan Chettiar: Take the question of baby food. At present, is not the manufacture of baby food the monopoly of only three firms? Is that monopoly not being perpetuated, if these patent rights were to continue like this?

Shri L. S. Davar: I do not know how baby food comes into the picture, because I have not seen a process for baby food being patented so far.

Shri R. Ramanathan Chettiar: It is hampering the development of our indigenous industry.

Shri L. S. Davar. So long as the clauses for compulsory licensing are there, any abuse of the patent system is very well covered by these clauses.

Shri R. Ramanathan Chettiar: Yesterday, in the course of your remarks, you had made an astonishing statement that startled some of us here.

when you said that the present Act was enough and there was no need for this Bill.....

Shri L. S. Davar: It is enough; I would repeat that statement.

Shri R. Ramanathan Chettiar: I am really surprised at this statement, and I believe some of my colleagues were also surprised when you made that statement. The present Act was based on the pattern of UK in 1911, that is, about fifty-five years ago. In the context of the fast changing economic development of our country and the other under-developed countries, *vis-a-vis* the developed countries, I am really surprised that you should think on those lines, even though you are an experienced person in this line.

Shri L. S. Davar: May I submit that this Act has been amended several times? Prior to one particular year which I cannot mention just now, we had a provision for revocation of a patent if it was not being worked in India. That clause was amended and we have now got the compulsory licence system. The Act was amended to provide for compulsory licence for food and medicine. As the requirements are coming up, we are entitled to amend our Act. But all that I am against is the wholesale revision of the law which no industry, as far as my information goes, has asked for.

Shri R. Ramanathan Chettiar: But in the same breath you also said that we should move with the times. So, do you not think that we should also streamline our legislation to suit the changing needs.

Shri L. S. Davar: The point is that if the legislation is such that it suits the requirements of the country at the present moment, then we should not disturb it. I have said already that during the Plan periods, when we want foreign investment and we want the local technological experience to develop and so on, we should not disturb the law; the law should remain as it is so that the foreigners as well as the local people can develop their industries in a proper manner.

Shri R. Ramanathan Chettiar: Even though it be of a reactionary nature? After all, we have adopted democratic socialism and we shall have to base our laws within the four corners of the policy of our country.

Shri L. S. Davar: Yes, but my submission is that our present law is much stricter than other laws; our present Bill is completely different from what appears in the socialistic countries.

Shri R. Ramanathan Chettiar: It is in consonance with the policy.

Shri L. S. Davar: No; it is not so in socialistic countries. In Russia you are entitled to get a patent and the Government will not allow importation from another source in violation of the rights of the patentholder.

Shri R. Ramanathan Chettiar: While answering a question of a colleague of mine earlier, you said that you were not quite sure whether an industry could come to fruition within a period of ten years, and you, therefore, wanted a longer period. But from the figures of investment and the return thereon, you will find that on an investment of Rs. 14 crores, a return of Rs. 7 crores was there; in 1962-63 the people concerned got a return of Rs. 2 crores by way of remittances of dividends, and Rs. 5 crores by way of royalties, which means a return of nearly 50 per cent. I do not think that in any other country, the pharmaceutical industry gives a return of 50 per cent. This is due to the patent laws being so elastic in our country.

Shri L. S. Davar: No, I do not agree with the hon. Member.

Shri R. Ramanathan Chettiar: I think Shri P. S. Naskar will bear me out on this point.

Shri L. S. Davar: I am sorry to repeat that when we talk of a royalty of Rs. 5 crores, we are talking of things which have already been developed, and when I say that the perio:

of protection should be extended, I am taking into consideration the period for the development of the inventions into a practical shape. Surely, it is not the pharmaceutical industry only but perhaps there are several industries which give so much profit, but considering that they do make profit, you must see that you have got the accumulated know-how of people who have worked perhaps for five years before or ten years before and who have come and given you the know-how now, and who are making profits now.

Shri R. Ramanathan Chettiar: But does it not tend to a monopolistic pattern?

Shri L. S. Davar: Again, unfortunately, I would submit when you talk of monopolistic pattern, that we have got other provisions of law in order to overcome that.

Shri R. Ramanathan Chettiar: Even the Monopolies Inquiry Commission has referred to that.

Shri L. S. Davar: Even under the present Act there is monopoly but I would say that the monopoly is mostly in the technical know-how; in so far as patents ore concerned, the existing provisions are sufficient to break that monopoly completely.

Shri R. Ramanathan Chettiar: Therefore, we should tighten the law now.

Shri L. S. Davar: How much more can we tighten the law? The more you tighten the law, the less the people will be inclined to give you the know-how.

Shri R. Ramanathan Chettiar: Should the period not be made less than ten years?

Shri L. S. Davar: No; I am afraid it is going to hit back the Indian industry itself.

Shri Balkrishna Wasnik: Does the witness agree that there is misuse of patents which this Bill is trying to prohibit? Supposing this Bill is not passed, then what method would he suggest to prohibit this kind of misuse?

Shri L. S. Davar: There has been no misuse. If there has been any abuse, the provisions are alr dy there and if the people are not enlightened enough to take advantage of the provisions it is not the fault of the Act.

Shri A. T. Sarma: May I know whether you are supporting this Bill or opposing it? After going through your memorandum I was under the impression that you are opposed to this Bill, but yesterday you supported the Bill. I want to know whether you stick to what you have stated in your memorandum or you are sticking to the oral evidence that you gave yesterday?

Shri L. S. Davar: I do not think there is any conflict between the submissions I made yesterday and the statement I have given in writing.

Shri A. T. Sarma: The Governmer has stated that the existing Act has not achieved its purpose. You say there is an improvement in the quality of the patents though the number is less. It is an ambiguous term. What is the improvement in quality? You have stated in the memorandum that in certain cases the rights of the patentees have been curtailed. You have listed many objections. But yesterday you said that the licensing system is necessary, whereas in your statement you say that it has totally proved a failure in the advanced countries. You now say that the existing Bill provides a better procedure of examination and it has been done on the model of advanced countries. Again, you threaten that if the proposals are implemented then the expenditure will go up five times and you ask whether the Government is prepared to bear such a huge expenditure. From the grounds stated by you it seems you are opposed to the Bill. Do you agree with that?

Mr. Chairman: Take it by what it is. He stands by his statement and also his oral evidence.

Shri P. K. Kumaran: Mr. Davar, you are very clearly in favour of the continuance of the present Act and not in favour of the proposed Bill. The main difference between the present Act and the proposed Bill is that as far as drugs and other things are concerned the process is going to be patented and not the product. You seem to think that the process cannot be separated from the product. If the present Bill becomes an Act and the processes are only patented, what do you think will be the impact of such a patent system on the anufacture and sale of drugs and other things in India.

Shri L. S. Davar: I do not agree with the first observation which the hon. Member has made, that I am absolutely against the Bill or the only improvement or the only amendment in the Act is in relation to drugs. It is a wholesale revision of the present Act, and I have in my memorandum detailed only such criticism of such clauses which have a certain impact either on the existing industry and development of further industries or on the inventor, and I think it would take a long time if I go through all those things again. My memorandum is already in the hands of Hon. Members. With regard to the point about the process and the product, the answer is very simple. If you give protection for the product covered by a process, then it will give impetus or inducement to others to find out alternative processes. I have already elaborated that point.

Shri P. C. Borooah: In regard to the terms of existing patents it seems you are opposed to the entire concept of reduction irrespective of the merits of each case on the ground that it would be unconstitutional and it will violate the existing agreements. What will be your opinion if it is done in the case of an emergency in the country?

Shri L. S. Davar: In the case of emergency it is all right. We are not in any state of emergency. This law is being made for posterity. When once the Government has given a right, why should it take away that right? Many people have made agreements on the basis of those rights and made investments on the basis of those rights. The legislature should not take away those rights merely by passing a law.

Shri P. C. Borooah: If it is done in the public interest, for the purpose of defence or....

Shri L. S. Davar: Under the Defence of India Rules you can do anything, but do not make that as part of the statute.

Shri B. K. Das: Shri Davar is of the opinion that 4 per cent maximum royalty is insufficient. May we have an idea as to what according to him should be the maximum royalty?

Shri L. S. Davar: It all depends upon each individual case. I have given an example where in one particular instance our Government allowed 15 per cent royalty on a non-exclusive basis because the art was such that even if we paid 15 per cent royalty we were benefiting by it. Each case depends upon its own merit. Therefore, as I said, royalty should not be fixed, it should depend upon the benefit that a person or an industry is deriving from the patent or know-how.

Shri B. K. Das: Do you mean to say that the Central Government should judge that maximum limit?

Shri L. S. Davar: Of course, all agreements are screened by the Government because it involves payment of foreign exchange. They have the right to refuse any agreement being executed if they find that the royalty is too much. Why should the Act lay down the limit?

Shri Babubhai M. Chinai: May I know from the witness whether he subscribes to the view that there should be a good flexible patent law under which industries can develop just like Japan which even today is paying nearly 100 million dollars by way of royalties to other countries but it is set off against the increased trade and its cost of production by making use of the know-how which has been given by others, even though they had to pay very high patent charges? Is it possible that under these circumstances you would advocate that this country should also adopt a little less restricted patent law so that they will be able to take advantage of it since this country is also under-developed and requires more know-how than many other under-developed countries? If so, does he subscribe to this view also that in the ultimate analysis even though you pay more royalties you are actually benefited by way of your export trade increasing by leaps and bounds?

Shri L. S. Davar: I entirely endorse the view of the hon. Member. That is why I quoted the example of Japan which has paid 300 million dollars as royalties within the period of five years and is benefited to a great extent.

Shri P. S. Naskar: You said that you are in favour of the patent of the process and not the product.

Shri L. S. Davar: Yes, not the product *per se*. It should be made clear in the clause that the patent is for the product made according to the process.

Shri P. S. Naskar: The clause says:

> "....no patent shall be granted in respect of claims for the substances themselves, but claims for the methods or processes of manufacture shall be patentable."

Shri L. S. Davar: What about the product made by that process? The process of manufacture of penicillin consists of this, this and this. Then the final claim will be penicillin manufactured by the processes aforesaid. So long as protection is given to that process....

Shri P. S. Naskar: Kindly read clause 47(1)(b) which says:

> "Where a patent is for a process of manufacturing an article or substance, the exclusive right by himself, his agents or licensees to use or exercise the process in India and of using or selling in India articles or substances made by such process and of authorising others so to do."

Shri L. S. Davar: I have read that clause. The wording of clause 5 should be made clear to make it in conformity with clause 47. On the one hand, you do not clearly say that the product made according to the processes will be given protection. On the other hand, in clause 47 you say about substances manufactured by the process. Therefore, clause 5 should be amended in order to make it specific that the product made by that particular process will be given protection.

Shri P. S. Naskar: Do you agree with me when I say that there should be one process for one product and not a multiplication of processes?

Shri L. S. Davar: I am afraid, it is not a practical way of thinking. I will tell you something from my own experience. Let us take an ordinary composition which results in a particular product. Let us take a refractory material which consists of a particular composition—alumina 5 to 10 per cent, chromium oxide 2 to 3 per cent and so on. When we talk of one process, according to the existing law or according to the modified Bill, it is always one process which is covered. But there is a general process in which there is variation.

Shri P. S. Naskar: Drug is a composition of intermediates. Each

intermediate will have its own process. Do you think that all these individual processes should be allowed to be patented or only the final process should be allowed to be patented?

Shri L. S. Davar: It depends upon particular inventions. One could not generalise. I would put it this way. If there are certain variants coming within the broad aspect of the whole invention, then you give claim for the broad aspect of the invention including the details of that process.

Dr. C. B. Singh: There is a statement which reads:

> "So drastic are the terms now proposed that there seems little doubt that India, if she should so desire at any time in the future, would not be able to become a member of the Iternational Convention if the Bill in its present form is passed."

Would you like to make any comments on this?

Shri L. S. Davar: There is an International Convention of which 70 countries are members. Certain principles are laid down which have to be followed by each member country. One of such principles is that so far as the patent law is concerned, the same treatment should be given to both the nationals and foreigners. This has been agreed to by all the member countries of the Convention, inciuding Russia. Now if we adopt certain discriminatory clauses in our law, we cannot join that convention.

Mr. Chairman: Thank you for your evidence.

Shri L. S. Davar: Sir, may I thank you and the members of the Joint Committee for giving me an opportunity to express my viewpoint?

(The witness then withdrew

II. Remfry & Son,

Patent and Trade Marks Attorneys, Calcutta.

Spokesmen:

1. Mr. Harold Holloway.
2. Shri Desh Pal Ahuja.
3. Shri Baldev Chaturbhuj Ojha.

(The witnesses were called in and they took their seats).

Mr. Chairman: Mr. Holloway, the evidence that you give will be treated as public. It will be printed and distributed to all the Members and also placed on the Table of the House. Even if you want any portion of it to be treated as confidential, it will be distributed to our Members.

We have received your Memorandum and we have distributed it to all our Members. If you want to add anything in addition to what you have said in that Memorandum, you may do so and then our Members will put questions and you may answer them.

Mr. Harold Holloway: I thank you, Mr. Chairman and the Members of the Committee, for giving us this opportunity of expressing our views on this subject. We are here to help the Committee. I hope you must have seen our written Memorandum and you will appreciate that we have aimed in our comments to provide material that may help in pinpointing difficulties and showing what improvements can be made.

My two colleagues and myself have between us some 50 years of experience and participation in work relating to industrial property. I have spent more than half of my life in India, much of it in connection with this work. My colleague, Mr. Ahuja, has spent many years in dealing with industrial property matters. He is a Master of Science and he had himself been engaged in research for several years with the Government of India. Mr. Ojha is a Barrister-at-Law. He has also been the Registrar of a High Court, a Deputy Registrar of Trade

Marks, and a Registrar of Joint Stock Companies. So, we have some experience of the matters which you, Sir, and the Members of your Committee are considering.

We felt that we had something to contribute in helping you to decide what form the new legislation should take. It is only right, I think, to say that, in general, many people may have overlooked the fact that there has really been no recent inquiry into this. In 1948, the Tek Chand Committee was set up. That Committee did circulate a very detailed questionnaire to which my firm, amongst others, also replied. That covered the whole range of patents law. The Committee which consisted of a number of persons presided over by the distinguished ex-Judge examined 122 witnesses. Its members visited 13 different cities. There was, therefore, a very thorough inquiry. The Committee was appointed on the 1st October, 1948 and it reported in April, 1950. Now, the main point that I would submit here is that it was set up very shortly after India had her Independence and shortly after India began seriously to tread the path of industrialisation.

Then, when the Ayyanger Commission was appointed in 1957, it was not in the same way as the Tek Chand Committee was.

Shri R. Ramanathan Chettiar: In what way?

Mr. Harold Holloway: I have got the exact language here. The learned judge was asked to advise with regard to the provision of law relating to patents and designs. He did not examine any witnesses other than three Government or semi-Government officials. The questionnaires were sent out and 79 replies were received. But those questionnaires—I have got the copies of them—related only to the question of product patents concerning chemicals and foodstuffs and compulsory licensing. The Tek Chand Committee covered all the points. Certainly, I think, all of you will agree with me in paying a tribute to the learned Justice Ayyangar for the wonderful appraisal he carried out. But the important point is that it was a personal appraisal. His appraisal did not rest upon a comprehensive study of evidence as was taken by the Tek Chand Committee.

Mr. Chairman: You want the whole ground to be gone over again by another Committee?

Mr. Harold Holloway: I leave it to this august Committee. I am only making a point which, I think, is relevant to the background of this Bill.

You have got our Memorandum. On p. 5, you will find we have listed many points. There are 23 main points set out there. It is interesting to note that each one of those 23 points rests not upon the Tek Chand Committee's recommendations but on the Ayyangar Commission's recommendations with the exception of 3 points which have been added since the Ayyangar Commission's Report.

I think there were certain practical considerations which came before the Tek Chand Committee—no doubt, they would be regarded by you as relevant—which perhaps were not brought before the Ayyangar Commission because evidence was not invited. The questionnaires also were limited only to the two aspects of compulsory licensing and product patents. If you look at the 23 points which have been enumerated, you will find that those rest upon the recommendations of the Ayyangar Commission with the exception of 3 points which have been added since the Ayyangar Commission's Report. They are not based upon a wide-ranging of inquiry of the kind which was undertaken before. There has been no evidence taken since 1949-50 with the exception of those questionnaires relating to the only two aspects of compulsory licensing and product patents. That much is clear. We should be specific concerning the particular clauses. We cannot avoid feeling that the main predicament, relates to the criterion to be applied to the particular clauses. I have in

mind particularly the lines at the bottom of page 4. I would like to read out these few lines. It says:

> "The obvious principal criticism which can be made against the Bill is that it neither ends Patent Law nor gives adequate protection to inventors. Patent Law everywhere rests upon the premise that in the case of inventions some element of monopoly, although subject to suitable safeguards, is in the public interest. If this were not so, then there would be no place for Patent Law."

This is the basic predicament, which is reflected throughout the clauses of the Bill.

In our submission there cannot be any patent system, unless it is attractive or sufficiently attractive to inventors. I would like to refer to the Tek Chand Committee Report. They Reported in page 71 as follows:

> "Another suggestion is that the provisions in regard to the granting of compulsory licences should be made applicable at least to patents for inventions relating to food, medicine and surgical appliances. We have given careful consideration to the arguments advanced for and against these suggestions. As regards the first suggestion, we are wholly opposed to it. The 'exclusive right' conferred by a patent is the essence of the Patent system and compulsory licences are a negation of such 'exclusive right'. A patent which is liable to be restricted by the granting of compulsory licences would confer 'exclusive right' neither on the patentee nor the licensee. Most of those who take out patents do so with a view to enjoying the 'exclusive right' conferred thereunder, and the system of granting compulsory licences in respect of patents generally would not be attractive to them."

This is what they said. The point I wish to make is this. We are all compulsorily amenable to the taxation laws, income-tax laws and things of that sort. Regarding patent laws, the question is whether a patentee considers it to be worthwhile endeavouring to make an invention, and, if he does make an invention, his decision whether to secure a patent is his own personal choice which can certainly be affected very considerably by the legislation in any particular country. That view is reflected in the Ayyangar Committee report. It is said on page 19 as follows:

> "Patent Laws rest upon the assumption that it is desirable to encourage inventions for their own sake and that monopoly privilege is the best way of doing it. The Swan Committee observed:
>
> " . . .The theory upon which the patent system is based is that the opportunity of acquiring exclusive rights in an invention stimulates technical progress in four ways: first, that it encourages research and inventions; second, that it induces an inventor to disclose his discoveries instead of keeping them as a trade secret; third, that it offers a reward for the expenses of developing inventions to the stage at which they are commercially practicable; and fourth, that it provides an inducement to invest capital in new lines of production which might not appear profitable if many competing producers embarked on them simultaneously. Manufacturers would not be prepared to develop and produce important machinery if others could get the results of their work with impunity."."

Looking into the individual clauses of the Bill, the balance is so very heavily weighted against inventors. If one looks at the additional liabilities which we enumerated in the introductory chapter, the cumulative burden on an inventor is very heavy.

Under clause 102 Government is entitled in certain cases, to acquire patents. The "Notes on Clauses" against clause 102 read: "It will be useful to enable the Central Government to acquire an invention in certain circumstances, as for example, where it would be economical to acquire the patent instead of obtaining compulsory licences in respect thereof". I will cite an invention which is a worldwide invention, namely, "Terylene", covering synthetic fibres. If there were no patent in India then under the new Bill, by virtue of prior publication overseas no one else would be entitled to secure such a patent in India, and the inventor but he could not then be prevented from manufacturing as could happen if he had a patent, and it was acquired. If he secures a patent, it would become liable to be acquired by Government. He could then not use his own invention without first becoming a licensee or he would be an infringer. This is not all: under Clause 93. The Controller possesses considerable powers to deprive altogether such a patentee of his rights. The patents also acquire an obligation to give a great deal of commercial information to the Controller under penalty of fines. All these are factors which cumulatively must influence the inventor in deciding whether it is worth his while to secure such protection. A little earlier I did mention the question of the time lag. One of the aspects that has naturally been given much attention in the drafting of this Bill has been the effect of foreign-owned patents. During the public controversy which preceded the introduction of this Bill, there was much reference to the majority of patents being owned by foreigners, although that applies to many other countries also.

In this connection, I would like to draw your attention to page 13 of the Ayyangar Report where there is a list of the percentage of patents in diffrent countries which are foreign-owned. This relates to the years 1930-37. At that time, it is known that the potteen of production and manufacture throughout the world was very different from what it is today. If the Members look at these figures, they will see that they are very much out-of-date today. As a matter of fact, a majority of patents are owned by foreigners. This is so in almost every country, because protection is usually secured for a good invention in a large number of countries, and in only one of them the inventor is not a foreigner.

This need to consider the international position is particularly important, because, while in every country the legislators can decide the laws in their own country, nowadays when patented goods are extensively exchanged in the ordinary course of international trade there is really only a very limited variation in patent laws, as between different countries which is feasible. Otherwise one would have to face a situation in which goods, which were not covered by patents in India, had been manufactured here, and when they came to be exported. Inevitably, the inventor who had been unable to obtain a patent, or who had not considered it worthwhile to obtain one in India, would hold patent rights in other countries where the import of such goods from India would constitute infringement. This would inevitably be detriment to the production of those goods here in India. These are practical considerations which, I believe, would have emerged, could there have been an inquiry in 1964 as well as in 1950. It is regrettable that there was no Inquiry Committee before introduction of this Bill. It is a matter of cumulative experience. In considering the position, it is not only right to look at the individual clauses of the Bill, but also at the overall impact of the Bill. Half of our anxiety—I do not say objections, because we are not in a position to object—concerns its cumulative effect.

We have set out these 23 points here. We believe that these are very relevant. Taken together they have

destroyed, or are likely to destroy, the balance of advantage. Unless there is an element of monopoly in the patent law, there is a contradiction in terms. Patent law does depend upon this.

It is being suggested in some quarters that the Bill which is now under consideration merely brings uptodate the Tek Chand Committee's recommendations which found place in the 1953 Bill. But this is not really so. None of those 23 points appears in that particular Bill. They have all been added subsequently. Perhaps we are a little biased, but those who have spent a good number of years working with the Patent Office here have full admiration for its wonderful performance, not within the last two years, but really ever since Independence. They have been handling a number of increasingly complicated applications rising from 800 to 6,000 per year. We are full of admiration for them. We know from our contacts with overseas inventors that they too are appreciative. They also have great appreciation for the way in which our Courts of Law work. I was concerned here in Delhi in negotiations involving Government with the President of an American Company, who took the opportunity to visit the Supreme Court. He told to me that it should be a compulsory visit for every foreign visitor, since it gave him so much confidence in India. This feeling has greatly encouraged foreign investors. They know that India cannot compete in the matter of financial return with such countries as South America. You may sometimes get a return on capital thereof 30 or 40 per cent in the first years. One of the main attractions here to overseas investors is the way in which the Patent Office functions, the way in which the Trade Mark Registry works, and the way in which industrial property rights are respected. These are things which are built only by years of hard work. Overseas investors greatly appreciate and admire the integrity and competence of our courts.

It is of particular regret to us and to them that whereas the Tek Chand Committee proposed that all appeals should lie to the Courts, this new Bill proposes that there should be no appeals to the courts in the matter of compulsory licensing, acquisition of patents by Government, etc. It is worthy of note that even at that time in 1950, when it was not intended that any such additional rights, as are now sought to be secured by Government, should be given to the latter, the Committee recommended that there should be appeals to the courts. As today Government's position is intended to be one of particular advantage, it is absolutely necessary that there should be a right of appeal to the courts. There are good grounds for this. I think I can illustrate this point by mentioning the matter of applications for extensions of the terms of patent. Now, in the new Bill, it is proposed that there should be no right to apply for extension of the terms of patents. Under the existing Act, there is a right to apply for an extension and there is discretion on the part of the Central Government to grant such extensions.

When the Central Government look at a particular Section of the Act, it is inevitable that its interpretation will be different from that of the courts because Government are bound to be influenced by considerations of policy. The Courts are not concerned with matters of policy. We are not saying that the Sections of the Act should remain permanently static. If the Legislature wishes to make any change, then we believe that the right way to do this is by amending the sections openly rather than by interpreting them differently. On the basis of the Tek Chank Committee's recommendation, there was provision in the 1953 Bill for the grant of extensions of the term of patents in certain cases. The Ayyangar Commission was opposed to this, and recommended that there should be no provision for extension, accordingly such provision was dropped altogether. During the period 1954 to 1957, 12 applications for exten-

sions of the terms of patents were filed, of which one was later abondoned. 5 applications out of the remaining 11 were granted. This was the position upto the time of the Ayyangar Commission. With the change of view that the Ayyangar Report produced, between 1958 and 1965 there have been 48 such applications, and not one has been allowed. You will see that whereas formerly almost 50 per cent of such applications were allowed, since the time of the Ayyangar Commission, every application, although based on exactly the same section, has been rejected, no doubt on account of such change in attitude. Probably the officials of the Central Government in this Branch are convinced of their fairness, but we have no doubt that considerations of policy have influenced them in the interpretation of these sections. If it was decided that there should be no extensions in any case, the right course for the legislature is to alter the section rather than to alter the manner in which it is applied. Having regard to the fact that the life of patents is short, the right to grant extensions in suitable circumstances as recommended by the Tek Chand Committee should be retained. India needs many of these inventions. Some inventions, by their very nature, require long periods of testing before there can be any exploitation of them. Amongst the 48 applications rejected, one application related to a certain insecticide. As you are all aware, certain insecticides require long testing before it can be known with certainty that no toxic residues will be left in crops, edible or otherwise, which have been so treated. Here, the question of human safety is involved. Approval was not given to utilise this invention any where till 1956, though the date of the patent in India was some time in 1948. Although such permission was given to use the invention only in 1956 in the USA, tests had taken place in India as early as 1957. This invention would be of great benefit to the cultivators of India. As I have stated earlier, it can take some time before such an invention, having regard to the public interest, can safely be exploited. If all opportunity to secure extension of term of such patents is denied, the country will stand to lose much benefit, as these inventions will not be adopted to Indian conditions or commercially exploited here.

In all these circumstances inventors, whether Indians or overseas people, do believe that the sections of the Act which affect their rights should be amenable to challenge on appeal to the Courts. If there is an apprehension of delay in the making of these references to the court, then a special Patents Appeal Tribunal consisting of a High Court Judge should be appointed, so that such matters can be dealt with speedily. If this is not done, then Government's position will be one of undue advantage. There is a basic principle, which I don't think anyone of us would dispute, memo index in causa saus that is to say, "no one should be judge in his own cause". If there is fear as to delay, then it should be possible for Government to cope with this difficulty without taking away the right of reference to the Courts, which latter inspire so much confidence in those not only in this country but also outside. This right is being taken away particularly with regard to compulsory licensing. One of the proposals in the Bill is that the Central Government as the appellate authority will have the final say with regard to compulsory licences, while in certain cases the Controller, under Sub-clause 85 (iii), must even concern himself with whether the applicant will be permitted to manufacture once a compulsory licence was granted to him. In ordinary course, the Central Government will have been concerned with the matter of issue of any industrial licence, in which the applicant who proposes to manufacture, will have been involved but not the patentee. It is desirable that justice should not only be done,

but that it should appear to be done, and yet the patentee may later be in conflict with the holder of the industrial licence granted by Government, the outcome of which dispute will depend on an appeal to the Central Government, which had itself already granted the industrial licence. We have been concerned in cases relating to compulsory licences in which the applicants have previously managed to secure industrial licences from Government, and have thereafter sought to weight the controller's consideration of the compulsory licence appplication against the patentee. Thus, these are genuine apprehensions, and the Committee upon consideration of these representations may feel that a right of reference to the Courts is desirable. I cannot carry this point any further. I believe that if it is felt that the present situation is unsatisfactory from the standpoint of delay, then it would be reasonable to request this Committee to have a further look at the idea of creation of a Patent Appellate Tribunal as it might prove successful. It is not fair that delays of great magnitude should have been attributed to patentees during previous public discussions nor is it enough to say, in order to justify the proposed change, that appeals to the Central Government would be disposed of quickly. I would like to give you certain facts very briefly of one of the main cases in which delay is alleged. My firm has been engaged on the side of the patentees in practically all these compulsory licences applications, so that, we have comprehensive knowledge of these. A little while ago a paper was submitted to a meeting in India, concerning industrial property rights, in which allegations of delay by patents in compulsory licence proceedings were made. In the latter connection, one case is most commonly mentioned and will no doubt be referred to this Committee. In this particular case we would like to cite the broad facts as they are revealing. With your permission I would like to read these particulars.

Patent Nos. 43678 *and* 43679.

"The responsibility for delay cannot be attributed to the patentees.

After filing their applications on the 28th September, 1956, it took the applicants for reasons best known to them, until the 24th September, 1957, *i.e.*, approximately a year, before true copies *i.e.*, exact copies, were served on the patentees.

"Moreover, as late as the 2nd September, 1958, and the 30th October, 1958, *i.e.*, two years and a month after the filing of these applications, the applicants lodged Petitions for leave to submit furthere evidence, both of which were dismissed by the Controller on the 20th January, 1959. It is surely inarguable that this delay is attributable to the applicants, and was not due either to the patentees or to any statutory deficiency.

"On the 9th February, 1959, the applicants made a further attempt, by lodging another Petition, to obtain leave to file additional evidence, and this was eventually allowed on the 30th June, 1959, whereafter, as is customary, the petitioners were, as a direct consequence, afforded opportunity to file additional evidence in reply, which they did on the 2nd November, 1959. In the result, the hearing of the applications was therefore able only to commence on the 22nd February, 1960.

"Thus, the applicants' own dilatoriness, in the matter of submission of evidence, was alone responsible for delaying the hearing during such period extending from the 2nd September, 1958, to the 22nd February, 1960, *i.e.*, for almost 18 months.

"If to such period of 18 months there be added the period of one year, *i.e.*, from the 28th September, 1956, to the 24th September, 1957, taken by the applicants to supply to the patentees true copies of their application, it is found that an aggregate of 2

years and 6 months' delay resulted solely from the applicants' own actions.

"The hearing of such applications took place on the 22nd, 23rd and 24th February, 1960, whereafter the then Controller delivered Judgment only on the 21st March, 1961, *i.e.*, 13 months later.

"If to such 13 months be added the period of delay directly attributable to the applicants of 2 years and 6 months, a combined total of 3 years 7 months delay in obtained for which, by no strength of imagination, could any lacuna or fault in the Patent Act or Rules (or indeed on the part of the patentees,) be held responsible.

"Accordingly, at the time of delivery of such judgment on the 21st March, 1961, a period of 4 years and 6 months had elapsed since the first filing of the applications."

Here I should say that if the combined total period of 3 years and 7 months delay is deducted, it will leave only 11 months with which the patentee is at all concerned. A brief reference may also be made to other cases allegedly, indicating dialatory tactics on the part of patentees. Suffice it to say that the facts are broadly similar in the case of the compulsory licence application relative to Patent No. 48416, in which delivery of the Decisions and Orders occupied more than 2 years and one month. I would respectfully request you to enquire into any such the cases which may be mentioned to you the facts of which should not be taken as established. Of course occasional advantage is taken of the rules by every part or litigant. This mention of delays is just to show that these one-sided allegations are without justification. I believe that the information in such statement will prove, therefore, to be interesting.

Shri M. R. Masani: Will that statement be available to us?

Mr. Harold Holloway: With the Chairman's permission I would like to make that statement available to the Members. I believe I need give only the numbers of the patents concerned. On that basis verification from the Patent Office could be made.

Shri M. R. Masani: Would you kindly circulate that statement?

Mr. Harold Holloway: I shall have it cyclostyled tomorrow morning, so that it can be distrituted tomorrow. I have not mentioned the names of the parties but I shall give the patent numbers.

Mr. Chairman: Here the case number is enough.

Shri R. P. Sinha: It seems that the witness has very long experience. Can you tell us as to whether there are any cases where the patentholders were also responsible for such long delays? I think invariably in almost all the cases, the patentholders prolong such litigations.

Mr. Harold Holloway: I could not concede on that point. I would only say that all patentholders are not saints. Certain procedural advantages can sometimes be taken by them. There have also been a number of cases where delays have been caused by the Applicants, But, where the patentee is allegedly at fault there may have been valid reasons for opposing the applications.

In the well-known case relating to chloram-phenicol the international patentee had six licensees, including its own associated company in India, who were licensed to produce chloram-phenicol in India. Three of them, prior to the submission of the application for a compulsory licence had already obtained industrial licences to produce, and the total of such licensed production capacity exceeded Government's estimate of requirements for Chloram-phenicol. Of these six companies who were licensed, five were competitors of the patentee. They had no connection whatsoever with the latter. The other company was a subsidiary of the Patents. In so far as the applicant was concerned it is a fact that, the applicant had itself been associated with a licence of the patentee. That connection

had been terminated and the patentees rightly or wrongly, but genuinely considered that the applicants were not suitable. It cannot be said to be an unreasonable monopoly when a patentee has licensed five of its competitors.

Accordingly, as I said, we hope that the Committee will reconsider the question of appeals.

Now so far as the Bill itself is concerned, it does seem to us to contain a number of oddities. For want of a better word, I call them, 'oddities' and by that we have particularly in mind those clauses which provide for retrospective effect.

Now, it is never enough to say that in no circumstances should there even be retrospective provisions, but, generally speaking, there should always be close examination before introduction of any retrospective provision,—and there are six main clauses which affect the position of patentees adversely and retrospectively.

The first one concerns the term of patents which is clause 53. We have made our comments on this on page 54. I do not propose to add anything to that.

Shri P. S. Naskar: Mr. Holloway is just elaborating the points that he has given in his memorandum. But is he prepared to answer questions on the basis of the written memorandum he has submitted. He is only just recapitulating what he has said in this memorandum. I think we have all gone through his memorandum. If he has any new points, he can put forward them rather than elaborating his memorandum.

Mr. Chairman : You can go on.

Mr. Harold Holloway: You will appreciate this is a very long and important Bill, sometimes it is very difficult to recall precisely whether one has included a point or not. I do not want to recapitulate. I apologise.

Shri P. S. Naskar: You can supplement it.

Mr. Harold Holloway: I want to add one or two points of information.

Cl. 64(1) (*h*):—We believe that this may even not five been intended, but it does seem rather less than equitable that a patent granted on the basis of the law as it existed at a particular time, and which complied with such law, should become liable to be revoked as a result of a subsequent change. We have in mind, particularly, the question of novelty as it is proposed to be affected by prior publication outside India. We also have in mind the position of importers who have already secured patents, and there is nothing wrong in that. Many countries do refuse to grant patents to people who, having seen inventions overseas, have brought them into the country and then manufactured under them. But, if the legislature changes its mind on the question of communication patents or the obtaining of patents by importers, then we say that it is undesirable that these changes should be made retrospectively effective. Drafting of clauses of such technicality is always difficult and any criticisms that we have made, have been made with humility. It is easy to throw stones. It is a highly difficult Bill to draft and anybody who has attempted to do so would, we hope, welcome comments which are based on practical experience. It does seem in this case that the draftsmen may perhaps have overlooked the consequences of the new revocation grounds, which have been specified elsewhere in the Bill, upon patents which will have been granted before the Bill becomes law. For example, take the matter of destruction of novelty, anticipation as it is called by prior publication overseas, *i.e.* anywhere outside India, as opposed to only inside India—it may be that this Committee will feel that it is a right step that publication anywhere should destroy, novelty, but that is a separate question. The point here is, whether any person should be able to go to a Court to apply for revocation of a patent, granted before the new Act, only on the ground that some 8-9

years ago there had been some publication overseas prior to the grant of the particular patent in India. That could only lead to great uncertainty. My respectful submission is that consideration should be given to remedying this defect.

The third point concerns Cl. 68: Interests are not to be valid unless registered within 3 months. This is likely to lead to difficulties in the case of agreements that have previously been executed. One would prefer to ensure that this should apply only to agreements executed after the coming into force of the Act. Fourthly, under clause 107, in an infringement suit, every ground on which a patent may be revoked is to be a ground of defence. This would mean that after infringing your patent, I could go along and say to the Court that although your patent had been valid for say nine years, it had now become liable to revocation by virtue of this new Act, since there had been publication, possibly even by yourself, the patentee outside India, at some time prior to the filing of the Indian application . . .

Mr. Chairman: How do you say clause 68 is retrospective?

Mr. Harold Holloway: It is retrospective because it requires all agreements, even previously concluded agreements . . .

Mr. Chairman: The agreements are only with regard to those registered under the present Act and not with regard to those registered under the previous law.

Mr. Harold Holloway: With respect, all patents, even if they were secured under the earlier Act would surely be regardable as having been granted validly and held on the register under the new Act. If that is not so, then it is difficult to know what the status of those "old" patents would be.

Shri M. R. Shervani: Then what is the position of the patents which are already existing?

Draftsman: Sir, wherever we have applied the provisions of the present law to the patents issued under the existing law, we have specifically said so. But wherever we have not specifically said so, the patents granted under the existing law will subjected to the provision of clause 162 be governed by that Act and not by this law.

Shri M. R. Masani: You mean the old law will continue for the old patents?

Draftsman: So far as this point is concerned, kindly refer to the repeal clause, clause 162. It says "(2) Notwithstanding the repeal of the Indian Patents and Designs Act, 1911, in so far as it relates to the patents, the provisions of section 21(a) of that Act and of any rules made thereunder shall continue to apply in relation to any patent granted before the commencement of this Act in pursuance of that section. (3) Save as otherwise provided in sub-section (2), the provisions of this Act shall apply to any application for a patent pending at the commencement of this Act and to any proceedings consequent thereon and to any patent granted in pursuance thereof." Wherever there is an application pending, to that, of course, this law will apply.

Mr. Harold Holloway: But clause 64(1) which relates to revocation reads: "Subject to the provisions contained in this Act, a patent, whether granted before or after the commencement of this Act may, on the petition of any person interested or of the Central Government, be revoked by the High Court on any of the following grounds . . .

Draftsman: That is retrospective. Wherever we have provided retrospective effect, we have said so. Clause 53(2) also has retrospective effect.

Mr. Harold Holloway: The fifth is Clause 141 relating to determination of certain contracts . . .

Draftsman: That is retrospective; that is made clear.

Mr. Harold Holloway: Then the sixth one is Clause 87—that patents already granted are to be endorsed at once with the words "Licences of right . . ."

Draftsman: That is also retrospective.

Mr. Chairman: Wherever it is retrospective, it is mentioned in the section itself.

Mr. Harold Holloway: In these cases, there is no doubt that it is retrospective and that is an aspect which is causing considerable concern, understandably, to patentees. These are the six anxieties concerning the retrospective consequences to patentees. Then there are some clauses which do seem to us to be inappropriate. I have here seven of those clauses. I am not going to make again all the comments which are already there in our memorandum.

Mr. Chairman: You have already given them.

Mr. Harold Holloway: I now come to clause 90 which is dealt with at page 79 of our memorandum. Sub-clause (a) (iii) of this clause provides for inclusion of the additional words:

> 'or developed or such market capable of being created is not being created.'

Our submission is that while it is quite reasonable to expect the Controller to ascertain whether an existing market is being satisfied to an adequate extent, it is not reasonable to expect the Controller to determine whether a market is capable of being created. Whether a market is being supplied is a matter of fact. Whether a market is capable of being created is really not possible of judicial or semi-judicial determination. We do believe that in this case the words 'a market for the export of the patented article manufactured in India is not being supplied' are fair and reasonable but that the reference to possible creation is something which even Socrates could hardly have decided fairly. Therefore, we do hope that our recommendation will be accepted and that those additional words will be deteted.

Then, I come to clause 8 about which you must already have heard a great deal, and that is referred to at page 31 of our memorandum. This relates to the obligation upon an applicant to keep the Patent Office informed of the filing of applications in other countries and of official objections and the amendments made thereon. I would like you and the Members to consider the additional expense that this would involve, and this will become evident when you take into account the fact that any major patent today is protected in eighty or more countries. Also, the obligation on our friends—because they are all friends— in the Patent Office would be such that the task of keeping these extra records would be as impossible as it would be for my firm or any other.

Shri R. Ramanathan Chettiar: What is the practice in the UK?

Mr. Harold Holloway: In the UK there is no such obligation. This proposal is based, I believe, on the Canadian practice, since the Canadians sometimes, but very rarely, make such enquries; I say this on the basis of experience because my firm has on behalf of Indian applicants, filed applications in Canada, and very occasionally we have had an enquiry because the Canadians are sometimes interested in what has happended in the USA. Although we file applications all round the world for Indian parties, we have no experience of anybody else calling for this information. I do not know how the successive Controllers, even though they be men of great wisdom and learn-

ing, will be able to translate some of these other applications and documents or what they would do with them.

Shri R. Ramanathan Chettiar: Can you enlighten us about any other easier method by which Government could obtain this information?

Mr. Harold Holloway: I do not think it is really possible and I do not think that there would be any utility in securing this information, because the law in India is already different from that in other countries. When this Bill comes into effect, it will be even more different. So, I do not think that much guidance would be available from what happens in other countries. We have made an appraisal and we reckon that it could land an applicant from the USA in an additional expenditure of Rs. 10,000. That is not an arbitrary figure it is based on calculation which we have made.

Shri R. Ramanathan Chettiar: What is the practice in the USA?

Mr. Harold Holloway. There is no such obligation in the USA.

Shri R. Ramanathan Chettiar: It is there only in Canada?

Mr. Harold Holloway: Even in Canada, to the best of our knowledge, it is not a statutory or official obligation; it is merely a case of the examiners sometimes asking for information with reference only to the USA. But we do not believe that it would ever be an advantage. It would be a disadvantage to the applicants, in the matter of expenditure, to the agents in the matter of handling, and also to the Patent Office. Therefore, there can hardly be any justification for this new burden. So we do ask you to look particularly carefully at the necessity for this clause

The third one of these particular anxieties is in regard to Clause 89 which is dealt with at page 76 of our memorandum. Our anxiety here is this. There are overseas patentees particularly who would like to manufacture in India, but nobody from overseas can manufacture here unless he can get the necessary permission. If an inventor obtains a patent in this country, which he is not permitted himself to work, and it is notified as "licences of right",—you know what that means; it means that anybody can use it—or a compulsory licence has been granted in its respect it does seem to us unreasonable that the patent should then, on the top of all that, be liable to be revoked. For, as we have pointed out, it could happen that after it was revoked, a licence to manufacture might be granted to the Patentee. We hope therefore that you will rest content in such cases with the power to grant compulsory licences and you will not insist also on having the power to revoke. India's position is unusual in that the system of industrial licensing is rather tighter, for understandable reasons, than in most other countries.

The fourth point is in regard to clause 102 which is dealt with at page 88 of our memorandum. I am referring to item (a) on this page. I have mentioned this before so I will not repeat it. I did indicate, however the case of a patentee who could be in a worse position by securing a patent here, in that he might, as a result of acquisition of the patent, be prevented from himself manufacturing, so, we would ask you to reconsider this clause, because it will have a deterrent effect upon the making of applications for patents both in regard to Indian inventors as well as in regard to overseas inventors.

Shri R. Ramanathan Chettiar: It is in respect of defence inventions.

Mr. Harold Holloway: There is no such restriction in that respect. It is for a "public purpose" which includes a Government undertaking. It is a very wide term and that is one of the points of anxiety.

Then, I turn to clause 47, on page 51, of our memorandum which will have an adverse effect on exports. It would mean—and this is what would happen—that if there is going to be no protection for the products even when achieved by specific processes, you would then find that parties are to be put, as they are put under the Bill, in a more favourable position if they import from outside India a product, than if they manufacture it in India, because, if they manufacture it in India, they will be infringing the process, whereas if they import it from overseas, as there would be no protection for the product, there would be no infringement.

Then clause 141(1), page 98. As we have noted in our memorandum, the effect of this provision would be that it would become a matter of chance as between two contracts: whether one is liable to be invalidated and the other should continue to be valid. This particular clause was considered at length in the Ayyangar Commission's report, and the Author came out there strongly against it, but it has reappeared here.

Shri D. P. Karmarkar: Could you elaborate this point?

Mr. Harold Holloway: I think that is quite easy. If you take the case you were mentioning earlier, the case of chloramphenicol, then, under the Bill, to import chloramphenicol would not constitute an infringement, because the product would be brought in and the product would not be protected, but if a party other than the patentee, instead of importing it, were to manufacture it in India, he would be using the process, so, he cauld be restrained. I do want to say that we have in my firm a very large number of people, over a hundred, who are concerned in tabulating what is going on outside as well as where in India. It is difficult enough for us to keep abreast, so we appreciate the difficulties of Ministers, but it is a fact that the Minister was misinformed in the speech that he made as to the position of product—patents in other countries. Would I be permitted to refer to that?

Mr. Chairman: Yes.

Mr. Harold Holloway: I quote from the speech of the Minister, who said:

> "Shri Dandeker and Shri N. C. Chatterjee think that nowhere was this difference existing between processes and products. I would submit that this difference exists already in many countries. I have got a long list of such countries here with me, namely, Argentina, Austria, Brazil, Belgium, Canada, Chila, Czechoslovakia, Denmark, Finland, the Federal Republic of Germany, etc., where foodstuffs, pharmaceutical preparations and product—obtained by chemical processes are not patentable, but only processes for preparing them are patentable."

The difficulty here is understandable. Different Acts take different forms. In certain cases, one Act may say that certain things only are patentable, and at a different place deal with infringements so that it would be quite natural for somebody who perhaps had not seen the Act, to assume that a product, even when achieved by a particular process, is not protected; if this were not listed but, if you look elsewhere in the statutes, you would find that for the purposes of establishing infringement, protection is given to such a product.

Argentina, for example, far from not allowing products when achieved by a process, allows clinical products *per se*, and there is a very good reason for this. The whole tendency in the world today, I submit with respect, is to extend protection to products *per se* in the interests of the little man; for example, if you are a big company, when you make an invention and you achieve a product by means of a specific process, then you set out, with the aid of massive research, to discover all the other processes by which you can achieve the

same product. If you are a small individual you may, with a little capital, perhaps discover a process which gives you a particular product, but you have not got the means nor the resources to discover all the other possible processes. In India, heretofore, although it has not been specifically stated in the statute, it is well-established practice that one only gets protection for a product when achieved by the process which is specified, and there would be no objection from the standpoint, I think, of patent practitioners, if a specific effect were to be given to this in the statute. That was proposed in the Tek Chand Enquiry Committee, and in the 1953 Bill it also found place. In Argentina, far from having no protection for products when achieved by processes, they have gone the whole way, so that, a patentee secures protection for such a product, howsoever achieved. The next country is Belgium; there is no such restriction there. In Canada, the products prepared by particularly described processes are allowable.

Shri D. P. Karmarkar: Clause 5 specifically relates to medicine, drugs and substances produced by chemical processes. In those cases, the products cannot be patented.

Mr. Harold Holloway: That is right, but the term "chemical products" covers almost all products.

Mr. Chairman: What is your next point?

Mr. Harold Holloway: Really you have a list there of six cauntries—Argentina, Belgium, Canada, Austria, Brazil and Germany—where the position is very different, as members might have gathered. I do not want to say this critically. As I said, it is very difficult to ascertain the true position. It is only by getting our fingers burnt that we have over the years been able to ascertain these things. This is a very difficult subject. That is why we have to point out some of these things to you and to this committee.

Mr. Chairman: How much more time do you require?

Mr. Harold Holloway: I will try to finish in half an hour.

Mr. Chairman: You may cantinue your evidence tomorrow. We shall now adjourn and meet again at 1.30 P.M. tomorrow.

(The witnesses then withdrew)

(The Committee then adjourned)

Minutes of Evidence given before the Joint Committee on the Patents Bill, 1965

Saturday, the 29th January, 1966 *at* 13.30 *hours*

PRESENT

Shri S. V. Krishnamoorthy Rao—*Chairman*

MEMBERS

Lok Sabha

2. Seth Achal Singh
3. Shri Peter Alvares
4. Shri Panna Lal Barupal
5. Shri Bibhuti Mishra
6. Shri P. C. Borooah
7. Sardar Daljit Singh
8. Shri Basanta Kumar Das
9. Shri V. B. Gandhi
10. Shri H. K. V. Gowdh
11. Shri Kashi Ram Gupta
12. Shri Prabhu Dayal Himatsingka
13. Shri Madhavrao Laxmanrao Jadhav
14. Shri Mathew Maniyangadan
15. Shri M. R. Masani
16. Shri Braj Behari Mehrotra
17. Shrimati Sharda Mukerjee
18. Shri P. S. Naşkar
19. Shri Chhotubhai M. Patel
20. Shri Naval Prabhakar
21. Shri R. Ramanathan Chettiar
22. Shri Sham Lal Saraf
23. Shri A. T. Sarma
24. Dr. C. B. Singh
25. Dr. L. M. Singhvi
26. Shri P. Venkatasubbaiah
27. Shri K. K. Warior
28. Shri Ram Sewak Yadav.

30. Shri Babubhai M. Chinai
31. Shri Vimalkumar M. Chordia
32. Shri D. P. Karmarkar
33. Shri B. T. Kulkarni
34. Shri P. K. Kumaran

35. Shri Shyamnandan Mishra
36. Shri Dahyabhai V. Patel
37. Shri Mulka Govinda Reddy
38. Dr. M. M. S. Siddhu
39. Shri Dalpat Singh
40. Shri R. P. Sinha.

REPRESENTATIVES OF THE MINISTRY

1. Shri K. V. Venkatachalam, *Joint Secretary, Ministry of Industry.*
2. Dr. A. Joga Rao, *Controller General of Patents, Designs and Trade Marks, Trade Marks Registry, Bombay.*
3. Shri S. K. Borkar, *Drug Controller of India, Ministry of Health.*
4. Shri B. N. Atrishi, *O.S.D., Ministry of Industry.*

DRAFTSMEN

1. Shri V. N. Bhatia, *Joint Secretary, Legislative Department, Ministry of Law.*
2. Shri R. V. S. Perisastri, *Deputy Draftsman, Legislative Department, Ministry of Law.*

SECRETARIAT

Shri M. C. Chawla—*Deputy Secretary.*

WITNESSES EXAMINED

Remfry & Son, *Patent and Trade Mark Attorneys, Calcutta.*

1. Mr. Harold Holloway.
2. Mr. Desh Pal Ahuja.
3. Mr. Baldev Chaturbhuj Ojha.

Remfry & Son, Patent and Trade Mark Attorneys, Calcutta

Spokesmen:

1. Mr. Harold Holloway
2. Mr. Desh Pal Ahuja
3. Mr. Baldev Chaturbhuj Ojha

(*The witnesses were called in and they took their seats*)

Mr. Chairman: You were on clause 102 yesterday.

Mr. Harold Holloway: In accordance with your instructions, we have submitted a note concerning the two points.

There was one point which arose yesterday when the Draftsman drew attention to the fact that 'patent' was defined in the Bill by reference to patents granted under the present Act. It was pointed out that one of my apprehensions concerning the effect of a clause on patents already granted was ill-based, because of the definition, and that wherever patents which were granted under the previous Act were to be affected, it was specifically stated. If the Bill is examined, then it will be found that there are many discrepancies. For example, Clause 84(1) which deals with compulsory licences, says:

> "At any time after the expiration of three years from the date of the sealing of a patent . . ."

"A patent" means, according to the definition, "a patent granted under

this Act". Now there are a wide variety of other references; as for example, concerning the restoration of patent rights, when there is a similar reference only to "a patent". Again a patentee in India gets his right to file a suit for infringement by virtue of the statute and not as in England by virtue of the terms of letters patent. The clause dealing with the right to bring an infringement suit refers only to "a patent"; it does not make any reference to patents previously granted. I think the reason for that is intended to be the savings clause which is to be found in paragraph 3 of Clause 162:

> "Save as otherwise provided in sub-section (2), the provisions of this Act shall apply to any application for a patent pending at the commencement of this Act and to any proceedings consequent thereon and to any patent granted in pursuance thereof."

So the applications which are pending at the time when the new Act comes into force are well taken care of.

But there appears to be no other provision except 162(4):

> "The mention of particular matters in this section shall not prejudice the general application of the General Clauses Act, 1897, with respect to repeals."

The learned Draftsman made the point that 'patents' meant the new patents except where it is specifically stated otherwise in the Bill. It does seem undesirable that, while in some cases reference is made in the clauses to the fact that such clauses are to cover all patents, whether they were granted under the previous Act or under the new one, in other clauses there is no such reference I would suggest respectfully that consideration be given to the possibility of following the same pattern throughout. At one place it has been specified that a clause is to apply to all those patents granted under the earlier Act as well as under the present Act. That pattern shou'd be followed throughout; otherwise, misunderstandings of the sort to which I was a party yesterday, are likely to occur.

In the 1953 Bill there was an additional provision which read like this—this is 115(3):

> "Save as otherwise provided in sub-section (2) the provisions of this Act shall apply to any application for a patent pending at the commencement of this Act, and to any proceedings consequent thereon to any patent granted in pursuance thereof".

There was thus more extensive provision in the 1953 Bill. In the Patents and Designs Act of the U.K. of 1907 a rather easier procedure was, I think, followed. 'Patent' was defined to mean "letters patent for an invention."

Shri R. Ramanathan Chettiar: Since then a lot of water has flowed underneath the bridge. You are referring to the 1907 Act.

Mr. Harold Holloway: Quite, but in this country we have never had any occasion to repeal any Patents Act. It is the first time that this is occurring. Of course, no one is bound by what has occurred anywhere else, but it is of interest that they define, in such 1907 Act, "patent" to cover all patents and then put in a further specific provision which was 98(2).

> "Except where otherwise expressly provided, this Act shall extend to all patents granted and all designs registered before the commencement of this Act, and to applications then pending in substitution for such enactments as would have applied thereto if this Act had not been passed."

In that case there is no doubt. It might be worth while for you to con-

sider inclusion of a definition of a "patent", by referring in to the same way as it occurred in this (1907) Act, to any patent, that is under whatever Act, and then to make it plain that all the provisions would apply except where it is expressly stated otherwise, irrespective of the Act under which the patent had been obtained. At the moment it does seem as if we are doing some of the one and some of the other, which is certainly inconsistent and liable to make it more difficult for patentees and others to interpret these provisions.

Shri R. P. Sinha: You mean that our definition of 'patent' should be revised accordingly?

