Title : Need to provide better facilities at Sirsa railway station, Haryana.

DR. SUSHIL-INDORA (SIRSA): Mr. Chairman, Sirsa railway station poses a danger to the life of passengers instead of providing facilities to them. At Sirsa station, platform has been built in opposite direction of the city, Therefore the passengers get down in the opposite direction to the platform instead of getting down at the platform because that suits them to reach their destinations. When the passengers alight, some stationary trains are there on the other tracks and movement of trains is also there. Thus, the passengers put their life in danger while crossing the tracks

Therefore, I request the Central Government to close the direction of platform without delay so that likelihood of any accident is avoided. Besides the new platform should be four times larger than the present platform so that passengers can protect themselves from the sun, rain and cold and the entire train could also be accommodated at the platform.
