Title: Need to preserve the rich bio-diversity of Munnar in Kerala.

PROF. RICHARD HAY (NOMINATED): Munnar in Kerala is rich in bio-diversity. It has been found in recent times that a lot of disturbance is taking place in the region which has affected the ecology of the region. Lots of agencies with their vested interests are damaging the fragile eco-system which is one of the rarest in the world.

Therefore, I request the Government to take immediate remedial steps to restore the pristine nature of the region in Kerala.