Mr. Harold Holloway: Yes, I think that would be easier. At the moment the definition a patent is to a patent granted under the new Act. For the next fourteen years anyway there should be patents on the Register that have been granted under the 1911 Act, and it certainly will make it more difficult for the Patent Office staff and for everybody else if, instead of a clear provision of the type I have just read out that was followed not only in 1907 but subsequently also in other British Acts, you introduce a clause which is not so clear; then all the time one will have the initial problem of deciding whether any particular clause, by virtue of the General Clauses Act or some other provision, means what it says to the extent of covering all patents or only patents under the new Act, and there will be confusion. The learned Drafts man pointed out yesterday that in certain clauses mention was made of the fact that the clause would apply to both, classes of patents. If in some cases this is stated, I think it should be similarly stated in all other cases where this is intended.

Shri D. P. Karmarkar: Your point, I take it, is that the Act should be so worded, all the clauses, so that what is applicable only to new patents and what is applicable to both patents ought to be clear?

Mr. Harold Holloway: The whole Act should apply to every patent except where it is specifically stated otherwise. That is the simplest procedure.

Sir, yesterday when you concluded the proceedings I had just referred to the fact that there were certain inaccuracies concerning the countries in which protection for products where obtained by specific processes is given and is not given. Moving on from there, I think that point is important, because clearly India, like every other country, must in a matter of this sort pay some respect to the practices that obtain in other countries. Otherwise, if one is completely out of step, the question of the commercial exchange of Patented goods and other things, the question of joining the International Convention, etc. would become complicated, if not impossible.

On this matter of inventions which are not patentable I would invite your attention to page 27 of our memorandum. It is under this clause 5, that products are said not to be patentable even when achieved by a specific process. Now, if one looks at other portions of the Bill, they would seen to indicate that these products are patentable. I am comparing clause 5, referred to on page 27 of our memorandum, with clause 47 (1) (i) referred to on page 51 of our memorandum. Clause 5 says that products are not patentable in India, but clause 47(1)(b) suggests that substance as by process and Patentable. Elsewhere in the Act (clause 48) we are told that it will not constitute infringement if Government imports, or authorises the import of these products. Clearly, if products even when obtained by particular processes which are thus protected are not to be protected, then there would seem

to be no reason why there should be a particular exemption in respect of Government concerning the imports of these products. If these products are not covered by patent protection, then if Government or anybody else imports them, there would be no infringement.

The hon. Minister in the Lok Sabha on the 22nd November, 1965 said: "Thirdly Government could authorise such licensees to import the patented article from any source, wherever it is available at a cheap price for sale in India, subject to the payment of a reasonable royalty to the patent-holder."

That quotation followed a discussion on drug patents. The quotation does suggest that the Minister was under the impression that there would be protection for products when secured by the particular process, and that is borne out by the language of clause 48.

Clause 48 reads thus:

> Notwithstanding anything contained in this Act,—
>
> * * * *
>
> (b) the importation by or on behalf of the Government of any patented medicine or drug for the purpose merely of its own use. . . .
>
> Shall not be deemed to constitute an infringement of the rights conferred on the patentee by this Act.',

I think, therefore, that it will need a policy decision by Parliament or by this Committee, no doubt, as to whether protection is to be granted to products as is suggested by clause 48, or whether there is to be no such protection as envisaged by clause 5, because clearly, if there is no protection, then there is no reason why the Minister should have suggested that royalty would be paid to the patent-holders. We are wholeheartedly in favour of some protection for the product. I mentioned yesterday that it was in the interests of the little man particularly, that there should be such protection, and, if there was no such protection, then these patents would be virtually valueless because anybody could import the product. We do ask you to consider this question of product patents. We have put forward a suggestion in this regard at page 29, of our Memorandum as to how this clause 5 could be redrafted so as to bring it in line with the rest of the Bill. Our recommendation is set out at page 29 in paragraph 7. If that draft is not acceptable, then it might be worth-while having a look at the 1953 Bill. Subclause (d) of clause (3). of Bill says what is not patentable. The language used there is very felicitious. It is as follows:

> "A substance prepared or produced by a chemical process or intended for food or medicine other than a substance prepared or produced by any method or process of manufacture particularly described in the complete specification of the invention or by its obvious chemical equivalent."

There are a number of variations which could easily be made so as to give the some effect as this sub-clause (d).

If it is decided that products when secured by a protected process should also be protected, then there is another problem which I would like to put before you. This is not covered in our memorandum except in the introduction. In such introduction, we have referred at the bottom of page 2 to the fact that in the UK it was found that it was not really enough merely to give protection to a product, as was the case in the UK up to 1919, and as is, of course, the position in India today, because if somebody imported a product, a chemical product, it was very difficult for a patentee to establish that such product had been manufactured by any particular process. So, the UK Act, section 38A (2) not unreasonably, in those circumstances, declared that a product would be

deemed to have been manufactured by the protected process unless it could be proved that some other process had been used.

A lot has been said about the delays. Delays in these matters do result from proving or endeavouring to prove that no other process but the protected process could have been used. I would suggest that that matter also be looked into.

The other two points that I would like to deal with concern food and drugs. The definition of food in clause 2 has been covered at page 12 of our memorandum. At the present time, the definition is proposed to be.

> "'food' means any substance intended for the use of, or capable of being used by, babies, invalids or convalescents as an article of food or drink . . .".

Most of you will have heard of the English proverb 'One man's meat is another's poison'. I think most Members would agree that it is impossible to think of any item of food which somebody during some human malady could not be advised to consume as a food. If you are going to include 'intended for the use' of, then these words are more than covered; the words 'capable of being used'. Since the latter would really cover every sort of food.

We have the same sort of problem with regard to sub-section (1) of section 20 of the Atomic Energy Act. If you would kindly look at page 25 of our printed memorandum, you would see that mention is made in the Atomic Energy Act that:

> "As from the commencement of this Act, no patents shall be granted for inventions which in the opinion of the Central Government are useful for or relate to the production....".

As we have pointed out, even a brick wall could be useful for such production. In actual working, this has been found to give a great deal of trouble, because many applications which have only had the most incidental use for atomic purposes have been held not to be patentable by virtue of the words 'or useful for'. We would like to see the words 'primarily relate to' substituted. Similarly, with regard to the definition of 'food', we would like to see the words 'primarily intended' introduced in the Bill. There could never be any doubt in the mind of the learned Controller whether something was "primarily" intended to be food for babies or convalescents, but if we include in the definition the words 'capable of being used' then it would mean that all food would be covered.

Mr. Chairman: You have stated all this in your memorandum.

Shri Ramanathan Chettiar: Mr. Harold Holloway has been only repeating whatever is contained in the memorandum. I think it would be better if he were to supplement what he has said and also bring in new points. Otherwise, I think we should be permitted to ask him questions now.

Mr. Harold Holloway: Can I bring in immediately two new points that have not been covered?

Shri Sham Lal Saraf: Certain points made by the witness are such that if some of it is accepted then consequential changes would naturally follow. Therefore, the witness need not take pains in explaining all those things in detail now.

Mr. Chairman: That is what I have been suggesting that he need not repeat what is there in his memorandum, which is already there before us all. He has already dealt with all these points in detail in his memorandum. So, he need not repeat those things.

Mr. Harold Holloway: Can I deal with two additional points?

Mr. Chairman: If you have anything new or anything to supplement what you have stated in your memorandum, you may do so.

Mr. Harold Holloway: This is entirely new, Cl. 87—p. 73 of our memorandum, in that we have dealt solely with food and medicines; we have not dealt with sub-clause (a) (iii) which renders all patents relating to methods or processes for the manufacture or production of chemical substances liable to endorsement with the words 'Licences of right'. If you would look to the notes on clauses in the Bill against cl. 87, you will find the statement:

> "These provisions are intended to secure the proper development of the drug and chemical industries in the country".

We have not commented on the chemical industries part of the clause, but there appears to be no reason why the chemical industry, quite apart from the food and drug industry, should be singled out for marking immediately as 'Licences of right'. If it is really accepted that this provision is necessary to secure the proper development of the food, drug and chemical industries—and we agree that customarily special considerations are felt to apply to food and drug patents —then if chemicals are brought in here, it does seem difficult to make any distinction between them and patents relating to machinery of telecommunications and so on. If it is really felt that these industries cannot be properly developed if these patents are not marked with the words 'Licences of Right', then that argument could be considered equally applicable to every other kind of patent. If that view is really felt, with respect then it would probably be worth considering whether any Patents Bill is desirable. We do not really see why the chemical industry should be singled out in this particular way.

Another point—the final point—concerns the qualifications for patent agents. One of the things that has occurred in this country, in the profession relating to patents and trade marks, has been that much benefit has been derived from the rich experience of senior officials when they have retired, in assisting others and in helping to train younger people in their profession. Now everybody knows that last year twice as many patent applications were filed as in 1956. There is a shortage of staff at the Patent Office. If we are going to make provision in the Act to prevent any officer who has been a hearing officer for more than twelve months from practice, that will mean that a large number of examiners, before they have been in offices for more than a year will leave the Patent Office after 7 years or so because they will be disqualified from practice in later life if they do not do so. Under existing regulations, so I understand, in Government service, class I officers cannot take such private employment except with special permission, within two years of retirement from Government Service. It does seem that this general provision is quite sufficient to cover these cases and that it is not necessary or desirable to impose a particular restriction on the staff of the Patent Office, which does not apply for example, against High Court Judges or others.

The relevant clause is 126(c)(iv):

> "has served in the office of the Controller as an examiner of patents or in any higher capacity for a period of not less than seven years:
>
> Provided that he had not exercised the functions of a hearing officer for a period exceeding twelve months in all during his tenure of office".

I think that will create administrative problems. In our note I did ask leave to be able to add to the comments on the qualifications of patent agents.

It is, as was noted in the Ayyangar Commission Report, a matter of fact that in other countries where specific requirements have been imposed, they

have been brought into effect gradually. In our very first note in the memorandum on the "commencement of the Act" we have suggested that, as in the case of the Merchant Shipping Act and one or two other such complicated Acts, power should be taken to make it possible to bring the statute into operation in phases, if Government feels at the time that this is right. Clearly, if this part of the Bill concerning Patent Agents and Firms were to become law very shortly, there would be complete dislocation. In my own firm, for example, we have some members of our staff who have been doing the same job for 40 years or so, as for example in the matter of filing. Similarly, in the Patent Office, they no doubt have staff who are employed on work peculiarly adapted to the existing Act. If immediately there are to be fundamental changes without anybody having had time to adapt himself or to qualify himself, there will be dislocation, and the Controller of Patents would be very much in the position of a Judge having to decide cases without counsels' aids, because there will be so few people who qualify immediately to become patent agents. I would ask that the Committee give consideration, no doubt after consultation with the officials, who, I think, would reflect this view, to our recommendation that there should be a period of grace of say five years or so, if these clauses concerning practice are really going to be adhered to.

Another alternative which has been suggested by other practitioners in India is that a list might be compiled at once of *bona fide* practitioners, as happened in the UK, by the Controller, to whom application would have to be made within a year from the coming into force of the Act.

This is really vital to the administration of any Act. All those who practice get on very well with the Patent Office. For example, if we practitioners were to put in all our hundreds of applications in disorder, chaos would result at the Patent Office. They are used to receiving applications in good order. Therefore, it is essential that any changes should be made gradually, so as to permit this state of affairs to continue.

On the point of administration, I would like to draw attention to the fact that this Bill will impose a very heavy additional burden on the Patent Office. Some of the clauses on which we have commented do involve some extra work which we believe is unnecessary.

Mr. Chairman: That is for Government, to consider.

Shri R. Ramanathan Chettiar: No chaos.

Mr. Harold Holloway: The Clauses which require particular attention are 2, 7, 8, 10, 12, 13, 18, 21, 39, 42, 57, 69, 85 and 93. They all involve additional work.

On the position of the Indian inventor, I want to say this. First, the Act should have as a main object the encouragement of research. Secondly.....

Mr. Chairman: You have stated that in your memorandum.

Mr. Harold Holloway: I have not quite said that.

Now, under clause 13, Indian inventors are going to be very seriously hit.

Mr. Chairman: You may leave the rest to the Committee.

Shri P. S. Naskar: Mr. Holloway, you are representing a very old firm and a very reputable firm. Your concluding sentence was that the purpose of this Patents Bill should be to see that the inventions and the research or rather the industrial growth is helped. You are in this line for many years. The Patents law is in existence for a long time. Can you

tell me out of the number of patents that have been granted, how many are owned by Indians and how many are owned by non-Indians? The non-Indians who are having the patents are not working them inside the country. How can it help the industrial growth.

Mr. Harold Holloway: I think, today, for obvious reasons, there have to be stringent import controls....

Shri P. S. Naskar: I am not talking of today. The Patents law has been in existence in the country for a long time. I have got the figures. Very few patents especially in the pharmaceuticals industry have been granted to Indians and quite a very large number, I should say 80 per cent, of patents have been taken up by the non-Indian concerns who just do not work them inside the country. They do not function inside the country. In this way, they are retarding our industrial growth. Don't you agree with me?

Mr. Harold Holloway: I agree that in this country, as in every other country, excluding the United States, the majority of patents, not only in the pharmaceuticals industry but in every field, are owned by foreigners. In India, in the pharmaceuticals field which involves a very costly research, it is quite likely that the majority of the patents will continue for a long time to be held by foreigners.

Shri P. S. Naskar: I do not mind research being done by them. They are holding the patents but they are not working them inside the country to help our industrial growth. By this they are retarding our industrial growth. Do you agree to that?

Mr. Harold Holloway: I will not agree with that. I share the view of one of the critics of the present patent situation who mentioned in the Lok Sabha that in 1948 the drugs that were produced were worth Rs. 10 millions and today that figure has risen to Rs. 1000 millions, which represents a hundred times growth. We want to see even quicker growth....

Shri P. S. Naskar: But how? You take the patents but you do not work them in the country and you have the monopoly of importation of the bulk supply in this country. You just put it in bottles and sell them here. How does that help our industrial growth?

Mr. Harold Holloway: In the pharmaceutical industry, in India there is a good amount of collaboration between the overseas companies, who are engaged in research, and the local manufacturers. Indian technicians are being trained here and overseas.

With regard to the importation of products, I agree that some years ago, it was commonplace that even intermediates had to be imported.

Shri P. S. Naskar: Even today. I restrict the scope of my question to this. There are quite a few life-saving drugs. Can you tell me in respect of how many life-saving drugs, the bulk is imported under the monopolistic system and how many drugs are being manufactured under the patents inside the country?

Mr. Harold Holloway: For instance, take the case of chloramphenicol. I am taking one specific case of which I know something. You have one company which developed this drug. Five of its competitors and its own subsidiary in India, have been licensed to manufacture here. The Government decided the capacity which it wanted, and that capacity was met by such local manufacturing arrangements. Since 1961...

Shri P. S. Naskar: Who supplied the raw material?

Mr. Harold Holloway: ... there has been no import of any intermediates but only of raw materials.

Shri M. R. Masani: I would like the witness to tell us a little about the statement made on p. 7 of their Memorandum to the effect that there are several aspects of this Bill which would prevent India from becoming a member of the International Convention. What are the aspects which would come in the way?

Mr. Harold Holloway: I would refer you to p. 118 of the Ayyangar Commission's Report. I would like to make this point: the Ayyangar Commission never envisaged the abolition of appeals. It did not envisage the licensing of right which is proposed in respect of a wide range of patents. This Bill goes much further. The Ayyangar Report did note the danger. It says in para 307:

> "Apart from any theoretical or ideological preference for or against the Convention, I would point out two matters which have a vital bearing on any decision on this matter. The first is that some of the recommendations which I have made and which I consider essential to achieve the adequate working of inventions in the country are not in accordance with the Convention...."

In this country, we need assistance in developing our industries. I think it is a serious step to introduce the Bill which would later on make India inadmissible to join the Convention. One such disability results from the London and Lisbon amendment of the International Convention.

Shri Sham Lal Saraf: How does it militate against the present convention?

Mr. Harold Holloway: Thus the Lisbon revision says:

> "(3) Revocation of the patent shall not be provided for except in cases where the granting of compulsory licences would not have been sufficient to prevent such abuses. No proceeding for the cancellation or revocation of a patent may be instituted before the expiration of two years from the granting of the first compulsory licence."

This Bill envisages a more drastic procedure.

Shri M. R. Masani: My next question is about the Soviet Union. In what year did the Soviet Union join the International Convention? What are the factors that led the Soviet Union to change its position and become a member of the International Convention?

Mr. Harold Holloway: I was not aware of it. I accept the Hon. Member's information that Russia is a member of the Convention. Personally, we have always found that, when in India we have told Russians that they were infringing somebody else's patents, they have been anxious to respect such patent rights. They have a slightly different system in Russia. They have also certificates of authorship which, I think, involve payment of royalty. Anybody can use an invention so held subject to payment. The reasons, I think, for Russians instituting a patent system are exactly those which prevent Italy, in practice, from abolishing permanently the patent system concerning medicines. In fact, most of the big Italian manufacturers conducted a private system of voluntary licensing with the bigger companies throughout the world, because if they had not done that, they would not have been able to export. That is one of the dangers that we apprehend in India.

Shri M. R. Masani: Can you tell us anything about the proposed move in Italy to bring the patent law in conformity with the International Convention?

Mr. Harold Holloway: The immediate occasion for the new Bill is the need for uniformity with the other countries of the European Common Market. But, as I have said,

there are already many cases of private licensing arrangements, while their exports would be affected.

Shri M. R. Masani: We shall be grateful if you can make available a copy of the new Bill.

My next question is this. The present Bill seeks to abolish the time limit within which a patent must be issued. Would you favour the restoration of the time limit so that long delays do not take place and would you think that the limits in the present Act are roughly fair and adequate for that purpose?

Mr. Harold Holloway: The period is proposed to be 15 months, subject to a three monthly extension from the date of the first official examination. I think we are dealing with that. As a result of accumulation of work, an impossible situation has already been reached in the Patent Office, and applications are now able only to be examined just before the expiry of the existing 18 month statutory period. Under the new system it is clear that patents are going to be granted three years after filing, or even four or five years after. If the period is to be calculated from the first examination report, it means that more time will be taken which also has the consequence of reducing further the effective life of the patents from 14 or 10 years to a lesser term.

Mr. Chairman: Would you like to put any time limit?

Mr. Harold Holloway: I think the factual situation is such that we must accept the inevitable. May I, in this connection, read out a short letter which has come to us from a foreign Government, which applied for a patent in India; it has a direct bearing on this matter?

"In this connection we wish to draw attention to the fact that the relevant official letter, dated 20th August, was a first official action and allowed a period of only 14 days in which to file a response. The action was not, in fact, received by us until 1st September making it absolutely impossible to reply within the stipulated period. It is considered quite unreasonable that patent Office should exact from an applicant a fee for an extension of time which was only necessary because of its own delay in issuing a first official action a mere fourteen days before the expiration of the normal period for securing acceptance. This is felt to be a special hardship in the case of an applicant, abroad where the whole of the short term available for response can be lost, as it was in this case, in quite normal postal transit times.

Will you, therefore, on our behalf, please make the strongest possible protest to the Patent Office in respect of this gross imposition."

We did nothing of that sort. We have loyalty also to the Patent Office here. We know the present problems of examination, so, in these circumstances, we have explained the position to the Government concerned.

Dr. L. M. Singhvi: Regarding Clause 115, you have pointed out that it would be improper for the Government to draw up a list of experts to be consulted in matters where litigation arises. Would you like to suggest an alternative means of drawing up the list of experts or would you like to leave it to the Court to determine as to who is an expert on a particular subject as and when occasion arises?

Mr. Harold Holloway: The 1953 Bill would have permitted the Courts to seek the assistance of experts, but the Courts, no doubt, after hearing the parties would themselves have been responsible for deciding who the experts should be. It seems to me that, when you have a new Bill which gives Government a special position

with regard to the manufacture of patents, commercial use and so on, it is really undesirable that there should be a Government-controlled list. It would be fair to leave it to the Court, as was proposed under the 1953 Bill, to make its own selection and to fix *ad hoc* remuneration.

Shri R. Ramanathan Chettiar: The 1953 Bill was introduced but was withdrawn.

Dr. L. M. Singhvi: You have opposed the abolition of appeals to High Courts and have advocated that an appeal should invariably and in all cases lie to High Court. Would you suggest that in between an appeal to the High Court and a writ proceeding before the High Court there should be interposed a proceeding before a Specialists Tribunal specially constituted for the purpose of patents?

Mr. Harold Holloway: In the note that we have submitted today, in the final paragraph we have expressed the desirability of a Patents Appeal Tribunal consisting of a High Court Judge which could hasten disposal of these matters. Our own view is that the Ayyangar Commission, as also the Tek Chand Inquiry Commission, were correct in saying that it was necessary that these appeals should all go to the High Court and having regard to the increased Government powers and benefits such as in Clauses 102, 99, 48 and 97, I think it would be better if the appeals did go to the High Court.

Dr. L. M. Singhvi: If you provide for an appeal before a Patents Tribunal, would you still insist on a second appeal before the High Court because if, in the first appeal, the Patents Tribunal were not able to adjudicate to the satisfaction of the aggrieved party, as writ petition might still lie before the High Court and, therefore, it would be superfluous to provide for a second appeal before the High Court.

Mr. Harold Holloway: While the general law of the country allows second appeals, there seems to be no reason why there should not be a second appeal in respect of patents. If there is not to be a second appeal, but there is to be one appeal to the Patents Appeal Tribunal or to the High Court, that it would be much better than to have no appeal at all.

Dr. L. M. Singhvi: You have made a reference to the fact that processes and technical know how continue to come from outside into the country and that the Patents Bill, as it is proposed, would emasculate the possibility of transfer of technology. Are you aware, in the context of the fact, that the patents secured in the country have not been utilised and there is an allegation that these patents have generally been secured only to protect export pockets and not really to secure transfer of technology and secure transfer of technology and indigenous, manufacture in this country?

Mr. Harold Holloway: Whatever was true in the past, today those items which are desired to be manufactured in India are being manufactured in India. We have thrown out the challenge that if anybody suitable anywhere in India wants to obtain a licence and assistance we would be ready to put him in touch with those who are engaged in that line. Government should encourage patents to manufacture here in India, but the Bill will not.

Dr. L. M. Singhvi: The Kefauver Committee of the United States pointed out that India is having the highest incidence of prices of drugs. There is the unhappy relationship between the cost of living here and the prices of drugs and other essential commodities. Do you think patent protection has played a certain part in keeping these prices high? The prices are very high in this country compared to international prices.

Mr. Harold Holloway: There are various observations which should be

made on the prices of patented and unpatented medicines. We cannot see any great differential. If one looks at the general level of rising prices in this and other countries, one tends to see the position in better perspective and not to attribute those to the existence of patents. A certain enquiry went out from Government whereby certain companies in India were asked to report whether they were manufacturing goods under patents, and if so, what goods. The majority of them had no idea for the simple reason that they were not being charged anything by their parent companies. The patent companies say: Manufacture like this, send us your technicians, we will train them. The local companies were thus manufacturing in complete ignorance of whether there were patents or no patents at all. I don't think those patents have a decisive bearing on prices. One of the common solvents in the case of drugs is alcohol. That is subject to excise and various other charges. There is one big company in Bombay a subsidiary of an overseas company, which has been manufacturing drugs in India since 1904, and I understand they have never paid the parent company one anna of royalty during that period I think that unless there were an investigtion as to whether there is any differential in the increasing costs of unpatented medicines and patented medicines it would be premature to draw any conclusion.

Shri P. S. Naskar: In respect of patented drugs coming from outside the same thing is sold cheaper outside and it is sold so costly in India. That is just imported. Why it is more costly here than in other countries? That was Dr. Singhvi's question.

Mr. Harold Holloway: A number of these drugs are partly imported and partly made here.

Shri P. S. Naskar: Price is so high because of taxation only, or is it due to the high profit motive there?

Mr. Harold Holloway: Patents have nothing to do with it....

Shri P. S. Naskar: The same company sells at one price which is called international price outside and that very drug is sold in India very much higher.

Dr. L. M. Singhvi: The figures that we have in this regard have pointed out the very wide variation in the prices of the same drug in different companies manufactured and sold by the same agency. My question is this. What part do patents play in this regard? Are they interested in preserving export market and making such profit as they can make by exporting these things rather than furthering the possibility of idigenous manufacture of these medicines or drugs which would bring down the pries?

Mr. Harold Holloway: There are specific drugs the prices of which are lower. If you were able to manufacture in India in sufficient quantities, then it would follow that the bigger the production the lower would be the price. If you look around you will find that prices of a lot of drugs are coming down.

Dr. L. M. Singhvi: For the same drug the same company charges different prices when it is sold in India and in other countries. Why this variation?

Mr. Harold Holloway: There are lot of other goods....

Shri P. S. Naskar: That is because of patents? Or, because of other considerations?

Mr. Harold Holloway: If a man looks for profit, then he is as anxious to make a profit on a product that is upatented as it is patented.

Dr. L. M. Singhvi: Patents make him sure because he has monopoly in this market. He can make any profit without any fear of competition from any quarter. What is the

period that we should prescribe? From when should this period begin and what are the reasons for indicating as to the suitability of indicating particular period?

Mr. Harold Holloway: Do you mean the life of the patent?

Dr. L. M. Singhvi: Period of the life of the patent.

Mr. Harold Holloway: I like the idea of 16 years.

Dr. L. M. Singhvi: Is it 16 years from the date of grant of patent or from the date of application?

Mr. Harold Holloway: The date of grant as the longer the period the better it would be for patentees. I would like to refer you to what the Tek Chand Committee suggested.

Shri Kashi Ram Gupta: In your memorandum you suggested amendment of section 20 of the Atomic Energy Act. Are you not aware of the fact that this committee is not supposed to go into that sort of arrangement? What was the purpose of your bringing this into the Memorandum?

Mr. Chairman: He has referred to it only as an example.

Shri Kashi Ram Gupta: He has said that it should be amended.

Mr. Harold Holloway: Clause 4 of the Bill reads thus:

> "No patent shall be granted in respect of an invention relating to atomic energy falling within sub-section (1) of section 20 of the Atomic Energy, Act, 1962".

As reference was being made in the Bill to that section, it appeared appropriate to draw the members' attention to the difficulties experienced in its administration.

Shri Kashi Ram Gupta: You have suggested amendments, modifications and deletions of about 50 clauses. Does it mean that the rest of the clauses are agreable to you?

Mr. Harold Holloway: In paragraph 2 of our Introduction we have stated as follows:

> "In short, we would ask that our detailed comments, many of which are of a technical nature, against the various Clauses, should not be construed as implying approval either of the shape of the Bill as a whole or of any individual Clauses".

Shri Kashi Ram Gupta: It means that you do not take responsibility for anything—even for your suggestions for amendment.

Mr. Harold Holloway: I am sorry if we have given that impression. These suggestions have been made in the interest of patentees and are aimed at improving the working of the law. We naturally take responsibility for these recommendations, and we shall help to work the new Bill to the best of our ability. We are also prepared to render any other assistance, either informally or formally to make the Bill workable.

Shri Kashi Ram Gupta: In view of the fact that lot of clauses are for deletion, do you mean to say that the old Act should be there and there should be no amendments?

Mr. Harold Holloway: Yes, but I think some clauses of the Bill would have to be deleted, especially the provision which makes it obligatory that one must give enough information to make it workable by the average skilled technician in India. That really means that you must give "know-how" which is inappropriate and impossible in a specification. If you could get all the information you want from a specification, there would then be no need nor use to send Indians

overseas to get training. There is a lot more involved in this. Such a clause in a U.K. Bill was found on examination to be utterly unworkable. A clause like that cannot be amended. It can only be retained, although unworkable, or in the alternative deleted. Anyone could say "I am an average technician. I cannot understand your specification. Therefore, I am entitled to have the patent revoked". How can one expect the Indian Courts to decide what an average technician knows or does not know? That really is not proper.

Shri Kashi Ram Gupta: You have suggested so many amendments. Why don't you bring forward a parallel Bill so that we can consider that, instead of this?

Mr. Harold Holloway: I will be very happy to do so if I am given time.

Shri Kashi Ram Gupta: In 1963 your firm together with four others had put in a representation to the Cabinet. You have not mentioned what those firms are.

Mr. Chairman: He has given them in the memorandum.

Shri Kashi Ram Gupta: In that representation you feared that the patent policy should be abolished. In this Bill it is not abolished. There is a reduction of the period. I think you must be satisfied now.

Mr. Harold Holloway: Dealing with the first point, we did not mention the names of the other firms in our Memorandum because we did not want to associate them either informally or directly with something to which they might not have agreed. If the Committee require the names of the other firms, I will gladly give them. As regards the other point. We still have our apprehensions. In our Introduction we have listed 23 main burdons which are sought to be imposed. Of those 19 or 20 are new in the sense that....

Mr. Chairman: You have already said that yesterday.

Shri Kashi Ram Gupta: Are you aware of the fact that there are so many Indian firms who produce pharmaceutical products. They are all in favour of total abolition of the patent so far as pharmaceuticals are concerned. Have you studied their point of view?

Mr. Harold Holloway: Yes. Some of these companies are our clients and we have assisted them in securing patent protection in the country, and in others we are therefore aware that there are a very large number of Indian companies who are working in India's interest and are efficiently producing wonderful drugs.

Shri K. K. Warior: Can we have a brief account from the learned witness as to how the patent Act is working in the newly independent countries like Egypt, Ghana, etc.?

Mr. Harold Holloway: I am aware of the position in Indonesia, Vietnam, Egypt and West Indies (Trinidad) who are members of the International Convention. Their statutes must therefore conform to the generally accepted pattern.

Shri K. K. Warior: In the Ayyangar Report, as Mr. Masani was pleased to refer, he had recommended certain provisions in the new Bill which may militate against the Convention. But still he recommended them to be included in the Bill. Is it not in the national interest that they should be added in this Bill?

Mr. Harold Holloway: It will make India ineligible to become a member of the Convention. Thereby you will also be penalising the Indian inventor who will be denied the priority privileges which inventors all over the world value.

Shri K. K. Warior: Does it not imply that until and unless Indian in-

ventor comes of age he can avail of the favours from the International Convention and until that time these provisions should be included?

Mr. Chairman: It is for you to decide.

Shri K. K. Warior: I want to know his opinion.

Mr. Harold Holloway: Very useful inventions are increasingly made in India. Some years ago it was very difficult to get permission from the Reserve Bank for the foreign exchange involved. They have now become fairly familiar with the procedure, and it is working very satisfactorily. I think it will be a great pity if an Indian citizen, before obtaining a patent, overseas, has not only to refer to the Controller but also to the Central Government. We want to encourage Indian inventors. I think a number of these provisions as to prior publication overseas, novelty, etc. are going to hit the Indian inventors very heavily. For example an Indian pharmaceutical company may make an invention, and to expect them to discover whether there are any prior patents in India before applying for a patent is reasonable, but to expect them to ascertain whether there has been any prior publication anywhere overseas is not, and is going to add to the cost. Why should an American company, for example come to India and challenge a patent which somebody in India has obtained as a result of research merely because in Argentina, for example, some earlier document had referred to the invention unknown to the Indian inventor?

Shri K. K. Warior: Do you think that certain products and processes which are not having the luxury of patent right in their own country should have patent right in India?

Mr. Harold Holloway: That is really a matter of the inventors preference. For example, inventors may only want to have patent protection for jute machinery in those countries like the U.K., Belgium or Thailand, where the jute is used and where they have business connections. There is nothing wrong in that.

Shri K. K. Warior: Some of the rights patented are really blocking inventions idigenously. What is your comment on this?

Mr. Harold Holloway: That is always alleged, but you have provisions for compulsory licences etc. and you have got hundreds of examples of happy voluntary collaboration.

Shri Sham Lal Saraf:. You have said that the present Patents Law is encouraging collaboration and also it has helped our export trade. Do you by implication mean that the proposed bill will impede both and if so in what way?

Mr. Harold Holloway: It will certainly impede both because many patentees, looking at the situation will decide that it is not worthwhile to obtain such patent protection and collaborate in manufacturers here. After others have secured patent protection in this country and if licenses are granted summarily in the way now proposed it may well be, and this is a matter of practical reality that when exports are made from this country, the inventors will treat them as constituting infringement in other countries. That will affect India's export trade, in the same way as it has affected Italy's.

Shri Sham Lal Saraf: In certain cases, some substances are manufactured or prepared elsewhere outside the country and are sold as patent commodities here. How would you react to the idea that wherever it is possible the law should make it incumbent upon these patentees to manufacture their products here within the country?

Mr. Chairman: He has said enough about that. Dr. Singhvi raised that question and he has answered.

Shri Sham Lal Saraf: As you know, the patents or inventions are always unpredictable. Therefore, would you suggest that the codification of patents or such inventions that need not come under the law of patents should be attempted?

Mr. Harold Holloway: Under Clause 13 it is proposed to examine the applications in India to find out whether there has been any anticipatory publication outside India. Because of the unpredictability of some inventions, their utility at that stage may not be known completely until a period of time has elapsed. One can always apply to revoke a patent on the ground that there is no utility in that invention.

Shri Sham Lal Saraf: When the first law was enacted, it might have been argued in this way. In the context of present day with the ever-changing technology, would you agree that the period of 10 years should be enough time for registering the patent from the date the goods are sealed or manufactured?

Mr. Harold Holloway: The tendency today is for inventions to cease to be simple and to become very complex. As I mentioned yesterday, in the case of insecticides and things like that a longer time is required before an invention is able to be exploited commercially at all.

Shri Sham Lal Saraf: You said that where goods are patented at present the law provides that the Government may import such patented commodities or goods from elsewhere, of course on payment of reasonable royalty to the patentee here in the country. In case the Government do it for their own use, what is your objection to that?

Mr. Harold Holloway: We have made our comments against Clauses 99 to 103 of the proposed Bill. We see no reason why the Government should not have certain rights, but when you extend those rights to Government undertakings and others for the purpose of earning profits, it seems to us that there is a fudamental conflict with the whole idea of a Patents Act, since there can be no system of patents without some element of monopoly, albeit subject to appropriate safeguards. The whole idea of giving any benefit to the inventor would then be undermined. That is where the point of departure come in. The bill goes very much wider than is necessary.

Dr. C. B. Singh: On page 4 of your memorandum you have stated in para 3 that 'with the growing demand in India, it is necessary, we believe, that the Pharmaceutical Industry, like other industries, should continue to expand, and so long as India's technicians are concerned, as they must be for some time more, with the battle of production rather than with research, it will be necessary to ensure continuing co-operation from those whose men, money and massive research are achieving the advances from which many of us have already benefitted.' Do you mean to suggest that research should be given the secondary place or be given a go-by?

Mr. Harold Holloway: There has to be a balance between production and research. As you develop your techniques in producing goods of high quality in quantity, you acquire a base from which you can engage in research. Here in India there is so much immediate need for so many of these products, that it is obvious that for some time to come the number of technicians who will be available for research, will be nothing like the numbers available in the more industrially advanced countries. Therefore, I think it is in India's interest that we continue to encourage people overseas to work their inventions here in association with Indian industry.

Dr. C. B. Singh: Are you envisaging big export market for Indian pharmaceutical goods and that is why the patent law should be tightened and protection given for a longer period?

Mr. Harold Holloway: In general, exports are likely to be encouraged, if there is an effective patent system in this country, because when goods are exported they will not constitute infringements in other countries.

Dr. C. B. Singh: You probably know that the result of research is very often accidental. Mr. Roentgen was experimenting Photographic with high machines where certain current generating electrical plates were kept which were found to have been affected by some current and he accidentally discovered X-Ray. So also Prof. Fleeming discovered penicillin while doing some experiments. The results have come out of smaller routine laboratory experiments and not of highly developed experiments. Then, how does it happen that high cost should be given to patentees' drugs etc on this score?

Mr. Harold Holloway: Many inventions may be simple and may have been discovered by chance. But the fact remains that they have been discovered. When an invention is made, it can either be kept secret or it can be exploited. One of the purposes of patents law has always been to encourage publication of the discoveries, And I think that whatever kind of invention is made, it is desirable that patenting thereof should be encouraged.

Dr. C. B. Singh: Do you agree to exceptions being made in respect of life-saving emergency drugs and inventions in the interests of the country's defence?

Mr. Harold Holloway: Yes, certainly, of the kind we have got in the present Act. It is working very well.

Dr. C. B. Singh: You have pointed out that communist countries which did not have any patent law are now gradually coming to patent law. Could you give us some explanation why they have come back to patent law?

Mr. Harold Holloway: I think they want to encourage research in their own factories in the communist, as in the western countries. I think there is also this consciousness of the need to facilitate interchange of goods in normal cause of international trade.

Dr. C. B. Singh: From your wide experience, may we have a few big examples of infringement of patent laws dealt with by your firm, especially in pharmaceutical products in this country?

Mr. Harold Holloway: Yes, we have been concerned with a number of them. A recent one, as I mentioned, concerned chloromphenicol. Most of these matters, when there are infringements, are settled as a result of negotiations between the parties. That is the only recent one that has gone to court, as far as I can remember.

Dr. C. B. Singh: Although only a small per cent of drugs and pharmaceuticals are covered by patent in this country, I have a lurking fear in my mind that a reputed firm enhances the prices like any other commodity, for example tincture, ginger etc., to make high profits.

Mr. Harold Holloway: As I have said before, people are just as greedy with regard to unpatented goods as to patented goods. There is no difference in the human greed.

Shri Himatsingka: Have you any idea as to the proportion of patented drugs to the unpatented drugs?

Mr. Harold Holloway: Our estimate is it is something like 2 per cent. We did it on our own enquiries and examination three or four years back, and nobody has scrously challenged such conclusion. Somebody once said it was nearer 5 per cent, but if this was so, it is still a very tiny fraction. Even if it were 6 per cent, it is a tiny proportion of the whole.

Shri P. S. Naskar: Are unpatented drugs costlier, or patented drugs are costlier—as a general rule?

Mr. Harold Holloway: The general rule is, that if a drug has been costly to develop, therefore it would be costlier to buy, not because it is patented but because it proved more difficult to develop. Therefore, on the whole one would expect that patented drugs resulting from research would be slightly more expensive.

Shri Himatsinka: Even under the present law the Government have a right to have licences issued up to three years. There is that provision that articles can be protected by the issue of licence. You are objecting to that now.

Mr. Harold Holloway: I am sorry if I have misunderstood the question. What we don't recommend is this—I think it is under clause 87 whereby all pharmaceutical patents are to be marked at one as "licences of right". This is one of those considerations that would cause the Bill to run foul of, or counter to, the International Convention. They have made such patents it liable to the grant of licence immediately—not after a period of time—irrespective of whether the inventor works, or is going to work, them in India or not.

Shri D. P. Karmarkar: In page 27 of your memorandum you refer to clause 5, and later you refer to clause 47 which relates to rights etc. Do you agree that so far as the advantage is concerned, clause 5 and clause 47 are satisfactory, taken by themselves—I am not referring to the impiging of the rights—do you agree that a patentee is privileged to the processed product as produced by that particular process?

Mr. Harold Holloway: I think on balance, that of it would perhaps be asking too much to expect you now to grant patent protection to products *per se*. It seems, however, not only reasonable but necessary that you should continue as at present to grant protection to products when they are produced by a particular process. Otherwise these patents would be valueless.

Shri D. P. Karmarkar: Then on page 31 of your memorandum, in respect of clause 8, your principal complaint is that the work of the Patent Office will be unnecessarily overcrowded and that this provision is unnecessary.

Mr. Harold Holloway: Yes.

Shri D. P. Karmarkar: That is your only camplaint. Suppose it could be managed, do you agree that a positively useful purpose will be served?

Mr. Harold Holloway: No. In all these Bills it is very easy to see afterwards that some of the information which is sought has proved not to be necessary. In another recent Bill there was the requirement that copies of the memoranda and articles of association of the parties should be submitted with each application. That produced the odd situation that in connection with one series of applications with which my firm was concerned, we were involved in the need, technically, to submit nearly a thousand copies of these memoranda and articles to a Government office. The Government office concerned accepted that they and we could not cope with a thousand such copies although the law required that we should submit five hundred copies of each. We therefore reached a compromise; we wrote and said "here are six copies of each, the rest will follow", and the Government office agreed never to ask for the others. We have sometimes to get round these provisions. It really is not, I think, sensible to insist, for example, upon specifications, and other documents, in Spanish and in half a dozen other foreign languages which we cannot translate here, being submitted to the Patent

chasing the drugs from abroad. When the Minister of Health stated that he was going to use section 46, he told the hospitals to stop purchases because he, as the Minister of Health, will arrange to get those drugs by using section 46. So, the hospitals stopped buying these drugs from abroad.

Mr. Chairman: And the UK Government took the responsibility of supplying these drugs?

Mr. A. G. Shaw: Yes.

The point I was making there was that the Minister himself decided that he would use the powers to supply the hospitals and the individual hospitals stopped purchasing themselves.

Mr. Chairman: Those powers exist even now?

Mr. A. G. Shaw: Yes, but they are not being used now. The Minister is no longer using those powers.

Mr. Chairman: But they have not been revoked?

Mr. A. G. Shaw: No. The fact remains that at the present time the Minister has stopped using them. He used them from 1961 to 1965, for a period of four years. Now he has stopped it.

Shri K. K. Warior: When the Minister took action no hospital raised any objection to it?

Mr. A. G. Shaw: No, because the Minister himself is responsible for the provision of all hospital services under the National Health Service.

In paragraph 31 I explained that the Ministry of Health announced that they proposed to invite contracts for the supply of certain drugs to the hospitals. The drugs which were supplied came from manufacturers outside the United Kingdom and none of the companies which were awarded these contracts was a patentee or licensee. They were coming from unlicensed sources. The drugs in question came mainly from Italy and were supplied through small companies which imported them from that source.

In paragraph 32 I explained, as I have already said, that this action was continued until 1965. Although there was some change in the companies which were awarded contract by the Ministry of Health and some changes in the countries from which these drugs came, they all came from unlicensed sources.

In paragraph 33 I go on to state that the Minister of Health announced, before taking any further action to continue the contract for a further period that he had invited patentees and licensees in the United Kingdom to quote for the supply of these drugs for the hospitals and armed services. He also gave the same invitation in respect of three other patented drugs which are widely used in hospitals. Subsequently, in Parliament the present Minister of Health, Mr. Kenneth Robinson made a statement with regard to the use and purchase of drugs under section 46. You will note that he says that with two exceptions satisfactory arrangements have been made with manufacturers and that, therefore, he would negotiate prices with manufacturers in the United Kindgom who were the patentees or licensees of the drugs in question.

In paragraph 35 I stated that subsequently satisfactory arrangements have been made with the patentees or licensees of the two outstanding drugs to which he refers earlier and, consequently, now, as I have mentioned, no purchases of drugs are being made from unlicensed sources under the authority of section 46(1) of the Patents Act, 1949. There has been no formal announcement of this but this decision was conveyed to my Association in a letter from the Ministry of Health, of which I have a copy and

in order to substantiate the statement which I have made, I have brought a copy of the letter for you to see, if you so wish.

Shri R. P. Sinha: Will you kindly read that letter?

Mr. A. G. Shaw: I will read it. It is addressed to Mr. Duckworth, who is the Secretary of my Association, my superior officer. It is from the Ministry of Health. It says:

"Dear Duckworth,

You wrote to Mr. Hunt on 3rd December about the supply of drugs to hospitals under section 46(1) of the Patents Act, 1949. Satisfactory arrangements were made with the patentees or licensees of the two outstanding drugs, chlorothiazide and hydrochl rothiazide. This means that there are now no purchases of drugs being made under the authority section 46(1), but the Minister said in a written answer to a parliamentary question on 21st June last that he would continue to use his power under this section as and when it seemed to him right to do so."

Mr. Chairman: So the section is there.

Mr. A. G. Shaw: The section is there. The Minister says he would continue to use section 46(1) if he thought it were necessary to do so. One could not expect any Minister to make any other statement. The Act is there on the statute book, it gives him powers. Therefore, he must say that he will use the powers which the Parliament has given him, if he thinks it is right and in the interests of the nation for him to do so.

Shri K. K. Warior: There was no instance of any import under section 46(1) after that statement in Parliament in June?

Mr. Chairman: The power was there.

Shri K. K. Warior: Were there any instances of any import?

Mr. Chairman: The patentees came to terms with him. You may continue, Shri Shaw.

Mr. A. G. Shaw: In the reply given by Mr. Robinson he refers to drugs used in the pharmaceutical service. I think, it would be helpful if I explain this term and why it differs from "the hospital service". The pharmaceutical service to which Mr. Robinson refers is the supply of medicines to National Health Service patients through the retail chemist when they have consulted the doctor in his surgery or when he has visited them at their homes. When he visits them at their homes or when they go to his surgery, if they require medicine, he will write a prescription and they take the prescription to the chemist who makes up the medicine and then gives it to the patients.

Shri D. P. Karmarkar: This service also is a part of the National Health Service.

Mr. A. G. Shaw: Yes. The National Health Services extends to hospitals and also to the doctors in relationship with their patients at home as also to the welfare and clinic services for mothers and young children. This is all part of the National Health Service in the United Kingdom. If I could just interpose an example, before I came to India I had to have some inoculations. Before I came I went to see my doctor as a National Health Service patients and I received the inoculations as part of the National Health Service in Great Britain.

Shri Bibhuti Mishra: Is Health Service compulsory for all people?

Mr. A. G. Shaw: The Health Service is not compulsory in the sense that you need not take advantage of the Health Service if you do not want to. If you want to employ a private doctor, you can employ a private

doctor and pay him; but if otherwise you want to use the National Health Service in Great Britain, it is there for you to use as a citizen of Great Britain.

In referring to the pharmaceutical service, which I have explained what I mean by pharmaceutical service, the Minister refers to negotiations of prices. By this Mr. Robinson refers to the voluntary prices regulation scheme, a copy of which I have here, which regulates the prices of branded prescription medicines when supplied through chemists to the National Health Service patients. This scheme was entered into voluntarily by the pharmaceutical industry in Great Britain with the Ministry of Health. The purpose of this scheme is to establish that the prices charged by the manufacturers are fair and reasonable. It was negotiated first in 1957, again in 1960 and the last agreement was made in 1964.

Mr. Chairman: What is the organisation?

Mr. A. G. Shaw: The organisation which negotiates it with the Ministry of Health on behalf of the pharmaceutical industry is the organisation of which I am an assistant secretary. I should add that this agreement does not apply to the hospital service, but this is for historical reasons. This agreement was originally negotiated following recommendations by a committee which was concerend with the supply of branded prescription products by doctors for National Health Service patients. The present scheme is complex and complicated as one might expect in dealing with such a diverse range of products and a diverse industry, but I should like to mention to you four important points in connection with this scheme.

Firstly, as I have mentioned, the scheme applies to prescription products only; it is not concerned with the prices of medicines for which the public may wish to go to the chemist or anywhere else and purchase for themselves as an individual. It is only concerned with the prices of branded prescription products which are supplied on prescription and which are paid for by the National Health Service.

Secondly, the price control which is applied by this scheme does not apply when a new product is first placed on the market. A new product when it comes on to the market has a freedom from price control. This freedom period extends for two to four years according to the amount of original research that went into the discovery and development of the medicine. If a lot of research has gone into a product, it has a longer period than one which is a formulation.

Thirdly, after the freedom period has expired, the price of the product is determined by various methods in which export sales are taken into account. This is an important point because a part of the scheme is to encourage the industry at home to export its sales and if it has a good export performance, it has better treatment under the scheme.

Fourthly, if a product has a very large use for the Health Service, the Minister has the right to enter into separate negotiations with the company and also if the manufacturer himself wishes to negotiate directly without recourse to the scheme, he can go to the Ministry of Health and do so. All members of the organisation by whom I am employed have agreed to accept this scheme voluntarily and not to increase prices without the approval of the Ministry of Health.

Shri Bibhuti Mishra: What is the difference in the export price and the internal use price?

Mr. A. G. Shaw: That I cannot answer.

Shri R. P. Sinha: Will it be possible for the witness to supply this information later; or, he would not like to do that?

Mr. Chairman: You can ask the question later. Let him finish his evidence.

Mr. A. G. Shaw: The present scheme will last for three years and may be continued unless either side gives six months' notice to terminate the agreement. That is all I want to say at the moment about the particular scheme.

I turn now to section 4, which is the legal proceedings arising out of the use of section 46.

I may merely summarise that sight of the Minister of Health to exercise powers in relation to supply of drugs to National Health Services hospitals was challenged.

In 1961 proceedings were commenced which did not terminate until 1965 when there was a decision by the House of Lords. You will know that the House of Lords is, however, the highest court in England. You will also note that the decision of the House of Lords in this case was not unanimous but was reached by a majority of 3 to 2.

In his speech whilst he was delivering his judgment, a copy of which I have already given, one of the judges said that the acceptance of the principle of Crown use for the National Health Services hospitals seemed to be alarmingly wide and to be a formidable incision into the rights which the Crown had granted. His views were endorsed by another member of the Court.

Now, under Sec. 5, I set out the views of the British Pharmaceutical Industry on the use of Section 46 and the reasons why they have been concerned on the importation of drug from unlicensed sources because of the effect which it can have upon the research and development in the U.K. In particular, they are concerned that if these importations continue on the products which are the most popular and in the greatest demand, it will take away the ability of the company to carry out adequate research in the U.K.

Now to paragraph 43 I draw attention to some views which have been expressed by the Patent Advisory Committee of my Association and I can now say that that has been approved by the Association for incorporation into the evidence which they will submit to the Committee recently appointed by Government to enquire into the relationship of the Pharmaceutical Industry and the National Health Service.

The Committee, which was appointed in 1965, is known as the Sainsbury Committee. You will note that except when the Section is to be used for defence purposes, here it is recognised that there is an overriding priority, it has recommended that there should be an equiry to establish such use of the section by Government in the interests of the national economy and the nation's health. The procedure suggested is similar to that which the British Parliament has accepted for the compulsory purchase of land.

You will note that one of the consideration which it is suggested should be taken into account is whether the use by the Government of this Section is likely to discourage manufacture or research in the U.K. In this connection, and it is relevant in relation to Section 41, to draw attention to the results of surveys carried out on expenditure by the pharmaceuticals industry association from time to time. The following figures which are readily available are for the years 1956—1963. They are:—

	(In £ & $)
1957	.. 4.2
1958	.. 5.1
1959	.. 6.3
1960	.. 7.5
1961-62	.. 7.8
1962-63	.. 8.3

This is the latest information which is available at my disposal. From this, it can be seen that in the recent years for which the figures are available, the rate of expansion on expenditure on pharmaceutical research in the U.K. has not been maintained. One might assume from these figures that the use of Sec. 46 and 41 must influence the owner of any company is in deciding upon the amount of money which one can devote upon reseach for new medicines.

Dr. M. M. S. Siddhu: In this connection, can Mr. Shaw tell us as to whether there has been any change in the position of the British Pharmaceutical Industries as a result of the American subsidiaries having taken over the British industries and consequently the research being carried out in America?

Mr. Chairman: You can ask this question at the end after he finishes his evidence. Please note down the points. You can ask him later on. Mr. Shaw, you may continue the evidence.

Mr. A. G. Shaw: Mr. Chairman, this is the *expose* which I wish to give. I am sorry to have taken so much time of the Committee. I am grateful to you and the Members of the Committee for your patience which you have shown to me in making this *expose*.

Shri R. Ramanathan Chettiar: May I ask the learned witness one question? During the course of his observations, he mentioned that out of 9 licences granted (patent rights) in the U.K. under Sec. 41, as much as 2|3rds (6) were abandoned.

Shri A. G. Shaw: Yes, Sir. Nine were granted of which six were abandoned.

Shri R. Ramanathan Chettiar: Can you explain the reasons that impelled the manufacturers to come to the decision in abandoning those six?

Mr. A. G. Shaw: Those applications were for separate patents which related to licences to deal with a particular material. I have already explained earlier that the company decided after a careful consideration not to use them as a commercial proposition.

Shri R. Ramanathan Chettiar: In the U.K. there large cartels (syndicates) in the pharmaceutical drug industry.

Mr. A. G. Shaw: Yes, Sir.

Shri R. Ramanathan Chettiar: If you realy analyse the worldwide organizations of the pharmaceutical industry, I think it is not more than 200. After all, about six or seven are cartels or syndicates that operate in the U.K. So, don't you think that these patents rights given to such cartels will lead to monopolistic tendencies?

Mr. A. G. Shaw: I don't think so because there have been few applications under Sec. 41 of the Act. The reason why there have been few applications is as follows:—

First of all, the manufacture of chemicals and medicines is very complex and a costly process and requires much complicated equipments and plants. Before applying for a licence, a company must be satisfied that it has got equipments and plant in order to carry that out. Having done so, it has also to be satisfied that it can establish a suitable market for the drug in the U. K. Then, it has also to be satisfied that it has the know-how in order to prepare a product of the correct standard and to offer it in the correct form which is required for the patient.

For a pharmaceutical product you might have to manufacture a chemical and then you have to convert it into an appropriate form in which it has to be administered.

Shri Vimalkumar M. Chordia: Please see para 14 of your memorandum. There you say only 4 applications were given for compulsory licence and none was accepted. May I know what are

the reasons that only 4 applications were given and even they were not accepted?

Mr. Chairman: That has been modified. He has said that 47 applications were made.

Shri Vimalkumar M. Chordia: It has been modified. He said that only 4 compulsory licences were given for food and not a single one was accepted: all were refused.

Mr. A. G. Shaw: They were refused because as I understand the reason—I have not got the decision of the Comptroller with me here—they were going to import those foods into the U.K. Sec. 46 is Govt's use and Sec. 41 is other than Govt's use where one can apply for a compulsory licence and these applications for food, as I understand it, were for the importation of the particular food into the U.K. and these applications were refused. I have not got the details of that judgment with me. If you like, on my return to England I will look into the question and obtain further information.

Shri Vimalkumar M. Chordia: Please refer to para 35. There you say that the Government have made satisfactory arrangements with the patentees or licensees of the two outstanding drugs and, consequently, no purchases of drugs are now being made under the authority of Sec. 46(1) of the Patents Act 1949. May I ask: was it possible for the U.K. to reach those arrangements without previously using the power of importing of patented drugs and products?

Mr. A. G. Shaw: Undoubtedly they used Sec. 46. But as I explained the Ministry of Health is negotiating with the manufactures both in relation to the prices which are to be charged to hospitals and also in relation to the royalty payments which have to be made. At the present time these negotiations have not been compieted. So I cannot, nor indeed can I expect to have any information about the prices because these are confidential between the Government and the manufacturer.

Shri Bibhuti Mishra: Is there any difference in the prices that are charged to hospitals and those charged to private persons?

Mr. A. G. Shaw: Very few private people get their medicines to-day because all the people or a very large proportion of people in U.K. obtain their medicines through the National Health Service. Very very few people buy the medicines themselves.

An hon. Member: What is the difference between the retail prices and the hospital prices?

Mr. A. G. Shaw: As I understand the question I have no information about the prices which have been agreed to by the Ministry of Health for these contracts. This information is confidential between the Ministry of Health and the contractor.

Shri Vimalkumar M. Chordia: What is the attitude adopted by the other industries in the U.K. to the use of Sections 41 and 46?

Mr. A. G. Shaw: The reply to that, Mr. Chairman, is that other British industries have submitted memoranda of evidence to the Sainsbury Committee. Towards the end of my address I mentioned that the Government have set up a Committee of Inquiry to go into the relationship of the pharmaceutical industry and the National Health Service. This Committee is called the Sainsbury Committee. The confederation of the British Industries which represents all British Industry has sent a memorandum to the Sainsbury Committee in which it supports the suggestion that the discrimination put forward in Sec. 41 should be removed and that also the use of Sec. 46 to provide articles for such purposes as National Health Service should be reviewed. So, in general, the views which I have expressed in my document consisting of the views of the industry on Sec. 41

and 46 have been endorsed by other British industry.

Shri A. T. Sarma: In your statement you have said that even a single supplier supplies drugs or medicines in various rates and prices vary from one supplier to another.

Mr. A. G. Shaw: Could you mention the paragraph in my document?

Shri D. P. Karmarkar: If I may put it correctly, is it not a fact that the negotiated prices do not apply to any private doctors who would like to prescribe medicines? Differentiation of prices is as between the negotiated prices.

Mr. A. G. Shaw: I think I understand the question. I must apologise to the questioner for not understanding it at the first time. These prices which are agreed to by this National Health Scheme will determine the prices at which the manufacturer will supply to the chemist and for the National Health Service it is the same price. There is no difference in the prices charged to the chemist for the product whether it is for the National Health Service or whether it is supplied on a private prescription. But as I have explained there are very very few people who obtain private medicines to-day; they all use National Health Service. But if they do obtain the medicines through their chemists and pay for them, the basic price of the medicine which they would obtain would be determined by this Scheme.

Shri A. T. Sarma: In paragraph 14, you have given a statement showing the number of applications submitted. But the number of applications is very small. Even out of that number, 13 have withdrawn their applications and others are pending. What is the use of having Section 41 if there is no use of it.

Mr. A. G. Shaw: I tried to explain a little earlier why there had been so few applications under Section 41—that you have, in fact, to be satisfied that you have the requisite plants and the capability to manufacture; you have to be able to satisfy that you have the know how in order to prepare the product and to prepare it in the proper form.

Dr. M. M. S. Siddhu: Referring to the expenditure on research, may I know what is it as a total percentage of the sales, and secondly, what percentage of the amount the pharmaceutical industry has been spending on sales promotion and advertisement?

Mr. A. G. Shaw: The amount which the industry spends on research in Great Britain in relation to its sales to the National Health Service is about 10% and it spends about the same amount of money on sales promotion.

Dr. M. M. S. Siddhu: I want to know it in respect of the total sales.

Mr. A. G. Shaw: It is difficult to relate it to total sales because the total production of the industry, which is about 200 million pounds, includes many things which are sold as medicines over the counter to the public and also veterinary medicines.

Dr. M. M. S. Siddhu: Mr. Brian Inglis in his book "Drugs, Doctors and Deaseses" surveying the pharmaceutical industry, says (on page 102) that "research and information are not services which the pharmaceutical manufacturers provide at great trouble and expense simply for the benefit of the medical profession and the community. Both are basically promotional activites indulged in at great cost because of the still greater returns." May I know whether the observation is correct?

Mr. A. G. Shaw: Mr. Chairman, I have not dealt with this aspect of sales promotion expenditure of the pharmaceutial industry in my brief and I would like to have a further opportunity of studying it. I do not wish to give a quick answer to this

question conerning the extract taken from a book I would most welcome the opportunity of taking the question and giving you a written answer.

Dr. M. M. S. Siddhu: What, in your opinion, is the life span of modern drugs which are being produced these days? After how much time they are not being prescribed?

Mr. A. G. Shaw: Again, Mr. Chairman, these are questions which come outside my memorandum. I came here to talk to you, if I may say so, about sections 41 and 46 and if there are questions outside my brief for which the Committee would like me to give an answer, by all means I would write them down, take them back with me and study them. I have not come prepared in my brief to deal with these questions.

Dr. M. M. S. Siddhu: You may please think over and give us replies afterwards.

Mr. Chairman: You can study them and send your comments afterwards.

Mr. A. G. Shaw: I think it would be better and preferable to the Committee, if they wish me to study something which is not in my brief, to give those questions to me before I leave and allow me to study them.

Dr. M. M. S. Siddhu: What has been the impetus on research programmes in those countries of Europe where the process for the product is patented. It has been made out that if the product is not also patented along with the process, then then research promotions do not get the impetus. There are countries in the Continent where the process is patented and not the product. What is the research programme of those countries as compared to U.K.? You may give the answer after your return.

Mr. A. G. Shaw: Again, these are questions which I would like to have an opportunity of taking away with me and studying them. I am very willing to help you, Mr. Chairman, in every way I can. I do not think it would be desirable for me to give answers here without information.

Dr. M. M. S. Siddhu: It is stated here in the same book (page 102) that "with the pharmaceutical industry established internationally on a cartel basis and protected by patent laws, such a competition can be minimised. I may add that Cyanamide Pfizers, Brystol and Parke Davies have their subsidiaries in England and one reason why the research programme of England suffers is that these subsidiaries instead of doing research work in London or England are doing it in Washington and New York.

Mr. A. G. Shaw: Equally I may say in turn, Mr. Chairman, that these companies have established themselves and are manufacturing in the United Kingdom for so many years and the British public gets the benefit of the research which is carried out in other countries.

Shri R. P. Sinha: I would like to know what has happened to the memorandum that you submitted on Section 46 for its repeal. Are you satisfied with the letter from the Minister of Health or are you still pursuing for the repeal of that section?

Mr. A. G. Shaw: They have appointed a committee of enquiry and in its submissions to this committee of enquiry, the Association will suggest, as I have pointed out in my memorandum, that consideration should be given to the method of use of Section 46. I have explained that in my memorandum.

Shri R. P. Sinha: Do you think that the repeal of section 46 as suggested by you will be in the national interest of UK?

Mr. A. G. Shaw: I think that it will be in the national interest of England because, in fact, we are not suggesting that the section should be done way with but we are suggesting that the section should in the first instance, be retained primarily for the purpose for which it was introduced into the legislation, that is, for the Armed Services and the defence of the realm. We freely admit that section 46 must be there to enable a Government Department to exercise an invention for the defence of the realm. What we suggest is that before a Government Department would use section 46 to purchase drugs for hospitals, there is an enquiry in which the company concerned can state its case and state its objections. And when there has been enquiry there can be a report and on the basis of that report action can be taken, and we wish to suggest that the whole aspect of the national interest, of the effect on production and the effect on exports and so on is taken into account.

Mr. Chairman: National interest should be of prime importance?

Mr. A. G. Shaw: National interest is whether it is going to assist in research in the country, whether it is going to assist in growth of the industry in the country and whether it is going to assist in the promotion of exports from the U.K.

Mr. Chairman: Do you agree that national interest should be of primary importance in deciding these matters?

Mr. A. G. Shaw: These we consider to be in our national interest; the growth of the industry is national interest.

Shri R. P. Sinha: I would like to seek a further clarification on one point regarding the views of the association. Suppose the pharmaceutical industry England, in spite of the agreement that they have got with the Health Ministry with regard to the prices, cannot reduce the prices to bring them on par with the international prices in the case of a certain drug or pharmaceutical product; suppose in respect of a product A, the international price is 50 per cent or 30 per cent lower than the British prices of that particular drug; would you like the Health Ministry to enforce section 46 and compel the industry to reduce the prices? If this particular drug or product could be sold at a cheaper price in the world, then national interest does demand that you should so improve your research and production processes that you could also give the item at the correct price.

Mr. A. G. Shaw: I think the answer is that we have an effective pharmaceutical industry established in the U.K., and we would hope to be able to produce our drugs at competitive world prices. Indeed, our industry exports about 30 per cent or 33 per cent of its total production. I think that shows that the industry is effective and is competitive with the world prices.

Shri R. P. Sinha: Previously, before secion 41 came, it was found that the patents were mostly used for purposes of foreign patent-holders to import their products into the U.K. The patent law had been revised in order that new industries could be put up to manufacture those new drugs. I find that in the USA, the new inventions of drugs are far more than in Britain. What you have been able to invent in England by way of new drugs is far less than what they have been able to do. Is England satisfied that all those new drugs that are being invented in the USA are now being manufactured in the UK as a result of section 41? For, if those inventors abroad do not manufacture them in UK, then sec-

tion 41 could be enforced and a compulsory licence could be given. Has that helped in the expansion of the pharmaceutical industry in England?

Mr. A. G. Shaw: I think that the expansion of the pharmaceutical industry in England takes place because these drugs which are developed in the USA are manufactured in Great Britain by the companies which have come and established themselves in Great Britain. They also are assisted by licence agreements and research agreement between the one company and the other, as a result of which one particular company in Great Britain will manufacture a drug which has been developed by somebody else. This is the pattern of development in the UK.

Shri R. P. Sinha: With regard to section 41, there is in England a differentiation in the matter of compulsory licence, between the drug and the food industry and other industries. Do you think that such a differentiation is correct?

Mr. A. G. Shaw: There is a difference between section 41 and section 37, and this is the difference. As I have explained, I think it is wrong that there is this discrimination against the inventor of a new and valuable medicine, because in order to develop a medicine today, the pattern of research is that you have to discover and manufacture many many compounds; it is not in the manufacture of the compound that the value lies but in the use of that compound in the treatment of disease. As I have mentioned in one of the documents which I have here, the comptroller of patents states that the relationship of discovery is probably in the ratio of 2500 substances to one substance which may have some use in the treatment of disease; the others are far to toxic. Because the value lies there and because of the value of the product, I think that this discrimination against drugs and medicines in section 41 should go.

Shri P. K. Kumaran: Before being the powers under section 46(1), the British Government started importing medicines from unlicensed sources, from countries like Italy. The British Government were not able to procure locally, that is, from England, the medicines which they required for the national services. Was that not so?

Mr. A. G. Shaw: The drugs which were imported from abroad were being made in Great Britain.

Shri P. K. Kumaran: But the local manufacture did not find it convenient to supply the thing to the British Government at reasonable prices. The prices quoted by the local manufacturers were high when compared with the import prices.

Mr. A. G. Shaw: The prices quoted by the local manufacturers were high in relation to the prices at which the drugs were imported, because, as I understand it, the companies which had manufactured the drugs in other countries had not done research which led to the discovery of the particular drug. They have no research cost to cover. As I have already said, you have to search for a long time to get a new product which is useful in the treatment of diseases. It is obvious that certain drugs that you manufacture can be cheaper if you are a country carrying on no research.

Shri P. K. Kumaran: In that case, later when the Government started using powers under section 46(1) and the local manufacturers found it convenient to come to some sort of agreement with the British Government, do you think they will supply after incurring a loss?

Mr. A. G. Shaw: The position is that the Ministry of Health is no longer using section 46.

Shri P. K. Kumaran: But a situation has been created whereby the

local manufacturers agreed to supply at reasonable rates. That was because the British Government used power under section 46(1).

Mr. A. G. Shaw: I do not know at what rates the drugs have been supplied, I have not got that information. I know that at the present time these negotiations on prices are proceeding; in the meantime, drugs are being supplied and hospitals are told that they will be charged at agreed prices later.

Shri P. K. Kumaran: That is true. We do not expect you to give the details of the prices, but we can infer. Keeping section 46(1) in the Act has now proved that it is in the interests of the British nation. Is it not?

Mr. A. G. Shaw: The inclusion of section 46(1) in the Act is there, and I am quite sure it will continue to remain there. What we are suggesting is that when it has to be used for purposes other than defence, there should be an enquiry to establish that its use is in the national interests. This is the point in the memorandum which we have submitted to the Committee.

Shri Tulsidas Jadhav: In India, the cost of labour is low and the prices of drugs are very high. Is it not desirable that certain measures suggested in the present Patent Bill should be there to reduce the prices?

Mr. A. G. Shaw: With the greatest respect, I know little of India. This is my first visit to India. I arrived three days ago. I do not know the conditions here. In any event, this is a question which is surely for the Parliament of India to decide. It is not for me to offer any personal observation on such a point.

Shri D. P. Karmarkar: Page 12, para 46. What are the provisions of section 32(3) and 40 referred to therein, in brief?

Mr. A. G. Shaw: In brief, section 32(3) is a revocation of the patent by the court. In other words, the Government would have to apply to the court and ask for the patent to be revoked, and the court would then decide whether it should be revoked. Section 40 gives the power for a licence to be endorsed on application.

Shri D. P. Karmarkar: We should like to know the rationale behind sections 41 and 46. Is it a social purpose?

Mr. A. G. Shaw: The rationale of section 41 is that it makes special provisions for food, drugs and medicines on the assumption that this was necessary, there may be special need. As I have explained, in today's circumstances such a discrimination is unnecessary. Section 46 is used to give the Government the right to use certain patent inventions for Government use.

Shri D. P. Karmarkar: Under sections 37 and 41 there is a difference in time.

Mr. A. G. Shaw: Under section you can make an application at any time; under section 37 you have to wait for a period of three years.

Shri D. P. Karmarkar: This was the discrimination you referred to a little while ago?

Mr. A. G. Shaw: Yes.

Shri D. P. Karmarkar: So far as you are aware, this definition of a substance "capable of being used as food or medicine or in the production of food or medicine" in section 41 has not given rise to any difficulties?

Mr. A. G. Shaw: Not as far as I am aware, there was one case when it was argued—I have not got the details—whether or not a particular compound was a food or a drug, and they came to the conclusion that it was a drug.

Shri D. P. Karmarkar: Normally this has not given rise to any difficulties?

Mr. A. G. Shaw: No. There is no definition provided in the Act itself.

Shri D. P. Karmarkar: What are the terms of reference of the committee you referred to that was appointed?

Mr. A. G. Shaw: This Sainsbury Committee was appointed in March, 1965 and its terms were:

> "To examine the relationship of the pharmaceutical industry in Gt. Britain with the National Health Service, having regard to the structure of the "industry, its commercial policies and the firms comprising it, its pricing and sales promotion practices and their effects on patents and the relevance and value of research, and to make recommendations."

Shri D. P. Karmarkar: Normally export prices would be more than what has been negotiated as the agreed price between Government and industry.

Mr. A. G. Shaw: Normally the export price is taken into consideration in determination of the price that is charged in the home market by the price regulation scheme. One would expect the export price to be slightly higher than the home market because of the cost of transporting the drug to the market, and due allowance is made for that in the scheme, but if a company establishes that it exports 25 per cent of a particular product in export markets then the price which it charges to the home market is in relation to the price which it obtains in export markets . . .

Mr. Chairman: What will be the difference between the internal price and export price?

Mr. A. G. Shaw: Only the cost involved in transportation.

Mr. Chairman: Could you give the percentage?

Mr. A. G. Shaw: Not without detailed examination. If you would like to see this scheme I will leave it here.

Shri D. P. Karmarkar: It would be better, Mr. Chairman, if he leaves all the relevant documents to which he has referred.

Am I correct, if I infer from what you told us, that the principal reason why the Government either imported or permitted other importers to make importation of patented medicines was the difference in price and that, so far as you know, they could buy cheaper from the outside market than the prices offered by the local concerns?

Mr. A. G. Shaw: Only the Minister himself can answer as to why he decided to do this. I can only offer my personal opinion.

Shri D. P. Karmarkar: Have you in the course of your studies or even earlier found that the prices at which the Government imported patented medicines were advantageously lower than the prices at which similar medicines were offered by local concerns?

Mr. A. G. Shaw: Obviously, Mr. Chairman, the prices at which Government imported the drugs from abroad were lower than the prices in Great Britain; otherwise they would not have gone to the trouble of importing them.

Mr. Chairman: Do you agree that the Government has reserved the right to control the prices for internal consumption?

Mr. A. G. Shaw: The Government has agreed with the pharmaceutical industry on this scheme which in fact controls the prices at which drugs are supplied to the chemists and to the

public, but the scheme provides for certain incentives to the manufacturers.

Mr. Chairman: You should have no such objection if the Government of India also reserved the same rights?

Mr. A. G. Shaw: That is for the Government of India to decide.

Mr. Chairman: Considering the powers your Government have reserved for themselves, you should have no objection if the Government of India reserved the same rights.

Shri R. Ramanathan Chettiar: In 1960 the prices had fallen from £ 60 per 1000 tablets to £ 9.10 sh.

Mr. A. G. Shaw: I do not know the prices at which the Government imported because these were never disclosed, not even to my association. I know there has been speculation in the Press and elsewhere, but I have not seen any information about the prices at which the Government imported the drugs.

Shri R. Ramanathan Chettiar: It had fallen even to £ 4.10 for 1000 tablets.

Shri D. P. Karmarkar: Earlier, were the patentees given the right of exclusive importation for the period of validity of the patents or there as no such privilege granted?

Mr. A. G. Shaw: This, Mr. Chairman, is a very detailed question on the general aspects of the Patent Law on which I do not claim to be an expert. I am not, at any rate, a patent lawyer. If you would like me to answer that question, I can study the question and prepare an answer on this point, but now it is not a point within the brief on which I have come.

Shri D. P. Karmarkar: According to the Indian law, anyone granted patent rights for manufacture is also simultaneously given the rights for exclusive importation of the particular product or process.

Shri Bibhuti Mishra: Ours is an under-developed country, Mr. Shaw and yours is a very developed country. I want to know how far your country has been able to help this country in the matter of research and technical know-how?

Mr. A. G. Shaw: I have not got the answer to that. It is something in relation to India which I cannot answer.

Shri Bibhuti Mishra: Is there any difference in the prices charged by you for those who take medicine from your stock and those who are under your National Health Service?

Mr. Chairman: He has already said that there is no difference.

Shri Bibhuti Mishra: You said that some years back England banned the import of medicines. Is it good for this country to ban import of medicines from other countries?

Mr. Chairman: That is for you to decide.

Shri Bibhuti Mishra: He has come all the way from England to help us by giving his opinion. His country is much more advanced than our country. I want to seek his advice about my own country.

Mr. A. G. Shaw: I am unable to give any such opinion.

Shri Bibhuti Mishra: When the Patent Law was enacted in your country, it was done keeping in view the interests of your own country. May I know how far those interests correspond to the interests of this country?

Mr. A. G. Shaw: Mr. Chairman, I have come here, if I may say so, to explain two developments which have occurred in the United Kingdom in regard to certain aspects of this law

which are comparable to certain provisions of your Bill. This is the basis of my memorandum and that is why I have come to talk to you this morning. I do not think I can usefully answer the question that the hon. Member has put.

Shri Sham Lal Saraf: May I know whether the law of patents has given rise to monopolistic tendencies and there are international combines and groupings, specially in the field of drugs, medicines and pharmaceuticals?

Mr. A. G. Shaw: Here again it is a general question of the patent law which is outside my brief. If the Committee would like me to answer that question, I would like to study it and write to you later I have returned to England.

Shri Sham Lal Saraf: There is a lot of criticism in India of the patent law because it has given rise to monopolistic tendencies.

Mr. Chairman: He says he has not studied this question.

Shri Sham Lal Saraf: We would be very thankful to him if he enlightens us on this point later.

I understand that your country and your law is more in favour of registering under the patents law the end product and not the process.

Mr. A. G. Shaw: The reason why our present law provides for product protection is set out in the recommendations of the Swan Committee. I did refer to that earlier on, and I am quite willing to leave the document with you. If I could add my own personal observation, I think product protection would help to stimulate the advance of pharmaceutical research in Great Britain.

Shri Sham Lal Saraf: Is it to encourage incentive for research and inventive genius that your law treats on par inventions of drugs and pharmaceuticals along with mechanical and other devices that are patentable?

Mr. A. G. Shaw: If I have understood the question correctly, we have explained our view to our government and it is that in order to encourage the maximum inventive genius and use of the development of medicines there should be no difference between drugs and pharmaceuticals and other type of inventions.

Mr. Chairman: The hon. Member wants to know whether the UK law is on par with the laws in other countries so far as this aspect is concerned. Have you studied the comparative position in different countries?

Mr. A. G. Shaw: As I explained earlier, I am not a patent lawyer and I have not made an international survey of patents and patent laws. I am the Secretary of an Association.

Shri Sham Lal Saraf: In view of the fact that very few applications have been addressed to the Controller of Designs and Patents what impression do we get about the present law? Is it working satisfactorily, as far as the operation of registration is concerned?

Mr. A. G. Shaw: To the best of my knowledge, yes.

Shri Sham Lal Saraf: With regard to the percentage of royalty on what basis does your Controller of Designs and Patents fix it?

Mr. A. G. Shaw: The provisions of section 41 in regard to royalties etc. are set out in the text which I reproduced, and during my expose I referred to the way in which the Comptroller gives his decision.

Shri Sham Lal Saraf: It is reported that in Italy, for example, there is no patenting of drugs and pharmaceuticals. Is it as a result of this that the medicines imported from that country were not only found to be defective but also deficient in a number of substances? Can the reason be that because they had not patented the inventions so people began to

manufacture all sorts of things, making it all the more necessary to patent drugs and medicines?

Mr. A. G. Shaw: I am not an international expert on patents. But I understand that a Patent Bill is now before the Italian Parliament, just as the Patents Bill is before your own Parliament. In that Bill it is suggested that drugs etc. should be patented.

Shri Kashi Ram Gupta: I conclude from what you have stated up till now that you are not agreeable to sections 41 and 46(a) as they stand.

Mr. A. G. Shaw: No, Sir. We have suggested that section 41 should be repealed to avoid this discrimination. In section 46, in the application of the way in which that section should be applied, should be reviewed. We have not suggested that section 46 should be repealed.

Shri Kashi Ram Gupta: But you are not agreeable to sections 41 and 46(a) as they stand?

Mr. A. G. Shaw: We have not suggested that section 46 should be altered. We have only suggested modification of its method of application.

Shri Kashi Ram Gupta: Does it mean that you are suggesting that in our proposed Bill sections 87 and 88 and 98 to 100 should not be there?

Mr. A. G. Shaw: I am not suggesting anything at all to your Committee. It is for the Committee to decide. I have come here to tell you what the position in Great Britain is.

Mr. Chairman: He has not made any comments on our Act. He has only spoken about the sections in the British Act and how it has worked.

Shri Kashi Ram Gupta: Are you in favour of compulsory licensing system, as provided in the Act, or not?

Mr. A. G. Shaw: It is not for me to give replies or comments on your own Act. In my opening remarks also I made only comparisons.

Mr. Chairman: The witness says that he is not competent to make any comments on our Act.

Shri Kashi Ram Gupta: But there is section 41 in his own Act.

Mr. Chairman: He has stated that it has not been repealed.

Shri Kashi Ram Gupta: He is in favour of repealing section 41.

Mr. Chairman: They are trying to repeal it.

Shri Kashi Ram Gupta: That means, he is in favour of removing the licensing system. That is what I conclude. Then, he has referred to the rate of royalty and in our Bill it is provided that there should be a fixed rate of royalty. In his opinion does UK also favour such fixation of the rate of royalty or will it be in the interest of the industry as a whole?

Mr. A. G. Shaw: There is no fixation of royalty in the U.K. law. Each one is decided by the Comptroller on application.

Mr. Chairman: By negotiation.

Shri Kashi Ram Gupta: The highest court in England has given the decision to retain the powers with the Government about section 46(a) and now, you say, the Government has set up a committee to go into the whole affair. Does it mean that the problem is there before the Government for a change in spite of the decision of the highest court?

Mr. A. G. Shaw: The decision of the highest court in the land was on the interpretation of the statute as to whether the supply of drugs to National Health Service hospitals was within the term "Services of the Crown". The House of Lords, the

highest court, decided that that was the case by three to two; but the committee which has been established and to which I have referred has very much wider terms of reference than that.

Shri Kashi Ram Gupta: You say that you are neither competent nor do you have the mind to say anything about our Act and Bill, but you have come to give evidence before us in relation to your Act, which means that we can conclude that so far as the application of those clauses in our Bill is concerned, your opinion has to be counted in respect of your sections.

Mr. Chairman: It is for us to consider. What can he say?

Shri Kashi Ram Gupta: He has come here to give evidence in respect of some sections of their Act. He must have studied the question of limitation of period of patent.

Mr. A. G. Shaw: I have not dealt with this point.

Shri Kashi Ram Gupta: You have not dealt with other points of your Act except these two sections.

Mr. A. G. Shaw: In my evidence here I have dealt with two specific sections.

Shri Warior: How far will the comparable provisions in the Indian Act to the provisions in sections 41 and 46(a) affect the pharmaceutical industry in Britain?

Mr. A. G. Shaw: They have affected the pharmaceutical industry in Great Britain by giving it a period of uncertainty as not to know what further development might occur. The Government, when it first used section 46, bought only five drugs from abroad. The industry did not know whether in the next year the five drugs would be 20, 25, 30 or 50. So, this is a period of uncertainty which must cause manufacturers in the country to wonder as to what proportion of their resources they can continue to devote to research. I think, this is shown out in a way by the figures which I gave which showed that there has been a levelling off in research expenditure.

Shri K. K. Warior: You said in your statement that new inventions made in countries other than Britain are taken to Britain by the same manufacturers; they establish their manufacture there and they process it there. Suppose, a firm is not willing to give such know-how, will Britain allow the import of the product for sale by these sections?

Mr. A. G. Shaw: Know-how does not go in the patent specification; the know-how is contained in what the manufacturer knows. I do not think that we have any instances where we think we are short of any essential medicines because they are not being developed in the United Kingdom by one company or another.

Shri K. K. Warior: Where a product or process is not patentable in the country of origin, will Britain allow that product or process to be patented in Britain under the Patents and Designs Act?

Mr. A. G. Shaw: The British Patent Act stands on its own. If you apply for a patent in Britain, you apply under the conditions which apply under that Act.

Dr. L. M. Singhvi: What is the composition of the Association of the British Pharmaceutical Industry; in particular, are there any members of this Association who are principals or who have a holding interest in any drug manufacturing companies in this country?

Mr. A. G. Shaw: I am sorry, I have not got a list of the members of my Association with me, but I know that there are a number of British companies who are established in this country. For example, the British company, Glaxo, I know, has a factory in Bombay because I passed it

on the way to the airport. I also know that the British Drug Houses is also established here.

Dr. L. M. Singhvi: Would you, as Barrister-at-Law and as one associated for a number of years with the pharmaceutical industry in Great Britain, say that the exigencies and the controlling considerations of patent legislation would have to vary from one country to another in accordance with the demands of a given national economy as also the stage of scientific and technological development in that country?

Mr. A. G. Shaw: That is a very wide question which, with respect, I do not feel competent to answer.

Dr. L. M. Singhvi: I would like to draw your attention to a statement that you have quoted on page 2 of your memorandum where you quote a departmental inquiry committee. Do you hold that this was a legitimate reason, at least historically, at the stage at which the amending Act in 1932 was enacted?

Mr. A. G. Shaw: At the time the 1932 Act was enacted the situation with regard to the development of medicines was quite different to what it is today. I am sure, all Members of this Committee will know the vast changes which have occurred in the practice and treatment of diseases in the last 20 or 30 years since the advent of, what is known as, chemotherapy. I think, the comment which is made in this document here should be looked at in relation to the state of medical knowledge and treatment which existed in the world at that time.

Dr. L. M. Singhvi: I invited your attention specifically to this statement which was contained in this Committee's Report somewhere in 1932. Conditions in 1932 were somewhat more comparable to those in India today.

I would like to know whether this change of circumstances which you referred to has come about mainly because of a greater pace of technological development in your country and therefore, the considerations which might have been applicable and relevant in 1932 in your opinion are no longer relevant and valid?

Mr. A. G. Shaw: I think that the technological advance has come about in every country.

Dr. L. M. Singhvi: I would like to invite your attention to para 9 on page 3 about the Swan Committee Report. They put forward the new recommendation that novel chemical compounds, including those intended for use as food or medicine, should be made patentable *per se*. What was your Association's point of view in respect of this recommendation?

Mr. A. G. Shaw: My Association at that time did not give evidence before the Swan Committee. But the principle which is contained therein has been accepted that the products should be made patentable *per se* by my Association because we believe that it is related to technological development in Great Britain and that the Great Britain has found important drugs.

Dr. L. M. Singhvi: How long, on an average, does it take for an application under Sec. 41 to mature in your country?

Mr. A. G. Shaw: I am afraid that without looking into the record I am not in a position to give my answer. But, I would say that perhaps it takes about 18 months or so to mature. Anyway I have not got the information on this matter just now.

Dr. L. M. Singhvi: You have made a reference at page 5 on para 23 that the rapid increase in the number of applications submitted since the time has caused serious concern to the pharmaceutical industry in the United Kingdom. I take it that your

reference is to the year 1960. However, I invite your attention to the figures given by you at page 4 which did not disclose any rapid increase in the number of applications submitted since 1960. You would yourself notice that according to your statement, in 1961, the number of applications submitted was only 3 whereas it was four in 1962 and 1963 but in 1964 it has risen to 15.

Mr. A. G. Shaw: In 1960-61 and 1964 the number of applications submitted was more. But, no application has been submitted in 1965. But, upto 1959 beginning from 1949 (for ten years), there were only 8 applications but from 1960 to 1964 there were about 30 applications which were submitted. To my mind, there is a fairly rapid increase in the number of applications.

Dr. L. M. Singhvi: In 1960 there were six applications; in 1961 to 1963 there were only 3, 4 and 4 respectively.

Mr. A. G. Shaw: During the period from 1949-1959—in this ten-year period—you would have seen that only 8 applications were submitted. I admit that the figures from 1961 to 1963 are only 3, 4 and 4. But, in 1964, it jumped to 15. I think there is a significant difference in the figures of 8 applications in ten years from 1949-1959. Whereas there were 8 applications in this period, the number of applications submitted was 32 from 1960 to 1964—a significant increase in these five years.

Dr. L. M. Singhvi: What was the nature of the concern of the pharmaceutical industry in the U.K.?

Mr. A. G. Shaw: The concern of the pharmaceutical industry was to have compulsory licences for importation into the U.K.

Mr. Chairman: He has given the facts and he gave that answer; it was for importation.

Dr. L. M. Singhvi: You have mentioned about Sec. 41. According to your Association this discriminates unfairly against the pharmaceutical inventor by not providing a comparable protection to that afforded to holders of patents for other types of invention. Would you not consider this from another point of view *viz.*, the importance and significance of a particular kind of invention or product of an industry is not in terms of how an inventor of a particular kind of a product is treated?

Mr. A. G. Shaw: We feel, Mr. Chairman, that Section 37 provides adequate grounds upon which anyone can come and apply to the Court or to the Comptroller in order to secure a compulsory licence.

Dr. L. M. Singhvi: It is your Association's contention that the power to give adequate protection to the pharmaceutical industry would result in condemnation of its research efforts. Whether this is substantiated by experience and actual facts and whether there was really a very substantial condemnation of research in your country as a result of somewhat lesser protection afforded to the pharmaceutical industry.

Mr. A. G. Shaw: I had mentioned in my expose, Mr. Chairman, certain figures which give the results of research expenditure from 1957 to 1963. I pointed out that in recent years it has shown that the expansion has not been maintained. I also said that the effect of Secs. 41 and 46 did influence the amount of research which the industry was contemplating to do.

Dr. L. M. Singhvi: One more question that I would like to ask is this. What was the result of the decision of the House of Lords in the Swan's case? Can you give us a copy of it?

Mr. A. G. Shaw: I have got the decision with me. I have given the recommendation of the Swan Committee on page 3 of my memorandum.

Dr. L. M. Singhvi: On page 12 of your memorandum you have mentioned several points in respect of providing against the arbitrariness under Sec. 46. At the end you say that instead of exercising Sec. 46 the Government department were to make use of its powers under Sec. 32(3) or 40 of the Patents Act, 1949, the interests of the public would be equally well served and the interests of the patentee better protected. You have also suggested that a specific enquiry should be followed by various methods including the one which I have just now mentioned. If such an enquiry is made, whether it would be more beneficial to Government or not? Or whether it would be more beneficial to have the proceedings instituted under Sec. 33(3) or 40 of the Evidence Act? What is the specific purpose of this suggestion?

Mr. A. G. Shaw: The purpose of this suggestion is to refer it to the Tribunal so that both the parties can appear and put their points of view when the Tribunal will be able to decide whether, in the national interest, the Government should proceed to use its powers having regard to such considerations as I have mentioned there as that would not discourage the growth of industry and research in the U.K.

Dr. L. M. Singhvi: Would you suggest that here, in India, there should be a Specialised Patent's Tribunal as has been suggested for your country or would you like this enquiry to be made by an *ad hoc* tribunal or by a common Court of Law?

Mr. A. G. Shaw: I am afraid I cannot give a quick answer to this question. That would be done by an independent tribunal.

Mr. Chairman: Would you want a judicial tribunal?

Mr. A. G. Shaw: Not necessarily a judicial tribunal.

Shri Shyamnandan Mishra: We quite appreciate the anxiety of the learned witness to confine himself to two limited points. But, we would also like him to appreciate us to ask him to give those very points in a somewhat wider context. In our anxiety to do so we would like to seek some information with regard to certain points and I hope they would not be outside his brief. The first one relates to the ratio of utilisation of patents in his country; the second one is the ratio of patents to inventions over a period. What is the trend of the ratio of inventions to patents? So far as I could see from a distance, it appears that in England the inventions have been rather on the decline and the patents have been on the increase. That would be a matter from which one can take a lesson. I would like to seek information on these two points.

Then, what is the amount of royalty paid and received by the United Kingdom?

Mr. A. G. Shaw: I have mentioned in my memorandum about the royalty that was awarded by the Comptroller in these two cases. Sec. 46, that is a negotiated royalty.

Regarding the utilisation of patents in the country I have no information.

The only information which I know is available is published in the report of the Patents Office in London. It shows the number of applications and specifications which are filed.

Shri Shyamnandan Mishra: What is the number of patents effective at a particular point of time in UK and what is the number of inventions which have occurred during a particular period—that information is not available in the UK?

Mr. A. G. Shaw: Not to my knowledge. I would try and make inquiries when I go back.

Shrimati Sharda Mukerjee: The learned witness has particularly stressed on the royalty which comes under compulsory licence and in the UK after 1949 under Section 46. As you know, the Bill provides for a maximum 4 per cent royalty under Clause 88. I would like to know if he has any information regarding the percentage of royalty which is paid to the pharmaceutical companies and other industrial companies which may have similar kind of agreements in other developing countries. Has he got any information on that?

Mr. A. G. Shaw: No information on that point at all.

Shrimati Sharda Mukerjee: You have no information regarding the rate of royalty in the other developing countries. Particularly you have mentioned that in Great Britain you have given a reference to a judgment in which the decision was 18 per cent royalty ex-factory price. The Bill here provides for 4 per cent royalty. I would like to know what is the general trend of royalties given in other developing countries.

Mr. Chairman: He has given the answer. He has not studied the position in other countries. In UK it is negotiated.

Shrimati Sharda Mukerjee: Has he got any idea that 15 or 17 per cent is above the average because his experience may be 4 or 5 or do we take that 15 or 17 per cent is normal?

Mr. A. G. Shaw: There are only very few decided cases under Section 41 which was the Section I came to talk to you about, I have given you the three cases where at the present time the royalties are working. It is a very limited number. But I have given you all the information that is available at my disposal.

Shri P. S. Naskar: You have referred to one of the recommendations of the Swan Committee that novel chemical compounds including those intended for food should be made patentable. Has this recommendation been accepted in this 1949 Act?

Mr. A. G. Shaw: Yes, indeed.

Shri P. S. Naskar: Under which Section?

Mr. A. G. Shaw: I am sorry I cannot give it immediately. It would be somewhere within Sections 19—26 of the Patents Act 1949 which talk about the grant, effect and the terms of the patent. It includes chemical products *per se*.

Shri P. K. Kumaran: Will he be able to tell us the number of patents which the members of his association have taken out in India?

Mr. A. G. Shaw: I am sorry I have no information on that.

Mr. Chairman: It is only two companies which have Branches here. He is not fully conversant.

Shri P. S. Naskar: It is not there. I went through Sections 19 to 26. I have not come across the use of the words *'per se'*.

Mr. A. G. Shaw: By *'per se'* means the product patent for a chemical substance in the UK. These words *'per se'* are not there. I am sorry if I have misused the term.

Mr. Chairman: You told the Committee some time back that the prices for the manufacture of an article are fixed. Who does fix that? You said that after a certain time the Comptroller comes in and refixes the internal prices. But just in the beginning of the manufacture you said that the prices are for a certain period. If it is not fixed by the Comptroller is it naturally within the discretion of the manufacturer to charge any price?

Mr. A. G. Shaw: The price which the manufacturer can charge for his product is determined by the manu-

facturer himself when the product comes into the market for the first time. It possesses a certain freedom period during which the manufacturer's price is charged. But after that period ends, it comes under the control of the Scheme.

Mr. Chairman: What is that period?

Mr. A. G. Shaw: 2—4 years. Four years for a product which has had a specific research; 2 years for other products.

Shri D. P. Karmarkar: That is also a voluntary scheme? There is no statutory backing?

Mr. A. G. Shaw: That is a voluntary scheme.

Mr. Chairman: In spite of the decisions and inquiries held in UK, Sections 38, 41 and 46 still remain on the statute?

Mr. A. G. Shaw: Yes, Sir.

Mr. Chairman: Thank you.

Mr. A. G. Shaw: May I thank you very much indeed for your kindness in receiving me—some one coming from quite an another country and talk to you on a subject which is of great concern to India.

Shri Sham Lal Saraf: Chairman Sahib: thank the gentleman on our behalf also.

Mr. Chairman: Your evidence is very illuminating and will be useful to this Committee because our Act is mainly moulded on your Act.

(The witness then withdrew)

(The Committee then adjourned to meet again at 14.30 hours).

——

(The Committee reassembled at 14.30 hours)

II. Dr. K. M. Parikh—Zandu Pharmaceutical Works Ltd., Bombay.

(The witness was called in and he took his seat).

Mr. Chairman: Dr. Parikh, we have received your memorandum and we have circulated it to all the Members. If you want to add anything, you may do so. Afterwards, the Members will ask questions which you may reply.

Dr. K. M. Parikh: Hon'ble Chairman and hon'ble Members, I am very happy to tender my evidence here before your learned Committee. I would like to point out at the outset what is patent. Normally, a contract between the Inventor and the State, so that State grants limited monopoly in order to encourage invention and inventor is required to make full disclosure of the invention, and so that at the expiration of monopoly it can be used by the public at large. Also during the time of his monopoly inventor is required to satisfy the reasonable requirements of the public. Thomas Jefferson says, 'Society may give the above rights, but this may or may not be done according to will and convenience of the society without claim or complaint from anybody'. I would like to put forward the following quotations from the United Nations Economics and Social Council Report on the role of patents in the transfer of technology to under-developed countries dated 9th May, 1964.

"In the case of inventions of special interest to the public welfare or security, provisions have been made in many laws to throw their use open to other than the inventor. Thus, in many countries no patents may be issued for inventions in certain fields (especially food and medicine). In cases where patents are issued, provision is made in the public interest.

In conclusion it may be stated that the creation and delimitation of the inventors right is essentially a process in which account is taken of and attempt is made to reconcile and satisfy the whole scheme of public and private interests pressing for recognition, *i.e.*, interest of inventor, social interest of encouraging invention, the interest of the buying public to enjoy the fruit of the invention upon fair and reasonable conditions, and the interest of the national government to accelerate and promote the economic development of the country."

Shri Bade: How are the inventors delimited?

Dr. K. M. Parikh: It is delimitation of the rights of inventors.

Shri Peter Alvares: May I submit that the witness makes his statement in full and then we ask questions?

Mr. Chairman: Yes, questions afterwards.

Shri Sham Lal Saraf: Clarifications too.

Dr. K. M. Parikh:

"It is recognised even under the Paris Convention—under the principle of National treatment that, 'each country applies its own standards to all applicants and patentees....with regards to patentability, formalities, duration of patents, conditions of use etc. This may result in a situation in which nationals of a given country receives less-generous treatment in other countries.... than afforded in one's own country or *vice versa*. Since each national treatment country is free to determine, according to its own needs....the degree of such protection will vary from country to country' ".

It was the practical experience of our Government that is given below in a reply to U.N. Economic and Social Council.

> "Patent system, which yield advantages to highly industrialised countries, does not produce the same results when applied to the under-developed countries."

It further states, "there is no doubt that normally granting of patents to foreign firms stimulates the rate of invention in foreign country....Most countries have little if anything to gain economically from such grants.

"The matter assumes great importance in respect of patents for drugs and food articles. It is a fact that the price of the same drug varies considerably from country to country. The question of public interest involved in these cases."

From the above considerations and conclusions of the U.N. Economic and Social Council, the following points are clearly established and are having universal acceptance:

(1) Patent may or may not be granted for a class of commodity.

(2) Pharmaceuticals are to be treated on different grounds—and this does not amount to any discrimination.

(3) No industrial property rights are involved or violated.

(4) No country (particularly members of Paris Convention) shall have any objection to such special treatments.

Now I will discuss a little on the patents in pharmaceuticals (drugs).

In recent years in the United States, Canada, New Zealand and South Africa—special committees have considered this problem at length. New Zealand agreed for restriction on drug patents, Canada suggested abolition of drug patents. In United States, in the bill, it was contended that three years should be ample

time to recover research outlays and maximum royalty of 8% for "unrestricted licence" that includes grant of all technical information required for sale and manufacture by the patentee. The Syman Commission in South Africa suggested five years for drug patents.

Looking to the above and uniform conclusions of various Committees of experts in developed countries suggests that there is something radically wrong with the drug patents and is commonly abused. The best is abolition or otherwise restrict the same to the minimum possible number of years which was found to be three to five years for a drug patent. This is mainly because the drug's life is very short and hardly lasts a decade in this fast moving time. The abuse of patent is on a large scale, also mainly due to: he who orders does not buy and he who buys does not order; sometimes sentiments and helplessness of public are exploited. For example, a poor man drawing hardly Rs. 100 a month will spend any amount, even borrowing, for his ailing relation, loved ones, wife or a child, etc.

Thus it is very right that drug patent be abolished or a period of three, five or seven years may be imposed but not more.

Even if it is feared that this may harm some few inventors for good reasons, one extension of three years be provided by Controller or the proper authority if fully satisfied on such application and verification. This is with regard to clause 53.

Now I have given a small table where you see the items, the imported C.I.F. price, the local manufactured price, the percentage difference. and the finished stage price, that is when put in formulation form and these formulations are sold directly. For Vitamin B12 the C.I.F. price is Rs. 30 per gram while the local firms are manufacturing it at about Rs. 230 per gram. Similarly for Chloromycetin, it is Rs. 80 while the local manufactured price is Rs. 400. You will see that in all other cases, Tetracyetin, Prednisolon and Tolbutamide, the local manufactured prices are much higher. Of course, in Tolbutamide, the patentee who is manufacturing this, is not selling this particular item to anybody and reserves it for his own use. An indigenous process for this particular item has been developed by the Haffkine's Institute, but this has been challenged as an infringement by the patentee and the matter is now before court.

The Development Council after taking into consideration all the aspects affecting the Indian production suggested that the local manufactured price should not be more than 60% above the c.i.f. price.

If the suggestion is considered with above quoted prices, it will reveal the true picture of the thing as it exists.

I have also given another table a little below on page 4 showing the patented items, the price of the item in some European and other countries and its price in India—a comparison of the two prices. Regarding Tab. Tolbutamide, in some countries including Germany and England it is sold for $1.85, while in India, it is sold for $3.57. These are figures existing roundabout 1958 or 1959. These I have taken from a published report.

Tabs. Chlopropamide is $1·41 in Italy while in India it costs $4. Aureomycin was sold in Argentina for $1·19 while in India it was $6·92. Tetracycline was sold in Argentina for $1·19 while in India, it was sold for $6·52.

Mr. Chairman: What is the unit?

Dr. K. M. Parikh: The price units are the same.

Particularly with regard to Aureomycin and Tetracycline, you will

dozen, while that of the foreign manufacturer is Rs. 11 per dozen.

We can see that the difference in price will clearly bring out the production in terms of value and production in terms of quantity. As the production in terms of value is represented at about 70 per cent. by these foreign units, it may be inversely true about the production in terms of units for the Indian Industries. There are about 2,000 licensed concerns, drug concerns, in this country. Out of them, less than 100 may be foreign or foreign-collaborated ones, while the balance of 1,900 are Indian. And it amounts to this that 30 per cent of the value of the drugs and 70 per cent of the production is done by the 1,900 firms, while the hundred firms are doing 30 per cent of production and enjoying 70 per cent of the value. And this is mainly because in our country we have got a flair or craze for everything with a foreign label.

From the above explanation your honour can very well observe how our firms can be developed under the present patent law; but it is to enable the existing patent-holders to take away the maximum of our foreign-exchange in innumerable ways under the heads of Royalty, technical know-how, service, fair return on capital, Analytical Controls and Machineries.

I have given a annexure which will clearly show—which has been published by the Reserve Bank—that in a period of three to five years these concerns take away their capital back. At the same time how the capital has been brought is again to be seen. They may send a machine from there to here, which may be owned by them there and the collaborators may agree to that, and it will be treated as capital participation.

It is claimed the present law creates new production and process.

So far as India is concerned, nothing new has developed in this country. But it may be true that our patent law has helped foreigners to create new things in their country out of the foreign exchange paid by us through our nose.

It is claimed that the reason for high prices of drugs is not this Patent Law.

It is very well clear and shown in my memorandum on pages 4 and 5 and page 8 how the patent law is directly affecting the present high prices. It is also very clearly brought out by the American Senate Report No. 448.

I have given also a table which shows how patented products are very highly priced in this country. Therefore I do not see how it can be insisted that the patent law is not the reason for the high prices.

Almost all the well known companies in this trade all over the world are already having their subsidiaries in one form or the other in this country and now many small or medium class Foreign Industries are also attempting to enter. I do not understand how the present patent law increases the ability of the country to depend less on foreign advances in therapy. On the contrary it has hit hard our national development because it is always difficult for a new one, whatever he could do against the existing foreign well-known brands. Our dependence grows more on foreign collaboration; even the individual capacities are afraid of facing the giants and are tempted to go in for colloboration which is a fashion of today.

These collaboration firms are mainly governed by their present companies and thus the only intention is to serve the interest of the parent body in the best possible way. Therefore, it is too much to imagine that these collaboration firms will give out the know-how and train or develop our industry.

As mentioned before, the present patent-holders put forward the dis-

advantages of the proposed patent Bill if it is enacted as it is. We shall discuss them individually later on.

As seen in point 7 above, the present patent law has made us more dependent on foreign advances and because of that we need more and more foreign exchange, while if the Indian research and development will progress under the present proposed Bill it is clear that the foreign exchange requirement will be decreased and in turn it will earn the exchange.

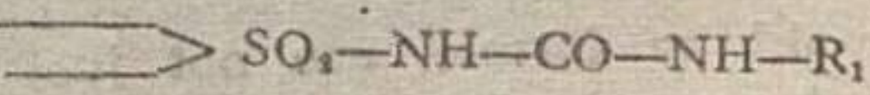
The second point is that they fear that the export by these foreign units will diminish. May I know at present what the export of the patented drug is? It is practically nill. They export to earn import values, which help them to make large profits and considerable exchange for their home country in different ways.

How does this export help us? There is no question of diminishing export. On the contrary, the export of these products should have been increased and at a better price.

The third point is this. It is said that domestic know-how cannot be developed without foreign assistance. But the main purpose of the patent law should be to encourage the domestic know-how which is already existing so that it can be developed. We should rightly refuse them by abrogating the patents.

By our flying Boeings they are not built here; by collaboration nothing is developed; in order to have them here, we have to build them here. Similarly, by collaboration nothing can be obtained or developed here.

The fourth and fifth points are as follows. Flow of foreign know-how will be slowed down. This amounts to a threat. In India, we are doing everything for the uplift and betterment of our nation and within our framework those who can fit in and really wish to assist us are welcome and so we should not submit to any such threats.

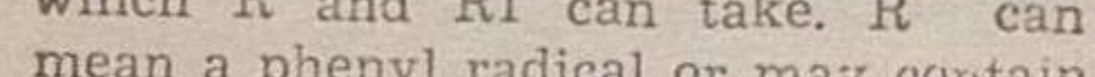


Also, what know-how has been brought into this country by these foreign pharmaceutical industries, or what products have been manufactured here by them? Whatever products are manufactured by them are all manufactured by other indigenous manufacturers too. This is concerning the proprietary medicines.

Now, let us take the example of tolbutamide. I have just now stated that the imported raw material costs Rs. 20.70 per k.g. while the imported tolbutamide would have cost us only Rs. 21.40. This clearly indicates the fact that the technology of the patentee is obsolete and old and it also suggests that indirectly a large amount of foreign exchange is taken out, and the Indian industry is prohibited from the manufacture of this material by legal threats. Thus, the present patent law has hindered the technical level and expansion of the Indian industry.

I would like to discuss the case study which has been given. I have already stated that I would like to discuss one of the patents here so that one could get a clear idea of the things.

As I have said, Hoechsts have the manufacturing patent for tolbutamide now. I may state that this tolbutamide is a substance belonging to the group of substances known as sulphonylureas. This group consists of a large variety of compounds; hundreds of thousands or millions of them can be included under that category, and tolbutamide is just one of those sulphonylureas just one of those millions of compounds.



The general formula has been given as a combination of R with R1 as shown below:

When R and R1 is substituted with the proper radical, that is, methyl and Butyle radical, then it is called tolbutamide.

If R and R1 can be changed, then it will result in a number of compounds whose number would go to millions. It is the general formula for sulphonylureas which has been shown in this particular patent No. 58716.

The present patent 58716 covers the synthesis of an exceedingly large number of benzenesulphonylurea derivatives. As claimed in claim 1, compounds with the general formula:

will come under that patent. Normally, under this patent specification, whatever is supposed to be claimed under this formula could be claimed by them as their property; under this particular claim No. 1, they are claiming this particular compound of R with SO2-NH-CO-NH-R1.

Now, what is the definition of R and R1? Here are some of the forms which R and R1 can take. R can mean a phenyl radical or may contain any of the following namely: Alkyl branched or unbranched, alkoxyl residues or Dialkyl and Diakoxyl Halogens, Aliphatic hydrocarbons or Cycloaliphatic hydrocarbons.

So far as R1 is concerned, it can be any one of the following namely: Aliphatic hydrocarbons, cycloaliphatic hydrocarbons and its salts, straight branched chains.

The compound described by the formula is a combination of these two namely R and R1. Suppose R is a phenyl radical, then R1 can be any one of the combinations which I mentioned earlier; so the compounds that could be formed are not just one but several. It can be the methyl, ethyl or butyl radical; if you make a permutation and combination of these things, it will result in an astronomically high number of compounds, and all those are supposed to be covered by this claim 1 of this patent.

If an organic chemist is to sit down and calculate the innumerable possibilities as described above, he will find, after reckoning for a few hours, that the number of compounds covered in this omnibus claim will amount to tens of thousands if not hundreds of thousands.

Here, I would like to quote what Justice Lord Loreburn has observed in one of the cases he has stated:

> "This patent is bad for ambiguity in the specification. There seems to be some danger of the wellknown rule of the law against ambiguity being in practice invaded. Some of those who draft specifications and claims are apt to treat this industry as a trial of skill, in which the objects is to make the claim very wide upon interpretation of it . . .".

I shall come to the question of trial of skill a little later. In this particular claim No. 1, the claim is made in such a way that they can claim the whole lot of compounds under that claim. If others are going to manufacture the substances, then they can stop other people from working those things by virtue of this claim; even if that is challenged, then they can show this original patent for one compound and claim all the other compounds as their property. If amendments to permit such things are going to be made then I am afraid that would not be an incentive but a disincentive to the research workers here in our country.

Another thing is this that so many compounds are covered in this particular claim practically. The small people or the ordinary people would not like to enter into any dispute with them because even if they find out a

new compound they will have to find a new name for it, and the legal trial will go on for years as has happened in the case of the Haffekine Institute. They have prepared a sulphonylurea tolbutamide by a different process patented by themselves. Yet it is being challenged and it has been pending before the court for the last three or four years. Lakhs of rupees are required to fight out the case in the court. Most of our industries today are not in a position to undertake such heavy legal expenses.

Now, I would like to mention the name of another compound with the name of chloropropamide which belongs to the same sulphonylurea group. Pfizers who are a giant corporation also patented it and they put it out in the market. Immediately when this came to their notice, Hoechsts said 'This comes under our patent; ycu are infringing on our patent rights'. And they begain to fight. And they could fight because both were giant corporations and each one of them had a patent which could make a very wide claim. For four or five years the fight went on; ultimately when they knew that both were giant corporations, they granted the licence, so that Pfizers also could put the product in the market as part of their patent.

The industry is a trial of skill. In writing a patent, it is only a matter of skill than anything else. If it were for one process only, then automatically the patentee would have been restricted to that process and he could not claim other processes.

Mr. Chairman: Is it your view that this patent can be claimed for all other combinations?

Dr. K. M. Parikh: Yes. According to their claim of R.I, it covers formulae with R and R 1, that means so many millions of compounds.

Mr. Chairman: This has been prohibited in the Bill.

Dr. K. M. Parikh: Not properly. In the Bill, it has been said that process is patented and not product. What I mean to say is that here also for these particular products, they have covered as many as 13 processes, all conceivable processes as their claim. All the 13 processes are included in these 30 claims. That means, I have no option; I cannot manufacture these products. They have made these claims all in such a way that I cannot reach that particular stage.

Therefore, it should be so provided in the law that that it should be process patent and one process only which actually they want to use which will be most economical to them, so that research incentive will be there and people will find out a better process and make it more economical and better. That will be in the public interest.

Further, Lord Loreburn states:

> "Some of those who draft specifications and claims are apt to treat this industry as a trial of skill, in which the object is to make the claim very vide upon one interpretation of it, in order to prevent as many people as possible from competing with the patentee's business, and then to rely upon carefully prepared sentences in the specification which, it is hoped, will be just enough to limit the claim within safe dimentions if it is attached in court. This leads to litigations as to the construction of specifications which could generally be avoided, if at the outset a sincere attempt were made to state exactly what was meant in plain language. The fear of a costly law suit is apt to deter any but wealthy competitors from contesting a patent. This is all wrong. It is an abuse which the court can prevent, whether the charge of ambiguity is or is not raised on the pleadings, because it affects the public by practically enter into the monopoly and does so by a kind of pressure which is very objectionable. It is the duty of a patentee to state clearly and distinctly either in direct words or by

distinct reference, the nature and limits of that he claims. If he used language which when fairly read is avoidably obsure or ambiguous, the patent is invalid whether the defect be due to design or to carelessness or to want of skill".

The reference is 32 RPC.

The claim 11 of the Patent refers to the conversion of benzenesulfonylt-hiourea into the corresponding sulfonylureas by treating sulfonylthiourea with agents eliminating sulpher. This means they cover everything, things not even known now. Here also Lord Ressel observed:

"The function of the claim is to defeine clearly and with precision the monopoly claimed so that others may know the exact boundaries of the area within which they will be trespassers. Thier primary object is to limit and not to extend the monopoly."

I would like to discuss this case further. On p. 3 of my memorandum, I have given the costing of these tolbutamide tablets as in the vs fixed by the kefauver Committee which clearly shows that even the Hoechest Chemical Corporation after taking their products and everything were selling to their licensee in America, M/s. Upjohn at $3.39 per 500 grammes, that is, to manufacture 1,000 tablets. The entire cost is given. The tableting charge is $2.00 in America which is hardly Rs. 2.83 2½ in India. Even if we calculate on the US standard, it will be $0.86 per 1000 tablets. On that, they used to pay a royalty to Hoechst at the rate of 7½ per cent, and the selling price used to came to 13.11. The same thing was sold to the trade at about $83.40 dollars, which is comparable with the Indian selling price. The same thing is being sold in Germany and England; it is cheaper there.

Shri R. Ramanathan Chettiar: Under the guise of the patent, they do this.

Dr. K. M. Parikh: Here there is no authority that can stop them. They take advantage of what is written in the law.

Continuing further with the case of tolbutamide, I would say that it is not to my knowledge that any company has started the research laboratory first, invested money and then afterwards they start manufacturing. Normally, they start manufacturing the unit first and from whatever profit they get, they assign 3, 4, 5 or 6% of their sale value. This is already calculated in the cost of the product which is marketed. This amount is put in successive years on a research laboratory. So there is no other capital as such created for research laboratory. It only means that research is done from the money obtained from the consumer. It is not that these corporations have invested money in it. It is the consumer's money.

Shri R. Ramanathan Chettiar: Is the practice different in your company?

Dr. K. M. Parikh: I am also doing it the same way; it can be the only way of doing research.

I was pleading that if fair chance is given to Indian concerns to be in this market at least, they can earn and spend more on research so that we can see that the development of this industry is tremendous. But today the real Indian industry has suffered greatly, because right after 1948, the Indian industrial concerns did not know how to create public opinion in this democracy so as to effect Government policy. Therefore, the policy has gone in such a way that it has always encouraged collaboration; the collaborators have come up and flourished. You see that hardly 100 firms take away 70 per cent of the total valume of sales in spite of the fact that these Indian concerns were existing long before independence.

Regarding cl. 5, only process is to be patented. Quite all right. But I would like to amend it further to say

that only one process which is effective and which is economical and which the patentee wants to use should be patented and not all the conceivable processes. I would then refer to the quotation from Mr. Leonard J. Robbins given in pages 7-8 of my memorandum and on the basis of that submit that the following change be made in Clause 4: "inventions where substances are not patentable but only one method or one process may be etc."

Clause 48. Normally tender buying is done by Government, local bodies, municipalities etc., not for profit but to distribute the medicines to the poor masses of the people who cannot afford to buy the drugs. Therefore, I feel that Clause 48 is very essential and should be retained as it is.

Clause 53, I have already made the point that the period should not in any case be more than seven years. The United States committee suggested three years, the South African committee suggested five years, the Canadian Committee suggested abrogation. Even the United States put in their Bill three years with 8 per cent royalty, including the royalty that the patentee has to give on technical knowhow, for manufacture as well as sales. So, when ours is a developing country where we have got the knowhow which we can develop, these patents should be limited to a maximum of seven years, from the date of application. I may also submit that all concessions and restrictions should relate to only one date, the date of application, as otherwise there will be confusion.

Clause 58(1). There was a case in 1948. CIBA took a patent for sulphathiazole, and May & Baker was the licencee in England. They had taken a patent not only for sulphathiazole but the compounds covering the whole group. This particular compound was being prepared by Boots, England, who had filed a patentee. So, they went to court and won the case, and the patent of May & Baker was revoked because it was wide and ambiguous. They asked for permission to amend their patent, saying they would have it only for sulphathiazole but the court did not allow it. So, if amendments are allowed in the court in the course of litigation, it will give the patentee wider scope. Therefore, I strongly feel that under this clause amendments at the court should not be allowed. Moreover, if for any one claim the product or the patent is declared invalid, it should be treated as invalid *in toto*. Only such strict rules and regulations will make the patentee a little careful while drafting his claims, so that he will not claim everything possible.

Clauses 87 and 88—licences of rights with respect to patents in pharmaceuticals and drugs. This is absolutely necessary and must be retained. It is argued why there should be discrimination between pharmaceutical and other patents, why there should be compulsory licence in the one case and not in the other, but as I said in the beginning, it is common practice throughout the world that there are different systems for different commodities, and pharmaceuticals and drugs are being treated by most countries on special lines for licensing. Compulsory licence was there, but it was not so far utilised mainly because the process was complicated, and therefore there is nothing wrong in having licences of right. If anybody wants to prepare, why should he not if he has the capacity to do it?

I do not know how the Controller of Patents is the proper man to find out whether the applicant has the capacity to manufacture or not. We have got a very strict Drug Control Administration in this country which looks after the quality, the purity and capacity to manufacture. It is necessary according to the schedules that they have to go and inspect the equipment, procedures, laboratories, standards etc. So, they are the pro-

per authority to look after this. If the licence is once granted under the licences of right and he is able to manufacture anything, he has to get the necessary permission from the Drug Control Authority, whether it is a small-scale or a medium-scale industry; large-scale industry automatically comes under the Industries (Development and Regulation) Act for purposes of development, regulation, licensing etc. These are the authorities who will see whether he is the proper man or not. Why should there be duplication at the level of the Controller of Patents? So, if an application is made for licences of right, it should be immediately granted, because whatever the fees or the loss is borne by the applicant and nobody else. Even if he wishes to throw away money and not utilise the licence afterwards, there is nothing wrong in it.

The Senator E. Fefauver Committee in their report have stated:

> "The conclusion would appear to be warranted that in this industry, the mere existence of patent protection is not a guarantee of invention, nor is its absence much of a barrier."

So, the best thing in the interests of this country is to abrogate the patents especially in the field of drugs and medicines. If this is done even for a short period of say ten years, you will see the difference.

I have also given one annexure published by the Reserve Bank which has already been discussed and which shows how by means of royalty etc. foreign exchange which is very scarce is being lost. The matter will be crystal clear to your honour that it is amply proved that the prices of the patented drugs are higher in this country even compared to the other developing countries. Why should Indians alone pay more to the giant corporations to meet their research expenses? In their characteristic way many foreigners and their friends will post various points and see that under the law this countinues to flow out from this country. The main point still remains. Are we to be influenced by the specialised techniques of the vested foreign interests and give up our grim determination to maintain our individuality?

In the memorandum I have suggested one point. From these calculations you may see that a royalty of four per cent or five per cent or ten per cent makes no difference so far as the price of these patents are concerned.

I may clarify one point. Who wants that the inventor should not benefit. He may be from any part of the world. The inventor must be encouraged. The royalty may be given. Only this patent Bill is necessary in order to stop the undue exploitation of people.

Shri Bibhuti Mishra: How many patentees are foreigners, how many are collaborators and how many Indians?

Dr. K. M. Parikh: I do not see much difference between collaborators and foreigners. Indian patents so far as pharmaceuticals are concerned may be about 3.5 per cent previously; it may be about 2·5 per cent now.

Shri Bibhuti Mishra: How much money is drained out through this business to the foreign country?

Mr. Chairman: He has submitted those figures which are published by the Reserve Bank. That will be circulated to the Members. I am requesting the witness also to send 65 copies.

Shri Bibhuti Mishra: What is your suggestion to have the know-how here —research scholarships to be set up in this country.

Dr. K. M. Parikh: My suggestion is very clear. These industries should be protected in the sense that only those who are really independent Indian industries—not collaborators or foreign firms—be given a chance to sell their products. They will defini-

tely do it. Not only that. I think about Rs. 15 crores is being spent by our government on researches in this country. I would like to give one example of Hoffkine Institute. They found a particular drug which was useful for the plague and they manufactured it. But they could not manufacture it because it was a patented product. The whole thing went to a court of law and one of the points in the court that it was not available in India. When the case was going on I have been told that patentee flooded the market with their products. Then the court went round and found that it was in the market and the case was rejected.

Now another example of the same institute is with regard to paludrine. They developed a process without any help, on their own. They asked the patentee, I think the ICI, to allow the manufacture of this particular product. They went on corresponding with regard to royalty, etc. It went on for five years and by the time it was resolved, malaria was more or less eradicated in this country.

Another thing with regard to Tolbutamide. The particular process is also absolutely original one. It is a process patented under our patents. But it has been found out that in Japan the same process has been put by a patentee as their process for patent in Japan. The matter could not be decided in the lower court; they had gone on appeal to the higher court.

With regard to Tolbutamide tablets, the price was Rs. 300 or more. Today's price is about Rs. 183 per thousand tablets. The Hoffkine Institute prepared it on their own and without any help from the Hoechst and they sold it at Rs. 60 per kilo. Many people started selling it. Then notices started coming in and many have stopped it also. If you consider the requirement of this, it is a permanent requirement; it is an anti-diabtes drug; diabetes could not be cured; it can only be controlled by this product. It is controlled by this product. These are permanent requirements. The present requirements are about 20 tons per year.

Shri Karmarkar: The case is going on in the court.

Dr. K. M. Parikh: Yes; the litigation is going on. Now, Hoffkine has been given a licence. When the Hoffkine Institute gives it at Rs. 60 per kilo it comes to Rs. 30 per thousand tablets. According to this, Indian firms were selling it at Rs. 50 for thousand tablets. Toray, Hoescht is selling it at Rs. 183. In July, 1961 it was Rs. 285. They are making a net profit of Rs. 150 on this drug. If it is Rs. 150 for 500 grams, it comes to Rs. 300 a kilo and Rs. 3 lakhs per ton, and for 20 tons, per year, it comes to about Rs. 60 lakhs a year. It should have been a little easier if it was shared by Hoffkine, and they would have earned quite a good amount and they would have further developed the research activities in their laboratory. But, instead of that, they are manufacturing same tablets for CSI; this is not economical, because in order to maintain their expenditure, the Government may not be able to grant them more money. While these advantages make the research laboratories flourish, it is not as if from the very beginning, a huge research laboratory has been established.

Shri Bibhuti Mishra: Are you in favour of bringing the drug industry into the public sector so that the poor people of our country may have cheapest medicine?

Dr. K. M. Parikh: I am not in favour of bringing it under the public sector, mainly because it is a very small industry. This is my individual opinion, and my firm has nothing to do with it. I personally feel that there is more of wastage and less of efficiency in the public administration. I am sorry to say it here. In the private undertaking, there is the question of owning it. It makes every individual work and the private sector gives proper attention in day-to-day matters. This industry is so small and we have

so many possibilities of changing the existing law a little here and there and through such changes, the Government can fully control the industry and bring the drugs for the use of the people at a very cheap price. If these changes are effected, definitely the country is going to get many products at very cheap prices. As you will see, chloroemphinicol is being sold by Indian small concerns at Rs. 3 per dozen against Rs. 11 per dozen by others. It is a great difference.

Shri Bibhuti Mishra: Are you in favour of having an appeal against the order of the Controller?

Dr. K. M. Parikh: In most of the cases, appeals are allowed but in some case, where delay is likely to take place, this delay is dangerous to the public, and an appeal in such cases should not be allowed. An appeal may be allowed to a tribunal appointed by the Central Government. The High Courts normally take more time and a lot of money is spent. I suggest a small tribunal to go into such questions, and on this tribunal, a judge may be represented.

Shri Bibhuti Mishra: Within what period, would you suggest, that an appeal should be decided?

Dr. K. M. Parikh: It depends on the court or the tribunal.

Shri Sham Lal Saraf: The hon. witness has made a number of points. Creating interest in research and inventive genius as far as drugs are concerned is absolutely necessary, and that alone will bring us to some stage of development as far as the pharmaceutical and drug industry is concerned. Making the drugs available at a lower or a cheaper price or a reasonable price is a different thing altogether. Do you agree that these are two separate things altogether? Therefore, do you agree that as far as the preservation of research and encouraging research and making the best medicines available to our countrymen, as far as possible, all efforts should be made?

Dr. K. M. Parikh: I have already made it clear.

Shri Sham Lal Saraf: If I have heard you aright, you said that it is only just a small percentage of the present-day patents are registered in name of Indian firms. On the contrary over 90 per cent of patents are registered in the name of foreigners. That being so, all the drugs, chemicals and pharmaceuticals that are sold in this country today are available because either you have got some know-how imported into this country or there is collaboration from firms outside this country.

Dr. K. M. Parikh: I do not agree with it completely, because all the drugs that are available in the country are not mainly manufactured elsewhere. There are manufacturers here, and they are able to manufacture because all the drugs are not patented. There are some which are being manufactured in India and they are sold in India in a free market by Indian concerns.

Shri Sham Lal Saraf: At the moment, the discussion is on patents. May I ask you how many drugs from your firm—which I know for years—have been patented and are sold out as patented drugs of your firm?

Dr. K. M. Parikh: It is only a negligible amount.

Shri Sham Lal Saraf: How many?

Dr. K. M. Parikh: 3·25 or 2·50. From my firm, there is not a single patent.

Shri Sham Lal Saraf: So, do I take it that the hon. witness has little experience about patented drugs?

Dr. K. M. Parikh: To have experience in obtaining and patenting the drugs is entirely different. What I say is, we are not given that opportunity to earn and invest on research as is given in the foreign countries, so that we could produce a sizeable research activity and manufacture medicines

and drugs which could be patented and sold.

Shri Sham Lal Saraf: As far as procuring the drugs for the common man is concerned, everybody agrees that that they should be sold at a reasonable price. Do you agree that that change can be brought about if our administration is geared to that ideal?

Dr. K. M. Parikh: That change can be brought about.

Shri Sham Lal Saraf: You have said at one place that there is discrimination between pharmaceuticals or manufacturers within the country and those who manufacture with the collaboration of, or with imported know-how from, foreign countries. Could you explain that? You have also said that you are being threatened that some of your products would be seized when sold in the market. You have not said by whom you are being threatened and why. Could you please explain both these points?

Dr. K. M. Parikh: Some foreign collaborators are manufacturing some of the patented drugs here in India, and it is their monopoly. In the case of tolbutamide, we bought it from Hoffkine Institute and sold it, and we got a threatening letter, and we have to face court action in this matter.

Shri Sham Lal Saraf: At one place you say that the period in respect of the registration for your patents should be from three to five years. I should expect that you have some experience of research work and, so, may I know how much time, on an average, it takes for developing a genuine research skill in a properly equipped laboratory to find out a particular equipment and then work at it?

Dr. K. M. Parikh: To have an up-to-date pharmacological laboratory, I require a lot of money. Today I have to sell in competition with foreign manufacturers who are already there with established names.

Shri Sham Lal Saraf: I was asking about the time factor, apart from the costs. Taking into account the time taken for completing the processes and then working it out and so on, to make it a patentable thing how much time would you ordinarily require?

Dr. K. M. Parikh: It varies from 1 year to 2 or 3 years. For example, this tolbutamide was a sulpha drug which was used for other purposes. By chance it was found that it lowered sugar in blood. After that, a little work will clearly bring out its properties.

Shri Sham Lal Saraf: Let us leave it to the committee to decide the period. Are you in favour of revoking a patent by a particular time and if so, under what circumstances should this revocation take place?

Dr. K. M. Parikh: If a limit is fixed for a patent, it should not be revoked before that. If the patent is not worked, there is already the provision of 'lenceces of Right'. If that is enforced, it will ensure that all patents are worked.

Shri D. P. Karmarkar: Your two principal points are that the patent clause has come in the way of development of Indian medicine and secondly, the prices charged here are enormous compared with the prices at which they are available outside. Do you agree that apart from some handicaps which arise on account of the fact that we have been backward in the development of modern medicine, in order to make India self-sufficient in medicine, for some time there would have to be foreign collaboration, even at a disadvantage?

Dr. K. M. Parikh: I am not at all against foreign collaboration.

return. Even if 7½ per cent is given I feel that it will be a fair amount.

Shri Kashi Ram Gupta: I invite your attention to the Memorandum of your managing agents, Mr. G. M. Parikh for Jagat Ram and company, wherein they have put down only 4 per cent.

Dr. K. M. Parikh: I know that.

Shri Kashi Ram Gupta: On page 2 of your memorandum you have given the example of Italy and Japan. How many years did it take Italy or Japan to bring in the Patent Act?

Dr. K. M. Parikh: I do not know. I think in Italy it was done recently.

Shri Kashi Ram Gupta: Only yesterday the Japanese industrialists have come out saying that they are against the present Patent Bill of India.

Dr. K. M. Parikh: It might be a timed one.

Shri Kashi Ram Gupta: You have said on page 2:

> "In order to achieve these twin objectives, the best and the only way out is to abrogate the Patents completely till we develop to such a stage when we can enter this convention.

What is your idea about "till we develop"? When do you think we can consider ourselves to have sufficiently developed? How can you measure that?

Dr. K. M. Parikh: I think 10 to 15 years will be enough for development. Once there is no Patent, even American manufacturers will be ready to collaborate with us for giving the know-how etc.

Shri Kashi Ram Gupta: You have given a list of liquids, ointments and powders of Zandu Pharmaceutical works. This means that although these are unpatented so far as Zandu works are concerned, in the case of other firms they are patented.

Dr. K. M. Parikh: I am just telling the class of medicines and not of any paritcular product. I have only said that our processing capacity for liquids is this.

Shri Kashi Ram Gupta: You have put in liquids, ointments and powders of Glaxos. Are they patented or not?

Dr. K. M. Parikh: They include both. I have given the manufacturing capacities of these pharmaceutical preparations.

Shri Kashi Ram Gupta: Now, the old patents are there. We are fast developing and they may be but of use. In any case they have made a lot of profit. Are you in favour of revoking all those patents?

Dr. K. M. Parikh: Who is to decide whether they have made enough profit? It can be generally decided on the basis of the number of years.

Shri Kashi Ram Gupta: When you say that 7 years is enough you think that 7 years is enough to give him the expenses of research and also a good living to him, and after this Bill comes into an Act all those old patents must be revoked?

Dr. K. M. Parikh: All those that are more than 7 years should be revoked.

Shri Kashi Ram Gupta: You have given an idea about your firm. Are there such firms in India whose patents are working in a good way and they are also in favour of abrogation of all patents for the time being?

Dr. K. M. Parikh: I do not know of any Indian firm having patents except one or two in Bengal and one here.

Shri Kashi Ram Gupta: Therefore, that is one of the reasons why this abrogation is sought.

Dr. K. M. Parikh: It is in the national interest.

Shri K. K. Warior: What percentage of the total sale proceeds of your firm is reserved for research work?

Dr. K. M. Parikh: We have not allotted any specific amount. As and when we require it, we go on spending it. At present we are spending a very small amount.

Shri K. K. Warior: What will be the approximate percentage?

Dr. K. M. Parikh: About one per cent.

Shri K. K. Warior: Do you agree with the view that if patent rights are not given there is every chance of many spurious drugs being manufactured?

Dr. K. M. Parikh: No, I do not agree. Because, there is strict drug control administration in this country.

Shri K. K. Warior: Do you not agree that spurious drugs are being manufactured?

Dr. K. M. Parikh: They are manufactured even in the United States. It is something which no one has been able to stop the world over.

Shri K. K. Warior: What will be the approximate profit range of the Indian manufacturers without any collaboration?

Dr. K. M. Parikh: Normally, the profit range of the Indian concern is much less than that of the foreign companies. The cost of raw materials multiplied by twenty will be the standard for foreign concerns. In the case of Indian concerns, if chlorophenical is sold for Rs. 3 it may be only two times

Shri K. K. Warior: If the foreign collaborators are not given patent rights do you think that indigenous manufacturers would be able to cope with the demand?

Dr. K. M. Parikh: Yes, I am confident.

Shri Daljit Singh: Is there any objection if there is a provision for expropriation of patent rights or acquisition of invention by Government?

Dr. K. M. Parikh: I have not studied it so thoroughly. So, I have nothing special to mention about it.

Shri Daljit Singh: You said that there is a vast difference in price between the products of Indian patentees and patentees with foreign collaboration. But is there any difference in quality of the product or process of manufacture?

Dr. K. M. Parikh: No difference. The quality is the same.

Shri Daljit Singh: Then why is it that people do not prefer to buy Indian manufactured products?

Dr. K. M. Parikh: That is individual preference. I cannot explain it.

Shri P. K. Kumaran: In Italy there has been no patent system. Some people hold that the absence of patent system did not encourage the invention of medicines in Italy, for the same although they have been manufacturing a large number of medicines and have been often introducing 20 to 30 variations of the medicines introduced by foreign firms.

Dr. K. M. Parikh: I do not agree there. In Italy they have also found out many of the products which are under trial. Many products have been invented in Italy even in the absence of patents. Even when there was no patent law many things were found out by the foreign countries.

Shri P. K. Kumaran: Is it not a fact that the Italian industry was able to sell its product at lower price than the international market price?

Dr. K. M. Parikh: Yes, they were able to sell even to England, a country which has a patent law.

Shri A. T. Sarma: I was under the impression that your firm is dealing with Ayurvedic pharmaceuticals also.

Dr. K. M. Parikh: We have dealings with allopathy, biological and Ayurved.

Shri A. T. Sarma: But you have not mentioned about Ayurved in your written speech. Do you not think that Ayurvedic medicines also require patents?

Dr. K. M. Parikh: We need not bother about Ayurved because this is the only country which is producing Ayurvedic medicines.

Shri A. T. Sarma: What is your opinion about it?

Dr. K. M. Parikh: It is a very big problem on which I have definite ideas. I have given some lectures on this subject.

Shri A. T. Sarma: Do you think that the provisions of this Bill are beneficial to Ayurved?

Dr. K. M. Parikh: For example, CIBA is doing research on reserpin which is the same as sarpagandha in Ayurved. The thing to remember is if the medicine is prepared in a fine finished form it will have a wider market while if it is in a coarse form, as it exists today, it will have very little market. Therefore, so far as the properties of the medicines are concerned, they should be scientifically explainable by the action of the drug etc.

Shri A. T. Sarma: I am not talking about the medicine. I am asking about the process of research work in Ayurved.

Dr. K. M. Parikh: If a firm deviates from the old process in Ayurved, immediately the vaids criticise it by saying that it is going against the old and well-established Ayurvedic traditions. Many of the vaids may not like it. That is why there is no progress in that field.

Shri A. T. Sarma: I was thinking about Makaradwaja.

Mr. Chairman: Anyhow, that is not the matter under discussion here.

Shri A. T. Sarma: I want to know whether any special provisions are necessary in the Bill for improving Ayurved.

Dr. K. M. Parikh: As we are the only country practising Ayurved, I do not think it is necessary. If it is included in the Bill, there is nothing wrong either.

Shri A. T. Sarma: So, you are not against its inclusion?

Dr. K. M. Parikh: No, I am not against it.

Shri A. T. Sarma: You have mentioned that you anticipated the Bill earlier and that it has come in a mutilated form. What is the meaning of it?

Dr. K. M. Parikh: I have discussed the two points—seven year period and abolition of patents. I think, abrogation will serve the interests of this country much better. But as we have already patentees in India, having big factories and everything, perhaps it may not be possible so to combine two ideas and to come to an amicable settlement. If the period is limited and licence is given, it will be a better solution.

Shri A. T. Sarma: In your memorandum you have stated that some safeguards are needed to protect the interests of Indian drugs. What do you mean by that and what safeguards do you want?

Dr. K. M. Parikh: I do not think so.

Shri Veeranna Gowdh: It is stated that the period should not be more than 7 years while in the Bill it is stated as ten years. What is your opinion if a period of only five years is fixed?

Dr. K. M. Parikh: It can be anything. The exploitation period should be as low as possible so that it gives them enough opportunity to recoup their expenses as they say and, at the same time, it should not give them a longer duration for exploitation. In genuine cases, I have already suggested, an extension of three years may be granted.

Shri Veeranna Gowdh: In your opinion royalty should be about 7½ per cent, not more than that, while in the Bill it is 4 per cent. Suppose, no percentage is fixed and each case is dealt with separately?

Dr. K. M. Parikh: It may delay the matter. As I told you in the case of the Haffkine Institute Paludrine was delayed for fixing up the royalty. After five years they got the permission. So, there must be some period fixed.

श्री ब्रज बिहारी मेहरोत्रा : आपने जितना स्टेटमेंट किया है वह दवाओं को सामने रख कर किया है लेकिन अगर कोई और चीज़ का उत्पादन हो, छोटे इम्प्लीमेंट्स एग्रीकलचर के या ऐसे इम्प्लीमेंट्स जो जनता को बड़े पैमाने पर काम दे सकें और उसमें इनवैस्टमेंट ज्यादा होगा तो फिर उसमें भी आप चाहेंगे कि चार वर्ष की ही यह अवधि रखी जाय ?

डा० के० एम० पारीख : मैं उसके लिए कुछ नहीं बतला सकता ।

श्री ब्रज बिहारी मेहरोत्रा : आप चाहते हैं कि संरक्षण में भेद रखा जाय . . . .

डा० के० एम० पारीख : जहां जहां अपनी प्रजा और समाज को ज़रूरत हो वहां वहां भेद रखा जाय लेकिन जहां ज़रूरत न हो वहां एक ही रखा जाय ।

श्री ब्रज बिहारी मेहरोत्रा : दूसरी चीज़ आप ने यह कही कि भारतीय चीज़ों का जहां उत्पादन होता है उनमें और विदेशी चीज़ों के उत्पादन में संरक्षण में ही भेद रखा जाय तो इससे क्या आप समझते नहीं हैं कि विदेशी लोग आकर उसका फायदा उठाते रहेंगे ?

डा० के० एम० पारीख : मैं ऐसा नहीं कहता । मेरा कहना ऐसा था कि जो हमारा भारतीय उत्पादन होता है वह चीज़ विदेशों से हमें नहीं लेनी चाहिए । अब जिनका भारतीय उत्पादन होता नहीं है और जिनकी आवश्यकता है तो विदेशी क्यों नहीं लेना चाहिए ।

श्री ब्रज बिहारी मेहरोत्रा : विदेशी चीजें ऐसी हैं जोकि विदेशों ने आविष्कार की हैं, उन्होंने अनुसन्धान किया है और वह आप के देश में आती हैं और अगर वह आपके देश में नहीं बनती हैं तो जाहिर है कि आपको उन्हें वहां से महंगे दामों पर खरीदना पड़ेगा ।

डा० के० एम० पारीख : जब वह चीज़ हमारे देश में नहीं बनती हैं और वे आवश्यक हैं तो उनको ज़रूर लेना चाहिए ।

श्री ब्रज बिहारी मेहरोत्रा : वह जो संरक्षण का भेद आप चाहते हैं वह कैसे रहेगा ?

डा० के० एम० पारीख : मैंने ऐसा भेद नहीं चाहा है । जो चीजें ज़रूरी हों और जो यहां नहीं बनती हों उनको वहां से लेना चाहिए अलबत्ता अनावश्यक चीज़ें यहां बाहर से नहीं लानी चाहिए ।

श्री ब्रज बिहारी मेहरोत्रा : सवाल तो ज़रूरी चीज़ों का ही है अब मिट्टी का कौन पेटेंट चाहता है । . . . .

डा० के० एम० पारीख : जिनका उत्पादन यहां होता है उनको बाहर से नहीं लाना है ।

श्री ब्रज बिहारी मेहरोत्रा : क्या यह सही नहीं है कि आपने अपनी फर्म को सामने रख कर ऐसा कहा है चंकि आपकी एक बड़ी मशहूर फर्म है बहुत सी चीजें मैनुफैक्चर करती है इसलिए पेटेंट का समय इतना कम रखा है कि आप उसको एक्सप्लाएट कर सकें ?

डा० के० एम० पारीख : वह तो पेटेंट ग्रांट करने का एक सिद्धान्त है चाहे, वह पेटट ग्रांट 7 साल हो, 10 साल हो या 20 साल हो । जिसे पेटेंट ग्रांट मिलती है वही अपना इन्वेन्शन डिस्क्लोज़ करता है पबलिक को बताता है और यह नम्बर आफ़ इयर्स जो रखा है उसका प्रयोजन ही यह है कि सात साल के बाद वह कर सकता है ।

Shri Peter Alvares: You have been arguing for some time that if the patents are progressively abolished it would be an incentive for Indian industry to develop. If the patents are entirely abolished, that would mean that there would be no protection for Indian industry if by chance you develop an invention yourself. As an investor in the private sector, are you agreeable to this position?

Dr. K. M. Parikh: I think, inventions are not made mainly by beginners and other people with the intention of patent protection only. They are done because it is a creative desire of man. The name is more important than financial gains.

Shri Peter Alvares: Therefore you are of opinion that even when Indian industry comes of age or is competent enough, even in those circumstances the Indian pharmaceutical industry is not in favour of any protection of patents.

Dr. K. M. Parikh: It may be a commercial aspect, as Italy is entering into today. If the people of this country feel like it, they may enter into it at that time.

Shri Peter Alvares: You are not sure about it. You are the first chemist here as a witness. There is a distinction sought to be made between protection of a product and protection of a process. I want to know from your experience or from the experience of the world, whether this distinction is real or whether it is possible to develop a particular product by a a process other than the one patented. Are there theoretically or in practice various ways of arriving at a product? If it is so, it is understandable; but if it is difficult or impossible in practice to arrive at a particular product by any other process, the distinction is only national.

Dr. K. M. Parikh: There is a possibility. The same product can be prepared by more than one process. The Haffkine Institute is a Government institute and their process is open to everybody. Anybody can go and see it.

Shri Peter Alvares: If there are various possibilities of arriving at the product by various other methods, what is the great objection to industrial or pharmaceutical patent?

Dr. K. M. Parikh: All the processes are covered by the specifications and I cannot do it. Here I have a patent of Hoechst which contains 13 process and runs into 56 pages. It has covered all the possible sulphonylureas and all the possible and conceivable processes.

Shri S. N. Mishra: What is the number of Indian patents in the field of drugs?

Dr. K. M. Parikh: I may not be knowing the exact figures but it may be 2.5 to 3.5 per cent. That will, however, include such type of patents which are also challenged.

Shri S. N. Mishra: That means, 97 per cent is the number of foreign patents.

Dr. K. M. Parikh: Yes, Sir.

Shri S. N. Mishra: Why are Indian patents not coming up? What is the

practical difficulty in the way of Indian patents coming up?

Dr. K. M. Parikh: I gave a solid example of the Haffkine Institute. If they had been allowed to do their patent, they would have earned so much money that they could have built a very huge research laboratory and then only the results would come out. To do research is not one or two individual's job.

Mr. Chairman: Is it the current patent law that is in the way?

Dr. K. M. Parikh: To an extent, yes.

Shri S. N. Mishra: How many of these 2·5 to 3·5 per cent patents belong to the private sector?

Dr. K. M. Parikh: I do not know.

Shri S. N. Mishra: Normally, the assumption would be that the private sector is not so well-equipped for the kinds of inventions which are required. If that is the present position, how do you think that you can displace the large number of patents that are granted to the foreigners?

Dr. K. M. Parikh: I do not know about the first part of it . . .

Shri S. N. Mishra: You are not able to get at my point. The assumption would be that the Indian industry is not well-equipped to undertake inventions because of lack of resources or maybe because of lack of talent and so on. Is that assumption correct or is it something else which is coming in the way of the Indian patents coming up?

Dr. K. M. Parikh: It is quite right that if the patents are to be worked out, the finance and other things are required. If a little assistance is given, more and more patents will be worked out.

Shri S. N. Mishra: Do you want the resources to be provided by the Government?

Dr. K. M. Parikh: It will be very difficult for the Government to provide such huge amounts . . .

Mr. Chairman: What is the assistance that you want? That is what you said.

Dr. K. M. Parikh: Assistance, in the sense, to protect the Indian industry in selling their products, etc. so that instead of having competition with other people and selling the products at a low price, they can make a little more money and spend more on it.

Mr. Chairman: You want to introduce Indian monopoly instead of foreign monopoly.

Dr. K. M. Parikh: That is not my submission. As we see, there is a difference of Rs. 150 as profit on a particular product and the Indian capitalist may not take that much but, say, Rs. 20 or Rs. 30 or Rs. 40 which may be utilised for the research.

Shrimati Sharda Mukerjee: From your evidence what I gather is that what seems to be in the way of further research in India is the lack of well-equipped laboratories. Is that not so?

Dr. K. M. Parikh: There are many laboratories which are well-equipped. But further expansion of the laboratories is needed.

Shrimati Sharda Mukerjee: More research is held up due to lack of more facilities.

Dr. K. M. Parikh: By virtue of having more facilities, that is, more and more good laboratories, there will be more people working into them taking up more problems at a time. Today, they may be able to take up a few problems out of which only 3 or 4 may show results.

Shrimati Sharda Mukerjee: There are many processes which are well-known and which are not patantable.

May I know why we have not been able to adopt those processes here and make medicines or even other products of the same standard as obtains in the case of goods which we import?

Dr. K. M. Parikh: The Indian industry is preparing quite a large number of chemicals which are not patantable.

Shrimati Sharda Mukerjee: Why have we not been able to obtain the same standard in the case of medicines or other products?

Dr. K. M. Parikh: Our standard is the same . . .

Shrimati Sharda Mukerjee: Not in every case.

Dr. K. M. Parikh: I would say every case. Whatever drawbacks are there, they are common to both foreign or Indian.

Shrimati Sharda Mukerjee: It has been the experience that where special protection has been given to the Indian industry, the prices have shot up and neither the quantity of commodity available to the market nor the quality has improved.

Dr. K. M. Parikh: There can be a number of factors, namely, the short supply of commodities, the profit element and a number of other factors can also be there.

Shrimati Sharda Mukerjee: Therefore, if we were to abolish patents, it may not necessarily help the drug industry.

Dr. K. M. Parikh: It will help so far as patented drugs are concerned.

Shrimati Sharda Mukerjee: What is the percentage of patented drugs in India? We were told that 3 to 4 per cent of the drugs used in India are patantable.

Dr. K. M. Parikh: If you take all the drugs available . . .

Shrimati Sharda Mukerjee: Out of the drugs which are in use today, what percentage of them are patented?

Dr. K. M. Parikh: There may be some obsolete things which may be in use somewhere in the country . . .

Shrimati Sharda Mukerjee: You take the drugs which are in use today. What is your assessment?

Dr. K. M. Parikh: It will be 40 to 50 per cent.

Shrimati Sharda Mukerjee: We were told that it is only about 4 per cent.

Dr. K. M. Parikh: That is how I have calculated.

Shri V. B. Gandhi: You suggested that the term of patents should be 7 years. As an experienced business-man holding responsible position in a very large Indian firm, you should be able to tell us how it can be worked in 7 years. As you know, before a drug can be put on the market, it requires a chemical trial and all sorts of other trials. The Government requires that it should undergo a thorough trial. It takes some time to obtain an industrial licence. Also, as you know, sometime is taken for marketing the product. Of course, there are some products which were lucky enough to be successful immediately, like, chylromycetin or such other products. But that good luck cannot be expected in every case. So, considering the requirements of chemical trials insisted by the Government and the time taken for marketing and so on, would you not like to reconsider your suggestion?

Mr. Chairman: He has already given the answer.

Dr. K. M. Parikh: The period of 3 years is enough for recouping the expenditure while the period of 4 years is enough for other things. In the case of a really genuine case, it may be given an extension.

Shri V. B. Gandhi: About the prices, it seems everybody wants to blame the present high prices of the patented products in India as Shrimati Sharda Mukerjee and Shri Karmarkar also pointed it out. Actually, the percentage of the products that are patented in India, according to our information received from our responsible source which we have every reason to believe, is not in excess of 2½ per cent to 3 per cent. So, what applies to 2½ per cent or 3 per cent should not be enough to push up the entire level of prices. The prices of other products which are not patented have gone up. The prices of all other products, even non-medical, have gone up; the toilet soap, Hamam, used to be sold at only 5 annas but now the price has gone up to 8 or 10 annas; the ENOS fruit salt—not patented I hope—which used to be available for Rs. 3 now costs Rs. 6. So we cannot throw the blame for high prices only on the existence of patents.

Dr. K. M. Parikh: It is not a question of high price only; it is a question of exorbitantly high price. This thing happens only when monopoly in some way is created and one of the ways is patent.

Shri R. P. Sinha: Without good chemical engineering we cannot make use of patents even if they are available to us free because it is not only the know-how, but the chemical engineering has not developed to a stage where what you do in the laboratory can be translated into practice. So, in your opinion, what is the stage of chemical engineering that we can take advantage of the patent only provided even the know-how was not available to us or we will have to pay for the know-how.

Dr. K. M. Parikh: We are fairly developed in chemical engineering. Moreover, chemical engineering is a thing which can be bought from any country. We can go out to an American firm of chemical engineering and get the plants; there will be payment only once..

Shri R. P. Sinha: Some of the chemical pharmaceutical manufacturers abroad met us as doctors and they said that, if they were to withhold the know-how when the patent law is changed, then India would suffer. What do you think about this?

Dr. K. M. Parikh: I do not agree with it because the technical know-how is fairly available. Most of the chemical processes are of a common nature with very little difference. Secondly, these foreign collaborators employ a number of scientists at very high remuneration and I do not know how far they have really learnt it; the things come straight from there and they have to act according to what is written down there.

Shri R. P. Sinha: The sales promotion forms a major expenditure item as compared to research. What, in your opinion, those firms which are here either as collaborators or manufacturers are spending, as a percentage, on the sales promotion and on research?

Dr. K. M. Parikh: Sales promotion is essential and they spend money on it. How much they are doing it in India, I do not know, but I can say from the figures elsewhere that the expenditure on sales promotion is fairly very high compared to the expenditure on research.

Shri R. P. Sinha: If the expenditure on sales promotion is cut down from 25 or 30 per cent to 10 per cent, then there will be reduction in the prices. What have you to say on this?

Dr. K. M. Parikh: That is only one aspect, but it will not bring us technology which we are very much wanting.

Shri R. P. Sinha: The Indian firms have to compete with foreign firms. The foreign firms have better means of detailing sales promotion with the result that the Indian firms' goods do

not get the same stamp of respectability as those of foreign firms. As you say, the Indian firms are working at a very meagre margin. So in order to bridge this gap between foreign and Indian firms, the only thing that can be done is to cut down this expenditure. What do you say about this?

Dr. K. M. Parikh: Instead of that, my suggestion would be that we should divide: wherever the Indian firms can do, the field should be open to them; why should there be any competition?

Shri Bibudhendra Mishra: For the information of the members, I may tell about the percentages as given by the Drugs Controller.

Out of the total mass of medicines used in the country, about 60 to 65 per cent is patented, but out of the total number of patentees, the number of Indian patentees is somewhere in the region of 2·5 to 3 per cent.

Shri D. P. Karmarkar: In other words, 65 per cent are alive today.

Shri S. K. Borkar: Of the drugs which are available in the market, 65 per cent constitute those which are patented.

Shri D. P. Karmarkar: Of this 60 or 65 per cent, how many cover 70 or 80 per cent of the field?

Shri S. K. Borkar: I can say that about five groups of drugs constitute about 80 per cent of the consumption.

Shri Bade: You have said in your Memorandum that we should abolish this Patent Bill. But now you have climbed down to this level, namely, instead of abolishing, we should have some curbs on the foreign firms. We have got the Model laws in which it is said that, if this Act was made retrospective—some countries have done like this—the developed countries cannot send their know-how to the under-developed countries and, therefore, there should be no compulsory licensing.

Dr. K. M. Parikh: Even today what is the know-how they have given to us—from the example of Tolbutamide.

Shri Bade: We shall compel them.

Dr. K. M. Parikh: How far is it proper or how far is it correct?

Shri Bade: According to the Bill, only processes would be patented and not the product. Suppose the processes are patented and according to one process, they are manufacturing the product, the other processes will be sealed. Is it not a fact.

Dr. K. M. Parikh: The other processes will be open for others.

Shri Bade: According to this Bill, only processes can be patented. Suppose they have patented ten processes and they are using only one process, then the other processes will be sealed out.

Dr. K. M. Parikh: Therefore, it was my submission that one process should be sealed and the others should be kept open.

Shri Bade: There is a provision in the Bill; it will be sealed for three years.

Mr. Chairman: If they want to manufacture with other processes, they must take patents for those processes also.

Shri Bade: So there should be that amendment here; if they are not using the other processes, they should be open to the public.

Dr. K. M. Parikh: Only one process should be mentioned.

Shri Bade: Regarding the period, you have said that it should be 3 or

5 years. We are also a party to the Model Laws; our representative was there and we have said that the period should be only 10 or 14 years. If you say that it should be 3 or 5 years, then we should give them some royalty.

Dr. K. M. Parikh: We can revise our thinking.

Shri Bade: How can you make it retrospective without giving them compensation or royalty or damages?

Dr. K. M. Parikh: It is not that question. The Bill, which will come into force is there. They are enjoying patent under the new Bill also.

Shri Bade: The section is quite clear. Same royalty should be given to them.

Dr. K. M. Parikh: They have already provided 4 per cent. I am suggesting 7 per cent.

Shri Bade: That is all right.

श्री चौरड़िया : आपने कहा है कि जापान ने बड़ी तरक्की की है । मैं जानना चाहता हूं कि अपने यहां नो हऊ लाने के लिए आप क्या प्रयत्न करेंगे ?

डा० के० एम० पारीख : अपने यहां भी नो हऊ ला सकते हैं

श्री चौरड़िया : आपको शुरुआत करने में क्या कठिनाई है ?

Dr. K. M. Parikh: We can buy this know-how and get this know-how also but we have gat our know-how in our country. The case is such that we have got enough know-how to start within our country.

श्री चौरड़िया : अपने यहां के नो हऊ का ठीक तरह से उपयोग करने के लिए और इनवैंटर को ठीक तरह से लाभ पहुंचाने के लिए यह आवश्यक है कि कानून दोनों के हितों की रक्षा करे । क्या आप कानून को उस ढंग से बनाने के पक्षपाती हैं जिससे अपने नो हऊ का भी उपयोग ठीक से हो और इनवैंटर को भी प्रोटेक्शन मिले ?

डा० के० एम० पारीख : इसीलिए मैंने सात साल का प्रस्ताव किया है ।

श्री चौरड़िया : एक तरफ आप कानून बनाने के पक्ष में नहीं हैं, दूसरी तरफ आप चाहते हैं कि कानून बने तो सात साल की अवधि उसमें रहे । अगर इनवैंटर को प्रोटैक्शन देना है तो जैसा कानून में दस बरस रखा गया है उससे उसे ज्यादा प्रोटैक्शन मिलेगा या कम मिलेगा ? मेरे खयाल में तो ज्यादा मिलेगा ।

डा० के० एम० पारीख : पेटेंटैड प्रोडक्ट्स बनाने में अभी थोड़ी देर लगेगी । खुद अपना पेटेंट निकाल सकें, इसमें थोड़ी देर लगेगी । एक दम से दौड़ा नहीं जा सकता है । पहले आहिस्ता आहिस्ता चलना सीखना होता है और उसके बाद दौड़ना सीखा जा सकता है ।

श्री चौरड़िया : मैंने यह सवाल किया है कि नो हऊ को उपयोग में लाने के लिए सात साल के बजाय दस साल तक प्रोटैक्शन दी जाये तो वह हमारे हित में होगा या अहित में ?

डा० के० एम० पारीख : प्रोटैक्शन उसी चीज़ में हो सकता है जहां पहले वह चीज़ पेटेंट हो चुकी है । अलग तरीके से बनती है पेटेंट की वजह से तो उपयोग नहीं कर सकते हैं

श्री बड़े : दस ग्यारह साल लगते हैं प्रोड्यूस करने के लिए अगर कानून में पीरियड के ऊपर कंट्रोल हो जाये तो क्या हरज है ?

डा० के० एम० पारीख: अच्छी चीज़ है ।

श्री चौरड़िया : सात साल का पीरियड रखा गया है और कहीं कहीं अगर एक्सटेंशन देने की ज़रूरत हो तो क्या आप उसके हक में हैं ताकि कुरप्शन की सम्भावना ज्यादा न रहे ?

डा० के० एम० पारीख : मैंने सजैस्ट किया है कि अगर कोई जनुइन केस हो और एक्सटेंशन देने की ज़रूरत हो तो तीन साल का दे दिया जाये ।

Shri Bade: That is not in the Bill.

Dr. K. M. Parikh: This is indirectly a control. It is valid for 7 years. If I know the same know-how I will go for licence and I will manufacture the same. I will utilise my know-how.

Shri P. C. Borooah: You support the bill in toto. What steps you would suggest to encourage inventions?

Dr. K. M. Parikh: It depends on the development of the country and the country's inventive capacities. Today America or England need this patent bill. India may not require to that extent.

Shri R. Ramanathan Chettiar: While he mentioned about the period of 7 years may I ask him whether it is his contention that this will crub the monopolistic tendencies in the drug and pharmaceutical industry and also bring down the price level of drugs in the country?

Dr. K. M. Parikh: Yes. It will definitely bring it down.

Shri Basanta Kumar Das: I understand that under the present circumstances if this law is enacted then it will be of some disincentive to foreigners to transfer their know-how to us.

Dr. K. M. Parikh: It will curb the period of exploitation, or area of exploitation.

Shri Basanta Kumar Das: Do you think it will not stop know-how?

Dr. K. M. Parikh: It will not stop know-how. It will flow.

Mr. Chairman: You said that the same period for drugs may be fixed as 3 or 5 or 7 years. Some of the witnesses who came before us told us that this discrimination should not be made between drugs and other patents. Is there any such discrimination existing in other countries?

Dr. K. M. Parikh: In some other countries pharmaceutical and drugs are treated on a special level. Even in England compulsory licence is allowed for drugs and medicines.

Mr. Chairman: What is the period fixed for that?

Dr. K. M. Parikh: I don't know much . . .

Mr. Chairman: You gave a table and said that the c.i.f. prices of drugs were far below the local manufactured prices here. What would be your remedy to control those prices? What would be your reaction?

Dr. K. M. Parikh: Allow others to manufacture. It will bring down prices.

Mr. Chairman: It has been stated to us that in spite of the patent law being there for so many years, India has not taken advantage of that.

Dr. K. M. Parikh: In law we have to take the licence and then only we can manufacture. They take so much time in giving terms and then in correspondence and all these things.

Mr. Chairman: You quoted one item where the price of Indian manufacture was Rs. 3 and the price of foreign manufacturer was Rs. 11. Do you

agree that the standard of the two drugs are the same?

Dr. K. M. Parikh: Absolutely same. You can send to any chemical or clinical laboratory for test. It will come to same standards. Basic material is purchased from the same source.

Mr. Chairman: You said that nothing new has developed in this country. Some witnesses have said that the foreign collaborators have helped us with these modern medicines and patented drugs and if these restrictions were to be placed that much of know-how may not be forthcoming to the Indian manufacturers.

Dr. K. M. Parikh: They are helped in the sense that we pay exorbitant price, much higher price than the price prevailing in their own home country.

Mr. Chairman: It is our mistake.

Dr. K. M. Parikh: Our law and our regulations are such that they get all this benefit.

Mr. Chairman: If we do not pay, they won't make such profits. This is a matter for negotiation.

Dr. K. M. Parikh: That is because they are the monopolist under our existing patent law. When the Doctor writes a particular preparation, the patent goes to the chemist and gets it without enquiring the price.

Mr. Chairman: Do you agree by and large with the provisions of the Bill that is now being proposed?

Dr. K. M. Parikh: I fully agree with it except a few modifications about the term of patents.

Shri R. Ramanathan Chettiar: The pharmaceutical industry has been in existence for over 20 years now. Have you made any attempt to have a Research Institute just like the Textile Research Institute in a collective way?

Dr. K. M. Parikh: I feel that in this industry there is no chance for collective research.

Shri R. Ramanathan Chettiar: I want to ask you whether you have explored the possibilities of putting a small percentage towards development of research, which would go to make a fund and you may create a Research Institute for the benefit of the whole industry, not only to individual users.

Dr. K. M. Parikh: If a new substance is found out in a collective laboratory, who will be the owner of it to exploit it commercially?

Shri R. Ramanathan Chettiar: In 1962-63, according to a survey conducted by the Reserve Bank of India, out of 14 crores invested by foreign interests in this country, they have taken away Rs. 7 crores—Rs. 2 crores as dividend remittances and Rs. 5 crores as royalties. The facts are there. If you want to crub the growth of indigenous industry and also want to crub the growth of foreign interests, this is one of the methods. Why don't you explore the possibility?

Dr. K. M. Parikh: We will do that.

Shri D. P. Karmarkar: You have stated that the term of patent should be seven years instead of 10 years from the date of patent with regards to Food, Medicines, etc. You feel that seven years is enough a period for recouping the expenses and particularly that is so in these days of fast development. In the case of existing patents, in the proposed Bill provision is there giving retrospective effect as soon as the Act comes into force. In the case of new patents, so far as medicines and pharmaceuticals are concerned, if the person is in a position to develop a patent for which he is given a licence and to manufacture it, why should you worry about this period of 7 years?

Dr. K. M. Parikh: I am suggesting this period of 7 years even in the case of existing patents in order to stop the high prices and exploitation of a particular firm.

Shri D. P. Karmarkar: If the price is otherwise regulated?

Dr. K. M. Parikh: Then ten year period is all right.

Mr. Chairman: There is another point. Certain patents have already been taken; they have got the right now. By taking recourse to this, if you revoke that, people will go to the Supreme Court.

Dr. K. M. Parikh: I feel that the Government has all the rights to change the number of years in the national interest. The existing people have had all the benefit for all these years now.

Mr. Chairman: Thank you, **Mr.** Parikh:

(The witness then withdrew)

(The Committee then adjourned).

Minutes of Evidence given before the Joint Committee on the Patents Bill, 1965

Tuesday, the 1st February, 1966 *at* 14.00 *hours.*

PRESENT

Shri S. V. Krishnamoorthy Rao—*Chairman.*

MEMBERS

Lok Sabha

2. Seth Achal Singh.

34. Dr. M. M. S. Siddhu.
35. Shri R. P. Sinha.

REPRESENTATIVES OF THE MINISTRY

1. Shri K. V. Venkatachalam, *Joint Secretary, Ministry of Industry.*
2. Shri S. K. Borkar, *Drug Controller of India, Ministry of Health.*
3. Shri B. N. Atrishi, *O.S.D., Ministry of Industry.*

DRAFTSMAN

Shri R. V. S. Perisastri, *Deputy Draftsman, Legislative Department, Ministry of Law.*

SECRETARIAT

Shri M. C. Chawla—*Deputy Secretary.*

WITNESS EXAMINED

The Chemical, Industrial and Pharmaceutical Laboratories Ltd., Bombay

Dr. K. A. Hamied.

The Chemical Industrial and Pharmaceutical Laboratories Ltd. Bombay

Spokesman:

Dr. K. A. Hamied.

(*The witness was called in and he took his seat*)

Mr. Chairman: Dr. K. A. Hamied, whatever evidence you give before this Committee will be printed and published. It will be laid on the Table of the House and distributed to members. Even if you want any particular portion of your evidence to be treated as confidential, it is liable to be given to our members.

We have received your memorandum and it has been circulated to all the members. If you want to add anything you may do so now.

Dr. K. A. Hamied: Sir, I am appearing here in my individual capacity.

Mr. Chairman: You are not representing Cipla?

Dr. K. A. Hamied: I am the Chairman of Cipla. I may say a few words about myself because that will reflect upon my evidence. Although it may be against me, I may say that I am holding so many patents, but I believe that the interests of my country are before everything else. I have been associated with Mahatma Gandhi. I have lived with Gandhi in Sabarmati. I am hundred per cent a member of the Congress Party. I was a member of the Bombay Legislative Council for 25 years. I am now Chairman of the Pharmaceutical Drug Research Committee of the Government of India. I have been a member of the Indian Chemical Association and its President continuously for four years. My connection with the pharmaceutical and chemical industry is for the last 35 years and have done something—I am not bragging—for the uplift of the chemical and pharmaceutical industry of my country to its present level, to what it is today, in the last 35 years. Therefore, what I say before you today should be judged from that point of view.

Coming to the patent law, the first patent was granted in England in 1449 for some glass manufactured by some English inventor. There was

no legislation for patents in England at that time. The first legislation came in 1624 or something like that. Then the patent was granted only as a protection for the process of manufacture of certain items. What happended was, after some time Germany and other countries manufactured the same substance and exported it to England at a cheaper rate. Therefore, the U.K. Government brought in an order that nobody can import or sell a product by the process which has been patented in England. Therefore, this process of product and patent started in England first. Afterwards the need arose when Germany, France, America and other countries which were scientifically developed tried to protect each other against the inventions of one country to be exploited by the other countries. They met and thought about it first at the International Patent Club where it was agreed that the patents of Germany should be protected in England. England should protect the inventions of France and so on. So it became a reciprocal law in which no country had the advantage over the other country—Germany took hundred patents in England, England had hundred patents in Germany, France protected American inventions, America protected the inventions by France and so on. In this way the whole thing started.

In India, the patent system was started in 1911 during the British rule. We have no patents to protect. In the Ayyangar Report there is a mention that 1300 patents of foreign companies exist today in drugs and pharmaceuticals, but the report has not mentioned a word about patents of India in America, Germany or elsewhere. Therefore, so far as India is concerned this patent law is a one-sided traffic, it is only exploitation of our country by these patents held by foreigners. We have no patent anywhere, the reason being that we are not so scientifically advanced, we are not so scientifically developed that we can make inventions and discoveries and take patents in the highly developed countries. I hope a day will come when we shall take patents.

An example of this was Japan. Japan had no patent law till 1945. It is surprising that the Japanese delegation which came here yesterday or the day before and saw the Finance Minister and others was opposing this Bill. Japan is the first country which developed on account of the absence of patent law. In Japan they copied everything. They became so big at the time of the Second World War that they played hell with America and England. Their submarines, cruisers, guns where exactly like others. Japan brought in the patent law for two reasons. One is, Japan was at that time—in 1945—under the control of America and it was American pressure that made Japan to bring in the patent law. Secondly, Japan's own inventions became so great—transistors, cameras, television apparatus and others—that Japan was herself interested in protecting her inventions in other countries. Therefore, Japan brought the patent law in Japan.

Today the position is that the foreign companies or scientists who take patents in our country are not even utilising those patents. I have submitted here a list of firms. There are about 2000 patents held in India by foreign companies and foreign persons. How many are they exploiting? They are just holding the patents. They are not utilising them. I have made an estimate that not more than 10 or 15 at the most—I have not got the exact figure—are exploited in India. The rest are not exploited in India. They are simply holding it. I will give you an example. A substance was being sold in India by a firm at the rate of Rs. 8 for 20 tablets. They are holding a patent for that substance but they are not manufacturing it. They are importing it. I also imported that substance. My cost of 40 tablets came to Rs. 2. The moment I put them in the market they filed a suit

against me in the High Court saying that I cannot sell them because they were holding the patent for import, sale and distribution. I lost the case I can understand it if they are manufacturing it. But they are not manufacturing it. They are importing it; but I cannot import because they are holding the patent law should say that if a patent-holder is not making the product for which he holds a patent but imports it and sells it in India, then anyobdy can import and sell it. The moment he starts manufacturing, I cannot manufacture it, but if he is importing, I can also import it. There is no reason why a person should be granted a patent if he is not manufacturing it.

Some people may say that Italy has no patent law. I will read a quotation from "Manufacturing Chemist" London, Vol. XXX No. 10 (page 406) of October 1959:

"Paradoxically, Italy has the distinction of being the only major manufacturing country in Europe that doe snot grant patents for medicines or processes, and yet has a flourishing pharmaceutical industry. This absence of patents has enabled Italian manufacturers to make many valuable drugs discovered elsewhere. The costs of research have thus been evaded, and this has played no small part in the growth of the post-war Italian pharmaceutical output. At the same time, an Italian manufacturer enjoys the patent protection of other countries for his own inventions. This one-sided scheme has aroused considerable resentment, but, as it is due to the economic environment, it is unlikely to change until new factors come into play. When the Italian pharmaceutical manufacturers become more interested in originating their own products, the question of protection in the home market will acquire more than academic interest, and some reciprocal patent arrangements may become an economic necessity."

So, here also they are speaking of reciprocal arrangement. Today Italian inventors and discoverers are at a low ebb that they cannot compete with America in discoveries and inventions. So, they do not allow their inventions to be patented so that their industries flourish. Here arguments are being advanced that the Indian pharmaceutical and chemical industry will go down if the revised patent Bill is passed and the foreign manufacturers will go out of India. Nothing of that sort will happen. I can assure you that even if the Patent Bill is passed as it is, they will never go out of India. We are paying them 4 per cent royalty. So, if our sales go up to Rs. 20 lakhs they will get Rs. 80,000 from the patented firms. So, they will not be at a loss and they will certainly not go out of India.

I will now come to another point which is at the back of this agitation. Today the foreign manufacturers like Sandoz, CIBA, Roche and ICI are protected by these patents. If the patent law is abolished, these firms will have to compete between themselves.

Mr. Chairman: It will be for the good of the country.

Dr. K. A. Hamied: Yes, sure. If the patent law is abolished, it may well happen that one European firm is holding a patent for a product in England. Another European firm may also be holding patent in England but not in India.

Shri R. Ramanathan Chettiar: It does not affect our interests.

Dr. K. A. Hamied: Yes, it will be beneficial for our country.

It is also said that patents encourage development and research. It is just the reverse. The chemical industry is so well advanced in Europe and other countries that for manufacturing one product they have got about 10 methods. What happens is that the foreign manufacturers patent

not only one process but all the ten processes. They do not leave anything to us. They have covered all the processes conceivable in the chemical industry because they are so advanced. So, our scientists or laboratories are not able to adopt any new process. Therefore, I would suggest that if a patent is granted, it should be only for one process which the patentee is using; it should not be for 20 processes. If he is using one process, let him patent only that process. If he wants a patent for the second process, the patent for the first process goes away. This will give an opportunity to Indian scientists and research workers to make use of some processes at least. Today we have not got that opportunity.

I will give an example. There is a machine manufactured in Bombay by a Sindhi called Magamal, a tablet-making machine, exactly identical to the one made by certain foreign manufacturers. When I told him that it is a patented machine, he said that he has changed some screws here and there and so it is entirely a new machine. I told him "all right, you go on with that". Because, if we go on doing that, we shall be able very soon to compete with the foreign manufacturers, as this machine will cost only Rs. 12,000 as against Rs. 20,000 for an imported machine. I was only saying this is how the absence of a patent law will help us.

Shri D. P. Karmarkar: If the patent law is left as it is, will it not mean infringing the patent law?

Dr. K. A. Hamied: He is infringing the patent law. I asked him to go ahead because I do not care for the patent law. Let him file a suit, if he thinks the patent law is infringed.

I think for the development of our country for the next twenty years there should be no patent law. In my opinion, the patent law should be completely abrogated. But, on account of international complications we may not be able to do that. The proposed Patent Bill is better than the existing Act of 1911. It is a compromise, not hundred per cent what I personally wanted for the sake of my country. The country cannot develop with the present patent law. We are completely under the hold of these patent-holders and we cannot manufacture or discover because they have covered all the processes.

When the patent-holder takes a patent in India, he is not allowed by his parent office in Switzerland or France or any other country to export that product which he makes in India under that patent. He is only exploiting the Indian market. I want it to be made a condition that if you want to patent for a particular product, give us an undertaking that you will export that product.

I had a big talk on this subject with our late Prime Minister, Shri Shastri, who was at that time the Minister of Industry. He told me that all these firms about whom I was speaking were Indian firms registered in India. I said that the criterion I would fix for saying whether it is an Indian firm or not is that if the firm exports the products manufactured in India I will consider it as an Indian firm but if the products manufactured in India are mainly for the exploitation of the Indian market and the firms are prohibited from exporting it, it is not an Indian firm. Shri Shastri immediately took a paper and wrote it down. He said, "It is a strong point that you are telling me".

For example, there are certain firms which are making sulphadiazene in India. I got an order for one tonne of sulphadiazene from Singapore. When I contacted those firms, they asked me what for I wanted it and when I said that I wanted it for export, they said that export was not allowed. They are utilising the patent with a foreign collaboration only in India. I do not call such a firm as an Indian firm. This is one poin

which should be kept in mind by Hon. Members here. If I am manufacturing something, and my products are being exported, I am proud of it. Which Indian firm can be called a truly, patriotic Indian firm which does not export or is prohibited from exporting its product?

Then, the very fact that so many experts from foreign countries, lawyers and representatives of foreign firms, are being brought to India to oppose the Patent Bill shows how important it is for the foreign firms that the revision of the Patent Bill should not come in; otherwise, they will not do it. If today you draft a Bill which is beneficial to them, they will not care; they will keep quiet and will not agitate at all. But this Bill is in the interest of India and if this is passed—it is very mild today—I am sure, it will help the development of our industries.

Then, the Reserve Bank of India Bulletin for November 1964 at page 1383 has given figures on the collaboration in the chemical and pharmaceutical industry. In the field of basic industrial chemicals, the paid-up capital is Rs. 7.6 crores, foreign capital is Rs. 2.2 crores and remittances by foreign firms abroad is Rs. 32.45 lakhs per year. In the pharmaceutical industry the capital invested is Rs. 8.74 crores, foreign capital is Rs. 7.58 crores and the remittance of dividends is Rs. 99.68 lakhs. In the other chemicals, the paid-up capital is Rs. 13.97 crores, foreign capital is Rs. 5.07 crores and dividend remittance is Rs. 72.54 lakhs. Then, royalties are Rs. 2.42 crores and technical services remittances are Rs. 2.86 crores. The total remittances by foreign firms on account of royalties, technical know-how and dividends are Rs. 7.36 crores. I cannot get Rs. 5,000 to go outside but the foreigners can remit Rs. 7.36 crores per year only under these headings only.

Shri M. R. Sherwani: I am sorry to interrupt, but when I said that Rs. 2 lakhs per day are being drained out of the country, it was contested. Here only under one item it is Rs. 7 crores. So, it is not Rs. 2 lakhs per day but it is actually Rs. 5 lakhs.

Dr. K. A. Hamied: Then, 51 firms in India—they are almost all foreign firms with or without Indian collaboration—are producing and selling 1,933 pharmaceutical formulations in India. For these formulations these firms are using imported raw materials. Almost 80 per cent are imported raw materials. For those raw materials they are holding patents in India but they are importing them.

Mr. Chairman: They are not manufacturing it?

Dr. K. A. Hamied: They are holding the patents but are importing them. For example, in a tablet there are three ingredients and for all the three ingredients the firm is holding a patent but it is not manufacturing these three ingredients and is importing to the tune of Rs. 20 lakhs a year. Then, why are they holding the patent?

In my second letter dated the 8th January to the hon. Members I have said, "Will you kindly put these questions to the foreigners as to how many patents they are holding, what are the names of the products for which they are holding patents and how many patents they are utilising in India and then just see their replies". If they are holding 100 patents they are using only one; if they are holding 200 patents, they are utilising only one or two. Why are they anxious when they are not utilising their patents in India? It is for the sake of import and product control so that nobody else can produce. The amount of foreign exchange going on this account is terrible.

Shri D. P. Karmarkar: In case your point of view that there should be no patent law for 20 years is not accepted, you have been good enough to make some specific suggestions on page 8 of your note. They are four.

You say, firstly, that only one process for the product by which they are manufacturing shall be patented. In the second paragraph you say that compulsory licensing shall be enforced even if the patentee is manufacturing the product himself. Are you satisfied with the provision that is already there with regard to compulsory licensing where in the case of drugs and medicines, even in the case of a patent, there should be compulsory licence under those conditions?

Dr. K. A. Hamieds There should be compulsory licensing. Licence of right is also very necessary.

Shri D. P. Karmarkar: Take cl. 87. It says patents covering medicines, drugs etc. shall be deemed to be endorsed with the words 'Licences of Right'. Does that satisfy you?

Dr. K. A. Hamied: It is very necessary under existing conditions.

Shri D. P. Karmarkar: Regarding your para 3, your point is that some measure should be devised..

Dr. K. A. Hamied: What about paragraph 1? Suppose a patentee has got 100 processes patented.

Shri D. P. Karmarkar: If a particular patentee does use a particular process in so far as medicine and drugs are concerned, the other processes could be straightway be thrown open according to the provisions of 87. There is no difficulty about that. Suppose you have patented 100 processes and you are utilising only one process. So far as drugs and medicines and food and chemical substances are concerned, if you do not utilise the other processes, straightway compulsory licences can be obtained by others.

Shri K. V. Venkatachalam: Even if he utilises, it can be done.

Dr. K. A. Hamied: I am saying that patent should be granted only for one process.

Shri D. P. Karmarkar: What is the difference? Suppose a man has made a discovery, no matter whether Indian or foreign. I make a discovery today in India. I have it patented immediately. Suppose a foreigner comes in. He immediately gets about 100 patents registered with the Patent Centroller. Now if it is a drug or medecine, on the registration of the patent itself, you can have a compulsory licence. So what is your objection to his obtaining the 100 patents?

Dr. K. A. Hamied: I am not objecting. I am objecting to his patenting 100 processes or one product. There is a lot of difference.

Shri D. P. Karmarkar: He has patented 100 processes for one thing. He is using only one process. For the 99 processes, you should have the freedom. Is that so?

Dr. K. A. Hamied: Not only freedom. I say that the 99 process should not be patented in his favour. Only one patent should be given.

He is using only one. The rest he keeps in his shelf. With the result, that I cannot use any of those processes; I cannot have any of those processes patented if I discover any of them.

Mr. Chairman: Yesterday Dr. Parikh said that so many combinations are possible and he pointed out that the patent is made to cover all those combinations. What Dr. Hamied wants is: give him a process patent for only one product through one process.

Shri D. P. Karmarkar: What is his difficulty if the person gets a hundred processes patented, differently or may be in one combined lot, if he utilises only one process, because this clause then comes in?

Mr. Chairman: What witness say is: do not give him one process and allow him to cover 100 processes for one product.

Shri D. P. Karmarkar: What is his difficulty. If out of 100 processes, the

patentee utilises only one process and then keeps all the 99 to be exploited by others through compulsory licensing, what is the objection?

Dr. K. A. Hamied: No. Chemical science is a very advanced science. To reach a certain product, I can go by many ways. These foreign firms are of highly scientifically advanced nations possessing these process patents. After getting these processes patented, their scientists start work to find out if there is any other method by which the same thing can be made. They have highly qualified scientists at their disposal. They find out: yes, there are 5 or 6 processes more by which the same thing can be made. They immediately include these in their patents.

Take tolbutamide patent held by Hoechst. There are about 17 processes patented by Hoechst for one product, tolbutamide. We cannot reach tolbutamide by any other route.

Shri K. V. Venkttachalam: Cl. 87(1) will permit you to do so.

Dr. K. A. Hamied: My point is: why should he be given all the processes when he is using only one?

Shri D. P. Karmarkar: We shall have to find out some foolproof method in regard to what this witness has said and what the other witnesses yesterday afternoon said, because it is rather important.

Shri M. R. Shervani: The point made is that when all the 17 processes have been patented by that party, all the routes get closed to our scientists and research is closed.

Shri D. P. Karmarkar: I appreciate your point. According to your para 3, you want to devise some measure to stop exploitation by way of unreasonably high prices after the patentee begins to work. We have to find out some statutory measure empowering Government to put a stop to that.

Dr. K. A. Hamied: I am sorry. No statutory measure can control prices. Government has tried it in regard to food, cement and so many other things. Prices can only be controlled by competition. If five people make the same thing, no man will charge high price. If a particular firm is holding a patent and it only is manufacturing that product, it can sell it at its price. The moment I also come into the field, either by licensing or by licence of right or compulsory licensing or by my own skill, it will immediately reduce it. I can give examples. A firm in Bombay was selling a particular injection at Rs. 25 for two. I started manufacturing the same thing. They sent me a notice alleging infringement of patent. I said, I do not care. You fight it out; we shall see. I sold it for Rs. 4.5. Then they reduced it from Rs. 25 to Rs. 14 and now to Rs. 9. The moment competition starts, prices come down.

Another Indian firm, not holding a patent but collaborating with a foreign firm, was manufacturing a product and selling it at Rs. 63. When I got a licence to make the same product, I made it and sold it at Rs. 45. Immediately they brought down their price.

Today these firms are holding not only a patent monopoly but also import monopoly.

Shri D. P. Karmarkar: Under cl. 87, anyone can have a licence of right granted to him under acceptable conditions. That removes your difficulty with regard to competition.

Even in spite of that right, there may not be Indian parties coming up. In that case also, your point is that even if there is one monopolist manufacturer and no other Indian is prepared to come up, you would like that the price he charges for his product in India should not be unconscionably high. For that, if possible, legal provisions should be made in the Bill giving power to Government.

Dr. K. A. Hamied: That can be brought into this Bill, but this is not a Price Control Bill.

Shri D. P. Karmarkar: Witness is not a lawyer. We shall find out how it can be done. The draftsmen know that in some of the clauses reference has been made to public interest. Whether under this, price control can be covered, we shall later decide.

Finally, what is the exact significane of paragraph 4?

Dr. K. A. Hamied: I had explained that. Supposing a patent is granted to a firm in India for the manufacture of cortesone....

Shri D. P. Karmarkar: I understand the process. Supposing it is found on a balance of advantage that even if the party is not prepared to export in the interest of manufacture in India itself, even when that export promotion is of advantage to us, even then you ask us not to allow it?

Dr. K. A. Hamied: In that case it must be allowed.

Shri Jadhav: These foreign firms do exploit. At the same time, do you agree that it did help in bringing in new drugs in the market for the development of the industry.

Dr. K. A. Hamied: I may explain the difference between the word drug and the word chemical industry, which is not clear to many. It is like that of a shirt and a cloth. Shirt is made of cloth; so long as it is cloth you do not call it a shirt. Ascorbic acid is just a chemical; so long as it is in bulk it is not called vitamin C. The moment it is manufactured into tablets and ready for sale it ceases to be a chemical; it is a drug. The drug industry in India during the last eighteen years has gone up considerably manufatcuring tablets, formulations, lotions, etc. But we have not developed the basic industry from which drugs are manufactured. If the import of foreign materials, basic pharmaceuticals are stopped the industry will fall flat. In this connection, I may be allowed to read a quotation from the speech of the late Pandit Nehru which I quoted in one of my speeches. He said that operating a steel mill or a chemical plant set up by foreign assistance would hardly make the country advanced an industrial nation no more than using a car or flying an aeroplane purchased from abroad. It is only when India has acquired the ability to design, to fabricate and to work its own plants, without foreign assistance will it be a truly advanced and industrialised counrty." I am say that I entirely agree with this point. We are so much dependent on the foreign technical know-how and foreign money and foreign help that we are ceasing to be a nation on our own. I do not want to boast but I can say that without any foreign help or technical know-how I am able to supply drugs and am even exporting to England and other foreign countries. We can do it provided we work for it increasingly.

Shri M. R. Shervani: You say that no development has taken place in the chemical industry. Is it due to a defective patent law?

Dr. K. A. Hamied. I say that the development that has taken place in the drug industry is not due to any basic development in the chemical industry. I drew that distinction. This patent law, I think, will help us in starting some basic manufacture if we are not hindered by the patents held by foreigners in India.

Shri M. R. Shrevani: The point is that anybody who obtains or patents a certain product here should be forced to manufacture it in India within a reasonable period. Otherwise the patent should not be granted. If you do not do so, they keep on importing. Therefore, it should be obligatory on him to start manufacture in the country. What, in your opinion, is a reasonable period to be given to the patentee to start production of the product? Two, or three or five years?

Dr. K. A. Hamied: Supposing you fix a time and if he does not manufacture within that time, what penalty should be imposed on him?

sell them. There is no patent for the drugs today in India; there is a patent for chemical processes. The hon. Member is confusing the terms with the proprietary registered names of foreign manufacturers such as Paludrine, Tolbutamide, and so on. We are unable to make them, because those names are registered trade marks and there is no law to prohibit them. The quality of the chemicals and pharmaceuticals and basic chemicals manufactured in India will be such that everyone will compete and those who are selling better quality stuff will naturally have some lead. But today there is no such competition.

Shri P. K. Kumaran: I can advertise that such and such a popular drug of the same quality as that brought from elsewhere is available and then manufacture anything.

Dr. K. A. Hamied: The hon. Member is again confusing the two We are now talking about chemicals. You give me the name of the drug.

Shri P. K. Kumaran: I am making a certain thing which I call by some name and it is having the same quality as the popular drug. I can manufacture it according to my own process and market it. It may affect the health of the people.

Dr. K. A. Hamied: But you cannot market it. There is the law.

Shri Arjun Arora: We have been told by some people that the abrogation or the modification of the patent law in India will create a situation under which no Indian will be able to get the patents abroad. How will it affect Indians?

Dr. K. A. Hamied: We have to examine first how many patents Indian inventors and scientists are taking outside India. In America, during the last 20 years, the number may not be more than 3 or 4 or 5 whereas during 1955 to 1959, 2000 patents have been taken in India by foreigners.

Shri Arjun Arora: Do you have any idea of the earnings that Indians make because of patents that they are able to get abroad?

Dr. K. A. Hamied: At the moment it is nil so far as I know.

Shri Arjun Arora: Do you envisage that in the next 10 years, the Indians will be doing a roaring business because of their patents abroad?

Dr. K. A. Hamied: At least I am living on that hope.

Shri Arjun Arora: What is your practical experience?

Dr. K. A. Hamied: The rate at which Indian science is advancing today through the C.S.I.R. and other private enterprises where scientific laboratories are working, we are capable of progressing at a very high speed unless they are not frustrated in their attempts by these hindrances in their ways. You may just see the example of Japan. Today, the Japanese transistors, radios, cameras and photographic apparatus are flooding the world. How did they learn all this? It is by copying anything which others are making.

Shri Arjun Arora: If we do not have the patent law, like the present one—infact, the proposed Bill—the result will be that Indians will not be able to get the know-how from abroad. What is your opinion on this.

Dr. K. A. Hamied: I shall be glad if we do not get the know-how. Then, our know-how will start working. Today, it is lying dormant. The things are being manufactured in India with foreign collaboration which an ordinary M.Sc. in India can make. I was a member of the Finance Corporation and I objected to many licences being granted in collaboration with foreigners. I said, "Why are you giving Rs. 10 lakhs royalty to such and such an American firm? Why don't you come to me? I will give you full advice." But they do not come to me. The foreign technical know-how has got such a halo about it that we are completely ignoring our own knowledge. We are not advancing because

we are getting something free. We want to become rich quicker. If I combine with, say, I.C.I., I shall be able to earn Rs. 1 lakh by next year. If I do it myself, it will take 4 years to earn Rs. 1 lakh. So, I say, why not I combine with I.C.I.?

Shri Arjun Arora: If India is starved of foreign know-how in the field of chemicals and drugs, may I know whether there will be a famine of medicines in India?

Dr. K. A. Hamied: Never.

Shri Arjun Arora: We shall be able to meet our requirements?

Dr. K. A. Hamied: We shall be able to meet our requirements. Even today, we are not able to meet our requirements. 80 per cent of the drugs are dependent on the import of foreign raw materials, not on the import of technical know-how.

Shri Arjun Arora: A number of foreigners take patents in India and they do not start the process of manufacture in this country. Do you have any idea as to what is their percentage? Are they in a minority or in a majority?

Mr. Chairman: He has given the answer.

Dr. K. A. Hamied: I have given the answer.

Shri Daljit Singh: You say in your Memorandum that the compulsory licensing of the patent should be enforced even if the patentee is manufacturing the product himself. Now, the existing Act covers this.

Dr. K. A. Hamied: I think it does. When I wrote that Memorandum, the Act was not printed.

Shri Daljit Singh: You have stated in your Memorandum that Japan did not have the patent law before the Second World War. Is it not a fact that in Japan the patent law was first introduced approximately in 1921?

Dr. K. A. Hamied: Not to my knowledge. I think Mr. Davar who appeared before this Committee confirmed that it was in 1945 that the patent law was introduced in Japan. That is my information also.

Shri Daljit Singh: You have stated that the patent law is one-way traffic so far as India is concerned because the number of patent taken by the foreigners in India is very large. We want to know how this problem can be tackled by India.

Dr. K. A. Hamied: The taking of patents is not according to my wish or according to the wish of our country. It depends on the advancement of scientific knowledge, inventive genius and all that. As our country develops, our inventive genius advances, we shall be able to develop things and make inventions and take patents in other countries. But today that is not the case. Let us have that gap of 20 years in which we can develop ourselves.

Shri Wasnik: You have stated that free competition will check the high prices and not the Government control. What I feel is that the combination of interested parties can dictate the prices and cause hardship to the consumer. In such cases, what do you think the Government should do? Should they make any provision here.?

Dr. K. A. Hamied: The Government can make a provision, as in the United States, against forming cartels. In the United States, the big firms like the Dupont, Monsant. were not allowed to make unions. They were prosecuted immediately and big penalties were imposed on them. So, here also that provision can be made by the Government that no cartels or unions can be made.

Shri Wasnik: What do you think should be the term of patents?

Dr. K. A. Hamied: I think, what is proposed now is all right. I would have chosen a less period. But now that the Bill has come and the period is given there, it is all right.

Shri Wasnik: We can change it.

Dr. K. A. Hamied: Between 7 to 8 years would have been all right.

Shri Arjun Arora: Seven years from the date of certification or application?

Dr. K. A. Hamied: From the date of certification.

Dr. M. M. S. Siddhu: You gave us the example of Testosterone propnate: a foreign firm came in competition and they slashed the price to 50 per cent of its original price. Have there been other cases like that?

Dr. K. A. Hamied: Yes.

Dr. M. M. S. Siddhu: Can you give other examples where a foreign firm and an Indian firm processed their products and the foreign concern brought the price down so that the Indians may not have a market.

Dr. K. A. Hamied: There are cases when the foreign firms were forced to reduce the prices. But the foreign firms are selling their products on the basis of prestige—false or correct. If it is a small firm, then the foreign firm does not do it. If, however, a firm of equal standing makes a product cheaper, then the foreign firm comes into the field; the foreign firms are afraid of competition with firms of equal standing. If a small firm reduces the price, they may not take care of it.

Dr. M. M. S. Siddhu: What is the time delay in the grant of licence for the manufacture? Because it has been pointed out that, once a patent is to be exploited, there are some delays: one is the delay at the patent office; the second is the delay at the licence; and the third is the foreign exchange component. You have been in this chemical industry for a long time. Could you tell us by your experience as to what is the usual time taken for an industry to be set up for a new drug?

Dr. K. A. Hamied: Including the application?

Dr. M. M. S. Siddhu: No; if the patentee himself were to exploit it.

Dr. K. A. Hamied: That means, the patent has been granted to him. Then the process is licensing by the Development Wing. That may take a long time.

Dr. M. M. S. Siddhu: What is the usual time taken?

Dr. K. A. Hamied: It is too much. I know that a very important foreign firm applied for an industrial licence two years ago and only some months ago they have been issued the letters of intent; they are just starting it. It all depends on the influence and pull of the person.

Dr. M. M. S. Siddhu: If that is so, do you think that 7 years' time is enough—I mean, under the present conditions of the country?

Dr. K. A. Hamied: So far as the time taken for the Development Wing to issue a licence to the manufacturer is concerned, that is a different problem, which I cannot answer just now.

Dr. M. M. S. Siddhu: What is the usual time taken in the screening of the compound, toxicity and other clinical tests being done?

Dr. K. A. Hamied: One year or two years or six months; it depends on the nature of the substance.

Dr. M. M. S. Siddhu: Assuming that good scientific talent is available, what is the usual time taken?

Dr. K. A. Hamied: It depends on the product to be tested. Suppose there is a birth control product, it may take five years. Suppose it is a product for heart disease, it may take a long time. In the case of certain products like the product for diabetes, I can give the report within one month.

Dr. M. M. S. Siddhu: You know the recent advances that have been made in the field of antibiotics, in the field of anti-diabetics, in the field of tranquilisers—I am not talking of harmones which take a long time. What is the usual time taken in these fields?

Dr. K. A. Hamied: About a year or 18 months; in the case of diabetes, it may even be less.

Dr. M. M. S. Siddhu: If we were to think in terms of not having the foreign subsidiaries, can we get all the intermediates from which we will be able to have the product manufactured if the compulsory licence is granted or they will hold back the intermediates?

Dr. K. A. Hamied: It will take a long time to reply to this question.

Dr. M. M. S. Siddhu: Suppose we give a compulsory licence to 'A' and the intermediates are controlled by the patentee. If the patentee does not want to co-operate, can we exploit it?

Dr. K. A. Hamied: About two months ago, a Conference was held in Delhi by the Council of Scientific & Industrial Research on the substitution of imported products in India. I was the Chairman of the Group of pharmaceutical chemicals. This question was discussed threadbare there. The point is that the chemical industry on which all the synthetic products are based starts from a very basic raw material called coal tar distillates like tolune, benzene and phenol. These coal tar products are developed by other subsidiary chemicals like sulphuric acid, nitric acid, etc., and are converted into intermediates. These intermediates are made as synthetic chemicals which are used in drug industry, plastic industry, etc. These intermediates are a go-between between coal tar and the final product. In India, there is a great scarcity of coal tar. We have got coke oven plants, under government control as well as under Tatas, but the coal tar which comes out is not further distilled. We are having a big scarcity of basic coal tar distillates and so we cannot manufacture the intermediates. Because we cannot manufacture the intermediates, we cannot manufacture final products. It is a chain reaction. At what stage shall we start? If we start manufacture of final products, we must have intermediates; if we start manufacture of intermediates, we must have coal tar.

I am attending another Conference on the 7th of this month on the very same subject. From which point we shall start? I have suggested that we should start from the basic coal tar. The coal tar is wasted on roads; why is it not distilled?

Dr. M. M. S. Siddhu: In other words, till the petro-chemical complex and the coal tar derivative complex which are the base of the pharmaceutical industry, are developed, we will be at the mercy of the foreign concerns.

Dr. K. A. Hamied: About petro-chemicals also, they are not made here. They are made from petroleum. Petroleum is from crude oil. Where is crude oil in India? It is also being imported. Bulk of the crude oil is being imported for the distilleries in Madras, Bombay and Calcutta. So for petro-chemicals also we are going to import this crude oil; we shall break it up into petroleum and chemicals. We are copying America! In America, this petroleum is natural and it is being utilised for these chemicals. Crude oil is available in Mexico and other places. We are copying that method without having the crude oil. Import licence will increase enormously. We should have some basic thing. Imports of crude oil will still remain.

Dr. M. M. S. Siddhu: What is the expenditure of the Indian firms, purely Indian firms, with Indian capital, know-how etc.—there are three or four of them, as compared to the foreign concerns on sales promotion? Advertising, detailing representative, sampling, all that is concerned with the sales promotion.

Dr. K. A. Hamied: It is almost equal. Foreign and Indian company is equally divided. Not less than 15 per cent and not more than 25 per cent.

Dr. M. M. S. Siddhu: There is great deal of formulations. Manufacture of

mostly formulations has impaired the growth of the pharmaceutical industry because formulations bring easy money with less capital or know-how with the result that Indian pharmaceutical industry has not begun working on the manufacturing side actually.

Dr. K. A. Hamied: May I deal with the working of the pharmaceutical Industry? It is just like the tailoring industry. Materials for the tailoring industry are made by the textile firms. Materials for the pharmaceutical industry are made by the chemical firms. You cannot ask a tailor, why you are not making your own cloth. The tailor is not supposed to make his own cloth. Pharmaceutical manufacturer makes tablets, lotions, injections, ointment and all sorts of things—he is not supposed to manufacture those chemicals. Pharmaceutical industry is basically an industry for the manufacture of ready-to-use drugs and ready-to-use medicines. Pharmaceutical manufacturers in India are manufacturing products which cover a ready market. Today if I can get a formulation for T.B. or influenza and it is useful I will make a formulation for it and sell it. It is not for me to manufacture all the things. Glucose is a thing which is a chemical manufactured by not more than 5 or 10 firms in the whole world. Everybody cannot make. But they are making glucose injections.

Dr. M. M. S. Siddhu: Some of the compounds are of less use. There is a compound for cancer. The sale will be very limited. Do you want for them the same terms of royalty of 4 per cent?

Dr. K. A. Hamied: I am making it without any foreign know-how. We are so bent upon foreign know-how that we forget our own know-how. It is very important. We are getting confidence. I am proud that I am sending the same to foreign firms in India also. I am making a particular hormone drug without any technical know-how. There is no 4 per cent royalty to anybody.

Mr. Chairman: We have got one more witness.

Shri R. P. Sinha: The compulsory licensing system is on our patent law for quite some time now. There have been lot of patents being registered in this country. Why is it that we are not able to take advantage of those things and start manufacturing the chemicals and drugs here under the sections of the compulsory licensing?

Dr. K. A. Hamied: It has been so, but it is correct. The compulsory licensing now is being made very easy under the existing law. Formerly there was some difficulty in getting compulsory licence. Under this new Act I think compulsory licensing will be taken advantage by us, Indian manufacturers. Besides that, another point also we should remember. In the course of these various years the technical know-how of us, Indians, has also grown. At the moment I can assure you that our own technical know-how is so much that we shall start taking advantage of the compulsory licensing. 10 or 15 years ago chemical science was not so much advanced as it is today. For that same reason, the advantages of the compulsory licensing which were there were not made use of.

Shri R. P. Sinha: As per the compulsory licensing section in this bill more industries under this section can be put up.

Dr. K. A. Hamied: Yes. Our own scientific knowledge has advanced so much. Licence which was granted to me also requires some knowledge on my part. Otherwise I cannot make use of that licence. Licensing of a patent process merely will not help one to put up that industry. During the last 18 years or so our own scientific knowledge has gone forward that we can make use of that licence. 10 or 29 years ago we could not make use of that.

Shri R. P. Sinha: If you use these sections for compulsory licensing that means when you use your own technology and know-how you will develop your own processes and know-how. Will you not like that what you develop should receive adequate protection under patent law so that you can flourish?

Dr. K. A. Hamied: The licence which I will acquire by paying 4 per cent royalty I shall be able to utilise that licence and if there is any flaw in that licence or process given to me I can make it up and I can find out where the flaw lies, by my own efforts. All the patents disclosed to patent office are not complete. 50 per cent of them is not complete. Even if we take the licence we cannot work under them. We have to apply our own knowledge to it. They do not disclose anything in the patent.

Shri R. P. Sinha: You don't get the co-operation of the foreign patent-holder and in spite of that you try to develop your own know-how and your own technical knowledge. Now when you develop that, will you like that to be protected under the patent law or not? That is in respect of your own chemical process, your own technical know-how etc. Or, will you like anybody can make use of that once you have developed it?

Dr. K. A. Hamied: If there is patent law I will take advantage of the patent law. If there is no patent law there is no patent law. But of course we shall take advantage when the patent law is existing.

Shri R. P. Sinha: Will you be able to develop your own industry with the help of your own technical know-how and technical knowledge, if there is no patent law?

Dr. K. A. Hamied: We shall develop. We can develop so many new things even for export to the entire world.

Shri R. P. Sinha: I can also start it and put you into difficulty.

Dr. K. A. Hamied: So much the better for the consumer. You and I may have some difficulties. But the prices will go down.

Shri R. P. Sinha: We find—this is not only with respect to pharmaceutical industries, but other industries as well—that the cost of production in India is higher than in other countries. If we permit importation of those articles produced by these industries, then these industries put up at a heavy national cost in India will be hit. How do you solve this problem?

Dr. K. A. Hamied: It is a very important question. First of all, I do not agree that the cost of production in India today is as high as is reflected by the price charged by the manufactures. I am talking of chemicals and basic materials. I am manufacturing some of them. My price say comes to Rs. 30 which is some what higher than the world price. It is being sold in India at Rs. 100|-. Why it should not sold it at Rs. 40|- instead of at Rs. 100? Because I am the only manufacturer.

Shri R. P. Sinha: If there is room only for one industry, we have to control the price by some other mechanism.

Dr. K. A. Hamied: Most of the foreign concerns have taken a licence from the Industry Department on this excuse that there is Room for one manufacture e.g. by Vitamin B12 is manufactured by 20 firms in the world. I am not going to manufacture if there is no Prospect of sale. In India licence has been given only to one firm. The import has been stopped. Please give the licence only to us. And they have been given the licence. They are allowed to sell it at Rs. 220|- a gram whereas the world price is Rs. 30 a gram.

Shri A. T. Sarma: You have stated in your memorandum that the patent law was established in 1911 by British rulers to encourage the British firms

in India. Do you think that the patent protection is harmful to the Indian inventor?

Dr. K. A. Hamied: From 1911 up till now we have not been able to invent anything.

Shri A. T. Sarma: I want you to given concrete instances as to how this has been harmful?

Dr. K. A. Hamied: There is no Indian invention.

Shri A. T. Sarma: Do you mean to say that lack of Indian invention is due to the patent protection?

Dr. K. A. Hamied: When I say 'no invention', it may not be hundred per cent so. There may be one or two inventions.

Shri A. T. Sarma: Was it due to this patent law?

Dr. K. A. Hamied: It was mainly because we werer not given opportunities for research and there were no research facilities and there was no research apparatus.

Shri A. T. Sarma: If it was to encourage British firms, how is it that all foreign firms are opposing this and all Indian firms are welcoming it?

Dr. K. A. Hamied: No. We are favouring this change in the patent law.

Shri A. T. Sarma: According to your calculation, it is harmful to the Indian inventors and more beneficial to foreigners.

Dr. K. A. Hamied: That is the old law, not the present Bill.

Shri A. T. Sarma: Then do you welcome this?

Dr. K. A. Hamied: I am in favour of complete abrogation. Since that is not possible due to political and other reasons, I am supporting this Bill subject to certain modifications.

Shri A. T. Sarma: Do you think that the proposed Bill will be beneficial to the Indian inventors?

Dr. K. A. Hamied: I hope so.

Mr. Chairman: I am raising now a very important point. Big foreign firms established in chemical and pharmaceutical industry in India are remitting over Rs. 5 crores of dividends and reyalties to foreign countries. Why do not they take up motor car industry? Why do not they take up textile industry in India? Why are they not doing locomotive industry? Why only pharmaceutical industry? That is the question. Why are they not coming into any other industry in a big way?

Shri Bade: As far as abrogation is concerned, of course, we are also of your view that there should be abolition so that the foreigners may not exploit us.

Dr. K. A. Hamied: I am very happy.

Shri Bade: At the same time, you have stated that since we are internationally connected we should not abrogate it. Supposing we make it compulsory that they should disclose their know-how before getting the licence, then they may withdraw from India. I would like to know how many years we require to develop all these drugs.

Dr. K. A. Hamied: I cannot say how many years we will take. And it will be very difficult also to judge how many years we will take to develop all these drugs. But, I hope the process of development will be much faster than it has been hitherto. There will be no hindrances in our way.

Shri Bade: Kindly refer to Section 95—page 55—of the proposed Bill. Sub-clause (3) says:

> Notwithstanding anything contained in sub-section (2) the Central Government may, if in its opinion it is necessary so to do in the public interest, direct the Con-

troller at any time to authorise any licensee in respect of a patent to import the patented article or an article or substance made by a patented process from abroad (subject to such conditions as it considers necessary to impose relating among other matters to the quantum of import, the sale price of the imported article, and the period of importation), and thereupon the Controller shall give effect to the directions.

Are you happy with this provision?

Dr. K. A. Hamied: 'To authorise any licensee to import'.

Shri Bade: The whole Bill is nullified by this clause.

Dr. K. A. Hamied: If the original patent holder is not manufacturing the product in the country and if he is allowed to import, then other people also should be allowed to import.

Shri Bade: It is stated in the clause "if in its opinion it is necessary so to do in the public interest, direct the Controller at any time to authorise any licensee in respect of a patent to import the patented article . . . "

Dr. K. A. Hamied: This will kill the whole Patent Bill.

Shri Bade: So you agree with me.

Dr. K. A. Hamied: This is very cleverly put here. The patent holder may appoint as licensee his own firm in India, who is a licensee by right.

Shri K. V. Venkatachalam: It is intended to be there.

Dr. K. A. Hamied: But it is not mentioned. The licensee is sitting in Switzerland. The licensee may be a person belonging to the same firm.

Shri D. P. Karmarkar: He is only a primary licensee.

Dr. K. A. Hamied: Though he is not manufacturing, you allow him to import.

Shri Bade: Supposing there are 3, or 4 processes. Anybody can go to the Court and say that the patentee is using only one process and he is not using three processes. Therefore, there should be compulsory licences for three processes and he will be given compulsory licence.

Dr. K. A. Hamied: He can be given for the first process only.

Shri Bade: That is not the condition here. He can be given compulsory licence for any of the processes.

Dr. K. A. Hamied: They should not be granted patent for any of the processes which they do not use.

Shri Bade: In the proposed Bill, the definition of medicine or drug is all medicines for internal or external use of human beings or animals. In the Drug Act, cosmetics is included in the external use of human beings or animals. I was in that Select Committee also and I objected to that.

Shri D. P. Karmarkar: I thought that was for those intended for curative purposes and not for adornment purposes.

Shri Bade: The definition of drugs given in the Drugs Act is repeated here also.

Shri Bibhudhendra Mishra: I am told by the Drugs Controller that the cosmetics has been separately defined in the Drugs Act.

Mr. Chairman: Anyway, we are not concerned with that here.

Shri Bade: Again, in the definition, Government undertaking means any industrial undertaking. When it is mentioned Government's use, it will mean Corporations also.

Dr. K. A. Hamied: It is only for Government's use, not for trading

purposes by the State Trading Corporation or the IDPL or the Hindustan Antibiotics.

Mr. Chairman: You have already made it sufficiently clear.

Shri P. C. Borooah: Do you agree that with the coming into force of this Act, the terms of existing patents for licence should also come to an end?

Dr. K. A. Hamied: The Bill should have retrospective effect. Licence means patents. The patens will fall in line with the new Bill when it comes into force.

Shri P. C. Borooah: Now India is holding a position because it stands on certain commitments. If we curtail the terms, then we will be falling back on our commitments.

Dr. K. A. Hamied: In those commitments India has never guaranteed that there will be no alteration or changes in the Patent Bill. There is no clause like that.

Shri R. Ramanathan Chettiar: From your experience, are cartels in the drug and pharmaceutical industry operating in India under the guise of the firms enumerated in your list?

Dr. K. A. Hamied: No cartels are operating in India. Cartel can only operate when the drug manufactured is the same. Take tetracycline of Pfizer. It is manufactured by three firms. When it is manufactured by more than one firm, only then cartel can be formed.

Shri R. Ramanathan Chettiar: You referred to Rs. 5.28 crores being remitted by way of royalty and dividend by those 35 firms.

Dr. K. A. Hamied: This is besides the remittance for purchase of raw materials by the 35 firms—another 6 crores.

Shri R. Ramanathan Chettiar: About 11 crores. In these raw materials, they have more or less monopoly. In reply to a question, you said that 80 per cent of the drugs are dependent on imported raw materials.

Dr. K. A. Hamied: May be 75—80

Shri R. Ramanathan Chettiar: The capital invested by foreign companies according to the RBI Survey (Nov. 1964) is Rs. 14 crores in 1962-63, p. 1387.

Dr. K. A. Hamied: It is: chemical 7 crores, pharmaceutical 8 crores, other chemicals 13 crores—in all 30 crores.

That is the total capital.

Shri R. Ramanathan Chettiar: What is the foreign content of the capital?

Dr. K. A. Hamied: About 14—15 crores.

Shri R. Ramanathan Chettiar: Out of that, 2 crores was taken away by dividends in 1962, 5 crores by way of royalty—total 7 crores.

Dr. K. A. Hamied: Out of 14 crores invested, 7 crores are taken out every year.

Shri R. Ramanathan Chettiar: In 1962-63, they had taken. Compared to that, what is the total capital of the indigenous manufacturers in the pharmaceutical and drug industry?

Dr. K. A. Hamied: I cannot say offhand.

Shri B. K. Das: When the new Act comes into force, in your opinion, will foreigners still be tempted to take patents or do you think they will not come at all?

Dr. K. A. Hamied: They would come all right. They are threatening that the Bill will have so many undesirable effects. But the fact is that they are saturated in their own countries. I met a French manufacturer recently. He is starting a factory for manufacturing antibiotics in Vietnam. I asked why he is doing it in that country when there is so much of uncertainty there. He said 'We have no

means of expansion in France. We will go wherever we can'. This is the condition in Europe today.

So I assure you it is merely a threat.

Dr. L. M. Singhvi: I would like to know, in the first instance, whether a provision for compulsory licence or licence of right would not preclude the difficulty that he anticipates in respect of patenting a number of processes, because as soon a person wants to utilise or exploit another alternative process, he can always apply and use that process.

Dr. K. A. Hamied: They generally have the better and easier process which gives more yield at less cost. But in order to prevent others from jumping by other means, their scientists work out all possible means and get those also patented, whether they are workable or not. The others reach the same product, but perhaps at double the cost and at half the yield.

Dr. L. M. Singhvi: Once a provision for compulsory licence or licence of right is already there, there is no monopoly or exclusion in respect of utilisation of these alternative processes.

Dr. K. A. Hamied: That monopoly right is also for the processes which they are not using. What I am saying is that if these processes are not barred, our scientists and technical experts will have free scope to work on various chemical reactions and various processes.

Dr. L. M. Singhvi: Putting it differently, do you not think that by allowing patent of a number of processes, you are making it possible that a number of processes and technical know-how would become public property in the sense of having that information disseminated so that your own scientists would not have to do the process of research all over again? They could use any one of these processes.

Dr. K. A. Hamied: I am a chemist myself. If the process is not known to us, I have my own processes to work. But the moment I start working, I reach a stage where I find it is already patented. I have to stop it there.

Dr. L. M. Singhvi: You mentioned that a certain monopoly is created because only one industrial licence is given in respect of a particular drug. If more than one industrial licence were given, there would be no monopoly. Is that the point?

Dr. K. A. Hamied: Not only licence given, but the manufacture started also. I have got a licence for a product for two years. But I never started it. It should be giving of a licence and manufacturing the product according to the licence within a certain time. The more the manufactures, the cheaper the product.

Dr. L. M. Singhvi: Would it be correct to deduce that if more than one industrial licence were given and if the indigenous manufacturers embarked on the manufacture of that particular commodity, there would be no monopoly and in that case, you could not find fault with the patent law but with the procedure of the licensing Ministry which grants only one licence and not more than one?

Dr. K. A. Hamied: I have never said so in my memorandum that patent law is responsible for high prices. Patent law leads to monopoly.

Dr. L. M. Singhvi: It is intended to lead to a kind of monopoiy.

Dr. K. A. Hamied: That monopoly is removed by compulsory licensing or licence of right and further by the issue of industrial licences which has come to stay in our country. Then prices will come down

Dr. L. M. Singhvi: Are you aware that in our country a lot of substandard or spurious drugs are manufactured.

Dr. K. A. Hamied: Mr. Borker will be able to say about that because he is dealing with it.

Dr. L. M. Singhvi: You are the witness now.

Dr. K. A. Hamied: That is the case everywhere, not only in India, but in America, England Germany and so on. In America, there was an injection prepared on using which 10 people died instantly. Nobody blamed the American manufacturer. To err is human. It can happen anywhere. An injection made by a foreign firm when administered intramuscularly resulted in a wound 6 inches long and one inch deep. Nobody blamed the manufacturer. But the Doctor was blamed, that his method of injection was wrong.

Dr. L. M. Singhvi: That is very unfortunate.

Dr. K. A. Hamied: If it was my injection, then the Doctor would not be blamed; they would say that the Indian medicine was bad.

Dr. L. M. Singhvi: The statement is often made, and has been made before us, that abrogation or relaxation of patents might lead to a greater manufacture of spurious/substandard drugs, and therefore, patients would not know what they are buying.

Dr. K. A. Hamied: No medicine is being manufactured by the patentee. They are all formulations based on the chemicals manufactured by the patentee.

Dr. L. M. Singhvi: What is the extent of research being done by indigenous investors and manufacturer?

Dr. K. A. Hamied: Quite a lot today.

Dr. L. M. Singhvi: Is it self-sufficient so much so that we need not draw on research from abroad?

Dr. K. A. Hamied: Research is a very costly process. I have had discussions with government officials and ministers and informed them that research is a costly process. And in India it is ten times costlier than in America and England. The duty on the import of research instrument is 60 per cent. If it costs here Rs. 20,000, I can get it in America for 4,000 dollars. If it gets out of order, I can phone the company and can get it repaired. But here, I have to import another one in a similar contingency. Who is stopping research, government or the people? Sometimes the duty is 60 per cent, 70 per cent or even 100 per cent on research apparatus.

Dr. L. M. Singhvi: How many indigenous manufacturers are there in India in the field of pharmaceuticals?

Dr. K. A. Hamied: Among the big-manufacturers we shall count about 200.

Dr. L. M. Singhvi: What portion of the total consumption of pharmaceutical formulations and drugs is manufactured indigenously?

Dr. K. A. Hamied: Not more than 20 per cent or 25 per cent; the rest goes to the foreign manufacturers.

Dr. L. M. Singhvi: What are the reasons for our not having embarked upon the manufacture of pharmaceutical raw materials which are not covered by any patents?

Dr. K. A. Hamied: The manufacture of these things is not a small process. A costly factory, a big factory has to be started. That can be started by people who hold capital. People who hold money do not understand what a coal tar distillant is, for instance. They are not interested. If I start manufacturing, for instance, glass, they will go into it. Capital is shy. Of course they are coming to this field now.

Dr. L. M. Singhvi: Are you suggesting that even government which is supposed to be omniscient is unaware of the utility of producing these raw materials.

Dr. K. A. Hamied: Application for licences are to be made by the private people, not government. In the last two or three years, they are coming forward.

Dr. L. M. Singhvi: My last question is about the difficulties experienced by the pharmaceutical industry in working or obtaining compulsory licence in respect of patents which could be commercially exploited in the country. What are the main difficulties?

Dr. K. A. Hamied: I mentioned that for us to realise a patent after getting a licence of right or by compulsory licence requires some chemical and industrial knowledge which has developed only during the last few years.

Dr. L. M. Singhvi: It is not the deficiency of the existing patent law but deficiency of our own technical know-how.

Dr. K. A. Hamied: Plus the difficulties in getting a licence compulsorily.

Dr. L. M. Singhvi: What kind of difficulty you face?

Dr. K. A. Hamied: I have not tried to get a compulsory licence; I do not care for these licences as I do everything myself.

Shri V. B. Gandhi: You said that our production of pharmaceutical products has increased tremendously in the last few years, from ten crores to something like 100 crores. Is it right to say that it has happened under the present system of some kind of protection that is being given to the pharmaceutical industry through the existing patents law?

Dr. K. A. Hamied: No, through import control.

Shri V. B. Gandhi: Anyway, larger production helps in diminishing the need for larger imports. If this production had not taken place, we will have had to import a substantial quantity and spend the precious foreign exchange. As a result of the protection extended under the present system, the industry has been able to make a much larger production and that means we have saved so much in imports. Do you agree?

Dr. K. A. Hamied: That is not on account of the patents, as I have told you already, but on account of the ban on imports of finished products and medicines.

Shrimati Sharda Mukerjee: One of the thing which other witnesses tried to impress on us that a mere relaxation of the law in itself will not ensure the growth of pharmaceutical industry in India because we have not the wherewithal in respect of the technology, capital and industrial base. What is your opinion regarding this? For instance, you mentioned the petrochemical industry. The process of the petrochemical industry is not really a great deterrent. It is a Rs. 30 crores industry which requires probably machinery worth Rs. 15 crores, etc. Is it your opinion that it is only the patent law which is a deterrent, or, is it your opinion that equally with the patent law is the fact that the other factors have not been available in to the country in the last 18 years?

Dr. K. A. Hamied: Both.

Shrimati Sharda Mukerjee: To what extent?

Dr. K. A. Hamied: I cannot give the exact difference and say how much it is. But the patent law has been responsible for our not having any knowledge as how to do it. It was controlled by certain firms. American or German, and even if we had the

knowledge, it was difficult to get import of capital equipment, licenses for starting the manufactures and so on. Even then, some raw materials had to be imported, because we cannot start from the basic things. For the petrochemical industry, as I said crude oil is necessary for manufacturing petrol or petroleum products, and then for breaking them up, at some stage, the import of raw material and capital equipment was necessary, and the technical know-how was also necessary. If we had the technical know-how, we did not have the other three things; if we had the other three things, then the technical know-how was not there. So, these have to be developed. The Government is taking interest in petrochemicals; at least they have given facilities to combine with other foreign firms and start petrochemical industries, but they will have to import raw material.

Shrimati Sharda Mukerjee: Do you think that the Bill which is before us is satisfactory?

Mr. Chairman: He has given that answer.

Shrimati Sharda Mukerjee: He said that there should be a much greater relaxation in the law.

Dr. K. A. Hamied: I have answered that question already.

Shrimati Sharda Mukerjee: Regarding products *per se* and the process, you said there should be patent only for the process of the product; is it your opinion that the product should be patented or not?

Dr. K. A. Hamied: The product is patented on account of the process.

Shrimati Sharda Mukerjee: There is a difference between the process and the product.

Dr. K. A. Hamied: I know the difference, but if the product is patented, nobody can make that product unless the process is known. This is happening in India. The product called tolbutamide, is a British pharmacopoeia product. It is not a proprietary name. The patent is held by Hoescht for the manufacture of that product. 17 patents are held by them for the manufacture of tolbutamide. If we import this product, they say that the product is also patented and we cannot import it. This is the position. So, they are today in full control of not only the process but the manufacture of tolbutamide.

Shrimati Sharda Mukerjee: Do you think there should be a shorter term than what is provided in the Bill?

Dr. K. A. Hamied: I have already, answered it: 10 years.

Shri S. N. Mishra: Our main object is to restrict or eliminate the scope for exploitation which is inherent in the situation. You have suggested a few methods for doing so. The methods that you have suggested are, so far as I have been able to understand, to restrict the patent to one process. Secondly, to make provision for compulsory export; thirdly, to provide for the import of its products.

Dr. K. A. Hamied: In case the patent-holder does not make it.

Shri S. N. Mishra: Yes; these are the three ways in which the scope for exploitation could be restricted or eliminated. Could we add to them—I am just testing my idea with you, and it may be a kind of compromise—that in the case it is laid down that a particular level of production has to be attained inside the country and if that level is not obtained, the Government would be compelled to allow import? There should be a kind of compromise. The Government can take a view of the requirements or the demand or the potential demand in the country and the Government can lay down that this level of production has to be obtained through

the exploitation of the particular method and so on. If that has not come about, then the Government will be compelled to provide for import. That makes it more reasonable, when you say that there should be sufficient import.

Then, if the development of the basic drugs and the intermediates comes about in a satisfactory way, then also the scope for exploitation would be very much limited, because much of the reasons for the increase in prices may be put down to the import of many of these raw materials too, which they have been using for this purpose. So, as we have been thinking, if in the country we are able to bring about adequate development of the basic drugs and the intermediates, then much of the scope for this can be eliminated. Would you like to lay more stress on that?

Mr. Chairman: What is your question?

Shri S. N. Mishra: It is a simple question. My question is, if it is laid down that a particular level of development has to be attained by the exploitation of a particular method, would not the scope for exploitation be limited. I am trying to test the idea with the learned witness. This is a very important question for which I want to have his advice and his answer.

Dr. K. A. Hamied: Regarding the first question, it will be very good if the patent-holder or the licensee under compulsory licence or other licences, is induced—not forced or compelled but prompted—by the Government to manufacture as much quantity of that substance as is needed in the country; it will be very good if the patent-holders or the licensees try to help and produce as much as is required by the country. In case it is not possible for some reasons, you suggest that this should be imported by the Government, but there comes the foreign exchange difficulty. At the present juncture, the question of import does not arise at all. And therefore, we are not to consider it at the present juncture of the foreign exchange position.

Shri S. N. Mishra: That is something else. The foreign exchange position may be difficult, but you should not go by that; it is only about the principle that I want to have your views.

Dr. K. A. Hamied: If foreign exchange is freely available, you will give notice to the manufacturer saying that we shall allow import, as Mr. Kidwai did when the sugar prices were going high. He issued licences for the import of sugar, to 20 people—I know it—and the sugar prices immediately came down.

Shri S. N. Mishra: So, in each case, would you like the Government to lay down the level of production which has to be attained, keeping in view the requirement of the country with regard to that?

Dr. K. A. Hamied: Yes.

Shri Sham Lal Saraf: Then the question will arise as to whether we have got the wherewithal in the country to get to that level of thinking.

Shri S. N. Mishra: The Government will take a review of the production, keeping in view all these things: the position of the resources, the demand in the country and so on. But it must not fall below a particular level of production.

Dr. K. A. Hamied: I have already replied that the production of one item depends on the import of another five items. We are lacking in the basic drugs and intermediates. I am making certain products for which I am given a licence for the raw material to the tune of three tons. I am producing a vitamin which is very important today in India and which is not made by anybody else. If the Government does not allow me to import my three tons of raw material, I cannot manufacture my vitamins. So, the question is, for the manufacture

of that much quantity laid down by Government, for the use of the whole country, the raw material required for the manufacture must be allowed by the Govenment. Otherwise, it cannot be made.

Shri S. N. Mishra: My question No. 2 is with regard to the development of basic drugs and the intermediates. If the basic drugs and the intermediates are produced in the country in large quantities, would you suggest that there should not be much scope for the grant of patents?

Dr. K. A. Hamied: The grant of patent is quite different. To my knowledge, not many patents are involved in basic drugs and intermediates.

Shri S. N. Mishra: There will not be much scope for that.

Dr. K. A. Hamied: The patents start after the intermediates and when we have a combination of intermediates in 20 different ways, we reach 20 different products. Then, we start patenting. As a Chemist, I have combined one or two intermediates and produced a drug for heart disease. Another man may combine two different intermediates and produce a tranquilliser. Everybody tries to combine intermediates in making new synthetic chemicals which are used as drugs and medicines. That derive for making new inventions and discoveries in the field of medicines will always remain.

Shri S. N. Mishra: The prices will come down.

Dr. K. A. Hamied: The prices will come down when competition starts.

Shri Peter Alvares: You and some other chemists have made out a case that one of the reasons for the stagnation of the Indian pharmaceutical industry is the existence of foreign patents. This implies that because you are not able to work on those foreign patents, you are not able to expand. It is a very sorry state of affairs because it implies that all the research that has been done has been done by foreign patentees and you have nothing else to day. May I ask why is it that the Indian pharmaceutical industry has not been able to achieve a break-through in inventions of essential drugs?

Dr. K. A. Hamied: The break-through is not so easy as the Hon. Member thinks. There are so many factors involved in making a break-through. On the discovery of a new drug, whether it is for diabetics or heart disease, the break-through is a combined process of the chemist, the pharmacist, the bio-chemist, the microbiologist and the medical doctor. The combination of all these factors leads to a drug and leads to a patent.

Shri Peter Alvares: Some of the witnesses have been saying that in the interest of India, this patent law should be abrogated. It has also been said that one should not rely upon copying so much but one should try to do some sort of fundamental research. I would like to know why the pharmaceutical industry has not been able to achieve anything in that matter. Can you tell me what is the percentage of their profits which they invest in research from year to year?

Dr. K. A. Hamied: They invest quite a lot.

Shri **Peter Alvares:** What is the percentage?

Dr. K. A. Hamied: It will be about 20 or 30 per cent.

श्री ब्रज बिहारी मेहरोत्रा : मैं एक ही सवाल करना चाहता हूं कि यह बिल जिसने कि फौरेन लोगों को इतना विचलित कर दिया है कि वे दौड़े चले आये हैं तो यह बिल अगर ऐसे का ऐसा एक्ट बन जाय तो क्या इससे देश को कुछ लाभ होगा ?

डा० के० ए० हमीद : मेरे ख़याल में ज़रूर मदद मिलेगी ।

श्री ब्रज बिहारी मेहरोत्रा : वह किस दज तक मिलेगी इसकी जानकारी मैं चाहता हूं ?

डा० के० ए० हमीद : मैंने उसका जवाब दे दिया हुआ है ।

श्री ब्रज बिहारी मेहरोत्रा : पेटेंट की मियाद अगर हम दस वर्ष से कम भी कर दें तो क्या आप इसे पसन्द करेंगे ?

डा० के० ए० हमीद : उसका भी मैं जवाब दे चुका हूं

Shri Gowdh: In the present Bill, there is a provision for the payment of royalty at the rate of 4 per cent. Do you think it is reasonable or do you think that no royalty should be fixed or that the rate of royalty should be increased?

Dr. K. A. Hamied: I think 4 per cent is a very desirable percentage provided the person who takes the licence works the patent and sells it in good quantity. It depends on the sale. If the sale increases to Rs. 30 lakhs or Rs. 40 lakhs and he gives Rs. 1½ lakhs to the patent-holder for doing nothing as royalty, it is a very good return.

श्री अचल सिंह : जो आपने मेमोरैंडम दिया है मैंने उसको अच्छी तरह से पढ़ा है और मैं उसको बहुत एप्रीशिएट करता हूं लेकिन मैं इसी के साथ साथ यह आप से जानना चाहता हूं कि अगर हम पेटेंट बिल जोकि हमारे सामने है उसको हम हटा कर बिलकुल इटली, जापान में जसा कि बिलकुल फ्री था वैसा फ्री यहां भी कर दें तो क्या हम उसको ठीक से चला सकेंगे ?

डा० के० ए० हमीद : मेरी राय है कि हम ज़रूर चला सकगे और हम बहुत ज्यादा तरक्की करेंगे ।

श्री अचल सिंह : जिस चीज़ की कीमत एक रुपये होती है उसके दस रुपये यहां पर वसूल किये जाते हैं अगर यह पेटेंट बिल हट जाय तो क्या वह चीजें यहां पर हमें सस्ती मिल सकेंगी ?

डा० के० ए० हमीद : अब कीमत का तो सवाल दूसरा है । अगर कोई चीज़ जोकि एक रुपये में आती है वह अगर हमको बारह आने में मिलने लगे तो वह ठीक ही होगा । बाकी मैं यह मानता हूं कि वैसा होने से हमारी तरक्की होगी इल्म में और हम वह चीजें भी बना सकेंगे जिनमें कि हम को आजकल रुकावट हो रही है और हम बना नहीं पाते हैं ।

I am not talking of injections and tablets. I am talking of the raw materials and the patents for the raw materials. Tablets are being made here but the materials coming from there are patented. The drugs are not patented; they are patented only in name.

श्री रामसेवक यादव : आपने अपने मैमोरैंडम में यह कहा कि एक देश से दूसरे देश में, ख़ास तौर से हिन्दुस्तान में जो बाहर से चीजें आती हैं और उन के दामों में फर्क है तो मैं आप से जानना चाहूंगा कि पेटेंट की कीमत बढ़ाना किस हद तक मददगार समझते हैं और क्या पेटेंटी और लाइसेंसी को वह इस शर्त पर दिया जाय कि जो अन्तर्राष्ट्रीय कीमतें होंगी उनके साथ उसको चलना पड़ेगा और ऐसा होने से यह चीज़ दूर हो सकती है ?

Dr. K. A. Hamied: The patent is responsible for higher price to a certain extent in the early stages of the product. For instance, Cartisone was manufactured by a very big laboratory in America. They spent millions of dollars on that and the price they kept was Rs. 950 per gram. You may say that on account of the patent which they were holding, the price was Rs. 950 per gram. But that is not so. It is because they were the only manufacturers. There was no-body else in the United States

or in England or in Germany. They were selling at a price which they liked because the drug was very important and useful. In America, the scientific workers are so advanced that they started to manufacture Cartisone by 20 different methods which we in India are not able to do. They succeeded in that. When 3 or 4 firms started manuafacturing the product, the price came down to Rs. 95 and today it is standing at Rs. 8 only. So, in the early stages if there is nobody coming forward to utilise that patent, then the patent-holder is the only man who manufactures the product. That is one of the causes of the rise in price. If enough number of persons come forward and take the licence and start manufacturing the product, then the price due to patent will never be high. If there is competition, the price will be less.

श्री राम सेवक यादव: पेटेंट या लाइसेंस के साथ जो गैर मुल्कों की चीजों के दाम हैं उसको शर्त लगाने से क्या कुछ दिक्कत को दूर किया जा सकता है ?

Dr. K. A. Hamied: There are causes by which the prices of pharmaceutical chemicals are higher in India than in other countries of the world. The price of sulphuric acid is double the world price; the price of nitric acid is three times the world price; that of caustic soda is double the world price. These are basic materials required in the manufacture of various items.

Mr. Chairman: We are manufacturing all of them here.

Dr. K. A. Hamied: Yes. Nitric acid is manufactured only by Government at Sindhri; it is selling at three times the world price.

Shri K. K. Warior: I want to draw the attention of the witness to this position: he said that we were short of the basic materials; then how can he complain that the foreign firms import these materials for finally processing them?

Dr. K. A. Hamied: I have not complained.

Shri K. K. Warior: Dr Hamied, in the event of these firms not importing, do you think that the Indian manufacturers alone should import these intermediates?

Dr. K. A. Hamied: Let me explain this. The foreign firms are holding patent for making, say, Butanol. They are holding patents for making the three ingredients. But they are not making these three ingredients here.

Shri K. K. Warior: Are they importing finished good?

Dr. K. A. Hamied: They import finished raw materials and press them into tablets here. Why are they holding the patents?

Shri K. K. Warior: In the absence of that, what will the indigenous firms do?

Dr. K. A. Hamied: The knowledge of manufacture of intermediates is not available here.

Shri K. K. Warior: First you say that our pharmaceutical industry has developed to such an extent that we would depend on our own know-how and in another breath you say that, if at all we are allowed to import these intermediates or the basic raw meterials, we are not able to do the finished goods. How do you reconcile these two statements?

Dr. K. A. Hamied: We are allowed to import intermediates as much as the foreign firms are allowed to do. But they have the privilege of holding a patent and not utilising it. That is what we are objecting to.

Shri K. K. Warior: You will agree that, if at all we get the raw materials, we do not have the know-how to have the products finished?

Dr. K. A. Hamied: I am not comparing the Indian manufacturers. I am saying that the foreign manufacturers are not utilising the patents which they are holding.

Shri K. K. Warior: What I want to know from you is this. As long as the indigenous firms do not have the knowhow, what is the harm in the foreign firms holding it back or blocking it?

Dr. K. A. Hamied: We have the knowhow.

Shri K. K. Warior: I am sorry you are not catching my point. My point is this: some four processes are patented by a foreign firm; they are using only one and three are left out just to block....

Dr. K. A. Hamied: My argument is that they are not using even one.

Shri K. K. Warior: Why can't the indigenous firms have their own knowhow to make use of the basic materials which can be imported?

Dr. K. A. Hamied: They are now gradually using it. Our scientific knowledge is slowly advancing; the laboratories are now working. Immediately after Independence, we were passing through difficult times; we had the import control difficulties—raw materials, even for research, were not allowed. But now we have advanced so much that today we are in a position to overcome those difficulties and we are doing some work.

Shri K. K. Warior: Is it your opinion that, even if you had all the facilities of raw materials and the facility of the background of the chemical industry, you will not be able to develop in this country your own inventions and your own production? In other words, is it your opinion that, given all other favourable conditions, the existing Act will come in the way of your developing?

Dr. K. A. Hamied: From my experience I can say that it has come in our way. Whether it will continue in future also after our scientific knowledge advances, I cannot say.

Shri K. K. Warior: Till now even though there was the provision for compulsory licensing, many people did not take advantage of that. Now do you think that the provisions of Clause 95 of the present Bill—for the terms and conditions of compulsory licensing—are all right or do you think that any further advantage should be given to the licencees, apart from the patentees?

Dr. K. A. Hamied: I have already replied. So far as the present Bill is concerned, they are sufficient. If more facilities can be given, so much the better.

Shri K. K. Warior: My question arises this way. When there is no agreement between the patentees and the licensing applicants as far as royalty and other considerations are concerned, when such disputes arise when there is no agreement and the Controller comes into the picture, do you think that the present provisions contained in Clause 95 of the Bill are satisfactory or any amendments are necessary?

Dr. K. A. Hamied: I have already replied to this.

Shri Kashi Ram Gupta: You have given a statement that Japan started its Patent Act in about 1945, after the Second World War. Some say that it was after the First World War. So I want to know whether you have based your knowledge on the fact that you have seen the document itself—the Patent Act—or your knowledge is borrowed from some others.

Dr. K. A. Hamied: It is borrowed from the general information which I have been able to receive. I cannot say from which document I have been saying this. Mr. Davar also has said the same thing.

Shri Kashi Ram Gupta: My point is this. Have you seen the Act itself?

Dr. K. A. Hamied: I have not.

Shri Kashi Ram Gupta: You say that you are exporting your own medicines. Are they patented medicines?

Dr. K. A. Hamied: Medicines we are exporting. We are also exporting raw materials of pharmaceuticals.

Shri Kashi Ram Gupta: Does your firm possess any patents? How many are there in your firm?

Dr. K. A. Hamied: About 4 or 5.

Shri Kashi Ram Gupta: Are they doing quite all right?

Dr. K. A. Hamied: 3 out of them.

Shri Kashi Ram Gupta: Are they being sent outside?

Dr. K. A. Hamied: We are not debarred from sending outside. They are not sent outside beacuse other countries have their own laws, import control orders, etc. I am not allowed to import finished medicines from other countries. They cannot import from my country. There is no bar on me from exporting.

Shri Kashi Ram Gupta: You said that you have experience about research. When you say that it takes long time these days to arrive at any new invention, because it has become more competitive, thousands of compounds may be there and only one of utility may be found. This is a sort of gambling where a lot of money is put in. This is one argument. The other argument on the other side is this. They say that the period for which the patent may be given should be very low. How do you reconcile the two?

Dr. K. A. Hamied: 8 years or 10 years

Shri Kashi Ram Gupta: 10 years from the date of application. It may take 3 or 4 or 5 years for the same.

Dr. K. A. Hamied: They may start the manufacture before the sealing time.

Shri Kashi Ram Gupta: They can start it, but government cannot take action.

Dr. K. A. Hamied: The moment patent application is made and final specifications are submitted....

Shri Kashi Ram Gupta: He won't do it.

Dr. K. A. Hamied: There are articles manufactured in England and Bombay and it is written: Patent applied for. You can't copy it.

Shri Kashi Ram Gupta: The controller cannot interfere so long as it is not sealed. Why should one start like that when a law does not allow?

Dr. K. A. Hamied: Law does not prohibit him from starting. It does not prohibit him from starting. So long as process is known only to me and not revealed to anybody else....

Shri Kashi Ram Gupta: Unless it is sealed he cannot go to court of law. That period cannot be counted that way. You say, it may be less than 10 years.

Dr. K. A. Hamied: I am not able to know the legal point raised by the hon. Member. After specifications are completed and filed by patentee in the patent office, after that, I believe the patent applicant is protected if he makes known to the people that he is manufacturing such and such a product and that the patent is pplied for; nobody can copy that under the law.

Representative of the Ministry: Applicant is not sure as to what is going to be the ultimate patent. Some of the claims may have to be amended. So it is only after their acceptance and opposition period is over that patent will be sealed and right accrues after sealing of patent. No suit can be filed under any rule earlier than sealing.

These patents are being sold in England and Germany and they say: Patent applied for.

Mr. Chairman: The witness is not competent. These are all legal points.

Shri Kashi Ram Gupta: Do you agree to the period?

Dr. K. A. Hamied: I have already replied to that.

Shri Kashi Ram Gupta: The rate of royalty of 4 per cent is enough you said. In these days it is a competitive position regarding research. Will that amount spent on research be able to be recovered by this 4 per cent of royalty?

Dr. K. A. Hamied: If licence is granted to several firms and you exclude that licence 4 per cent will be ample. He will get 4 per cent from 10 firms.

Shri Kashi Ram Gupta: You should give your opinion about the rate of royalty.

Mr. Chairman: He has mentioned that 4 per cent is enough.

Dr. K. A. Hamied: Companies declare dividend of 6 per cent. If patent holder gets 4 per cent without trouble and labour, I don't think it is bad.

Shri Kashi Ram Gupta: What are the difficulties for companies like you to have your own know-how patented in the present conditions?

Mr. Chairman: Know-how is not patented.

Dr. K. A. Hamied: Some of our patents are well known ones. Others don't know. We want to hide our research. We apply to the patent office. We are holding a few patents. We consider it as complete secrecy of ours and nobody can copy it. If anybody copies it I will also suffer.

Shri Sham Lal Saraf: You said that the annual return by way of dividend and know-how is over 7 crores of rupees. What is the total investment made by foreign investors in India?

Mr. Chairman: He has given that also.

Shri Sham Lal Saraf: What is the annual return for that investment plus technical know-how?

Dr. K. A. Hamied: This is 7 crores on investment of 14 crores.

Shri Sham Lal Saraf: The entire investment on the part of foreigners is only 14 crores.

Dr. K. A. Hamied: There are 35 concerns.

Shri Sham Lal Saraf: At the present stage there is lack of knowledge and there is lack of inventive genius and technology. What measures do you suggest so that we may come up to the level of the progressive nations of the world?

Dr. K. A. Hamied: This is nothing coming under patent law. There are many methods.

Shri Sham Lal Saraf: This law is brought from England for specific purpose. There are number of members speaking on different aspects of the Bill. Our feelings and fears are there. We do not want to get them from outside for all times to come. You have said that this is a reciprocal law. Today we are not yet in a stage of reciprocating with foreign countries. You know it because you are an expert. How do you suggest that we can at least reach a stage so that we will be able to reciprocate? How long will it take for us to reach that stage?

Dr. K. A. Hamied: About 20 to 30 years.

Shri Sham Lal Saraf: We are at the lowest ebb so far as development is concerned. Our advancement in science and technology cannot be

compared with the achievements of advanced countries.

Dr. K. A. Hamied: I agree that foreign countries are today very much advanced in technical know-how and ingenuity. They have been doing that work for years. But this has nothing to do with the patent law. I can write a thesis on that.

Shri Sham Lal Saraf: Unless there is collaboration we will not go ahead. About abrogation of this law, you might be knowing that in Italy when this law was abrogated for a number of years the goods manufatcured were defective and of low quality. Then the Italian Government was forced to introduce a law. Today the law is on the anvil of the Italian Parliament.

Dr. K. A. Hamied: In Italy the real reason is that certain gigantic institutions do not want smaller firms in Italy to manufacture certain chemical which those gigantic firms are manufacturing. The smaller manufacturers started manufacturing them because they do not care for the patent law. Now the gigantic American and Italian firms are forcing the Italian Government to pass a law. The law is not yet passed. But who are behind this move? They are big firms. Similarly, here also lawyers are flying from Switzerland and Germany to oppose this Bill.

Shri Sham Lal Saraf: Regarding your own firm, how many of your know-how are patented under this?

Dr. K. A. Hamied: About five or six.

Shri Sham Lal Saraf: You said that as far as foreigners who are working in collaboration or on their own are concerned, to the extent of manufacturing within the country, they may be allowed patent rights. Otherwise, they import and let others also be able to import.

Dr. K. A. Hamied: If they are holding a patent for a certain product in our country and are selling it without manufacturing—I can give you so many examples. Acromycin is one such.

Shri Sham Lal Saraf: That means importing a commodity should not come under this.

Dr. K. A. Hamied: It is so also under the existing law. Under the new Act it will be free. They can import.

Shri Sham Lal Saraf: For manufacturing a particular drug there are more than one process. A particular firm is employing just one process. With regard to the rest, it should not be allowed.

Shri K. A. Hamied: I quite agree.

Shri Sham Lal Saraf: With regard to inequality of prices ranging between what is being sold in our country and foreign countries, what would you suggest to regulate the prices?

Dr. K. A. Hamied: I do not think that by statutory regulations prices can come down.

Shri Sham Lal Saraf: With regard to raw materials for manufacturing drugs, you have said that they are to be imported. How long shall we continue to import these? Or, do you think that attempts have to be made to use our own raw materials?

Dr. K. A. Hamied: We are unnecessarily afraid of imports. Switzerland is a country to which God Almighty has given nothing—no steel, no coal, nor coaltar. Still it is the largest producer of chemicals and pharmaceuticals which have flooded the whole world. They have no raw-materials except cheese and butter and milk. How did they achieve this? Because they are allowed to import all types of things for manufacture. Government do not interfere. Their scientific knowledge and development is so high that they are now the experts. They are importing coaltar products from France, Belgium, etc. We are not allowing that. I am trying to tackle

this matter with the new Finance Minister. Please allow us to import all raw materials free of duty. Let us then see how much export we can do. If I import raw materials for Vitamin from Germany at 65 per cent duty, I cannot do anything after that. If the Finance Ministry take a very rational view on imports of raw materials, all these can be converted into finished products as Switzerland is doing. We shall also then flood the world with our things and our science and industry also will develop.

Shri Sham Lal Saraf: Would you please send a note to the Chairman on this question of import of raw materials indicating what type of raw materials will be helpful to us?

Dr. K. A. Hamied: We will.

Mr. Chairman: Thank you very much.

(The witness then withdrew)

(Dr. Abraham Patani was called in)

Mr. Chairman: Dr. Patani, Dr. Hamied has already taken three hours. Our friends are tired. Tomorrow we have got two foreign witnesses. We cannot postpone their evidence. Since you are coming from Bombay, we will give you some other time. Please excuse us. We want to give you full time.

Dr. Abraham Patani: Thank you, Sir.

(The Committee then adjourned)

Minutes of Evidence given before the Joint Committee on the Patents Bill, 1965

Wednesday, the 2nd February, 1966 *at* 14.00 *hours.*

PRESENT

REPRESENTATIVES OF THE MINISTRY

1. Shri K. V. Venkatachalam, *Joint Secretary, Ministry of Industry.*
2. Shri S. K. Borkar, *Drug Controller of India, Ministry of Health.*
3. Shri B. N. Atrishi, *O.S.D., Ministry of Industry.*

DRAFTSMEN

1. Shri V. N. Bhatia, *Joint Secretary, Legislative Department, Ministry of Law.*
2. Shri R. V. S. Perisastri, *Deputy Draftsman, Legislative Department, Ministry of Law.*

SECRETARIAT

Shri M. C. Chawla—*Deputy Secretary.*

WITNESS EXAMINED

Dr. J. M. Hunck, *Chief Editor, Handelsblatt, Duesseldorf, West Germany.*

Dr. J. M. Hunck, Chief Editor, Handelsbllatt, Duesseldors, West Germany

(The witness was called in and he took his seat)

Mr. Chairman: Dr. Hunck, the evidence that you give will be treated as public and published and distributed to our members and also placed on the table of the Parliament. Even if you want anything to be treated as confidential, it will be printed and distributed to our members. We have received your memorandum and it has been circulated to all the members. If you want to supplement anything, you may now do so. After that, the members will ask questions.

Dr. J. M. Hunck: May I supplement my memorandum now?

Mr. Chairman: Have you got sufficient number of copies?

Dr. J. M. Hunck: Not now; I can hand it over to you tomorrow.

Mr. Chairman: We will require 65 copies.

Shri R. Ramanathan Chettiar: Before Dr. Hunck begins, we would like to know something more about Dr. Hunck.

Dr. J. M. Hunck: Handelsblatt is an economic and financial paper and I have been the Chief Editor since the starting of this paper; it was started in 1946. It is a new style of financial paper where international relations in the field of commerce play a very important part and this pattern has been followed all these years. To a considerable extent, it

has also promoted our foreign trade whether export or import.

Shri R. Ramanathan Chettiar: We would like to know whether any pharmaceutical industry or drug industry in Germany has got any interest in the economic journal.

Dr. J. M. Hunck: Yes. No financial interest, *i.e.*, capital.

Mr. Chairman: You are not connected with these industries. You are not connected with the Patent Law. You are not a practising agent or attorney for patents. Only as an *amicus curiae*?

Dr. J. M. Hunck: Yes. Some pharmaceutical industries in Germany came to know about my intention to come to India and asked me if I could try to do something for them.

Mr. Chairman: Have you got anything in writing to show that they have authorised you to come and give evidence?

Dr. J. M. Hunck: No. They asked me if and when I go to India I can do something for them.

Mr. Chairman: As one interested in the collaboration between India and Germany?

Dr. J. M. Hunck: Yes, that is my point.

Mr. Chairman: You may begin.

Dr. J. M. Hunck: Hon'ble Mr. Chairman and Hon'ble Members of the Joint Select Committee, at the outset, I would like to thank the Committee for having granted me the opportunity of appearing before you and offering my views on the Patent Bill 1965 and elucidating some of the matters mentioned already in my memorandum. India is by for the largest active democracy of the world and since independence has been a tower of justice and equality. The fact that the Committee has agreed to invite oral evidence from other countries of the world with regard to this legislation bears ample testimony. For this reason, many nations, including West Germany, have maintained friendly relations with India.

I would like to refer to the preface which Dr. Leubke, President of the Federal Republic of Germany wrote for my last book on India entitled *India Tomorrow* which generally states that real friendships always produce new friendships, and to the words of Dr. Leubke:

> "Just as the social duty of the individual to the community of our people has become a fundamental principle of our national life, so our people as a whole feel they have a social duty to the larger community of the peoples. The world will judge our people according to their willingness to aid other peoples. Indians and Germans have co-operated in various fields; scholars from both our countries have worked in close co-operation in the spheres of arts and literary studies. This collaboration is now spreading to the field of technology. May it promote the welfare of the Indian nation and contribute to a flourishing friendship between Germany and India?".

Similarly, the Federal Minister for Economic Cooperation, Mr. Walter Scheel, mentioned on the 13th of January this year, when he held a press conference in New Delhi, that the Federal Government would do its best to help India by capital aid. Besides, it would lay special stress on technical aid which includes education and training. Furthermore, the German Government will promote joint ventures between Indian and German firms in a more intensive manner. The Indian Investment Centre told me yesterday that till September, 1965, a

total of 372 approvals for joint ventures had been accorded. These joint ventures which provide foreign capital and technical aid as well, can, as a matter of fact, only flourish in a favourable investment climate and because your government will only allow new investments in those branches which are of the utmost importance to the health and economic developments of your people, such climate may be called the cornerstone of profitable co-operation for all parties concerned.

In my opinion, international partnerships are the stepping stones to future economic stability. They are the most dependable means of overcoming obstacles. With their aid, India is bound to gain in stature as an international partner in trade and industry. Due to its vast population and the vast untapped resources of mineral wealth, India is most suitable to become one of the most important economic partners in the world. If India were to achieve this, she must lose no time in developing the home market and supplementing it by an export trade with various other countries of the world.

To quote the words of Shri G. L. Mehta, Chairman of the ICICI and India Investment Centre:

> "There is nothing objectionable *per se* in obtaining assistance from other countries whether in the form of government aid or private investment obtained on fair terms and in a selective manner.".

Shri Ashoka Mehta, the hon. Minister for Planning has rightly emphasised that self-reliance does not mean self-denial of the essential means of development, which is foreign aid, or even stagnation of the economy.

Mr. Chairman: You are only repeating what is already contained in your memorandum.

Dr. J. M. Hunck: There are two quotations which I have given.

Mr. Chairman: You have already said all this in your memorandum. If you want to supplement anything in addition, you may do so. It is not necessary to read the whole thing again.

Dr. J. M. Hunck: I am only giving these two quotations.

Your Committee is considering a new patent law which amongst other things gives special treatment to articles of food and medicine. Your esteemed Health Minister, Dr. Sushila Nayyar, who being also a medical doctor is extremely competent to deal with all questions concerning health, has tried as far back as 1963 to remodel patent protection for foods and medicines for the main reason that production may rise and that consumer prices might in consequence go down. The hon. Health Minister is making efforts to obtain cheap medicines for the people. But which is the best method to do so?

I have been an economist during all my life and did practical and theoretical work as a scholar, as a businessman, as a writer and as the editor of an economic paper of international reputation. In my opinion, prices will only become lower if the productivity increases and more goods are being offered in relation to a given demand. In the case of pharmaceuticals, this means, in the first place, that research and development goes on in the same intensive manner as has been done in all countries where new drugs have been produced and sold on a large scale. This research and development is very expensive. Proof of this fact is the statistical late about new drugs produced during the last fifteen years in various countries. U.S A. figures with not less than 355 new drugs, little Switzerland with 44, West Germany with 32, United Kingdom with 27, and France with 21 and the remaining countries including

Italy and Russia produced fewer than five each.

India is trying to achieve self-sufficiency in food by 1971-72. This was even confirmed to me yesterday by your hon. Food Minister, Shri C. Subramaniam, whom I had the pleasure of meeting yesterday. This means increased crop production and cattle improvement, to say the least, according to Dr. P. V. Sukhatme, Director, Statistics Division of the F.A.O., who delivered the Dr. Rajendra Prasad Memorial Lecture in Cuttack on December 31st. Dr. Sukhatme stated that 25 per cent of the Indian people suffered from hunger and malnutrition; in the case of children it was even worse. This makes your endeavours to bring down prices for medicines and pharmaceutical products like vitamin tablets quite understandable. But one should not forget that out of about three thousand experiments in the laboratories only about one product becomes of practical use and will be a commercial success too. The question, therefore, arises, of course, whether the Government itself should be in charge of laboratory research work by means of public enterprises. Research and development of that kind includes pharmacology, toxicology and clinical trials in several hundred clinics in the country and abroad which usually takes four to six years. Very often, it happens that these trials prove to be unsuccessful or that after one or two years the disadvantageous effects of the product are observed. In the meantime, three to four million rupees might have been spent. Perhaps there might be very few directors in the public sector research undertakings who would courageously stop further trials after enormous amounts of money have already been spent and that will be lost. The private entrepreneur, however, it used to take these risks, and he must do it if solely for competitive reasons. He is possessed by the idea that that another time the lost money will be recovered by first class laboratory research. The mere risk element in research might in any case be claimed as justification for higher returns. Surely, in many cases, drug firm is like an economist; its income lies in its brain power, its principal asset. Yet no one has tried to express my own earnings as a rate of return on my capital (*e.g.* car, office, one typewriter).

In the drug industry, the existence of patents does not restrict competition. In fact, patents are essential to competitive endeavours. Drugs have a very inelastic demand. If a patient can in any way manage it, he will consume the drugs of his doctor's choice. Price competition is therefore very unlikely to be effective. Rather it is substitute competition which typifies the drug industry, namely, rapid obsolescence of products, one drug being quickly replaced by a better one. Each company strives to discover new products and to improve its old ones. In other words, the objective must be determined from the point of view of whether it helps to promote (a) research for developing and discovering new drugs and processes by granting rewards for creativity and for the risks which have been undertaken in such research, (b) the cross fertilisation of ideas by encouraging publication of inventions rather than their suppression as a trade secret, (c) by creating a classified source of information concerning existing technology so as to aid in the conduct of research and prevent duplication of efforts, (d) by such cross fertilisation of know-how to improve and develop own know-how and thereby to become a major partner in international economy.

Less developed countries very often complain that young scientists prefer to stay abroad where they might earn more than at home. This situation is not unique to India. I can tell you that in 1962, not less than 356 and in 1963, in total 428 German scientists and technicians emigrated to the

United States., It is estimated that between 2 and 3 thousand German scientists and engineers are working in the U.S. The German Government is trying hard to get them back. So Scientific institutions are being erected on a broader scale. Their salaries will be enhanced. All over the world, skilled people are moving to the more developed countries. We have a lot of young scientists from African countries, from the Near East and also some from India who do excellent work. The British figures since the Immigration Act, analysed by the Ministry of Labour, show that from June, 1963 to June, 1964, some 32,000 employment vouchers were issued to commonwealth immigrants and over 90 per cent of these went to India and Pakistan. Development, as a matter of fact, is not simply a matter of producing skills; it is a matter of producing opportunities to use these skills. This includes laboratories, good salaries and similar incentives. First class laboratories or joint ventures or even foreign firms in India might offer a chance for young Indian scientists to be trained within the country and under conditions which he will meet when doing work within his own enterprise or with an Indian firm later on. This can only be achieved if there is a reasonable opportunity to recoup the capital invested and a reward for the risks undertaken in the shape of patent protection.

Your country, where 80 per cent of the national income comes from the private sector, has spent in 1961-62 on scientific research an insignificant amount of Rs. 46.9 crores which is Rs. 1.07 *per capita* and 0.32 per cent of the national income, while the total investment up to the end of the Third Plan is estimated at the huge sum of Rs. 30,000 crores, most of the investments being based on imported technical know-how. The Federal Republic of Germany with a population only 1/8th of the Indian population has spent in 1962 a total sum of Rs. 517 crores. Nevertheless, the so-called technical balance of payments (which compares the imports with exports of royalties) is highly unfavourable as far as the Federal Republic is concerned. In 1962, 50 million dollars were earned by German royalties whereas German firms paid not less than 135 million dollars for royalties abroad. This results in a negative balance of payments of 85 million dollars. Another statistical data might interest you. 75 per cent of private research and development in western countries is in the fields of aviation, construction of electrical machinery and appliances and the last, but not the least, chemical industry including pharmaceuticals.

It was the German chemical industry which invested most abroad during the last few years. In many Latin American Republics, the big dye-stuff companies and Schering have established factories to produce besides the dye-stuffs, artificial fibres, fungicides, pasticides, pharmaceutical products etc. FARBWERKE HOECHST to give you one example, have invested abroad a total sum of more than Rs. 30 crores of which 44 per cent was invested in less developed countries.

More than half of German private investments abroad were made by 24 big firms out of which 9 hold a leading position. This means that private investment is generally being made by relatively a few big enterprises. This is quite understandable because it must be remembered that especially the chemical and pharmaceutical firms need a lot of money to invest to the advantage of the country where they are carrying on their work.

Now let us look at some leading pharmaceutical firms and their business in India. First there is HOECHST which participates in a joint venture with a majority Indian capital participation. HOECHST also plans to establish in collaboration with Indian partners a research laboratory near Bombay where Indian scientist will be usefully engaged. A few young Indian scientists are at the present moment being trained in Germany and they will, on return to India, occupy leading positions in this re-

search unit. CIBA, by the way, has built a huge research centre in Bombay where Indian scientists are busy. Next comes Bayer with a joint venture and a German part of 50 per cent. Bayer India has almost completed a factory near Bombay at a cost of Rs. 6 crores which will commence production in the beginning of autumn this year. Bayer will develop in this new factory three products which are vital or India's development. First coutchouc (rubber) auxiliaries, second pesticides, insecticides and fungicides, third pharmaceutical products against tropical diseases. besides resochine which fights malaria. In all these cases, it must be found out whether the Indian climate needs a different composition of the product, necessary to make it possible to store these products for a certain period without danger of deterioration. In other words, every foreign enterprise which does work within India must start a certain scientific work to find out whether Indian conditions are appropriate to either store their products or make the best use of it. Furthermore, these firms are experiencing with indigenous plants and active ingredients. Foreign knowledge is being matched, to the advantage of all parties concerned, with Indian knowledge. And everything should be done to protect such a development in the way of a fair patent law.

Boehringer Knoll works with a German partnership of 48 per cent., Sarabhai-Morck with 33 per cent, and German Remedies with 49 per cent. On account of the uncertainties of the Patents Bill, many German firms will hesitate to invest more in Indian laboratories. This, of course, would change at once if and when a patents law will be modled on a basis which is not confiscatory in character and on the basis of international terms to protect private property, whether material or intellectual.

In view of the most unfavourable foreign trade balance, India is highly interested in more exports. If the Patents Bill becomes law in the present form, exports will hardly be possible because expenses and risks are relatively high and could not be covered by the extremely small margin of profits which have been mentioned so often. Foreign partners are quite prepared to agree to exports being undertaken under conditions of a fair Patents Bill. They will do so the more since prices calculated in Western Germany, for instance (which may be considered to be a hard currency area) will naturally be higher than in countries with soft currencies. This export business will, therefore, be an asset which could hardly be over-estimated in joint ventures producing pharmaceuticals.

Foreign investments in Germany might give you another illuminating example of what concentrated international co-operation means. Between September 1961 and June 1965, the amount was Rs. 777 crores, half of which came from neighbouring countries and the rest from the U.S.A. As far as German investments abroad are concerned, they come in the private sector up to 1964 to only Rs. 8.64 crores. West Germany is, therefore, in consequence of the enormous losses due to the last war, walking to a certain degree on foreign crutches. International partnership was an efficient help in the recovery of the West German industry. Capital has been made freely transferable by the then Minister of Economics, Prof. Erhard. West Germany was able to gain its feet and surge ahead. Now it is, as you might know, the second largest trading partner in the world. The principle of its system is not only to assist the economically week but to give full cope to initiative and free enterprise.

I shall now give you another example which refers to an Asian country, Japan, after the second world war, has made rapid progress in technology and industry and accomplished considerable technical innovation. As the Japan Patent Association has explained in its memorandum which was handed over to the esteemed Select Committee, this is all due in an important degree to the introduction of foreign patents, foreign know-

how and foreign capital into Japan under the protection of Japanese Patents Laws which are in lines similar to the laws in other industrialised countries of the Western orbit. The technical balance of trade including patent royalties and payment for know-how amounted in 1964 to foreign expenditure of 146.4 million dollars while Japan received in the same year for patent royalties and know-how from abroad only seven million dollars. This again means, as in the German case, a negative balance of a sum total of 139.4 million dollars. Our Japanese friends reiterate this fact by saying that it is in this way that they have made technical progress in industries and have gained much larger sums in foreign currency by the exportation of the products thus made in Japan. It is exactly such a point of view which should be included in the basic objectives of your Patents Law and play a very important role. It is mentioned furthermore in the Japanese memorandum and I quote: "It is nations such as Japan and West Germany which held a complete Patents System and that have made progress in industry since the Second World War". And I may add in a phenomenal way.

If you consider the Indian Patents Bill under these aspects, one might say that it has restricted essential and substantial rights. The consequence mentioned in the Japanese memorandum is formulated as follows:

> "If any form of property were to be used or acquired by government without payment of reasonable compensation and without due process of law, such use or acquisition would offend the fundamental rights which we have always jealously safeguarded in a democratic country and India is considered as a model case of democracy."

The effect of this Bill, if enacted, is tentamount to taking of property under power of Government without due process of law, without provision for an appeal to a judicial tribunal and without just compensation. To give some data about the recent economic development of Japan, exports have risen in 1965 by 26 per cent after 23 per cent in 1964. The balance of payment came out with additional rupees 96 crores. The German balance of payment by the way in comparison in 1965 ended, for the first time since 14 years due to enormous imports caused by high prices, with a deficit which can be appriased at about rupees 780 crores. And may I add to finish up the Japanese case that the special adviser to the Minister of Foreign Affairs, Mr. Ohkita, mentioned some days ago in New Delhi that though the economic planning agency of the government had produced several plans since the end of World War II, the Japanese economy was predominantly a private enterprise and the per capita income in 1964 stood at 2900 rupees, by far the highest in Asia.

Reference is often being made to Italy and its patent laws. Everybody knows that the Patent Laws in existence have been reformed under the domination of Mussolini in 1939. There is practically no patent protection for pharmaceuticals in Italy, with the consequence that small and obscure firms are flooding the market, but nevertheless, international products are being preferred. HOECHTS, for instance, is in the market with 76 per cent of diabetes tablets consumed whereas 37 Italian firms deliver only 24 per cent. The same is the case with products of other firms who are research oriented. The chemical industry of Italy, as you might know, however, enjoys patent production and has developed a high international standard, if you take f.i. Montecatini and Edison.

Now the Italian pharmaceutical industry wants international exchange of technical progress and the Italian government has drafted a bill according to which patent protection shall be granted for processes to manufacture drugs and medicines. The draft

bill is before the Judicial committee of the Italian Senate.

On the other hand, the European Economic Community has prepared a European patents law which is in conformity with an agreement of the European council to harmonise the sale of all kinds of drugs. This of course will influence action in Italy as well as in Great Britain. May I add that the Council of Europe embraces European countries belonging to the European economic community as well as to the European free trade area and consequently all the States of western part of Europe. A convention on the unification of 13 points of substantive law on patents for inventions has been concluded in November, 1963. According to this convention of the Council of Europe protection will be granted to the substance itself produced by chemical processes in so far as the substance does not relate to food stuff, luxury articles, provisions including sweets, tea, coffee, beverages and tobacco products. Italy, as a member of the Council of Europe, is obliged after a limited period to grant patent protection for such substances produced by chemical processes. As you might perhaps know, the Soviet Union has already adhered to the international convention for the protection of industrial property known as the Paris convention. Further, in the middle of 1965, the Soviet Union has introduced a trade mark law. At a conference held at Munich recently between the representatives of Eastern and Western Europe including the Soviet Union, the above-mentioned information was again disclosed. This indicates reinforced preparedness for international exchange between east and west European countries including the Soviet Union of technical information and the use of patents upon payment of reasonable terms. Since the adherence of Soviet Union to the Paris convention, not a single case has been known according to which the Soviet Union has violated the patent rights. As far as the new Indian patent law is concerned, judicial appeal seems comparatively to be absolutely necessary.

Regarding the term of validity of a patent the exceptional case of ten years only for drugs and foods seems to be discriminatory. It is a basic experience that discrimination tends to breed new discrimination. It is suggested that the term should be ten years at least as of the date of sealing of the patent instead of the date of filing the complete specification.

Sections 5 and 47 provide that for food, medicine or drug patent protection shall be only for processes and to the products produced by such processes. But no provision is made concerning the burden of proof. This should lie in any case with the infringer. And if a licence is granted under a patent or another person is authorised to work the invention for reasons of vital importance, the licencee should start immediately to produce and not be allowed to import only. In any case the licencee should pay reasonable royalty. If a country changes its patent law it is to my mind a bad thing in so far as it offends the international code of fair behaviour and science and development in the whole world in a detrimental way. India, however, has a special place; it is a guiding lighthouse to many countries, especially those which are less developed. For this reason, pharmaceutical firms all over the world are so much interested in the way the Indian government proceeds with the patents Bill. There is always a way to find a solution which gives comfort to both parties.

If for instance prices seem to be extremely high, why not follow the French example: after a period of three years from the date of commercial exploitation, the patentee has to appear before an official committee which controls the whole cost structure and then has to come to terms regarding a fair and decent price. This of course can only be done on

condition that the representative of the government is not just interested to take over but to have the firm calculate a fair price. Needless to say that, for instance, big institutions like Securo Social in Latin America get a substantial discount. The Indian government has always been flexible if necessity arises. I might refer to the substantial tax reductions which will be granted for the erection of the new fertiliser factories.

The late Mr. Lal Bahadur Shastri wanted a purely pragmatic approach to problems. The Shastri legacy in the economic and scientific field is determined pursuit towards self-reliance in a most pragmatic manner which gives the best advantage possible to the Indian people without hurting the foreign investor sincerely. Solid business with a social touch is what you need in the new patent law. This is in conformity with the words of our President Lubuke which I quoted at the beginning of the memorandum. It reminds me of what the foreign minister of Kenya, Josef Murumbi, told me once: "As far as international co-operation is concerned, we do not want charity because charity only comes once. Therefore, we want solid and fair business which helps both the parties."

Thank you once again for having given me an opportunity to place my views before you and, Jai Hind.

Shrimati Sharda Mukerjee: Mr. Hunck, your memorandum which was circulated to us and also your explanation have been of considerable help to us. We would like to ask one or two questions. Would you like to tell us, in regard to the modern research which is being conducted in Germany in relation to drugs, how much of international co-operation you have in modern drug research, for instance? I mean the collaboration between your country and another foreign country, for instance, or foreign countries.

Dr. J. M. Hunck: I can only answer in general terms. I gave you the instance that we have much more royalties from abroad. I should appraise it at about 30 to 40 per cent, and a few of the drugs we are producing in Germany are being produced on the basis of royalties and patents from abroad.

Shrimati Sharda Mukerjee: I am afraid I did not put my question so directly; what I mean to ask is, in the research laboratories themselves, is there any work being conducted in collaboration between Germany and foreign countries.

Dr. J. M. Hunck: No, probably not.

Shrimati Sharda Mukerjee: When you say that international cooperation between India and Germany would be affected by this measure, do I take it that you only refer to the investment aspect or you refer also to the research aspect?

Dr. J. M. Hunck: I should think both, because research also means investment: sending exports to India and invest an amount of money and use technological work and find out the methods which may suit the climatic conditions of India, and find out indigenous plants and all those things. That means investment, of course.

Shrimati Sharda Mukerjee: As you are aware, this Bill is an amending Bill, coming after many years since the existing Act was brought into effect and which is now in force; the present Act is almost 50 years old. I think it has been the experience in this country that there has been very little collaboration in research in regard to drugs and other things. We feel that while European countries are anxious to invest capital here, they are not equally anxious to part with their knowledge.

Dr. J. M. Hunck: They have started the collaboration on a laboratory scale. The first step was, as you

might remember, the Indo-German co-operation with firms in Asia. This started only in 1957-58, that is to say, only six to eight years back, and within these eight years, the first step was to export to India; the second step was to establish its own ventures; for many years, the first difficulty was one of exchange; there was not enough foreign exchange to transfer our profits back to Germany, and for this very reason the German firms told me in the last few years that they even prefer to invest this money in India; probably Hoescht does it and Bayer does it, and similar other firms will do so. Since they were told that this co-operation is of advantage to both parties, they might call new items of research which can be transferred to Germany; it is in fact, not foreign exchange, but it is only intellectual money which can be exchanged with Germany and can be used in Germany for any other country where the climate and other conditions may be similar. The Germans have picked up this idea of erecting more laboratories in your country, especially—India—which has a huge market. I can give you more items.

Shrimati Sharda Mukerjee: As you have rightly said, India has a huge market, but India wishes to develop markets outside India, and it is to safeguard that that this Bill has been presented to Parliament.

Dr. J. M. Hunck: I think I have mentioned in my little memorandum that exporting is another thing; there might be other conditions and countries where exports are possible, especially your neighbouring markets in Asia, and these joint ventures are quite willing to do so. I see that there is quite a lot of such joint ventures of two or three firms here in Delhi, who do export business. Why should it not be done in pharmaceutical interests, which are specially prepared for this part of the world and this part of Asia?

Shri Bibudhendra Mishra: Would you please tell us the exact provision in the Bill to which you object?

Dr. J. M. Hunck: I mentioned in my speech that I consider patents as a method to restrict production or a certain amount of development for a given period to one firm. That is one objection.

Shri Bibudhendra Mishra: I hope you are acquainted with the provisions of your German patent law.

Dr. J. M. Hunck: I have generally presented my ideas. To a certain degree, I am aware of those laws. Basically, I am.

Shri Bibudhendra Mishra: In Germany also, articles of food and medicines—the products are not patentable, but only the process is patentable.

Dr. J. M. Hunck: Patents apply to both.

Shri Bibudhendra Mishra: I find from the United Nations publication that both in Germany and Japan, only the processes are patented, and if the patent is not worked inside the country, they can be revoked.

Dr. J. M. Hunck: But you have to pay compensation and you can apply to the court about it. It is quite natural.

Shri Bibudhendra Mishra: But there is a provision that if it is not worked inside the country, it can be revoked. Also, in the public interest, there is a provision that there can be compulsory licence.

Dr. J. M. Hunck: Yes; it must be, if it is a question of emergency.

Mr. Chairman: That is what this law is doing. What is your objection; those provisions are being sought to be enacted here; so, what is your objection?

Dr. J. M. Hunck: The objection is, it is not clearly explained which are those public undertakings and cases; secondly, by licensing, it does not enable us to go to court against it

In Germany, there is a special court in Munich which deals with patents and with violations of patents.

Shri Bibudhendra Mishra: This book, published by the United Nations, *The Role of Patents in the transfer of technology to developing countries,* also refers to Germany, and the reply given by the Government of Germany says: "Free use of invention by order of Government in the interests of the public".

Dr. J. M. Hunck: Only with compensation.

Shri R. Ramanathan Chettiar: The compensation may be illusory.

Dr. J. M. Hunck: It must be a fair compensation.

Shri S. N. Mishra: What countervailing actions have you adopted in your country to contain the evil effects of monopoly arising out of patents?

Dr. J. M. Hunck: We do not consider that as an evil effect of monopoly. I have told you about the prices and about obsolescence.

Shri S. N. Mishra: If the prices do not happen to be at the international level, what action do you take?

Dr. J. M. Hunck: We do not take any action. We leave it to the free competition between the producers. Whether the price is high or not, the physician who recommends a drug and the patient who takes it prefer a drug prepared by a first class firm in which they have got confidence.

Shri S. N. Mishra: What is the amount of foreign investment that has taken place in drugs in Germany?

Dr. J. M. Hunck: I cannot give the answer at the moment.

Shri S. N. Mishra: You mentioned the figure of 777 crores so far as foreign investment is concerned. Probably that comprises both on government account and private account?

Dr. J. M. Hunck: Only private account.

Shri S. N. Mishra: Since you are dealing in the field of drugs, was it not reasonable for us to expect you to give some figure about foreign investment in the field of drugs?

Dr. J. M. Hunck: I can give it to you later; not at the moment.

Shri S. N. Mishra: What is the ratio of foreign patents to the indigenous inventions in Germany?

Shri Peter Alvares: In the subject-title of your memorandum you have said "Development of Indian Pharmaceutical Industry to serve the public—Memorandum pleading for competitive prices by fair competition". I do not know if you are aware that the prices of foreign patented pharmaceutical products in India are two to three times the cost in European countries. The other factor is most foreign pharmaceutical companies have secured a monopoly by patenting all processes in this country and thereby preventing the broad-based growth of the pharmaceutical industry. In view of this, how do you justify your own thesis that if the field is kept open for foreign enterprise and participation, the present system as it is will serve the Indian public? The prices are manipulated and the industry is not allowed to grow because of monopolistic tendencies.

Dr. J. M. Hunck: Of course, prices of many other things are also higher in India. An Italian Fiat car costs double the price here as in Italy. You might know the reasons why it is so. Of course, there might be other reasons—the price structure, cost of production, market situation, etc.

Shri Peter Alvares: That is not very correct. because these patents are not worked in India. They are

imported. If they were worked in India, I can understand the argument that cost of production in India is higher.

Dr. J. M. Hunck: I have seen statistics where prices of drugs in India are not high.

Shri P. S. Naskar: It is an acknowledged fact that the price of a particular brand of patented medicine in India is higher than the so-called international price prevailing in other countries. To pinpoint his question, can you tell me in the last 15 years how many patents have been taken by the German firms in India and how many of such patents are worked in India?

Dr. J. M. Hunck: Unfortunately I have no figures about it. I will try to get it.

Shri Peter Alvares: In the last para of page 3 you say,

> "The new Bill will not encourage in particular the foreign patent holders to work the patents in India."

This is what the Bill wants to do, *i.e.*, to try to compel foreign patent holders to work them in India. At present there is no such compulsion. That is why we have the situation where all patents are registered here, but the products for sale are imported from outside. The present Bill will try to do away with that. I do not understand how you say the Bill will not encourage the physical working of patents in India.

Dr. J. M. Hunck: As far as I know, the German firms do not see that there is enough security or the risks may be too high to start laboratories here.

Shri Peter Alvares: At the moment there is no compulsion to start a laboratory to work any patent in India. This Bill will try to do something like that in a half-hearted manner. But you do not want that provision and you want the existing provision to continue whereby it will not be required that a patent is compulsorily worked in this country. So, this statement is not correct from the point of view of what the Bill seeks to do.

Dr. J. M. Hunck: I see it in a different way. At present there is no opportunity for a foreign patent holder to work on it in this country.

Mr. Chairman: Why is there no opportunity? If he takes a patent here and does not work it here, what is the government to do?

Dr. J. M. Hunck: Government can stipulate that he has to work it here. As I have said in my memorandum, you can always find a way which satisfies both parties.

Mr. Chairman: The very object of having patents is in the interests of the country.

Dr. J. M. Hunck: Yes.

Mr. Chairman: Supposing a patentee does not work that process and produce the product in India?

Dr. J. M. Hunck: After some years he should produce it here.

Mr. Chairman: That is what he Bill tries to do.

Dr. J. M. Hunck: But you must give decent conditions and fair prices on which he can work.

Shri Peter Alvares: India has a low cost structure and America has a higher cost structure. The prices here are four times the prices in America and in real terms the price of a particular medicine will be ten times more in India than what it is in America.

Dr. J. M. Hunck: There is no competition from other international firms.

Shri Peter Alvares: How can there be any competition?

Mr. Chairman: You hold the monopoly and you will file a suit in the court if your patent rights are violated.

Dr. J. M. Hunck: If you allow more firms then there will be competition.

Shri P. S. Naskar: You said that if a patentee after taking a patent inside this country does not function for two or three years then we should revoke that patent. But then you will ask us to pay him the compensation.

Dr. J. M. Hunck: Of course, he is entitled to get some compensation for his patent which you use.

Shri P. S. Naskar: In your speech you laid emphasis on the research part of it. Could you give us an idea, taking any particular pharmaceutical firm in Germany, as to how much money is spent on research, how much on advertisements and so on?

Dr. J. M. Hunck: On research and development they spend about 15 per cent and on advertisements it is substantially less. We in Germany advertise very little because the pharmacies, the physicians and others use what is produced.

Shri Gowdh: You have chosen three or four items with which you disagree. One of them is the question of royalty payable to a patentee. You say that 4 per cent is very low. What in your opinion is the percentage that should be given as royalty?

Dr. J. M. Hunck: In Great Britain they had legal proceedings and 18 per cent was given.

Shri Gowdh: Is it your opinion that no percentage should be fixed?

Dr. J. M. Hunck: Yes.

Shri Gowdh: You say that if the life of the patent is reduced from 6 years to 10 years it is not workable, it is not profitable to the patentee. What do you think should be the reasonable period?

Dr. J. M. Hunck: My idea was ten years. I was saying that it takes about two years in between the date he applies and the date on which he receives the patent.

Mr. Chairman: It is 18 years in Germany from the date of application. Here in India it is now 16 years and now under the Bill it is made 14 years and 10 years from the date of application for medicines and food articles. It actually comes to 12 years. That distinction is made in many countries.

Shri Gowdh: Are you aware of any instances in the recent years where a patented drug has become obsolete or out of date within five years because of the invention of a more effective drug?

Dr. J. M. Hunck: There are many instances of such drugs.

Shri K. K. Warior: In his memorandum, on page 3, Dr. Hunck says:

> "Paragraph 48 enables the State to confiscate all patents without giving any reason or compensation".

Clause 48 is only for certain governmental purposes. Will he explain why he has used the word "confiscation"?

Dr. J. M. Hunck: If you take away without compensation, I should call it confiscation.

Shri K. K. Warior: Is there no such provision in any of the Acts in Germany?

Dr. J. M. Hunck: No, it is not there in any other country.

Shri K. K. Warior: Suppose a situation arises, for defence or in the case of some epidemic or some such thing, where the Government thinks it is necessary should not the Government have the right to import any patented material—either the process, the

material or the product—from outside?

Dr. J. M. Hunck: Of course, it has that right.

Mr. Chairman: The provision in he West German enactment says that the free use of the patent invention is possible by the order of the Government in the interest of public welfare and security.

Dr. J. M. Hunck: Of course.

Mr. Chairman: That is all what we want to do by this Bill.

Dr. J. M. Hunck: It is confiscation if it is done without proper compensation.

Shri K. K. Warior: Suppose the patentee is not in a position to supply enough of that product during a crucial period like an emergency or when there is an epidemic how can the Government safeguard the interests of the community?

Dr. J. M. Hunck: But why do you not pay compensation? That compensation is for his intellectual property.

Mr. Chairman: In your enactment relating to patents there is no question of compensation. It refers to free use of patent invention by the order of Government in the interest of public welfare and security. So, why do you object to this provision in our Bill? After all, Government will exercise that power only for the welfare of the country and for the security of the country.

Dr. J. M. Hunck: Of course, they can do it, but the patentees should be compensated.

Shri K. K. Warior: Then I come to clause 87, relating the licensing rights, to which you have raised objection. Is it not a fact that similar provisions exist in patent laws of developed countries?

Dr. J. M. Hunck: No, I do not think licensing rights in the pharmaceutical field for patents is given anywhere else.

Shri K. K. Warior: Suppose a firm in a developed country takes patent rights for a number of processed for the same product just to block the entry of others into the field, creating or acquiring a monopoly in that product, should that be allowed? Suppose that party is not using all the processes but only one process, should not the local inventors or research workers be given some elbow room to utilize the other processes?

Dr. J. M. Hunck: Of course, provided the party concerned has the brain, the knowledge, the know-how. But no such thing is mentioned in the Bill. It simply says that the licensing rights can be given. It should specify that it will be given only to those who have got the know-how and who know the trade secrets, because they are much more important than the patent proper.

Shri K. K. Warior: In a contingency where a firm tries to block the entry of others by patenting all the processes, should not Government enter the field and encourage the local manufacturers to produce them?

Dr. J. M. Hunck: But how many patents are there in India which stands in the way of curbing the initiative of the local inventors from evolving some new processes? Not many. Why should we concentrate on those few unscrupulous firms and generalise?

Shri K. K. Warior: All right I will not generalise. But in case all the processes are patented only to block the development of indigenous invention, should there be any objection to a provision in this enactment which will lift that blockade and allow free open competition?

Dr. J. M. Hunck: If you kindly make it a little more specific, I can try to answer it. If some one does

something which is against the welfare of the community, It is quite natural to take action against him. But that is an exceptional case.

Mr. Chairman: It is only in an exceptional case that Government will use those powers. Do you mean to say that the Government will use those powers indiscriminately?

Dr. J. M. Hunck: As far as I know sections 87 and 88 say that patents relating to food and drugs shall automatically be endorsed with the words "licensing rights". Furthermore, even a patent held under the old Act will automatically be endorsed with these words from the commencement of the present Act. No appeal is possible against that. The Controller can utilise the patent at any time before the terms of the licence are mutually agreed upon. It is retrospective. He gets it immediately before the terms of the licence are agreed upon.

Shri K. K. Warior: Then I come to the question of royalty. You say that 4 per cent royalty is too low. But it is not as if the patent right is given to somebody and all of a sudden 4 per cent is fixed. There is sufficient scope for all sorts of agreements between the patentees and the licensees. This provision is only to safeguard against extorting exorbitant royalties. It is only there the Controller comes in the way and fixes 4 per cent. Is it not sufficient?

Dr. J. M. Hunck: You are referring to an exceptional case. But I am sure it is not the case everywhere.

Shri K. K. Warior: It is not covering all licenses compulsorily. It is only when the other provisions are not satisfied, in the last resort, it is done under section 88.

Mr. Chairman: It is there in the German enactment also. It says that by declaration to be published and registered any patentee may permit any person to use his patented invention subject to adequate compensation.

Dr. J. M. Hunck: Under this provision anybody can apply for this licence to the Controller and he has to give it immediately without waiting for proper agreements.

Shri K. K. Warior: What will be the impact of this Bill when enacted on the export market of West Germany, so far as medicines, pharmaceuticals and intermediates are concerned?

Dr. J. M. Hunck: On the West German pharmaceutical industry, you mean?

Shri K. K. Warior: What is the assessment of those friends who were happy in giving you the brief and asking you to represent them?

Dr. J. M. Hunck: Those friends, as I told you, are very happy to continue to co-operate and develop more co-operation with India.

Shri K. K. Warior: We welcome that co-operation. The question is: What will be the impact, adverse or advantageous, on the West German industry if this Bill is enacted, according to their assessment or according to your assessment?

Dr. J. M. Hunck: It depends on individual cases; but, basically you must allow the man who invests money to get a fair profit out of his money if the risk is in a decent limit. There is nothing wrong about it.

Shri K. K. Warior: I understand from your statement that India stands to suffer, but what will be the impact on the West German industry, according to their assessment or according to the assessment of any of the associations which the pharmaceutical industry has or according to your own personal assessment, if any, and not on German investments in India?

Dr. J. M. Hunck: In what respect?

Shri K. K. Warior: In their exports to India or in their taking out patents here for their exports and processes.

Dr. J. M. Hunck: I am afraid, there may not be the desire to establish a laboratory and collaboration will not be as much as it has been up till now.

Mr. Chairman: Please look to clause 88(5). Compensation is provided there. It is not expropriation.

Dr. J. M. Hunck: Expropriation was only under section 48.

Mr. Chairman: That is, for the purposes of Government.

Dr. J. M. Hunck: For the purposes of Government or if anyone does it on behalf of Government.

Mr. Chairman: If it is for Government purposes, Government should reserve those powers. Do you not agree? Many countries have done that. UK has done it; Germany has done it.

Dr. J. M. Hunck: Then we come back to the same old question, that is, decent compensation should be paid.

Mr. Chairman: But you have no objection to the power being retained if compensation is paid.

Dr. J. M. Hunck: Of course. It is quite natural if a country is in a state of emergency and a state of defence.

Shri R. Ramanathan Chettiar: When the Government exercises that power, no compensation is paid under the German patent law.

Dr. J. M. Hunck: I am sorry, there are no cases of taking over patents without compensation. Compensation is paid.

Mr. Chairman: Not even for security purposes?

Dr. J. M. Hunck: It pays for that.

Shri R. Ramanathan Chettiar: It may be illusory or nominal compensation.

Dr. J. M. Hunck: It depends; but at least it is fair compensation, not only nominal. Government does not take anything away from only a small group of people. The taxpayer has to pay the money. He will be compensated.

Shri Kashi Ram Gupta: You must be aware of the fact that during the last ten years there have been patent agreements by German firms in this country and the old Act has not put any limit on royalty, still under the agreements, as they stand, generally the royalty fixed is not more than 8 or 10 per cent?

Dr. J. M. Hunck: Yes, I know.

Shri Kashi Ram Gupta: Agreements entered into during these ten years do not have a rate of royalty more than 8 or 10 per cent—that is the maximum; it may be 5, 4 or 6 per cent even. Then, on what grounds do you say that there should be royalty of 15, 16 or 18 per cent?

Dr. J. M. Hunck: I mentioned the British case. You asked me what royalty should be paid. Then I mentioned what is paid in Great Britain.

Shri Kashi Ram Gupta: In veiw of the fact that German firms agreed to a royalty of less than 8 per cent, as a jouranlist you ought to have an idea why the Government of India is going to fix it as 4 per cent in special cases. Have you studied it from that point of view?

Dr. J. M. Hunck: May I tell you that royalties are paid in the course of joint ventures of German firms cooperating with Indian firms? Of course, royalty is one small profit which comes out of it; but, there is besides, another kind of profit for producing and selling those goods which may be shared between the

Indian and German partners. They might have additional profit in their general business in this joint venture.

Shri Kashi Ram Gupta: Whether they make additional profit or not it not the question here; the question is about patent royalty to be fixed by the Controller. Under the agreements that royalty is less than 8 per cent, which means that Indian conditions are suited to them for a lower royalty. If it is so, your argument about this clause does not stand.

Dr. J. M. Hunck: 4 per cent is only half the amount of 8 per cent.

Shri Kashi Ram Gupta: But that 8 per cent is the maximum; there are cases of it being 5, 6, 4 or 3 per cent.

Dr. J. M. Hunck: Royalty is besides profits out of mutual business.

Shri Kashi Ram Gupta: The Controller has nothing to do with profits; he fixes it about the patent.

Dr. J. M. Hunck: German firms do go into negotiations regarding the royalty.

Shri Kashi Ram Gupta: Every firm has to negotiate under the 'old Act.

Dr. J. M. Hunck: In case there is a joint venture, besides royalty he gets additional profit out of that, so, he agrees to royalty of 8 or 6 per cent.

Shri Kashi Ram Gupta: You say that collaboration is welcome. When it is welcome, the net result is there. Everybody knows it. When they will get profit from it, according to you, there should be the least objection to lower royalty.

Dr. J. M. Hunck: Does that 4 per cent include royalties? Or, does it also refer to know-how agreements?

Shri Kashi Ram Gupta: Know-how has nothing to do with it.

Dr. J. M. Hunck: But the Chairman just now referred to some section where it is said "royalties and similar things".

Shri Bibudhendra Mishra: It says: "4 per cent of net ex-factory sale price in bulk of the patented article".

Dr. J. M. Hunck: But does it refer to royalty?

Shri Bibudhendra Mishra: That is a sort of compensation.

Shri K. V. Venkatachalam: Royalty and other remuneration.

Dr. J. M. Hunck: What is meant by "other remuneration"?

Shri K. V. Venkatachalam: It does not include know-how.

Dr. J. M. Hunck: I am happy if it is so.

Shri R. Ramanathan Chettiar: It says, 4 per cent royalty and other remuneration. It is not clear.

Draftsman: The idea is that the maximum that is recovered should not exceed 4 per cent. Supposing we simply use the word 'royalty' only, the object of the provision may be defeated by using some other expression, e.g., royalty 3 per cent, some-other thing 5 per cent or 6 per cent. Whether in the form of royalty or otherwise, all told, it should not exceed 4 per cent.

Shri Kashi Ram Gupta: That has nothing to do with the know-how.

Dr. J. M. Hunck: Could there be other agreement regarding compensation for know-how? Is it included in this? I was told just now that it includes everything. I am not sure.

Shri Kashi Ram Gupta: Supposing the word 'remuneration' is not there, are you then agreeable to this?

Dr. J. M. Hunck: Yes.

Shri Kashi Ram Gupta: You have said that there are huge expenses on research and, therefore, care should be taken to see that all those expenses are covered. As you know, in India there is mixed economy. Here, the Government has also got its own laboratories and they give the facilities and there may be further improvement in that direction. Then, your argument of spending very heavy amounts on research does not stand here. Your argument may be from the German point of view and not from the Indian point of view. In India, the Government also gives facilities in the field of research. When this is the case here, the question of asking for the extension of the period of patent or about the rate of royalty does not stand on that ground.

Dr. J. M. Hunck: Why should the research cost less for the Government than for the private people?

Shri Kashi Ram Gupta: Whether it is lower or higher, the question is this. You say, in India, the German Company spends a huge amount on research. But actually, the amount spent on research can be huge only if the Company is doing it independently. In this country, there are Government laboratories also, and there are other ways of doing it.

Mr. Chairman: Why argue with him?

Shri Kashi Ram Gupta: He has to see to the conditions obtaining here. We are drafting the Bill according to our own conditions.

Therefore, we have given the period as 10 years because we know the amount spent on research will not be so much as they say.

You are a journalist and you should know the position obtaining here and in Germany and other countries. You should examine it.

Shri J. M. Hunck: I am surprised how the time taken on research for certain products should be shorter here than in other countries.

Mr. Chairman: You need not argue.

Shri Kashi Ram Gupta: I am not arguing. I am linking it up with the period of the patent. We have made it 10 years. He is objecting to that; he says that that is not enough. We say that the period of 10 years is enough.

Mr. Chairman: He wants extension of time because they have to spend a lot of money on research in Germany.

Shri Kashi Ram Gupta: My point is that when they have to come here, they are to do it here.

Mr. Chairman: Research is done in Germany also.

Shri Kashi Ram Gupta: He is a journalist also. He ought to know the position obtaining in other countries including India.

Dr. J. M. Hunck: We should always take into account the research cost which the firm undergoes in all places, not in India proper only.

Shri Kashi Ram Gupta: Have you thought of some suggestions by which the Indian inventor may benefit?

Dr. J. M. Hunck: Whether it is an Indian or an alien inventor, everyone should benefit in the same way or everyone should get the same incentives by way of royalties or by way of fair compensation. Whatever I have mentioned does not refer to foreigners only. It does refer only to scientists, whether foreign or Indian. What I suggested was that more Indians should be trained in laboratories which are built up by joint ventures.

Shri Kashi Ram Gupta: You have stated that there should be proper investment climate in India. Do you mean to say that the present Act provides proper investment climate and that the amended Act will not

provide proper climate and, if so, what are your reasons?

Dr. J. M. Hunck: I am afraid that the new patent law will not provide comparably favourable investment climate.

Shri Kashi Ram Gupta: How does he explain the reasons?

Mr. Chairman: He has already replied.

Shri Kashi Ram Gupta: Can you give us an idea about the time taken generally for such research in your country and the percentage, in general, of the amount that is spent on research?

Dr. J. M. Hunck: I have already given the answer—10 to 15 per cent is being spent on research.

Shri Kashi Ram Gupta: On the basis of your knowledge during the last 10 or 15 years, may I know how much has generally been the time taken on research on certain patents?

Dr. J. M. Hunck: It takes from 2 to 4 years.

Shri Sham Lal Saraf: First of all I thank you for the expression that your country owes some social duty to this country also. In this country we want advanced research, know-how and raw materials, in order to be able to set out foot on this modern industry of drugs and pharmaceuticals. May I know how and in what way your country can help us in that?

Dr. J. M. Hunck: Advanced research has to be done only when basic research is available.

Shri Sham Lal Saraf: That, I know. What I am asking is this. We are grateful to you for the sentiments that you have expressed on behalf of your country. We need three things, namely, advanced research, technical know-how and raw materials, in order to be put somewhere on the map of manufacture of drugs and pharmaceuticals. How and in what way your country can help us in that?

Dr. J. M. Hunck: I gave you instances of Hoechst and Bayer, the new factories which are established in Bombay. Young Indian scientists are sent to Germany to be trained and later on to take over leading positions in these firms. This is a kind of co-operation which is important and which gives advantage to both the parties. We might give you our experience and by this co-operation of both the partners, I think there will be a good result within a few years.

Shri Sham Lal Saraf: Therefore, keeping, that in view, do you feel that it is all the more necessary that whatever firms get their patents in this country should invariably manufactue and prepare these drugs and pharmaceuticals within this country?

Dr. J. M. Hunck: Yes; it should be done within this country; that is necessary.

Shri Sham Lal Saraf: Today the position is that most of the foreign firms who have got their patents registered here, are not preparing the drugs here.

Dr. J. M. Hunck: The preparation should be done in this country. That is the idea of co-operation.

Shri Sham Lal Saraf: As a columnist, I would ask you what would you consider a reasonable return for investment-cum-knowhow-cum-all that the patentee imports from a foreign country.

Dr. J. M. Hunck: I am afraid it differs from branch to branch.

Shri Sham Lal Saraf: I am talking of drugs and pharmaceuticals.

Dr. J. M. Hunck: As I told you in the beginning, I have not myself had enough practical experience to know how the cost structure is in the production of pharmaceuticals.

Shri Sham Lal Saraf: What I mean here is this. When a drug or a pharmaceutical is in a position to be commercialised, what is the earning; that is, from the day it is commercialised, what would you consider to be a reasonable annual return for all the investment, including the royalty, etc.? What percentage would you consider to be a reasonable return?

Dr. J. M. Hunck: This is a very ticklish question. I cannot tell you whether it is 50 p.c. or 20 p.c. I gave you the suggestion as to how it is done in France. There, he presents his cost structure and they find out a decent price considering all the cost elements. That would be a fair thing.

Shri Sham Lal Saraf: At the beginning you said that, after the present Bill came up, the German investors were hesitating to invest in pharmaceutical industry in this country. After all these discussions which have taken place and in which you wonderfully participated, may I ask you whether the hesitation is more imaginary..

Dr. J. M. Hunck: I am sure that there will be a fair and decent patent law afterwards, fair without these various clauses which are lowering the investment climate; for instance, the clause which makes it retrospective on the patents already given; this is an exceptional case.

Shri Sham Lal Saraf: You have heard from different quarters that medicines and drugs sold here in this country, particularly those that are imported or supplied by foreign inventors, are priced very high. When the Bill under discussion comes into force and along with the administrative action, it will be necessary to regulate and not to control the price structure. Do you agree to that?

Dr. J. M. Hunck: Yes.

Dr. C. B. Singh: We have been told about peop'e having put good amount of money and good amount of money being spent on research in various countries. I would like you to tell me how many nobel laureates have been there in the last few years who have obtained nobel prizes during the last few years on medicine? Have you any such idea?

Dr. J. M. Hunck: I remember my neighbour professor Domagh.

Dr. C. B. Singh: In the last 15 years there have been 13 nobel laureates. Only one of them has been working in the drug research factory. Only one. Out of them only one has been working in a factory and that is Paul Muller, discoverer of insect-killing elements of D.D.T. He was working in a chemical factory producing pharmaceutical drugs. Others had been working in other universities or Government laboratories. The argument that money is required for research by the private firms falls to the ground completely. Research of the type that is known as research has not been carried out.

Dr. J. M. Hunck: They are chosen by other people. Many of these are not known to the general public.

Dr. C. B. Singh: Those who are selected for the nobel prize—the world knows them. I suppose you will not dispute that. There are many Germans who have obtained nobel prizes. Let me go to my next point. What percentage of the profit should be compulsorily detected for research work in any big manufacturing concern? What percentage should be detected from their income? Do you suggest any figure?

Dr. J. M. Hunck: I can give you the figure of 15 per cent., 15 per cent of the total prize.

Dr. C. B. Singh: Regarding earmarking for research work, 6 per cent is done in this country.

Dr. J. M. Hunck: I have no idea.

Dr. C. B. Singh: Hardly any research work worthwhile in what you call medicines or drug research of

drug manufacture has been done in this country.

Dr. J. M. Hunck: I know...

Dr. C. B. Singh: What is the reason for this?

Dr. J. M. Hunck: In 1957 or 1958 there were certain joint ventures in this country.

Dr. C. B. Singh: They have not produced any result. There have been various patents of foreign countries which have been sold here. Real research is not done by joint ventures also. They are bringing their raw material, bottling them, and they are doing nothing more.

Dr. J. M. Hunck: They try to use indigenous plant. They try to do it under Indian climate and other conditions. They are constantly on Indian surroundings here.

Dr. C. B. Singh: That we understand—that is not my point.

Dr. J. M. Hunck: They are sending scientists to Germany and other countries.

Dr. C. B. Singh: On page 2, on paragraph 4, you have said that there is nothing wrong with foreign investments and that West Germany has made use of them from the very beginning. We are not disproving that. We don't dispute. What we dispute is the amount of investment and the consequent income and profit they take. Suppose we ask you to suggest reasonable ratio of income from the investment, will you suggest something? Sometimes you get 20. Sometimes you get 30. Sometimes you get 40. What do you suggest?

Dr. J. M. Hunck: It should have some relation to cost.

Dr. C. B. Singh: Will you agree to 40 per cent?

Dr. J. M. Hunck: Annual profit of 40 per cent?

Dr. C. B. Singh: They say and put it as high as that.

Dr. J. M. Hunck: It should not be so much.

Dr. C. B. Singh: How can you bring this down? There are very heavy prices as compared to the investment. What do you suggest to bring this down?

Dr. J. M. Hunck: Profits have to be set in relation to costs.

Dr. C. B. Singh: You have mentioned that as far as price is concerned, there should be some discount for hospitals, etc. Can this be done and brought about in this Bill, compulsory discount for this very thing, in this Bill?

Dr. J. M. Hunck: Latin America for instance. They offer a huge discount.

Dr. C. B. Singh: They do it here also. 20 per cent they do even here. That is not enough.

Dr. J. M. Hunck: When you say something apart from price regulation, you must mention its cost . . .

Dr. C. B. Singh: You agree to this to be incorporated in this bill.

Dr. J. M. Hunck: Yes.

Shri D. P. Karmarkar: The principal difficulty is in respect of foreign collaboration. That has been found. There are certain well-placed firms and producers abroad who are collaborators here that maintain the patent. During the duration of the patent as no importation can be made in competition with the sale by the patentee the charges charged by the patent-holder are inordinately high. You mentioned one instance. I am mentioning this because we have a combination of two manufacturers. The reference is to Merck Sarabhai: They are very famous in this field. In respect of Vitamin C their sale price within the country is Rs. 74|-

per kg. The international price is Rs. 18.50/- subject to minor variations. This firm is a first class producer, but the internal consumer has to pay four times the cost of international price for the same product. I have a strong feeling on this.

are what I said. Vitamin C is being manufactured with German collaboration of a very high standing. The Indian manufacturer is also of high standing. The internal price of the product is four times the external price. I am not asking you to comment on this. If these facts are correct would you leave some discretion to the public authority to see to it that nothing more than what is considered as a reasonable price is charged for the product?

Dr. J. M. Hunck: In any case, of course, I have mentioned it several times.

Shri D. P. Karmarkar: For this purpose it will be good for the competent authority to take power and to take such measures to make the selling of the products at a very high price almost difficult and impossible. A little increase in price on account of first production or due to local conditions is admissible. But if the difference in prices is so much, then you would agree with me?

Dr. J. M. Hunck: I completely agree. I have mentioned it in my memorandum. Normally the comparison should be with international standard price, but subject to special costs in India.

Shri D. P. Karmarkar: You have made your position clear in regard to 40 and 42. One may or may not agree with that. That is a different matter. You have given reasons also. I have checked up the factual position in Germany. This is a United Nations publication. I think we can take for granted the facts contained in this publication. There I may just invite your attention to one provision, namely, "If working of patents is necessary for the public interest, compulsory licences may be granted to the most reliable applicant which says: 'Free use of the invention by order of Government'. Government have reserved this right to themselves. "Free use of the invention by order of Government in the interest of public welfare or security". Public security is clear. If Government are satisfied that the public welfare is so served, then free use of the invention is permissible. Do you agree with this?

Dr. J. M. Hunck: What about compensation then?

Shri D. P. Karmarkar: Let us assume that compensation is there.

Dr. J. M. Hunck: With compensation I agree.

Shri D. P. Karmarkar: So you agree that at any time in the interest of public welfare free use of invention can be made.

Dr. J. M. Hunck: Of course

Shri D. P. Karmarkar: Free use and compensation do not tally.

Dr. J. M. Hunck: What is free? It is liberal use.

Shri D. P. Karmarkar: With this provision you will agree?

Dr. J. M. Hunck: Of course.

Shri D. P. Karmarkar: Cost to the consumer is part of public interest or public welfare. That is obvious.

Dr. J. M. Hunck: What is that?

Shri D. P. Karmarkar: I am manufacturing a medicine. It costs 50 times more here. Obviously public interest is involved in this.

Dr. J. M. Hunck: Then you should say that all consumer prices are for public welfare. How will you fix the price?

Shri D. P. Karmarkar: Price should be reasonable. Would you consider consumer's price as part of public welfare?

Dr. J. M. Hunck: Not in general.

Mr. Chairman: We have authentic information that international prices are lower than the prices that are being charged for patented medicines.

Shri D. P. Karmarkar: I am grateful to you for your observation. He is a distinguished person in the field. I shall pass on this information to you so that you can make use of it. You see that Vitamin B6 manufactured by Merck Sarabhai is sold here at Rs. 800 a kg; its international price is Rs. 206|-. Vitamin B12 manufactured by Merck Sharp & Dohme is sold here at Rs. 215|- a gm; its international price is Rs. 32|- per gm.

Mr. Chairman: Is Merck an American firm or German?

Dr. J. M. Hunck: Merck is American. It was taken away after the first World War.

Shri D. P. Karmarkar: Chloramphenicol manufactured by Parke Davis is sold at Rs. 410|- a kg in India whereas it is sold at Rs. 100|- in international market. Tolbutamide manufactured by Hoechst is sold in India at Rs. 75|- a kg; its international price is Rs. 20|-. Vitamin A (dry powder) manufacured by Glaxo is sold in India at Rs. 421|- a kg; its international price is Rs. 54|- a kg. Procaine Hydrochloride manufactured again by Hoechist is sold in India at Rs. 21|- per 500 gm; its international price is Rs. 8|- per 500 gm. Tetracycline Hydrochloride manufactured by Pfizer—you please note this— is sold internally at Rs. 1,147|- per kilo; in the world market it is sold at Rs. 107|- per kilo. Assuming that these facts are correct, then you have already agreed that Government should take some power in their hands.

Mr. Chairman: They are correct. They are compiled by the Reserve Bank of India.

Dr. J. M. Hunck: There is the question of compulsory licence.

Shri D. P. Karmarkar: In the model law they have agreed that the Minister of Industries concerned should have the power to give a compulsory licence wherever public safety or public welfare is involved. Here we say that compulsory licence should be given. Do you agree that such power should include importation?

Dr. J. M. Hunck: Of course.

Shri M. L. Jadhav: Instead of going to the High Court, if there is a tribunal consisting of a Judge, will you be satisfied?

Dr. J. M. Hunck: Then it should be a special tribunal. The special tribunal should consist of experts. They have to be experts. I am in favour of appeal to the Court. We are living in a democratic society. There should be right of appeal.

Shri P. K. Kumaran: My honourable friend just now quoted to you the prices of different drugs obtaining in India and that obtaining abroad. What in your opinion India should do to bring down the prices of those drugs?

Dr. J. M. Hunck: Of course you will have differences in prices. This happens not only in this country but also

in many other countries. For reasons of scarcity of foreign exchange, you may not be importing the required quantity of some drugs. If you have more imports, then the prices will automatically go down.

Shri P. K. Kumaran: It is not a question of foreign exchange. We can import only those medicines for which the firm has taken a patent in India. If for a particular drug a firm in Germany has taken the patent in India, we cannot import that drug from any other source.

Dr. J. M. Hunck: Cannot you import from any other source?

Shri P. K. Kumaran: They have taken the patent for the drug as well as for the process.

Dr. J. M. Hunck: That comes to the suggestion I made before. The price of the imported drugs should, of course, be controlled. That shall be controlled by the Commission I have suggested.

Shri P. K. Kumaran: Some time back the Government of India issued a licence to a German firm for the manufacture of raw chemicals and intermediate chemicals in large quantity in India. For some reasons that German firm has refused to build the factory. Unfortunately, I don't know the name of the German firm.

Dr. J. M. Hunck: Sometimes there are such cases.

Shri P. K. Kumaran: This firm was to produce 94600 tons of raw chemicals and 33,200 tons of intermediate chemicals from which drugs were to be made. Now the German firm has refused to build it.

Dr. J. M. Hunck: I am sorry I could not tell you the reasons. I don't know the name of the firm.

Shri Dalpat Singh: You have mentioned in your memorandum that international partnership was an efficient help on the way to the recovering of the West German Industry which was completely shattered in 1945. May I know how far this can be attributed to the Patent Law operative in your country?

Dr. J. M. Hunck: With international co-operation the economic development of a country will go faster. If you have a patent law according to international standards and on international basis, naturally the international co-operation will be forthcoming. For the same reasons the Soviet Union agrees to the patent laws of various countries and sticks to them. This is a base for smooth international economic co-operation. Patent law is the pillar of international co-operation.

Shri Dalpat Singh: What is the percentage of appeals to the Federal Court from the Patent Commissioner in Germany?I want to know whether the number of appeals is small or it is a good number.

Dr. J. M. Hunck: It is relatively a small number. During the last 15 years it is 34 out of 3,000.

Shri R. P. Sinha: Dr. Hunck, you have spoken very flattering words about our democracy and about our democratic functioning. You have quoted copiously from our leaders both in the Government and outside the Government. You have also stated that the Patent Law of our country has been largely patterned on your own patent bill in Germany. There may be variation in some details, but the main frame-work is more or less same. You have also stated that the Government there function judiciously not only in the interest of German public but also in the interests of industries there so that they can also function profitably. I don't know why, when you have got so much confidence in our Government and in our way of functioning, you fear that we will not implement this law fairly, in spite of the fact that there are reserve powers.

Mr. Chairman: I don't think that would be justified.

Shri R. P. Sinha: He has stated in his memorandum that with the passage of this Bill there will not be inflow of capital and the knowhow and the patent in this country, although it is a similar legislation and he has confidence that our Goernment would function fairly, and will not see that the patent rights are abrogated in spite of the fact that we have reserve powers.

Dr. J. M. Hunck: After seeing the working of this Committee, the sincere efforts you are really putting to find out the different shades of opinion about this Bill and the democratic way in which you are functioning, I have no doubt that the outcome will be a fair patent law. That your patent law is framed after our patents law is itself flattering to us in Germany. I don't see why we should object to it.

Shri R. P. Sinha: You have stated that HOECHST are selling 76 per cent of their product—pharmaceutical products in Italy and only 24 per cent comes out of indigenous source because their products are so good. Why should they fear that they will not be able to do well in this country even if we have no patent law?

Dr. J. M. Hunck: In Italy, they have no big German firms but they have been getting drugs etc. from the neighbouring countries. Practically there is a large pharmaceutical industry in the neighbouring country and it serves well. Likewise, in Great Britain, whether there is any Patent Law or no Patent Law, we try to export our products there. Here, in this country, the difference is that this is a new market. We try to make good work. In the case of Italy, it is served by the neighbouring countries. We must concentrate all our efforts on good work.

Shri R. P. Sinha: As far as I think, in India, we know that the German manufacturers do very well. I don't think that there is any difficulty with regard to your country. Whether there is any Patent Law or no Patent Law, the name is there; they will be able to sell all their products.

Dr. J. M. Hunck: It is in your interest that these German firms do make their investments in India on laboratories. You should encourage this in order to have production.

Shri R. P. Sinha: That is what we are trying to do exactly. We are encouraging that in order to have production. That is the purpose for which this Committee is sitting to revise the Patent Law in such a way that we have production here.

Dr. J. M. Hunck: Then it is good.

Shri R. P. Sinha: My hon. friend here has referred to you about the different prices obtaining in India and in the international markets for the different products inculding some of the German products.

Here, I would like to know whether it is possible for you to give us the cost of production of the German pharmaceutical firms in India as well as in Germany to find out why the prices here are so high. Is it a fact that the cost of a drug is high because the cost of production here is high or is it because they are trying to profiteer from the nearest market that the cost is high?

Dr. J. M. Hunck: I think this refers to several items which we have to consider. For example here we have to pay higher freight charges, customs and excise duties.

Shri R. P. Sinha: We would like to go into details. Do you feel that the prices here are unreasonable being four times the international prices?

Dr. J. M. Hunck: Now it may be unreasonable. But, in the long run, it will be reasonable.

Shri R. P. Sinha: Will it be possible for you to cooperate with this Committee to furnish us with a certain data to show as to what is the cost of

production in India and in the international markets else-where?

Dr. J. M. Hunck: I shall try to do that.

Shri Peter Alvares: The phrase 'cost of production' is rather a misnomer. The prices in India are not so high because there is no production here. All that is happening here is that in each item a lot of ingredients is involved.

Shri R. P. Sinha: I am only talking about the items which are manufactured here.

Shri Sham Lal Saraf: Very little is manufactured here.

Dr. M. M. S. Siddhu: You have quoted about the cost of research in the pharmaceutical industry. May I quote it that the Medicinal Chemistry by Burger a standard book; here, he says that out of 500 to 1,000 compounds, if you screen all the compounds qualitatively, that cost alone comes to $ 2 to 4 lakhs. At the same time, if one were to take one year's profit of a patented drug and a non-patented drug—in England they call it as branded and non-branded drug—on one item alone, the difference is to the tune of two lakhs and sixty pounds. In other words, the sale of a single drug for one year is able to cover out of the profits all the services and other expenditure which have gone into the research. But it said in the country that the research is a very expensive thing and its cost has to be recovered over a very long period. This is something which I cannot understand. Therefore, will it be possible for you to tell us why in the name of research, the increase in prices of a drug is out of proportion with the expenditure?

Dr J. M. Hunck: Do you want me to tell you about the expenses on a single drug?

Dr. M. M. S. Siddhu: What I want you to tell me is this. Out of 3,000 compounds, what will be the actual expenditure that will be incurred on one compound? If that compound is successful in one country alone, will the profit from that compound cover the cost of the whole project? Will that also not cover up the expenditure on research incurred within one year?

Here is the figure that I have got. I am quoting it from the U. K. Public Accounts Committee's Report. The name of the product is 'Pamedol'. This is one of the German Firm's product. Price difference in one country is £2·60 lakhs. Worldwide patent would be able to recover out of its profits all expenses incurred on research in a short time.

Dr. J. M. Hunck: I might mention that in some cases the research costs will be covered within one year but in other cases, it might take a number of years.

Dr. M. M. S. Siddhu: There is a drug by name sulphanoria of CIBA. They have been able to cover up their expenses out of the profits of this drug; there is another drug by name Tolbutomide. Here also they have been able to cover all their expenses. In England, it is found that from the sale proceeds of one year, the difference between branded and non-branded drugs total investment on research could be met. The profit on one year's sale is equal to the total research done on a product of that firm in England.

Dr. J. M. Hunck: Of course, it is equal to the total research done on a product of a firm in England.

Dr. M. M. S. Siddhu: If the drug is to be sold all over the markets within six or seven years, the total expenses on research are recovered and yet most of the drug manufacturers, as Dr. Singh said, are not doing the fundamental research work. They are thinking in terms of more compounds branching out of a particular compound; comparison with the parent compound makes a difference of

5-10%. That is why in the long run these compounds or drugs become obselent as you have said yourself. The drug industry in order to produce more and more of such drugs are spending money and producing obselent drugs. Because of this real research, as Dr. Singh has said, is still coming out of the Universities, Research Institutes where the understanding of the disease processes is going on whereas the question of marketing of drugs of doubtful value which are not going to last long is being done by the modern drug industry.

Dr. J. M. Hunck: I would not be quite off the mark when I say that I know that many big German pharmaceutical firms like Bayers have had enormous research work done to assist the general development of new products. The very reason that these new drugs will become obsolete very soon itself is an additional impetus to invent new processes to have new drugs invented. It is not that only from the business point of view but at least as much from the scientific point of view also that a man who invents some thing, and invests it for the general good too.

Dr. M. M. S. Siddhu: The German manufacturers and their products have been held in high esteem not only during the last few years but for many years—we can even think of the twenties. Since then the question of collaboration should have come up earlier. I would like you to tell us how much is research done through the Universities and institutes and the drug manufacturers. While they were importing these drugs and making good deal of profits, they were drawing all the profits from out of our county.

Mr. Chairman: Do you want to know the contribution to research in Germany?

Dr. M. M. S. Siddhu: I want to know the financial contribution in India, to the Universities or to the Indian Medical Research Council of India. The drug industries' contribution towards research has been negligible.

Dr. J. M. Hunck: I do not know. How could I know? I have been told by my German friends of a pharmaceutical branch that it costs more money to make their products popular. You talk of India. For instance in Germany there are many magazines for doctors etc. and they are explained in those magazines whereas in this country there are only few, I have been told and so a man has to cover regularly the various physicians.

Dr. M. M. S. Siddhu: It is not that we do not have enough of medical magazines and journals which will reach medical men. But when the firm have more formulations which are in competition with each other, they detail their representatives to go out with a lot of samples and all that. There what the firms do is to ask the doctor to prescribe 'A' medicine or 'B' medicine of a particular drug manufacturer. It is not due to the fact that the mailing is bad in India or the magazines are not there. It is only for doing more and more promotional work and there the expenditure is about 20% as compared to 6% on research the average all over the world.

In your country it has been pointed out in the United Nations booklet that the medicines are not patentable, the drug is not patentable but the process is. What happens is this: the firm which is going for a process or for a product tries to cover all the conceivable theoretical ways of reaching that product with the result that to reach that product or to manufacture the product all the theoretically possible ways have been blocked. The result is that another young scientist in spite of the fact that he is able to discover or manufacture or bring out the same drug by another process finds that theoretically he is blocked. Will you like that the process to be patented should be the one or two which the particular patentee has in view to

exploit rather than all the theoretical possibilities? Patentee should get only those processes patented which he is likely to exploit but not all the theoretical processes which can be conceived in Chemistry.

Dr. J. M. Hunck: I would agree with you.

Shri P. C. Borooah: You said that you have no objection to Government retaining the right of revoking a patent at any time provided compensation was paid. What is your view if suppose a patentee abuses his right? Do you want that he should also be compensated?

Dr. J. M. Hunck: He should be stopped immediately. He should not be allowed to earn any further profits out of his patent. But I would like to know what you mean by 'abuse'.

Shri P. C. Borooah: Suppose he has taken a patent for 15 items but he is working only two items and import the rest. Is it not an abuse?

Shri D. P. Karmarkar: If I may supplement, the hon'ble member's question is: suppose a patentee comes here; he purports to manufacture some items. So he gets the exclusive right of importing the same. He goes on importing them and selling them and making profits and shows no ostensible progress in its manufacture within the country. That is what he calls by 'abuse'.

Shri P. C. Borooah: There also you want compensation to be paid?

Shri D. P. Karmarkar: For 3 years he has done nothing. The patentee's intention is not to work out the patent. In the mean time for 3 years he has had the advantage of importing the product and selling it here, with no corresponding advantage to the people at all. In this situation, why should he be paid compensation; why should we not penalise him and mulct him some of his profits?

Dr. J. M. Hunck: I would put these things in a contract that penalty will be imposed, etc. Then it will be binding if he abuses. It will have a judicial basis.

Shri P. C. Borooah: In 1911 it was considered reasonable that a period of 16 years would do for a patent. Since then the country has developed technologically to an unimaginable content. Why ignore this position? Why should not the period be curtailed because of this technical development, which it has been possible to do research and marketing in a much shorter period. Why should you ignore this technological development and cannot reduce the period to 16 years or 14 years?

Dr. J. M. Hunck: I am not quite sure whether research can be done in a faster way. I would say with the advance of science, the outcome of things is more complicated; you invent for a disease which has not been known before and you don't know the outcome; these can take much more time.

Shri Bade: In your memorandum, on page 3, you have said that this patent Bill is bad both for foreign and Indian investors. The object of the Bill is to encourage Indian investors, according to the statement of the Bill. Then how can you say that it is bad for Indian investors?

Dr. J. M. Hunck: Where have I said so?

Shri Bade: On page 3 of your memorandum, you say "The Patents Bill which is now introduced in the Parliament tends to perpetuate the emergency law which, as the expression says, is only meant for times of emergency. This would be bad for both foreign and Indian investors."

Dr. J. M. Hunck: Because you can't perpetuate the emergency situation which is only for a certain period and you can't normalise these conditions of emergency . . .

Mr. Chairman: Because foreign investors will not come . . .

Shri Bade: If the foreign investors could not come in, my another question is that the Patents Law should not allow excessive foreign influence in the economic field and it should also protect the country's balance of payments position. Is it not true?

Mr. Chairman: That is for us to decide.

Shri Bade: If he does not agree with me, then is it not a fact also that in India 90 per cent of the medicines are foreign and they are importing all the drugs here? Then there is this question of foreign exchange. Therefore, this Bill is introduced. Do you not agree with us?

Dr. J. M. Hunck: I agree with you that as many patents as possible should be produced as soon as possible within the country.

Shri Bade: If this Patents Law is abrogated, then there will be more firms importing, there will be competition and the consumers will get the products at a cheaper cost and there will be more inventions in India; just as is done in Japan.

Dr. J. M. Hunck: I am not in favour of abrogating the Patents Law . . .

Mr. Chairman: It is for this Committee to recommend. He has given his opinion.

Shri Bade: Then there is another question about this royalty. You have said that some compensation should be given. But there are so many countries—Japan, Jordan, Kuwait, Liberia, Mexico, Netherlands, New Zealand, U. K., etc.—where there is no provision for compensation. Even then the companies are having their sales there.

Mr. Chairman: He has given his views. It is for this Committee to consider. He wants compensation.

Shri Vimalkumar M. Chordia: Some of the firms have got patents for many drugs but manufacture only a few and import others. We want that they should manufacture all here and not import. What procedure will you suggest for that.

Dr. J. M. Hunck: This question has already been put by another Hon'ble Member—about what procedure should be followed to induce these firms to produce here.

Shri Vimalkumar M. Chordia: For example, Hoechst is holding many patents in India but exploit only one, that is for manufacture of Tolbutamide. What should we do to induce these firms to manufacture other drugs also here.

Dr. J. M. Hunck: You can only persuade the firm to manufacture in India if there is a market which takes enough of its production. I am of the opinion that if there is any chance to produce here with profit, then it will be done.

Shri Vimalkumar M. Chordia: Indian market is almost monopolised by foreign patentees and foreign collaborators. Can you suggest any way so that India can be relieved of the dependence on foreign companies?

Mr. Chairman: It is for us to take decisions.

Dr. J. M. Hunck: Sir, three months ago I had a long conversation with Mr. S. L. Kirloskar. I asked him why Indian products were not sold at world market prices in Germany. He said that Indian economy was associated with a closed market for many years and most of the products were sold in India itself. But the international market is a buyers' market where the buyers decide the prices. I think it is a general outcome of a situation of market which is in India for the last 35 years or so.

Shri D. P. Karmarkar: We are happy to learn that Germany is even now having a very few of our engineering products at prices which are competitive.

Dr. J. M. Hunck: We are sending now two engineers to India to find out which parts of the machines, such as sewing machines etc. can be produced to advantage India and sold in Germany. We have the Business Bureau in Dusseldorf, sponsored by the manufacturers' or anisation, and they are considering this question; they find that the quality etc. can improve in the course of two years, but it would take some time. They always concentrate on two or three qualities which are still in vogue in Germany. In the case of one of the items, about ten years ago, there were 150 varieties, but today there are only five left, and more and more of it is imported from other countries.

So far as the Import quota system is concerned, I am in favour of letting go all these quotas. But I might say that most of these quotas are not even practically used by the Indian exporters to the full today, but when you ask them they only tell you that because of the quota system they are not able to export more.

Shri Vimalkumar M. Chordia: The patent law will apply to all types of industries, but we are seeing that only the pharmaceutical industry is agitating very much against this. Can you attribute any reasons for that?

Dr. J. M. Hunck: You are discriminating against pharmaceutical firms, and there must be a reason for it. And I quite understand it. Your Health Minister has explained it several times that the health and physical status of the whole nation depends on meeting the demands for vitamin tablets, vaccines, medicine for preventing malaria and so on. So, the pharmaceutical industry has a certain distinct and vital position in respect of the life of the nation.

Shri R. Ramanathan Chettiar: May I know how many combines or cartels are there in West Germany in the pharmaceutical industry, such as Bayers etc.?

Dr. J. M. Hunck: Bayers is not a cartel. We have an anti-cartel law in Germany under which cartels are prohibited.

Shri R. Ramanathan Chettiar: You do not have a law such as what exists in the USA?

Dr. J. M. Hunck: We have an anti-cartel law. We have a special cartel tribunal in Berlin. Whenever any case comes up that tribunal goes into the matter. So far as Bayers are concerned, they are an independent firm, and they are not a cartel.

Shri R. Ramanathan Chettiar: While thanking you for having taken the trouble to appear before this committee, I would suggest that it would be advisable for the representatives of your pharmaceutical industry not only in West Germany but in the Central European countries to come and appear before us, because now they have sent you, only a non-technical man on their behalf. That is the only humble suggestion that I have to make to you.

Dr. J. M. Hunck: I am very sorry. I was not sent for this purpose. I told them that I would be going to India but it would be difficult for me to represent them, but they said 'Since you are going to India, why don't you appear before the Committee on our behalf?, and I said 'All right'.

Shri R. Ramanathan Chettiar: It would be helpful to the pharmaceutical industry as well as to the Joint Committee if they could send some of their representatives to appear as witnesses before us.

Dr. J. M. Hunck: Dr. Jucker is coming. He represents the Swiss industry where a similar situation prevails.

Shri B. K. Das: Have you studied the patent law, that is the Patents Act, 1911 as it is in existence now?

Dr. J. M. Hunck: I have studied it broadly, because I intended to refer only to the basic economic facts and not to go into details.

Shri B. K. Das: Do you think that that law as it stands today will be helpful for having foreign capital and for lowering down the prices and for fostering the development of the industry?

Dr. J. M. Hunck: It will be helpful. Of course, some changes or some amendments can be made.

Shri B. K. Das: But you do not want amendments to the extent that the present Bill envisages?

Dr. J. M. Hunck: Giving retrospective effect to certain provisions is a bad thing. Further, the basis of calculation for royalty and other expenses is not quite clear. Then, there is the question of appeal to a special court. I understand that you are going over that provision again. I would suggest that there might be a special court where the person can go in appeal. These are the few suggestions that I would like to make.

Shri D. P. Karmarkar: By special court, you mean somebody with judicial experience?

Dr. J. M. Hunck: Yes, of course, so.

Shri D. P. Karmarkar: It may be a regular civil court or it may be a court appointed by Government but it should be a court manned by persons with judicial experience?

Dr. J. M. Hunck: Yes, it should be manned by persons having judicial experience.

Mr. Chairman: Thank you very much.

Shri D. P. Karmarkar: We deeply appreciate the trouble that you have taken to come and give evidence before us.

Dr. J. M. Hunck: I thank you very much for this opportunity given to me.

(The witness then withdrew)

[The Joint Committee then adjourned]

Minutes of Evidence given before the Joint Committee on the Patents Bill, 1965

Thursday, the 3rd February, 1966 *at* 14.00 *hours*

PRESENT

Shri S. V. Krishnamoorthy Rao—*Chairman*

MEMBERS

Lok Sabha

2. Seth Achal Singh.
3. Shri Peter Alvares.
4. Shri Ramchandra Vithal Bade.
5. Shri Panna Lal Barupal.
6. Shri Dinen Bhattacharya.
7. Sardar Daljit Singh.
8. Shri Basanta Kumar Das.
9. Shri V. B. Gandhi.
10. Shri H. K. V. Gowdh.
11. Shri Kashi Ram Gupta.
12. Shri Madhavrao Laxmanrao Jadhav.
13. Shri Braj Behari Mehrotra.
14. Shrimati Sharda Mukerjee.
15. Shri P. S. Naskar.
16. Shri Chhotubhai M. Patel.
17. Shri Naval Prabhakar.
18. Shri R. Ramanathan Chettiar.
19. Shri Sham Lal Saraf.
20. Dr. C. B. Singh.
21. Dr. L. M. Singhvi.
22. Shri K. K. Warior.
23. Shri Ram Sewak Yadav.

Rajya Sabha

24. Shri Arjun Arora.
25. Shri Vimalkumar M. Chordia.
26. Shri D. P. Karmarkar.
27. Shri P. K. Kumaran.
28. Shri Shyamnandan Mishra.
29. Shri Mulka Govinda Reddy.
30. Dr. M. M. S. Siddhu.
31. Shri Dalpat Singh.
32. Shri R. P. Sinha.

REPRESENTATIVES OF THE MINISTRY

1. Shri K. V. Venkatachalam, *Joint Secretary, Ministry of Industry.*
2. Shri S. K. Borkar, *Drug Controller of India, Ministry of Health.*
3. Shri B. N. Atrishi, *O.S.D., Ministry of Industry.*

DRAFTSMAN

Shri R. V. S. Perisastri, *Deputy Draftsman, Legislative Department, Ministry of Law.*

SECRETARIAT

Shri M. C. Chawla—*Deputy Secretary.*

WITNESS EXAMINED

Dr. E. Jucker, *Incharge of Synthetic Research, Sandoz Ltd., Basle (Switzerland).*

Dr. E. Jucker, Incharge of Synthetic Research, Sandoz Ltd., Basle (Switzerland)

(The witness was called in and he took his seat)

Mr. Chairman: Before we begin, I have to bring one matter to your notice. You have given a Press statement in India. Normally the proceedings of this Committee, until they are placed on the Table of the Houses of Parliament, are treated as confidential. So it was most improper on your part to have given a statement to the Press.

Shri R. Ramanathan Chettiar: He held a Press Conference.

Mr. Chairman: It should not have been done. You are appearing as a witness before this Committee. Till the report is placed on the Table of the Houses of Parliament, the proceedings of this Committee are treated as confidential. Whatever evidence you will give here will be treated as public and it will be printed and placed on the Table of the House and will also be distributed among the Members of Parliament. Even if you want any portion of it to be treated as confidential, it will be printed and distributed to the Members of Parliament.

We have received your Memorandum and copies have been distributed to all the members of this Committee. If you want to supplement anything to that, you can. Then members will ask questions.

Dr. E. Jucker: Hon. Mr. Chairman and Hon. Members of the Joint Committee.

I should like, first of all, to thank you very much for having given me an opportunity to appear as a witness at this meeting of the Joint Committee on Patents Bill. Being a research chemist, being a Swiss citizen, I am very much impressed by the democratic principles of your country, of your Parliament and of this Joint Committee. I will take this experience back with me and I thank you very much once again for the opportunity that you have given me to be here as a witness.

I should like to apologize for not having a full command over English and I should also like to apologize, Mr. Chairman, for what has appeared in the Press and if you permit me, I would like to give a few explanations as to how it had happened.

I have been in India five times, always invited to lecture on drug research, and each time I was asked

by the Press to discuss the most recent achievement in drug research with the Press and each time there were small articles in the Indian papers on the subject of my lectures. Therefore, I was not surprised to be asked this time also to tell the Press as to what was going on in drug research. With respect to the lecture I had to give yesterday at the Royal Society of Chemistry which was presided over by Dr. Seshadri....

Shri R. Ramanathan Chettiar: We are not referring to that.

Dr. E. Jucker: I supposed that the Press-men wanted, as usual, to ask questions with respect to that lecture and I was taken by surprise when they started talking of patents. A few things were published. I sincerely apologize for that; I did not intend to do so. I hope you can accept this.

With your permission, Mr. Chairman I would like to say a few words in addition to what I have stated in the Memorandum that I have submitted.

May I, first of all, draw your attention to the fact that I am only a research chemist. I graduated myself in Organic Chemistry from the University of Zurich where I spent six years with the famous Nobel Prize Winner, Prof. Karrer. I then joined the research laboratory of Sandoz and there I am in charge of synthetic drug research. What I know about patents—I must admit quite frankly—is only as a research chemist and not as a specialist on patents.

I should like to draw the attention of the hon. members of this Committee to the fact that drug research, as it is done today, is done in an entirely different way when compared to what was done perhaps 30 years ago. In those days it was possible for a single research worker to isolate natural products to establish their physiological properties, to have those natural products tested by clinicians and then to see that some of these natural products were used as medicines. Today the situation is a completely different one. Drug research of today is a very complex enterprise. I certainly do not want to make any propaganda for Swiss watches, but I want to point out that the mechanism of drug research can best be compared with the working of a Swiss watch. There are many many wheels which have to turn at the same speed and in the same direction together and only the whole of it is to be considered as drug research. The situation has also changed very much inasmuch as natural products in modern drug research, apart from antibiotics, do not play the same important role as they did 20 or 30 years ago. Drug research of today consits mainly of synthetic work and most of the medicines which we use today are of synthetic origin. I would like, later on, to go into greater details as to how this drug research functions and how long does it take, because it does have a direct relation to the patent systems of various countries.

I have already mentioned that drug research consists of many varied sciences. I should like to give you a proper idea of its functioning according to the chart which was distributed to you. In the development of a new pharmaceutical speciality, many sciences are involved today. The begin of a research project is always an idea. We, synthetic chemists, are used to think in terms of relationship between chemical structure of compounds and their possible physiological activities. Once, such an idea has been conceived, it must be transformed into a working hypothesis and here a very complex and complicated work starts. As a research chemist, I then have to establish the already existing knowledge with respect to my own idea. I must be absolutely sure that what I want to start is new and novel. Otherwise it would mean duplication of work and I could not afford to start it. Therefore, the beginning, after the working hypothesis has been established, is always a very thorough

search of literature and of patents. I mention patent in this connection for the following reasons.

In the patents which can be bought at the patent office, chemical procedures are described and it is said to what final products these chemical procedures would lead. It must also be said in each patent as to what purpose the final products are meant for. Therefore, what is contained in a patent has the same value as a scientific publication. The knowledge of what is published in a patent can under circumstances form the basis from which a new research line can be started. We must consider the literture and patents before we start the research project of our own. Let us assume that this research has shown us that the idea is new and we are persuaded that it is a good idea and we hope that new medicines might result. The first experimental step then is chemical work. The chemist who is usualy graduated from university, starts synthesising new compounds. He builds a complicated compound by adding small compounds together and by subjecting them to chemical reactions. Synthetic research, as it is today, is a very cimplicated procedure and requires thousands of basic chemicals as starting materials. Pharmaceutical industry is not a basic industry. It requires basic materials from other sources. During the synthesis, out of the simpler parts, a complicated product is being built. It is like a house. You have the bricks. You add them together and at the end of it, it is a house. In the same way it works in the synthesis. Usually to start a new project about a dozen of novel substances are required; we consider them as prototypes. Then these substances undergo a thorough pharmacological screening, the purpose of which is to establish the physiological activities of the compounds which we have synthesised. These compounds are new; they were not known up to now, and it is not possible to predict their physiological properties. Those of our colleagues who are pharmacologists, apply these new substances to isolated tissues from animals and later on to the whole animals such as mice, rats or others and see how these substances react and what effects they produce. Sometimes there are good effects. Sometimes there are no effects; and sometimes there are undesirable effects.

Let us assume that the compounds we have built from simple substances produce certain interesting effects in animals. Let us also assume that due to certain activities of these substances a certain percentage of mice fall asleep then it could be considered as a sign of a sedative activity of the substance we were testing. Our next duty is, now to supply many more substances to pharmacologists in order to find out whether the substance produced hitherto is the most active one, the best that is wanted, or whether from the new group there are better substances to be had. It usually requires the synthesis of many hundreds of new chemical substances in order to establish these relationships between the structure of the novel substances and their pharmacological activity. This work takes 2 years, 3 years, or more in the chemical laboratory. Parallel with it, other substances are tested in what you find here as pharmacological screening. This pharmacological screening takes at least as long as the chemical work. Of course, some of the screening is done simultaneously with chemical work. Let us assume that this pharmacological screening has shown that a few of the substances possess interesting properties, and we think that these properties can be used in the treatment of human beings: as sedatives or tranquiliser or whatever it is. These few substances, perhaps six or a dozen out of 500, or out of one thousand, must undergo a very detailed pharmacological screening. Many tests are applied to the substances and together with these new pharmacological screening a very extensive research with respect to toxicology must be done. It is an extremely important factor as you all know of

course, and we must be very careful to have no substances in all these tests and in the tests of human beings which might be toxic. These toxicological tests require half year or one year and only afterwards are we allowed by Government's regulations and by our own conscience to pass on one or two substances into clinics where medical doctors would test them on the patients. Usually it is the chemist who produces the substance itself and the pharmacologist who tests the substance. Usually these people also try the new products out on themselves, in order to be sure that no accidents could happen in the clinic.

Parallel with the clinical tests many other tests should be carried out. Analytical work must be done, in order to be absolutely sure that substances are pure and quality is always the same. This is a very important thing. Lot of effort is spent on the analysis of these new potential drugs. At the same time biochemistry of the substance must also be studied in order to find out what happens to the substance in the human body.

Let us assume that all these tests proceed on well and our clinicians are prepared to look at the substance on human beings. Sufficient amount of the new product must then be produced. And, this is an entirely new task which cannot be carried out by research chemist, but for which special laboratories exist. We call them 'Pilot Plants' because they have fitted their work with quantities of 5 kilos or 10 kilos whereas in the research laboratory, you work with one gramme or five grammes or 10 grammes, but certainly not more.

Therefore, before the substance can go into the clinic, the pilot plant must synthesise 5 or 10 kilos which again requires a certain amount of time, half year, or sometimes longer, if the procedure is a very complicated one. Later on it is upto the physician to tell us whether the substance is good or no good at all. If it is no good at all, we try to produce something better. If it is good, the clinical test goes on for two years, three years or longer and the clinical tests are carried out on thousands of patients. Let us assume that we have been lucky—luck is always required in our field—and one of the substances survives and the physicians say that it could be used. Then, of course, we will start thinking of manufacture. First it will be hundreds of kgs, sometimes even thousands of kgs. At the same time, we must start preparations to inform the medical profession of the new substance. Very often, we are criticised today that our factories spend lots of money on the medical propaganda. I would like to explain here—probably you all know it—that it is not only propaganda that we are doing in this respect, but it is something more. You can never expect the medical profession to be able to make use of a novel substance if we do not explain what the new substance is, how it works whether it is less or more toxic, what are the side effects, where it could be applied and how it could be applied. This is a very difficult job. This is not to be considered as a pure propaganda. It is absolutely needed in this field. All in all, the whole procedure takes on an average six, seven or eight years or even more. From my own experience I can tell you that most of my own medicines which were developed by my collaborators took us seven, eight or more years. When we compare our own results with the results obtained by others, it is all the same and it could even be longer.

Due to the time factor, I should like merely to draw your attention to a very important blood-pressure drug—Alpha Mthyl Dopa. It was synthesized in 1950, but was introduced into therapy only in 1963. It took thirteen years to evaluate this drug in such a way that it could be introduced into therapy.

After this explanation, I would like to answer the question. Where is drug research done today? You have

seen from what I have said up-till-now that in order to carry out drug research you need learned people who can study patents and literature. You need chemists, you need physico-chemists, analytical chemists, bio-chemists, physiological chemists, pharmacologists biologists, micro-biologists, toxicologists and clinicians. You need representatives of about one dozen different sciences. It is so all over the world, with few exceptions. It is only the pharmaceutical industry which can combined all those people together. They must be almost in the same building. They must have daily contacts. They must work hand-in-hand. Drug research is carried out in industrial laboratories in this way. Few drugs result from other sources.

Mr Chairman, I may, with your permission, make one more remark about the contributions of drug research to the welfare of human beings. Yesterday I gave a lecture entitled: Progress in drug research. I spoke on four subjects—High blood pressure, Diuretics, Oral Antidiabetics, and Mental Drugs.

Fifteen years ago not one single drug for the treatment of mental disorders was known. Twelve years ago not one single drug for the treatment of high blood pressure was known. Ten years ago not one drug for oral administration was known to combat sugar diabetes. The last twenty years have seen a tremendous output in this field of entirely new medicines. These medicines have revolutionised our means for therapy. It is true to say that millions of human lives have been saved by new drugs. I can draw your attention to perhaps the case of mental disorders. Ten or twelve years ago mental cases could not be treated properly with drugs. There were only electro-shocks and insuline shocks. but no drug therapy was possible. Many of you who have seen mental hospitals know what they looked like. People were just put away and isolated from humanity. Medical doctors where not in a position to treat them properly. These were the poorest of the poor. Today what is the position? I have seen many mental hospitals myself. There are no patients left in the rubber cell. Most of the patients can live quite ordinary lives with the help of drugs. Many patients have been released from hospitals and are working-patients who otherwise would have spent the rest of their days in the mental hospitals. I am very happy to say that one of our substances has produced such interesting effects in mental disorder cases that patients who have been hospitalised for more than twenty years could be sent him for the first time and remain at home. Of course, many of you know these things yourselves.

Mr Chairman, ladies and gentlemen, I would not like to keep your attention any longer. I can only say that according to my humble opinion and the opinion of research chemists, patent is an absolute necessity for research of any kind and patent is a necessity for drug research for various reasons. There are very few fields in research activities where competition is as tough as it is in pharmaceutical field. Therefore, I am of the opinion that the better the protection the patentce is given for pharmaceutical research, the better will be the output of new substances. I do not want to go into details in this respect. I would be very happy to answer all questions if there are any to be put forward. I will try to answer them to the very best of my knowldge. Thank you very much for your attention.

Dr. C. B. Singh: Dr. Jucker, we are grateful to you for discribing the method of drug research as it happens today. We are very happy about it. I would like to draw your attention to one important point. Here, I have got a paper showing the names of Noble Laureates who have been doing research work on medicine nd physiology. Out of 30, only one Noble Laureate, Mr. Paul Mueller, is working with the industry in Basle,

Switzerland. All others have been working either in the University Laboratories or institutions which have nothing to do with what you call pharmaceutical drugs. That is an important point you have to remember. Secondly, you have given in paragraph 4 on page 7 of your memorandum the important new drugs produced by the various countries in the last 15 years. USA 355; Switzerland 44; West Germany 32; U.K. 27; France 21. You also mention that majority of this work was done, rather, was helped by drug manufacturers. I want you to substantiate your point that majority of this research was helped by the drug manufacturers.

Dr. E. Jucker: First of all, you asked how does it come about that Nobel Prize Winners are not with the industry but with the Universities. I have not seen the list of these Nobel Prize Winners which you have and I would like to look at it, before I with the industry and quite a lot of experience with respect to how Nobel Prize is given. I would put it this way. Quite a few of the Nobel Prize Winners, who are probably in this list, were very much supported by the industry. . Chemical Professors, who have received Nobel Prize recently had a very close association with the industry and quite a lot of fundamental research has been carried out by them. In this respect, we must differentiate, of course, basic research and the applied research. The purpose of the latter is new drugs. The work of pharamaceutical industry must be based on basic research and it has been established this way that in the Universities people do more of a basic research than in the drug industry. Basic research means that you don't aim at something absolutely special which could as such be used in the therapy. Basic research means that you study fundamental functions of the body; or for example, fundamental chemical reactions. Those who have achieved some outstanding result in their basic research have won this Noble Prize. If I as a research chemist contribute a new drug for mental disorders, such a contribution would never fit into the regulations of the Noble Prize Committee. If something of importance to the humanity is being done at a particular level of basic research, than it is rewarded by the Noble Prize Committee. Such people are seldom with the industry.

Dr. C. B. Singh: Your explanation is there. But the fact remains that real basic research of a fundamental nature anywhere is carried out by these Noble Laureates and the drug companies, if anything, take those ideas and modify those things to suit their own purposes. That point you concede.

Dr. E. Jucker: As much as I am aware, not one single drug has resulted from the work which was done by a Noble Prize Winner.

Shri P. S. Naskar: What about penicillin?

Dr. C. B. Singh: We shall take the question if penicillin as pointed out by the Deputy Minister. In 1928 it was discovered by Flemming and in 1939 Florey was one who discovered the practical use of it. Then there is Chain. How do you say that no one has discovered any drug? Penicillin was not discovered by the research worker in the industry.

Dr. E. Jucker: Drugs are not produced by Noble Prize Winner—it is a fact. Penicillin is one of the very very few exceptions, if it is not the only one. Drugs are not produced by this very important type of people; fundamental knowledge is produced by them. But pharmaceutical industry does not just modify it. Fundamental knowledge is needed, but what is built on top of it is quite enormous. Some of the research work of Chain was paid by the industry.

Dr. C. B. Singh: You will agree with me that, in spite of the researches carried out—sulpha drug you have brought out as an anti-biotic—pencillin still remains the queen of anti-biotics.

Dr. E. Jucker: May I tell you that the first achievement in the fight of infectious diseases was due to Professor Domagk who was associated with the German pharmaceutical industry and who discovered the anti-bacterial effect of the red dye prontosil. Sulpha drug have saved many lives and are extremely important bacticides.

Dr. C. B. Singh: I have used it and in the earlier stages because of its toxic effect some of the patients died.

Dr. E. Jucker: It was not synthesized for the purpose of using as a drug in the initial stages. It was a general observation that Prof. Domagk made that it has anti-bacterial activity. Two years later, it was substituted by sulfanilamide and released as a safer drug. With sulfanilamide probably no people died.

Dr. C. B. Singh: I lost so many patients because of using Prontosil. I have seen patients dying. In your memorandum you have stated that the USA is the largest in producing new drugs. How do you explain it? Why all those drugs have been centralised in America? Have you got any explanations for that?

Dr. E. Jucker: I would put it this way. America's pharmaceutical industry is an extremely developed one. They have very big pharmaceutical firms and they have been spending enormous sums of money on research alone. Last year, more than 300 million dollars were spent by the pharmaceutical companies—not by Government—on industrial drug research. 300 million dollars were spent for this purpose in one year alone. Due to concentration of research workers and also due to all facilities which can be got by spending all this money, it is quite clear that the efforts which are made produce many new substances. If all these substances are tested properly, it is quite clear that more drugs result from them than from a smaller amount of substances.

Mr. Chairman: What is the amount expended by U.S.A. Government on this?

Dr. E. Jucker: I do not know that. But, last year, 300 million dollars had been spent by the private enterprises.

Dr. C. B. Singh: My second question is this. How do you explain that in this country or any other country for that matter, hardly any research worthwhile has been carried out by the institutes or by the technical institutions including the research factories of the pharmaceutical industry? Here no research worthy the name has been done in this country. How do you explain that?

Dr. E. Jucker: I would like to explain on the following lines. First of all, I am sorry to say that I am not in complete agreement with his statement.

Dr. C. B. Singh: I would like you to give me one example in this country.

Dr. E. Jucker: I have been in this country five times and I have visited university laboratories as also the Central Drug Research Institute in Lucknow where quite a lot of research works are carried out.

Dr. C. B. Singh: I know much about that. Don't tell me about C.D.R.I.

Dr. E. Jucker: I would like to tell you that the Hindustan Anti-biotics have done very much of research.

Dr. C. B. Singh: This is a Government factory. It has not done research.

Dr. E. Jucker: They do research work on the same line as anyone does. In this country, certainly research is carried out; it has started bearing fruits. I know of private enterprises in the western countries

which are interested in getting new drugs developed by Hindustan Antibiotics. Here I would like to explain one thing, in a different way. In Europe Chemical industry was established in the middle of 19th century. It took the industry a long time to develop its research. You know for research work a lot of financial assistance is necessary. Nobody can afford to do research work unless one builds up financial basis first. This is probably the reason why smaller companies carry out little research, as long as they do not have a proper fundament for it.

As I have already said drug research is not a basic research; it needs intermediaries and it needs starting materials. If you do not supply all these starting materials, you cannot carry out drug research.

Therefore, Sir, in this country, drug research can be carried out either by the Government or by a private enterprise, but only if these tarting materials and intermediates are made available. For this purpose a chemical industry must be built up. As long as there is no basic chemical industry, we cannot do drug research properly.

Dr. C. B. Singh: But you have forgotten one important point. For any research, you must have a first-class scientist. To get a scientist it must be made attractive for him to go into research. Can you tell me as to, why in my country, first-class men are not coming over here for research? Or for that matter why they are not coming forward for research of any kind anywhere in this country?

I have got some ideas on this. But, I want you to tell me the reason why first-class scientists are not coming to do research work.

Mr. Chairman: What answer can he give to this?

Dr. E. Jucker: Mr. Chairman, as a Swiss boy do you want me to give an explanation for certain things which are happening in this country? I cannot answer this question.

Dr. C. B. Singh: All right. Will you please refer to page 7 of your Memorandum? Here you have mentioned as follows:—

"In those countries in which most new drugs were produced, the universities conducting basic research are also subsidised very heavily by the relevant industries themselves—In this case, by the pharmaceutical industry." I would like you to tell me as to how the subsidies are given to the universities by these industries?

Dr. E. Jucker: You want to know about the position in Switzerland or in this country?

Dr. C. B. Singh: Any country about which you know you may tell me.

Dr. E. Jucker: About this country, I do not know. But, as regards my country, the following is the position. Basic research is mainly carried out in universities. This type of research is not supposed to have immediate influence on drug research. Basic research will supply the industrial drug research with impulses and will stimulate it, but will as such not result in new drugs. Therefore, if a university professor suggests an interesting project, for example with respect to novel chemical reactions, the industry might agree to support this project even if no direct results which could be used by drug research are to be expected. Upon preliminary discussions we might come to an agreement with respect to the above project and the financial assistance which then is given, is usually meant to cover the costs for substances and personal assistance. The means which are provided by the industry usually cover these expenditures.

Dr. C. B. Singh: You know that in the earlier days there was some en-

quiry about mercury and chlorine. There used to be medicines from out of arsenic chlorine content. I am talking about the earliest period of time. Don't you agree with me that for this purpose one basic unit should be started for doing this work? It may not be difficult to do that. Take the case of sulfonamide. First this was made. Then came sulphadiazine, then came sulphadine etc., etc. That the beginning was sulfonamide itself is an important point. Later on, the synthesis was made under the same constitution, in the same cost and probably in the same circumstances and you were able to synthesise a dozen or more drugs without much difficulty.

Dr. E. Jucker: I would like to answer this question in the following way. Nothing is difficult once you know the answer, but if you work on any new synthesis, as I do often, then you are faced every day with the most difficult problems. Once you have solved them, everything looks very easy. Then there will be no problem anymore. I can tell you one example. We have recently built up a new group of psychothropic substances which could be used against mental depression. It took us 2 years to synthesise one single substance. But to produce it on a longer scale it took 3 more years. I would say that there are substances, the synthesis of which is easy and simple but the longer our activities go on, the more complicated this work does become.

Dr. C. B. Singh: You have seen our Patents Bill. I would like you to tell me a few basic features which you think should be either dropped or modified or redrafted.

Dr. E. Jucker: I feel—I am to some extent entitled to speak on drug research but I am definitely not entitled to go into details of the Patents Bill—I would, therefore, like to draw your attention only to very few points which I know, and which I have come across in my own work. May I start with the problem?

Mr. Chairman: The hon'ble Member wants to know how this Bill that is before our Parliament comes in the way of research.

Dr. E. Jucker: I would put it this way. It comes in the way of synthetic drug research inasmuch as (a) the protection given for the substances which we develop is not enough; the process alone does not give you proper protection. Secondly, the term of patents should be longer. I am absolutely convinced and I talk the truth when I said that on the average it takes you 7 or 8 years to produce a marketable drug. If the term is 10 years, then the effective term that remains is 2-3 years and not longer. These are very important points which affect drug research.

Then, of course, there are other provisions which are foreseen in the Bill and, in the present form, such as licences of right which are unknown in any other country. There is no one single law in the whole world which have licences of right of this type, and I believe that these particular clauses will affect the developing of drug research in the country very badly. May I draw your attention to this point? How can you imagine anybody to take up costly time-consuming drug research if he knows that once he has succeeded in producing a very valuable substance, anybody who asks for a compulsory licence must be given. If according to the Bill the Controller of the Patents Office has to grant anybody who asks for it, the compulsory licence, and the royalty is not more than 4 per cent. Nobody who has ever done drug research would dare to continue under such circumstances, because he must be afraid that once after he spent enormous amount of money and after he reached certain success, the fruits of his work are taken away from him and the insufficient compensation will not enable him to continue his research.

Mr. Chairman: Do you know that in Switzerland, your country, inven-

tions contrary to law, inventions contrary to morality, chemical substances, medicines, foods when they are not made of chemical substances, processes for the manufacture of medicines other than chemical, are not patentable?

Dr. E. Jucker: That is not correct. May I give you an explanation on this point?

Mr. Chairman: What I am reading is a United Nations Booklet.

Dr. E. Jucker: There are three types of patent protection. One type is the French Law; one the American Patent Law and the other the German Law for the French and the American systems the substances as such are protected. This is not done in Germany or in Switzerland. In Switzerland the sustances are protected not as such, but when produced according to a special process, which is covered by the patent. This means here for that the substances are not protected if there is not a particular process for their manufacture. What we protect is the substance when manufactured along a certain route. We have a perfect protection and there are no infringement cases in Switzerland; no infringement cases in Germany. We have exactly the same patent law and I beg you to believe it.

Dr. C. B. Singh: You think there is no provision so far for extension in our Bill. After hearing you, if there is a provision included in the Bill for extension in suitable cases, do you think that it will meet your point?

Dr. E. Jucker: Definitely, Sir.

Shri Sham Lal Saraf: I thank you for giving us some details of this modern way of research, particularly, in drugs and pharmaceuticals. May I know in the first instance whether the Sandoz India Ltd. have got collaboration with Sandoz Ltd., Switzerland or it is an off-shoot of the Swiss company?

Dr. E. Jucker: It is an affiliated company which was founded 15 or 20 years ago by our company in India. Now Sandoz Ltd. India have shareholders all over India.

Shri Sham Lal Saraf: I had the privilege of visiting your Headquarters also and talking to the Minister of Foreign Trade of Switzerland and your representative in Berne in 1960 and later Sandoz became interested in the State I come from, *i.e.* Jammu & Kashmir. I understand that your company is interested in both herbal drugs as well as synthetic drugs. May I know as far as your efforts or as far as your work that you are conducting within this country is concerned, whether you confine your activities mainly to herbal drugs or synthetic drugs as well?

Dr. E. Jucker: In our company, the main line of production and the main line of research until very recently was with natural drugs. This line started with ergot alkaloids and later on with cardiac glycosides. In the old days we have preferred the natural products to synthetic ones. Our company has always been very much interested in drugs from natural sources. We conceive them of the greatest importance, though the experience of the last, let us say 10 years, shows rather clearly that the main sources—I exclude anti-biotics—of drugs are synthetic sources. If you have a look at modern medicines, you will not find one single new medicine of greater importance from a natural source, which was discovered and introduced into therapy during the last ten years. The last important one was Reserpin from the Indian plant Rauowalfia Serpentina. Since its discovery natural drugs of importance were not found any more. That is probably one of the reasons why we entered the synthetic field and we started to build up substances which are not of natural origin, which are derived from the chemists fantasy. Of course, to a great extent we keep the idea of natural products as a model and we look at the formula of the natural products and try to modify it in our minds so that there is a certain relation to it. Sometimes it does work; sometimes it does not. That is what I call model based synthesis. We have natural product models but to-

day I have to say free systhesis is much more frequent.

Shri Sham Lal Saraf: Some of the learned witnesses who have preceded you, have given us the impression that if to-day the pharmaceutical industry in this country suffers, one of the main reasons for it is the paucity of raw materials for the manufacture of drugs. From your experience that your company has gained in this country, do you consider that even to-day there is a lot of scope for herbs to be raised, handled properly and brought under proper research?

Dr. E. Jucker: I have been asked this question about each time I was in this country. I have discussed these problems with my friends from universities, from other institutes and also from the industry. I believe—this is my personal opinion; I have an experience of 20 years in drug research—that the greatest handicap you face in your country is the lack of raw materials for synthetic drugs. If you want to produce synthetic drugs on a large scale, you need a well-established chemical industry for basic starting materials. If you have to import all the raw materials—the simple chemicals—from abroad, then the whole enterprise of the synthesis of medicines becomes very costly. In order to produce one kilo of a medicine, you might require 100 kilos or even 1,000 kilos of a simple starting material like benzyl chloride or chloracetic acid, because the yield during a complicated synthesis is so small that you start with a huge amount and at the end of the synthesis, there might be a kilo or two. This explains the cost of the substance. And if you have to import all the raw materials and pay transport charges for such huge quantities, it would be too expensive. Therefore, I would like to say that if synthetic drugs are to be produced here, the raw materials, the starting materials, must be made available by your own industry. Of course, there are also possibilities with herbs. But these herbs have been investigated so thoroughly during the last 40 or 50 years that, I think, very few herbs remain uninvestigated, that is, herbs which you can collect in major quantities. Therefore, I believe that if you want to build up a drug industry of your own producing these substances, you should better start with synthesis.

Shri Sham Lal Saraf: May I know, ever since you started manufacturing drugs and pharmaceuticals in this country, how many imported inventions you have got patented in this country, and secondly, how many of these patented drugs are actually being manufactured by you in this country?

Dr. E. Jucker: This question is very easy to answer. Out of all the products which we have on the market here, there is only one drug which is under patent protection. It is Intestopan, used for intestine trouble. All the rest of our products are not under patent protection. It might be that a second product is also under patent protection, but I am not quite sure about it. But in no case there are three patented products. All the rest of our products are not protected by patents. I would like to draw your attention to Calcium preparations, ergot alkaloids and cardiac glycosides—they are not protected by patents.

Shri Sham Lal Saraf: How many processes for manufacturing these drugs are done here? Is it only packing or finishing alone?

Dr. E. Jucker: No. As soon as there was a possibility to manufacture, we have started manufacturing. But, as I have already told you, if you want to manufacture a medicine, you need raw materials and we also, like other firms, had to wait until raw materials were available. We are manufacturing now our Calcium (Sandoz). The whole supply of the country is manufactured here in a place near

Bombay. These manufacturing facilities are now being expanded in order to export Calcium (Sandoz) from India. It is now intended to export Calcium (Sandoz) produced here into Switzerland. Then they are manufacturing now cardiac glycosides. The plant digitalis is cultivated in the country and is used for the manufacture of distatalis glycosides. We have started manufacturing Intestopan. I can tell you frankly that it is almost impossible to synthesise this very simple substance here because of the lack of starting materials. Therefore, we do our very best.

Shri Sham Lal Saraf: You said that even now it takes seven to eight years for fundamental research for some of the drugs. Now, on that we have different opinions. May I know from your vast experience, what would be, in your opinion, the reasonable time for a patent from the date of sealing?

Dr. E. Jucker: The average term of the patents all over the world is about 17 years. We believe that if the present term of 16 years is maintained, it is a fair treatment to the patentee.

Shri Sham Lal Saraf: In the Bill, it is suggested that from the date of sealing, it should continue for 10 years. Keeping in view all the processes that it has undergone—sometimes very lengthy processes also—if the drug is patented for a ten-year period, what would be your reaction to that, as compared to 16 or 17 years?

Mr. Chairman: He has said if it is 16 years, it is quite all right.

Dr. E. Jucker: If the patent is for ten years, then the actual protection is for two or three years and no more.

Shri Sham Lal Saraf: Drugs are sold at very high prices in India when compared to other countries in the world. Also in this country because of the rising standard of living, drugs are very much in demand. How would, in your opinion, we be able to reduce the prices and also be able to import as much of know-how as possible?

Dr. E. Jucker: With respect to the hon. Member's question, I do not think that I am competent to express my opinion on it, because I do not know the prices of this country.

Shri Sham Lal Saraf: What about the import of know-how? How can we do it?

Dr. E. Jucker: The import of know-how depends on the collaboration between those who have the know-how and those who want it. If this collaboration can be established on terms which suit both parties, there should be no problem, and if I may say so, during the last ten or twelve years, this collaboration has worked beautifully. The pharmaceutical industry in India today is much larger than what it used to be about ten years ago; it is about ten times larger today than what it was ten years ago. This collaboration did work, and if one can proceed along the same lines, then there is no difficulty.

Mr. Chairman: This witness has spoken only on research, and therefore I would suggest that the questions also should be only on research. He is a technical witness.

Shri Kashi Ram Gupta: Your memorandum deals with the detailed processes through which a compound has to pass before it becomes useful in the final stage. You have given an idea of the average time taken in these different processes and also indicated the fact that huge sums are involved in the venture. But you have not given any picture of the break-up on the financial side of the matter. After all, there is a process on which the companies big or small have to decide; they decide what percentage of their total assets can be allotted to research for capital investment and what percentage of the profits are to be reserved for research expenses. Unless an idea of this break-up is given, your whole explanation and arguments and phraseology for protecting patents leads us to no conclusion and gives us no help

logy for protecting patents leads us to no conclusion and gives us no help in formulating our correct opinion. Please throw some light on this aspect of the problem.

Dr. E. Jucker: I thank you very much for this question; I am concerned with drugs, as I have already specified, and I work as a research chemist. I am supplied with all the money, and I spend millions per year on synthetic drug research, but I would definitely not be in a position to give you the proportion between the money we spend on drug research and the profits. The definition of the term 'profits' is not the same everywhere. The conditions here are different from ours. What I can tell you is with respect to Swiss companies; there the proportion between the money spent on drug research and the turnover is on an average about 8 to 10 per cent. My company, let us assume has a turnover of 500 million Swiss francs on pharmaceuticals; then the spending on drug research would be about 40 million Swiss francs; it is roughly about 8 per cent.

Shri Kashi Ram Gupta: Your memorandum leads one to conclude that the pharmaceutical industry in the future can deliver the goods only if it is highly centralised both in regard to capital and know-how, productive capacity and marketing, and competition too can only be possible when equally giant firms are there in the market. This means that the older the company, the more are its chances to stand in the market. Such companies possess such varieties of medicines also along with the patented medicines, whose patents time-limit has elapsed but which are in good demand in the market. They are thus in a position to get results by spending on research a lower percentage of their profits than those who are new to the line. Thus having such a law as protects such combines naturally goes against the interests of *entrepreneurs* in undeveloped countries and those whose resources do not match with those of the developed countries. As such, a legislation of your conception which you have just now referred to will naturally go against the interests of our economy. If your reply is in the negative please explain how you can substantiate that it will be in our country's interests.

Mr. Chairman: The hon. Member's questions are too long.

Shri Kashi Ram Gupta: I have written it down purposely so that I do not go astray this way or that way from the main point.

Dr. E. Jucker: I am very happy about this question. I have many very good friends in this country. Despite the fact that I am associated with a private firm, I do not keep what I know as a secret; I lecture about it and then try to give my advice if it is wanted, where I can. I have discussed this particular question many times here with my colleagues at the universities and with my friends, and therefore, I would like to put it this way.

Enterprises which can produce drugs, either governmental or private enterprises, have not been built within five years or within ten years. Many of these enterprises are fifty years old. Some of them are a hundred years old. Thus, the whole procedure requires time. You need time to build up a factory and to build up research work, and you cannot forget about the time-factor; you cannot get round it. You cannot expect your country which is industrially a young country to produce drugs as cheaply and at the same quantity as a country which has been doing so for hundred years. It will need a certain amount of time, but the fundament for manufacturing your own drugs cheaper perhaps than what they are today is research work. If research work is carried out in this country, proper drug research, then you will be able to produce drugs of your own. If drug research is carried out abroad, patented abroad and then you get compulsory licences, then you will always be later than the foreign counrties, and your country would always be depending upon them. I

believe that a country like India should aim at independence at all the levels. And independence in medicines can be achieved only on the basis of drug research of your own, and, that is where I am a firm believer in the fact that if you stimulate drug research in this country, drug research done by Indians, by Indian firms and eventually helped by Government, and you have a patent system which protests the results of those researches, then you will have a proper drug research and drugs of your own. That is the way I see it.

Shri Kashi Ram Gupta: Seeing your reply, I think I have to put my question this way now. Pharmaceutical research goes hand in hand with research in the field of diseases and ailments also. The latter research mostly constitutes a duty on Governmental level or is done by such organisations as may be specified. So far as the pharmaceutical drugs are concerned, do you not think that if the risky processes are covered by Government aid or by Government organisations, then the rest of the process which has eliminated this risk can be taken up by private enterprise? If such a thing is done, then how could you say that the present patent law would not give enough term for the patent? If that is done by governmental agency mostly, then the fear of risk is eliminated; then so far as the term, royalty and other things are concerned, the present Bill should suffice, I think. What is your opinion about it?

Dr. E. Jucker: I hope you do not mind if I do not completely agree with your opinion. I have been born in Russia; I have lived there for 14 years, and I have relatives in Russia, and friends in Russia and friends in my own business in drug research. Russia up till now has not produced anything of importance in the field of drugs. If you go through the list of Russian drugs, that is the drugs which are available in Russia—I have the latest book by Prof. Mashkovsky whom I know very well—you will find that they are all drugs which have been developed in Western countries. Here, you have an example. The whole drug research is started and paid for by Government. I believe that if you let the pharmaceutical industry compete, one firm with another, on the basis of free enterprise but protected by a proper patent law, then you will get better and quicker results than by governmental aid.

Shri Kashi Ram Gupta: I think my question is not very clear to you. My point is this. I have suggested that the risk portion of it may be covered by Government but the other portion could be left to private enterprise. That is not so in Russia.

Dr. E. Jucker: But what is the risky portion of it? The whole is risky. I have projects; I must admit that I might be not too good a chemist; I have worked on rheumatism project for more than ten years, with about 6 Ph.D. chemists and about 40 assistants; we spend perhaps 20 million Swiss francs on it. The results are non-existent. What is the portion which is risky and which is not risky? The whole is risky.

Mr. Chairman: How can you divide the two?

Dr. E. Jucker: You cannot divide it.

Shri Kashi Ram Gupta: At page 10 of your memorandum you have mentioned that the development of drugs has slowed down during the last five years. This in your opinion is due to legislative measures, keen competition and high expenses etc. Do you mean that the Governments of all countries or of some particular advanced countries have introduced such legislative measures during the last five years?

Dr. E. Jucker: I would like to explain it this way. First of all, the developments in the sciences which have led to new drugs—I have described all of them—such as chemistry, pharmacology etc. have been tremend-

ous, and many new drugs were discovered. There are many new drugs available, and the more of them are available, the more difficult it is to find new drugs and to find bet'er drugs. That is one reason why this process of finding new drugs has slowed down.

The second reason is that drug research becomes more difficult as we enter into new fields. Take, for instance, the virus diseases, cancer etc. We know so little about the fundamentals of these fields; that needs much more basic research; so, much more basic research must be done on them. For example, as long as we do not know what is rheumatism or what is cancer, how are we to produce new drugs? That is what I would call basic research. If somebody discovers what can er is he will not get the remedy but the Nobel Prize because it is only on this discovery that we can produce the remedy, but the discovery is very important. Therefore, I would say that in fields which remain open and which are so difficult we are spending, all of us, enormous amounts of money. For example, take cancer research. We are rather certain that during the next ten or twenty years there will be no drug of choice for cancer, and yet we are spending money on it because we want to do the progress. If we do not, then who does? That is one answer to your ques'ion.

Shri Kashi Ram Gupta: But you have not replied to my question about legislation in the countries.

Dr. E. Jucker: I am coming to that. The second part of your question is this. There was a very unhappy experience in Germany and in other countries about five or six years ago. For the first time in the history of drug research, it was found that a certain substance when used by pregnant women had resulted in fa'alities, and that had caused a tremendous drawback on the whole drug research. Everybody is now afraid of unknown factors in novel substances. If you have something novel in your hands, then it first means that you do not know everything about it. Therefore, we ourselves have become much more careful about introducing new drugs, because no one can afford a second case like that such as we faced five years ago in Germany and other countries.

Shri Kashi Ram Gupta: Do you agree that these regulations of the Government are justified?

Dr. E. Jucker: Absolutely so.

Shri Kashi Ram Gupta: How do you say that this Bill puts hurdles in the way?

Dr. E. Jucker: I do not object to it, but I say that it takes mu h longer today to find a new drug and to introduce it in the market. Therefore, it becomes much more cost y, and the period which is left for the patent is too short. That was the point that I wanted to explain.

Shri D. P. Karmarkar: Are you able to appreciate the fact that there is p etty little invention here, and what we have been doing during the last ten or fifteen years is with collaboration with distinguished firms like yours and it is by this means that they have been having some industrial production in the field of pharmaceuticals here, with proper terms etc. Therefo e, the motivation behind the shortening of the period in respect of patents from 16 to 10 years is this that we are anxious to have industrial production started here as ear'y as possible. Are you not in a position to appreciate that this is the reason for the shortening of the period?

Dr. E. Jucker: I fully understand the idea, behind th s shortening of the term. I fully understand it and I fully appreciate the Indian position. But we must not forget that patent does not give everything. Anyhow, it is not in the

patent that one gets the know-how; it is not in books that one gets the know-how; this know-how must also be made available if somebody wants to utilise what has been described by a patent. Just by shortening the term of a patent one does not find a suitable solution to this problem. I think it would be wiser if conditions could be made such that the patentee willingly gives all that he knows, the whole know-how plus the patent to the licensee; I think that that would be very efficient if it were done that way.

Shri D. P. Karmarkar: Do you agree that for reputed producers of drugs and medicines like your concern, for instance, in the world of pharmaceutical production, whether you have a patent or not does not make a difference? So long as the industry produces things of good quality, and your concern produces things of good standard, and Sandoz will remain Sandoz, whether or not you will have patents would make no difference.

Dr. E. Jucker: With respect to patents and drugs, for our company or for any other company, the following has to be said. We have tried to find out how many drugs out of those sold in India are patented and we have come to the answer that it is only 2.5 per cent; 97.5 per cent of all the drugs in this country are not patented at all; they can be manufactured by anybody in this country. And yet why do people not do it? They do not do it because they lack the know-how; they lack the facilities. This is much more important. But with respect to patents, I still have got to stress the following. This 97·5 per cent covers all the products, so to say. The new drugs which are developed by the industry and which are put on the market require patent protection for a few years. If after a few years this patent protection stops and drugs become free, then the industry does not mind. But to introduce a new pharmaceutical speciality, there must be protection for a while. Just imagine what will happen, if a firm introduces a speciality and gives all the information to the medical profession. Imitators get everything gratis. They would not contribute anything at all. As soon as such a firm puts the product on the market, there are perhaps 20 similar products produced by imitators from all over the world. Then the profit which the patentee must have for a while becomes questionable. That is a very important point. The starting of a new drug must be covered by a patent.

Shri D. P. Karmarkar: It is not as a complaint that I am mentioning this. In so far as your distinguished concern in India is concerned, for instance, they have specialised in belladona alkaloids and ergot alkaloids. I am told it is a fact that they are not making these things in the country, even though the raw material is grown here. Why?

Dr. E. Jucker: I am prepared to take all the blame, if necessary I have been asked why do we sell certain products here like balladona—alkoloids which is derived from a plant which grows in this country but, why do we import this substance from abroad? Why do we not manufacture it here itself? This question is very justified and I am very happy that I am in a position to answer it, because I had a similar request quite recently with respect to another of our drugs.

Certain products are sold in thousands of kilos and others are sold in a few kilos. Bellodona alkaloids are extremely active compounds; they are used in dosages of half a milligram or one milligram. For some of these products which my firm markets here, the basis is just not broad enough to manufacture the amount needed here; it might be perhaps one kilo or 5 kilos. It would be too costly to establish manufacturing facilities for a small amount of active ingredients and it is wiser in every respect to buy it from somewhere where it is produced on a larger scale. It will be cheaper.

Mr. Chairman: What is the quantity you are manufacturing in Switzerland?

Dr. E Jucker: Very small. I do not exactly know, it is perhaps 50 kilos or perhaps 100 kilos. But it is never in tons. It is very little for the whole world.

Mr. Chairman: India is ten times Switzerland.

Dr. E. Jucker: This product has been on the market for a very long time. It has never been developed in significant terms.

Shri Sham Lal Saraf: In Kashmir a substantial quantity of belladona is grown. But the difficulty today is of processing. Is this firm prepared in any way to encourage that State to process belladona?

Mr. Chairman: Is your firm doing anything to help the processing here?

Dr. E. Jucker: Yes. I can give you an example. The amount of substance which one manufactures for a speciality must be of some order in order to justify manufacture. If it is only for a very small quantity, it is too costly to manufacture it.

Mr. Chairman: That can be said of every other product.

Dr. E. Jucker: No, Sir. here are substances which you need for a speciality in sufficient quantities and then you try to manufacture them as is the case with difitalis leaves which is grown here in the country by ourselves and extracted here.

Dr. M. M. So. Siddhu: Will you take Cortisone?

Shri D. P. Karmarkar: Let me finish my questions.

So far as vital medicines are concerned, are you in a position to appreciate that they have been exploited, patents taken and part of the expenditure on research has been covered by profits, and that being so, in view of the large market that exists in India by way of its huge population, not much would be lost by the company or the producer who comes here either in collaboration or by himself, if the period of protection is reduced, so far as medicines and drugs are concerned, from 16 to 10 years?

Dr. E. Jucker: What one must realise is this: You need to synthesise about 3,000 compounds to produce one food drug. That means that this one drug is to pay for all the failures, and the profits we are making on this one drug must finance all the failures and all the research we are carrying out at the present time. We never know how long it is going to take us to produce the next medicine.

Mr. Chairman: But that is not so in the case of all drugs. There are drugs which take two years, some three years and so on.

Dr. E. Jucker: I fully agree. But as I see it, you cannot have a patent law which takes these differences into account. These drugs which are sold on a very broad scale are an exception. We have waited for years and years to bring out a new drug and then if the protection for this one new drug is two years, we are not in a position to compensate, to reimburse our expenditure.

Mr. Chairman: Will you be satisfied if in certain particular cases, the period may be extended by the Controller under powers given to him?

Dr. E. Jucker: Quite frankly, the drug research people would appreciate if there was a proper limit of let us say 15 years for all inventions, but if this cannot be done, of course, even a prolongation of the term is better than nothing.

Shri D. P. Karmarkar: There is a provision in your federal law, a summary of which has been given in the U.N. brochure as follows:

> "Other cases in which patents are subject to public use—Total or partial expropriation in public interest against compensation to be fixed by the State."

Have there been any complaints about this provision in your law either by your own companies or foreign companies having patents in your country?

Dr. E. Jucker: Compulsory licences in the Swiss law, German patents law, European patent law, are of an entirely different character than what is suggested in this Patents Bill. Here everybody would be entitled to a compulsory licence with respect to patents on drugs. In our system compulsory licences are given only in the public interest and then against proper remuneration, the quantity of which is not fixed but is subject to mutual discussion. I must make it quite clear that not one single case of this type has happened in Switzerland during the last 10 or 15 years. There has not been even one single expropriation by the Government of a patent, and if it had to be, then we would accept it for three reasons: firstly because it is needed in the country's interests, secondly because a proper remuneration would exist, and thirdly because we would have access to an appeal at the highest courts of Switzerland.

Mr. Chairman: It might not have happened in Switzerland, but there are several countries which have got this provision of compulsory licensing—U.K., France, Germany, almost all the countries.

Dr. E. Jucker: Yes, but it is always in the public interest and for security purposes.

Mr. Chairman: You have no objection to that.

Dr. E. Jucker: We have no objection to it at all. This is absolutely justified.

Shri M. L. Jadhav: In the law of your country, there is a provision for revocation of patents. Has there been any instance of revocation of patents and for what reasons?

Dr. E. Jucker: In my country, not one single patent has been revoked in recent years. The provision is there, it is in every country for dealing with cases of immorality and things like that.

Shri P. K. Kumaran: After giving number of inventions in your memorandum, you have stated:

> "The remaining countries including Italy and Russia produced fewer than five."

Will you enlighten us why Italy and Russia could not produce modern medicines?

Dr. E. Jucker: I was very careful in putting it down as less than five. I must admit that I know of not a single original drug produced in Italy or Russia. In fact, a couple of years ago the Russian Minister of Health complained badly about the underdeveloped state of the Russian pharmaceutical industry. In Italy very little research work has been carried out by three or four of the major firms only; all the rest of the Italian industry did nothing but copy. Therefore, the research work which was carried out in Italy was of a very limited order, and it never led to one single original pharmaceutical speciality. Nowadays the Italian pharmaceutical industry is going through very bad times. There has been recently a governmental study made of the Italian pharmaceutical industry, and it was asked why certain of the companies were being taken over by firms from abroad, why other Italian firms had started limiting their research activities, and it was answered that in the present situation when

there is no patent protection for pharmaceuticals at all, nobody in Italy can afford research work in this field, and they have never been able to carry out proper research work during the last 20 or 30 years, that is the reason why they have no new drugs of their order.

Shri Arjun Arora: You said that 97·5 per cent of medicines sold in India were unpatented. Is that figure based on turnover in terms of rupees, or items of medicine?

Dr. E. Jucker: Items of medicines or drugs sold.

Shri Arjun Arora: Have you any idea of the turnover of patent medicines in India in terms of rupees?

Dr. E. Jucker: No. It can be done, but it will take some time.

Shri Arjun Arora: Does your firm deal only in patented medicines for both patented and unpatented medicines?

Dr. E. Jucker: Yes, with both.

Shri Arjun Arora: Could you give us an idea of the percentage in terms of rupees of your turnover in India?

Dr. E. Jucker: I am sorry I could not do it. I would say a major part of the sales is with unpatented medicines.

Shri Arjun Arora: You said that in Russia there was not much research. How is it that they are able to produce medicines at cheaper rates without research?

Dr. E. Jucker: I do not know how cheap medicines are there. he only explanation that I can give is that the Russian drugs which you find in Prof. Mashkowski's books, all those drugs had been developed by the west; the west has paid the whole research expenditure for these drugs. They are just manufactured and sold in Russia. They are western medicines.

Shri Arjun Arora: Why cannot you do it in India?

Shri R. Ramanathan Chettiar: Even in Russia the open market prices are very high.

Shri K. K. Warior: I wish to know the proportion of the cost of the starting material, the intermediate and the finished products in the Sandoz factory.

Dr. E. Jucker: I could never answer this question because I just do not know it. I am in research. I understand nothing about the costs of the starting materials or the cost of the end products. But may I give you an example which I was told a few days ago here in India. You can take a cotton shirt and find out the cost of the cotton in it and compare it with the price of the shirt. You can do the same thing in medicines and this will be about the answer. Starting materials are very cheap. But the work involved is very expensive and the yield at the end is very small. That is what makes the cost of the final product. If you add together the price of all starting materials this will never give you an answer.

Shri K. K. Warior: What I mean is this. We get a material worth 100 dollars. How much will research cost? How much will the intermediates cost? Ho much will the finished product cost?

Dr. E. Jucker: We can never generalise like that. It is different in every case. If you have a starting material, sometimes it takes three operations to get the end product; sometimes it takes 15 operations. So, there is no generalisation possible,

Shri K. K. Warior: Do the intermediates cost much more? disproportionately more?

Dr. E. Jucker: No, no. May I clarify? The price of a substance which we use as a drug is composed of various fac-

tors. One of the factors is the price of raw materials. Another factor is the work involved; yet another is the capital involved; then there is the research factor. So, there is no generalisation possible.

Shri K. K. Warior: We have a report here from Justice Ayyangar before us. In that report on page 16, he says that there are some examples where an invention is not patentable in the patentee's home country but is patented in India and they relate to patents for medicine and drugs taken out by Swiss nationals in India.

Dr. E. Jucker: May I tell you that I hold myself a couple of hundreds of Swiss patents. That is the only answer I can give you. In Switzerland we can patent our inventions in the pharmaceutical field like in the whole of Europe. There are only 7 countries in this world where you cannot patent pharmaceutical inventions — China, Afghanistan, Iraq, Iran, Ethiopia and Turkey. Italy is going to have a patent law. In the rest of the world including Switzerland you get patents for pharmaceuticals. I know the Swiss law by heart. What is of ten being mixed up is product *per se* protection which you have only in France and USA while you have in the rest of the world product by process or process protection. It is a wrong interpretation to say that in Switzerland there is no patent protection for pharmaceuticals.

Shri K. K. Warior: I could not follow.

Mr. Chairman: He says it is wrong interpretation.

Shri Daljit Singh: On page one of your memorandum you say that you do not propose to even attempt to consider the legal provisions of the Indian Patents Bill. And also in the end of the memorandum you say that the prime concern of the legislators dealing with the Patents Bill should be the encouragement of drug research by means of a strong, just patent law which would ensure the unimpeded further development of this most important industry.

In view of that should we think that you support the Bill.

Dr. E. Jucker: Mr. Chairman, this is a very important question. Is the distinguished gentleman asking me whether I support the Bill?

Mr. Chairman: He has come as a research scientist.

Dr. E. Jucker: I wanted to say what I know about drug research and the implications with patents.

Mr. Chairman: That is what he wanted to tell us.

Shri Peter Alvares: I have one simple question, Dr. Jucker, you are a very prominent chemist. The Patents Bill, as is stated in its objects and reasons, is to encourage inventions, etc., but the controversy appears to be on the time-limit of patents. It has been suggested in the case of medicines and drugs the period should be 10 years and otherwise, it should be 14 years from the date of the patent. The date has been defined as the date of the filing of the specifications. May I know what can be the time-limit? Between the filing of the specification and the commercial exploitation of the patent, how much time should be deducted from the span of 14 years?

Dr. E. Jucker: This is a very important question. I will give my absolutely frank opinion about it. Due to very hard competition to which we are submitting in our part of the world, we have to file the applications as soon as we can. That means we file them as soon as we have the pharmacological results. We wait for the first pharmacological results which may be indicative, indicating the proper commercial use of the compound as a medicine. Therefore, from the time of conception of the idea to the time of filing, perhaps one year elapses on an average.

Shri Peter Alvares: From the time of filing of the specifications.

Dr. E. Jucker: From then on, it takes us six or seven years to market it. Out of the eight years we require for the whole research, one year can be deducted. Therefore, from the moment of filing, it is perhaps seven years.

Shri Peter Alvares: I presume you know the meaning of the words "filing of the specifications". From the time of the filing of the specification, the period of the patent is counted. Between the time of filing the specification and the marketing of the product, how many years could be deducted from the 10 years that are available?

Dr. E. Jucker: Seven years.

Dr. M. M. S. Siddhu: Great stress has been laid on the point that unless chemical engineering and chemical industries are developed in this country, research on synthetic products, synthetic drugs, is not possible at this present stage, with the result that we will be dependent on research of other countries and their patents and on large imports, thereby this country will be depleted of its large resources, and it will not be able to carry on with any major chemical programme. So, in such a case, do you think that the production of the period of 10 years is not justifiable. Please take into consideration firstly, the economic state of the country; secondly, the non-development or the infancy of the chemical industry; and thirdly , once a firm has introduced a drug, that product does not go out of the market in spite of the fact that the patent has elapsed, because the doctors, once they are accustomed to a particular brand, go on continuing to prescribe it? In other words, the ten-year period does not mean only 10 years but it means as much time as the doctor can reliably entrust the patient with the quality of the drug and as long as it lies in his memory! Therefore, under these circumstances, would the ten-year period not suffice?

Dr. E. Jucker: You have been judging the present situation on the pharmaceutical market and the present situation arose under the existing patent law where you have the protection of 16 years. First of all, nobody can predict with absolute certainty what is going to happen if the 16 years are reduced to 10 years. But do not forget that in the old times, it did not take as eight years to introduce a substance in the market; even if it took eight years to develop it, then left still another eight years ago protected marketing. And then, it is clear that doctors who get the substance are inclined to stick to it. Let us assume that this Bill becomes law and the protection is 10 years. It takes us eight years to bring a compound to the market. For two years only would the patent protection last. If a compulsory licence is given immediately, the patentee will enjoy no monopoly at all.

Dr. M. M. S. Siddhu: You are presuming that it takes seven years; light drugs such as streptomycine, chloromycetine, etc., started processing earlier, but it is worth-while studying the question in respect of the date of the application of the patent, the sealing of the patent and the manufacture of those products, and studying what is the time taken. The time in America is never more than three years.

Dr. E. Jucker: It has been studied. The cases which you talked about are instances. The antibiotics are got from the fungus and the cultivation of fungus, and needed perhaps as some what shorter time than synthetic drugs.

Dr. M. M. S. Siddhu: And steroids.

Dr. E. Jucker: How long has it taken to develop this steroid field? If you take the modern drugs—of course, chloromycetine and so on related to 10 years ago—on an average, the time taken is much more than it was 10 years ago. Today, you can take

for granted that no synthetic compound can anymore be brought into the market before six years. In this country, it takes two years to get the Government permission to market it in addition to the chemical and pharmacological and toxicological development.

Dr. M. M. S. Siddhu: I do understand it. I do not have the list at present; it was a long list of drugs which are modern in the sense that they have revolutionised the treatment. That is what they call modern in America. I had a list of about 10 drugs containing steroids. Butazolidiss products and antibiotics and I found that from the filing of the application to the grant of the application, there was one year, and within three years they started the manufacture.

Dr. E. Jucker: It is absolutely impossible today. It might have been possible 10 years ago, but the new law will have an impact on research today and not what was happening 10 years ago. Today, it is just not possible to introduce a compond within four to five years. It cannot be done, and I can give you examples, as many as you want.

Then, I would like to give the answer to your next point. You said that once a substance is introduced by a firm, then the medical profession knows it and sticks to it. But just take this fact: you synthesise a compound and you bring it out and within the first half a year, somebody who had previously asked for a compulsory licence which must be granted according to the Bill—after half an year—also brings out your new product and 20 more imitations come; you said the medical profession would stick to your product. But, after all you were the only one to have all the expenses for the research and the copyist did not contribute anything at all.

Dr. M. M. S. Siddhu: I have before me the book Medicinal Chemistry by Burger. He has worked out the expenditure on the screening, toxicology controlled clinical studies and quality control and he says that out of every 500 to 1000 compounds which are synthesised and tested, if one were to become successful, the cost runs from 2,20,000 dollars to 4,30,000 dollars. This is the Second Edition of his book published in 1960.

Dr. E. Jucker: Six years have elapsed since then and inflation has gone ahead. I am sorry I have to say frankly that Prof. Burger is a very academic man. I know him personally. He is a professor at the university. He has never done drug research on his own and he never had to pay for it.

Dr. M. M. S. Siddhu: When a patentee takes out a patent for a product through a process, through his theoretical knowledge he covers all the possible processes which are likely to lead to that compound. Will it not be correct that the patent should be only of those two or three processes which the patentee is likely to exploit and not all the possible processes, otherwise research in other countries on a similar product is blocked for ever?

Dr. E. Jucker: When you talk about research, you do not quite mean the same thing as myself when I talk about research. When I talk about research, I do not want to find new ways to synthesise known compounds. But I want to find ways to synthesise new compounds, because only if you find new ones which can be used as medicines, you help the progress of medicine. Otherwise, if you find new processes for substances which have been developed by others, you help yourself and the progress of medicine is nil. Therefore, by idea is the best way to protect research is to grant product protection. This is my firm belief. Secondly, I have already pointed out the way it is handled in Switzerland and Germany—it is pro-

duct by process protection. We are not allowed to claim all possible processes. We must describe them properly and they must work. Thefore, no fantasy is allowed in these patents. If somebody finds ot a process which is novel and which adds to the progress he can get a patent of this own.

Dr. M. M. S. Siddhu: In Switzerland, if a particular patent is not worked, then compulsory licence is given.

Dr. E. Jucker: I cannot answer this without reading the corresponding paragraph of the Swiss law very carefully, because to my knowledge in the last 15 years not a single request for a compulsory licence has been made. So far as I am aware, you have perhaps only a summary of the law. It requires much more than non-working. Non-working, according to my knowledge, does not permit a compulsory licence in Switzerland. Otherwise, there would have been requests for it. I believe it is the relation between non-working and a dependent patent. If you have a patent which depends on another patent and this patent is not worked and you are prevented from using your patent, the n after a period of 3 years you can ask for a compulsory licence.

Shri P. S. Naskar: The provision in Switzerland is:

> "On request, compulsory licence may be granted by the court if the invention was not adequately worked in Switzerland within three years from the date of registration of the patent. The patent may be revoked if after the expiry of three years from the issue of an ordinary licence, the granting of licence is not sufficient to satisfy the needs of the Swiss market."

Do you contradict it?

Dr. E. Jucker: I do not contradict it. But I must see the whole law. Reading one paragraph will not do. It is inter-related with the other provisions. Assuming it is correct....

Shri P. S. Naskar: There is no question of assumption. It is a fact I have quited from the United Nations Publication.

Dr. E. Jucker: But still there are three years during which the patentee can decide whether he wants to utilise the patent.

Mr. Chairman: So you cannot object to a similar provision in our country?

Dr. E. Jucker: If a safeguard period is provided for, it is absolutely all right.

Dr. M. M. S. Siddhu: Why is it that medicines other than chemical products are not patentable in the Switzerland?

Dr. E. Jucker: According to the Swiss law, only chemical processes are patentable; physical processes, mechanical processes for the extraction are not patentable. The substance which you obtain as the final product must be obtained by a chemical process. Only then it is patentable.

Dr. M. M. S. Siddhu: If there is a such a provision in our Bill, will it not also protect at least a large number of antibiotics which are not synthetic?

Dr. E. Jucker: In your Bill, there is no distinction between synthetic products and natural products at all. You take pharmaceuticals as a whole class.

Dr. M. M. S. Siddhu: One has been trying to refer to development of drug industry in Soviet Russia. For instance, it will be worthwhile undersanding and studying why only two countries, the United State of America and Soviet Russia, are going into space and not the other people. If one is to compare these two things, one will have to think why U.K. is

being 4 per cent on the ground that out of 4 per cent, 2 per cent wil' go by way of taxes. But, in your own country, there is no provision in your law for royalty.

Dr.E. Jucker: No. other country than India has a provision like that.

Shri R. Ramanathan Chettiar: In Canada there is such a provision.

Dr. E. Jucker: In England and Canada the royalty is fixed by the Controller of Patent Office and one can go to the Hight Court in appeal if one feels that the amount is too small.

Shri R. Ramanathan Chettiar: How do you say that in an und-r-developed country like India the percentage of 4 percent is unreasonable?
